3.3 Riparian

Flowing lines swirl around the contours of the Riparian themed landscape, simulating the streams and shallows that course through the valley floor of Stanislaus County. Seasonal forces of flowing water push and scour the earth and rock into valleys, leaving ridges and mounds with trees and grasses clinging to their uppermost regions. The Riparian theme landscape reflects these elements in sinuous dry river beds created with gravel and boulders and mounded areas planted with trees, shrubs and groundcover. See Section 3.11. The natural-appearing landscape is created by random and unstructured placement of trees and shrubs. Meadows of poppies blanket the interchange and extend along the highway. A design feature of the Plan is a California poppy-lined highway, funded and reseeded on a yearly basis by members of the community through the Adopt-a-Highway, or similar program.

Images of reeds and waterfowl are highlighted in the structural aesthetics for the bridges, walls and paving. The undulating pattern on the bridge railing, representing flowing water, complements the reeds and waterfowl that are featured on the bridge structures and walls along the highway.

The metal work on the bridge, lights, hardware and conduits attached to them will be finished in the standard Caltrans green color, RAL 6005 (Standard Dark Green).

3.4 Urban

"Elegant and sophisticated" appropriately describe the Urban theme design concepts. The landscape for the interchange is tastefully simple, evoking images of a beautiful city park with well-defined paths, bordered by colorful shrubs and shaded by generous canopies of leafy trees. See Section 3.12.

The design elements on the overcrossing reflect images of the center of town with bright lights, decorative railings, stepped building facades and marquees. The metal elements and conduits in contact with metal are finished in black. The horizontal band on the barrier of the overcrossing has a red stripe applied by hand using a brick red concrete sacking over a fractured concrete formliner finish. The rectangular window shapes on the retaining and soundwalls have snaps of cityscapes within them as if viewed from the window of a moving vehicle.

3.5 Consistent Design Features Throughout Corridor

Four land use themes are showcased in the document with individual design concepts. Equally important is the appearance of cohesiveness throughout the Route 99 corridor in Stanislaus County, achieved through the use of selected common features. For example, rectangular window patterns appear on the vertical surfaces of soundwalls and retaining walls throughout the corridor. Frames and motifs are created with custom formliners. The motifs in each window change in succession as if viewing the landscape through the window of a moving vehicle. The soundwalls and retaining walls have the same color, block design and basic configuration.

Soundwalls are constructed of 8"x8"x16" concrete masonry units in a stack-bond pattern. The caps are 16"-long concrete masonry units. The field color and caps are light tan, ground face blocks with specks of black-colored aggregate. Below the cap is a 16" high light gray horizontal stripe, from 8"x8"x16" precision surface blocks with specs of black-colored aggregate. The patterns on the soundwalls walls are created with

split face blocks of the same light tan block color used for the field.

Retaining walls match the light tan color of the soundwalls, achieved by mixing pigment into the concrete. The surfaces of the walls are sacked completely and evenly using matching light tan sacking concrete. No mica is added to the surface. Color-staining concrete is avoided due to uneven results. No sandblasting is to be used to texture or clean wall surfaces. Light-textured grit is added to the sacking mix to mimic a light sandblast finish. Where retaining walls abut overcrossing wing walls and abutments, retaining walls are the same light tan color described in this paragraph. Abutments and wing walls are plain gray concrete.

Slope paving field resembles the soundwall field color and texture. To mimic the dark speckled surface of the concrete block, the surface is seeded with black mica in an even distribution so that the light tan concrete is dominant and the black mica serves as the accent color. The concrete surface on the slope paving is scored in an 8"x16" stack-bond pattern to match the soundwall block design.

Decorative formliner panels for soundwalls, retaining walls and slope paving are created from custom formliners with the designated patterns. The integral concrete color matches the field color in the retaining walls. No mica is added to the surface. Finishes are smooth.

Control joints are designed to work with the graphic elements of the design. At retaining walls, control joints are centered vertically, outside of and between concrete window panels. No control joints are to go through decorative concrete panels with themed design features. On slope paving, control joints will be required within the decorative panels due to their length. For the Agricultural theme, align the joints with the two valley "V" hinge points in the angular pattern; avoid the almond cluster. On the Industrial-Commercial theme avoid the round shape. Avoid scoring through the birds on the Riparian theme and for the Urban theme, score only along exterior frames and in 8"x16" score joint pattern.

Gore paving will be integral-colored concrete matching the light tan color of the retaining walls. The score joint pattern is shown on the design concepts in the following pages. The surface texture will be a medium broom finish drawn ninety-degrees to direction of travel.

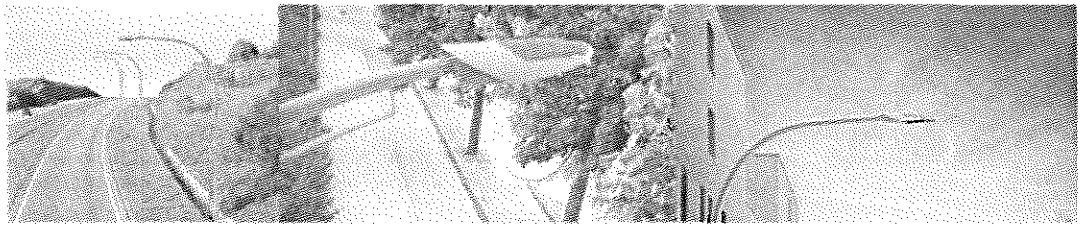
Bridges, barriers, abutments and wing walls are plain gray concrete. Mix formula is to be identical for all gray concrete produced for individual projects and throughout corridor to make sure all gray color is the same. Custom formliners are used to create architectural features. All concrete structures at and above overcrossing road will be sacked with gray concrete sacking to match formula used for cast in place concrete features. Sacking will produce an even and consistent texture similar to a very light sandblast finish.

Pedestrian sidewalks are plain gray concrete. The field is finished with a medium broom finish drawn at a ninety-degree angle to the direction of traffic. Edges are tooled and defined by walls, curbs and control joints.

The full length of the corridor, organized with landscape designs and similar treatments of walls and paving, will appear cohesive and attractive.

Metal Birds are stainless steel, 24 gauge, powdered-coated with matte finish Brick Red #38/30028 by Tiger Drylac, or equal. Mounting height is six feet clear of pavement and no more than 1" protuberance from surface of wall. Such specifications are based on Caltrans standards and must be verified with their current regulations.

Green Finish on Metals where specified is RAL 6005 (Standard Dark Green).
Black Finish on Metals where specified is RAL 9005 (Black Satin Finish).
Plant Materials: See Section 4 for Plant Selections and Resource List for Nurseries and Materials.



3.6 Lighting

Lighting for the highway and overcrossings will be consistent throughout the corridor. The lights are RoadStar Series by Phillips Lumec or equal providing LED illumination. The poles are round with an arched mast-arm.

Highway mainline fixtures and poles will be standard Caltrans gray and maintained by Caltrans.

At overcrossings, on- and off-ramps and transition zones between overcrossings and local streets, lights will be finished in standard Caltrans semi-gloss dark green at the Agricultural and Riparian themed areas and in semi-gloss black at the Industrial-Commercial and Urban themed areas. RAL number for green is 6005 (Standard Dark Green). RAL number for black is 9005 (Black Satin Finish).

The lights on overcrossings are positioned directly across the travel way from one another and not in a staggered formation. Lights at on- and off-ramps are in a staggered formation.

Corbel lights within the perforated stainless steel domes at the Light Industrial-Commercial theme concept are high-intensity LED lights, designed to cast rays of light through the perforations.

3.7 Areas Requiring Specialized Treatment

It is the goal of this plan to provide views from SR99 that are attractive, neat, clean and well-organized.

Landscaped Freeway Status and Outdoor Advertising:

Enhancement and preservation of the beauty of a transportation corridor over the long term is integrally tied to the prevention of billboards and sign pylons from being erected and removal of those that are existing. Outdoor advertising is regulated by the State of California and its presence limits the ability to plant trees and tall shrubs within the corridor, therefore diminishing the visual quality and appearance of a highway substantially. Refer to California Code of Regulations, Division 6, Chapter 1, Outdoor Advertising-General.

The State will not issue a permit for erection of a billboard if it is adjacent to a section of Landscaped Freeway. Refer to http://www.dot.ca.gov/hq/LandArch, Landscaped Freeway for the criteria for classification as a Landscaped Freeway. In brief, a Landscaped Freeway is classified by the State of California. The landscaping is continuous for 1,000 feet in length on one side of the freeway or 1,000 feet combined length on both sides of the freeway. If there is a gap of 200 feet or less in the landscaping and the gap adjoins a landscaped segment of freeway, then the adjoining landscaped segment must be at least 500 feet in length.

Undergrounding Utilities:

Similar to billboards, overhead utilities diminish the quality of the appearance of the highway and adversely impact views extending beyond the corridor to adjacent hills, mountains and the horizon. Prohibiting overhead utilities from being installed, and offering incentives for them to be undergrounded, through local and regional zoning and code regulations are positive contributions by public agencies within Stanislaus County toward improving the appearance of both the highway and region at large.

Homeless Encampments: Local and State authorities are encouraged to be active in preventing the use of Caltrans right-of-way for sleeping, gathering and shelter at all times. Local and County community services agencies are encouraged to work with law enforcement to find shelter and food for those who make use of highway right-of-way lands for personal needs.

Debris Pick-up Within Highway: Debris pickup is one of the contributions that can be made by local organizations and businesses with acknowledgment provided by the California Department of Transportation Adopt-a-Highway signage program.

Landscaped Buffers: City Planners and County Agencies are encouraged to require with commercial, industrial and research and development building permits, a 40-foot landscaped buffer along the full length of their property measured 90 degrees from the Caltrans right-of-way line. The landscaped buffer would serve a two-fold purpose. First, it would provide a beautiful community tree-lined highway for the future as the highway is widened toward the right-of-way line over time. Secondly, it would insure that private land uses are screened from view of the highway. Landscape shrubs planted within the buffer should be selected from the master plant list in this plan. Trees should match the theme tree selection designated for the highway adjacent to individual properties and be spaced between 20 to 40 feet on center.

Screening Unsightly Views: To beautify the corridor immediately, City and County Planners are encouraged to work with individual land owners who have debris, debris bins, demolished automobiles, stockpiled materials, unkempt buildings and materials and graffiti-painted surfaces that are visible from the highway, to install 8 foot tall chain link fencing on their property lines facing the highway, using fuse-bonded PVC finished chain link fabric, black in color, with steel posts and top rail to match black color, and to plant vines at a minimum of 6 feet on center on the private property side of the fence, irrigated with an automatically controlled irrigation system. In addition, local agencies are encouraged to require landowners to plant a single row of tall screening shrubs 12 feet in front of the fence on their property at a spacing not greater than 6 feet on center, also irrigated by an automatically controlled irrigation system. The plant materials should be selected from the master plant list in this plan to maintain design consistency throughout the corridor.

3.8 Railroads

UPRR and Amtrak have rail lines in a north-south corridor that are adjacent to State Route 99 in Keyes, Ceres and northern parts of Modesto. Railroad companies have specific requirements concerning landscape planting adjacent to their property. In addition, any encroachment in, or over railroad rights-of-way, will require written agreement with the individual railroad company. Refer to Title 23, Code of Federal Regulations, Chapter I, Subchapter G, Part 646, Subpart B [23 CFR 646(B)], and Part 625.4, Paragraph (b) [23 CFR 625.4(b)] for information on design and horizontal and vertical clearances from railroad facilities. Also, see U.S. Department of Transportation, Federal Highway Administration website.

3.12 URBAN

4. Plants

4.1. Introduction

The following pages provide lists and photos of plants that are suitable for use in highway environments and the local climate around State Route 99 within Stanislaus County. They have been reviewed and approved by the Landscape Architecture Department of the California Department of Transportation, District 10 (Caltrans).

Locations for trees, shrubs and groundcover must conform to Caltrans standards. Refer to current document of, "Landscape Architecture PS&E Guide, Section 4, Highway Planting Design, Plans, Plant List and Specifications Sheet," which is available for viewing on-line at the following website address:

www.dot.ca.gov/hq/LandArch/16_la_design/guidance/lap_guide/Sec4.pdf

Also refer to the following Caltrans websites to find current documents and standards:

http://www.dot.ca.gov/hq/LandArch/index_intro_to_la.htm
http://www.dot.ca.gov/hq/LandArch/16_la_design/guidance/index.htm

Construction documents developed for projects within Caltrans right-of-way must not deviate from current Caltrans standards. Since the standards apply to all levels of the work from design features to CAD line weights and layers as well as specifications, the designer is encouraged to become thoroughly familiar with the standards prior to beginning work.

The plants listed below are drought tolerant, requiring moderate to very low amounts of potable-quality irrigation water. Next to the plant name on the lists is a letter corresponding to water use requirement. The letters are M=Moderate, L=Low, VL=Very Low. The source for determining the amount of water use a plant requires is the University of California Extension's document, "Water Use Classification of Landscape Species", otherwise known as WUCOLS, available at,

http://ucanr.edu/sites/WUCOLS/WUCOLS_IV_User_Manual

If non-potable water is the water source for irrigation, existing landscapes must continue to be irrigated with potable water to protect their health. If new landscapes are to be irrigated with non-potable water, a chemical analysis from the purveyor and the following plant lists must be submitted to a soil and plant laboratory for assessment and preparation of a report identifying which of the plants in the list would survive using the proposed non-potable water source. The soil laboratory should also provide recommendations for the type of soil to use with the water chemistry to prevent damage to the soil structure from salts.

Due to the large number of trees and shrubs used in the highway landscape, it is recommended that the plants be contract-grown in order to insure that all of the plants, correct species and cultivars are available on schedule. Wholesale nurseries are best suited to manage and care for the thousands of plants required for the highway landscape project. It is recommended that the designer include a registered certified and consulting arborist on the design team to visit the growing grounds after a contract grow agreement is in place to inspect and tag trees to be included in the contract grow contract. A follow-up inspection is made one month before delivery to make sure that the tagged trees are in optimum condition and if they are not, to select replacement trees. See Section 4.4, Resource List for Nurseries and Materials.

4.3 Median Planting

The following information is provided to assist the designer with assessing and implementing median planting.

Median Width	Landscape Treatment	Guardrail Around Landscape Area	Aesthetic Treatment Above Concrete Barrier	Aesthetic Treatment on Concrete Barrier
0'-12'	Asphalt/Concrete/ Stamped Concrete/color	No	Yes	Yes
12'-30'	Hydroseed	No	Yes/No	Yes/No
30'-60'	Shrubs	Yes	No	No
60'-90'	Trees and Shrubs	Yes	No	No

The median widths indicated in the table above are found in the existing highway conditions within SR99. Individual project median designs are subject to Caltrans District 10 approval.

The designer is to use plants selected from the SR99 Corridor Enhancement Plan, plant list. Final plant selection is subject to Caltrans District 10 approval.

Landscape planting is subject to Caltrans design standards including:

Plant setback and spacing guide:
http://www.dot.ca.gov/dist4/rightofway/documents/airspace/plant_list.pdf

Highway Design Manual (Particularly Chpt 9):
http://www.dot.ca.gov/hq/oppd/hdm/pdf/english/HDM_Complete_30Dec2015.pdf

Plants (from plant list) suitable for use in medians:

Shrubs

Arctostaphylos cultivars, Manzanita Cultivars

Celtis occidentalis, Common Hackberry

Heteromeles arbutifolia, Toyon

Laurus 'Saratoga', Saratoga Bay Laurel

Nerium oleander 'Mrs Roeding', Mrs. Roeding Oleander

Nerium oleander 'Sister Agnes', Sister Agnes Oleander

Photinia x fraseri, Red Robin

Rhamnus alaternus 'John Edwards', John Edwards Coffeeberry

Rhamnus californica, 'Leatherleaf', Leatherleaf Coffee Berry

Rhaphiolepis indica 'Jack Evans', Jack Evans India Hawthorn

Rhaphiolepis 'Majestic Beauty', Majestic Beauty India Hawthorn

Rhaphiolepis 'Clara', Clara India Hawthorn

Rhus ovata, Sugar Bush

Xylosma congestum, Xylosma

Trees

Calocedrus decurrens, Incense Cedar

Cedrus deodara, Deodar Cedar

Ceratonia siliqua, Carob

Cupressus arizonica 'Glabra', Smooth Arizona Cypress

Eucalyptus microtheca, Coolibah

Liquidambar styraciflua, Sweetgum

Nyssa silvatica, Tupelo

Olea europaea, Olive

Pinus canariensis, Canary Island Pine

Pistacia chinensis 'Keith Davey', Keith Davey Chinese Pistache

Platanus x acerifolia 'Columbia', Columbia London Plane

Platanus racemosa, California Sycamore

Populus nigra 'Italica', Lombardy Poplar

Prunus cerasifera 'Krauter Vesuvius', Krauter Purple Leaf Plum

Quercus agrifolia, Coast Live Oak

Quercus ilex, Holly Oak

Quercus lobata, Valley Oak

Quercus suber, Cork Oak

Quercus wislizenii, Live Oak

Schinus molle, California Pepper Tree

Ulmus parvifolia, Chinese Elm

4.4 Resource List for Nurseries and Materials

The following website lists over a hundred wholesale growers complete with contact information.

http://www.plantsearchonline.com/CA.htm

The nurseries below are among several that supply materials for highway projects.

Boething Treeland Lodi, Lodi, CA. (209) 727-9700

Cornflower Farms, Elk Grove, CA. (916) 689-1015

Monrovia Azusa, Azusa, CA. (626) 334-9321

Native Sons, Arroyo Grande, CA. (805) 481-5996

Norman's Nursery, San Gabriel, CA. (626) 285-9795

San Marcos Growers, Santa Barbara, CA. (805) 683-1561

Suncrest Nurseries, Watsonville, CA. (831) 728-2595

Valley Crest Tree, North. Sunol, CA. (925) 862-2485

Village Nurseries Wholesale Plant & Tree Grower, Orange CA. (800) 542-0209, (800) 875-1972

Materials provided for highway projects are specified in the construction documents, supplied by the general and subcontractors and are not purchased directly by a public agency administering a highway project. The materials are specified on the construction drawings and in the specifications for highway projects. The contractor is required to submit shop drawings, brochures, cut sheets, laboratory analyses, reports and samples for review by the design team and Caltrans. If the reviewers find the submittal acceptable, the contractor is authorized to order the material. If the submittal is not in conformance with the contract documents, it is rejected and re-submittals are required until an acceptable submittal is approved. The following are manufacturers and materials numbers for the items included in this planning document.

Concrete Masonry Units for Sound Walls

Basalite, Dixon, CA, (707) 678-1901 – Color 389 and 428
Calstone, Tracy, CA, (209) 833-7366 – Color S304 and S1344LC

Concrete Color Admixtures

LM Scofield Company, Los Angeles, CA. (213) 723-5285 – Color C-12 Mesa Beige
Solomon Colors Inc, Rialto, CA. (866) 747-2656 – Color Thyme 238

Metal Color Finishes

Tiger Drylac, Ontario, CA. (800) 243-8148 – Color RAL 6005 (Green) and RAL 9005 (Black) and 38/30028 (Brick Red)

Gravel Mulch

West Coast Sand and Gravel, Northern and Central California, CA. (800) 734-3053
Size 3/4" - 1 1/2" washed crushed rock. Color Tan
George Reed, Inc., 140 Empire Ave., Modesto, CA. (877) 823-2305 - Size 3/4" - 1 1/2" washed crushed rock. Color Tan
Teichert (Corporate Office), 3500 American River Drive, Sacramento, CA. (916) 484-3011
Size 3/4" - 1 1/2" washed crushed rock. Color Tan

Maccaferri Inc, Sacramento, CA. (916) 371-5805

All cobbles, boulders and gabion rock must be full and intact rocks and not broken pieces. Cobbles are to be smooth and oval-shaped.

5. Sustainable Practices

Sustainability is the "...endurance of systems and processes." (Wikipedia, 2016).

Determined application of sustainable practices and processes with the intention of living in environments that are in balance, healthy and productive across connections and systems ranging from the natural to social, is a goal and frame of reference for planners of projects within the State Route 99 corridor.

Among the many features available to us that provide opportunities to contribute toward endurance of a healthy ecosystem include **water, air, soil and plants**.

Water availability and conservation are topics of perennial concern in the State of California. Methods to conserve and minimize water consumption used in landscapes within the corridor include selection of drought tolerant plants, use of "Smart" irrigation controllers that are linked to internet weather stations, use of flow sensors that automatically shut off an irrigation system if there is a leak or breakage, use of bubblers or drip irrigation systems to place water only where needed at each plant and operation of irrigation systems at night to minimize evaporation. Water quality and soil erosion are discussed in the Appendices under "Slope

Stabilization and Best Management Practices".

Use of non-potable water: Most often non-potable water has salt levels that are detrimental to plants and particularly to soil structure. To rid soil of salt build-up with use of non-potable water, more water has to be applied to the soil in order to leech out the salts. Leeching does not rid the soil of salts. It simply takes the salts to a deeper level of the soil causing damage to lower soil horizons. Only when the non-potable water has a chemistry that is similar to potable water, yet is not drinkable, is the use of non-potable water considered sustainable. Also refer to Section 4, Plants, 4.1 Introduction.

Caltrans links to information on water conservation

http://www.dot.ca.gov/hq/LandArch/16_la_design/water_conserv/index.htm

and http://www.dot.ca.gov/water.htm

Air quality in Central California is the subject of state and local planning and management. Although it is not within the scope of this document to address the issue at large, there are sustainable practices that can be implemented when planning transportation construction projects within State Route 99 to minimize airborne particulates. Soil erosion exposes raw earth to heat, thus producing dry particles that can become airborne by the strong winds in the Central Valley. See the Section B on Soil Stabilization and Best Management Practices in the Appendices for methods to reduce and prevent soil erosion. In addition, maintaining dust control by watering during construction is required for projects within the corridor. In the landscape, open soil areas are mulched with gravel, stones, boulders and arbor mulch to keep soil in place, to prevent evaporation of soil moisture and to keep down weeds. Areas planted with shrubs and ground covers will also reduce soil exposure to wind. Finishes on metals are applied in large plants specifically designed to handle large sizes and quantities of metal fabrications typically used in large highway projects and are not applied on the project site except for minor touch ups with paint. Conveyance of materials and supplies using the least amount of fossil fuel, either through purchasing locally or shipping by rail, is another way in which construction projects can minimize their contribution of airborne particulates. Avoidance of chemical sprays in the landscape and during the construction of highway features is yet another way to minimize air pollution. Finally, including in the transportation network, provisions for bicycle ways, pedestrian walkways and mass transit will further reduce air pollution.

Soil structure and health is maintained when sustainable practices are employed in its care. Like any living system, soil requires water and nutrients. It also requires minerals, organic matter and porosity. It supports and maintains a symbiotic relationship with soil organisms and the wider ecosystem where the plants that it supports ultimately create an atmosphere that nourishes the soil. Use soil in the installation of plant materials that is loamy in character. Any top soil to be used or native soil must be analyzed by a soil and plant laboratory for suitability for use on the project site and with the plant materials specified. Sustainable practices include tilling the soil only once during planting and tilling only when the soil is at an optimum condition with a medium moisture content (not wet and not dry). Repeated tilling causes the soil structure to break down. Place two layers of sheet cardboard in overlapping layers on top of the tilled soil after planting trees and shrubs. For areas planted with groundcover, install the sheets first, then make "X" cuts in the paper and install groundcover plants. The sheet cardboard holds in moisture and reduces weeds. On top of sheet cardboard, place a 2-inch layer of compost followed by a 3-inch deep top dressing of arbor mulch. During maintenance, keep small diameter clippings on site rather than hauling away and place around shrubs and trees except those plants that are mulched with gravel or stones. Chip shrub and tree wood debris and use as arbor mulch on site. Do not re-use any part of the Eucalyptus species or include invasive species listed on the California Invasive Plant Inventory Database in the landscape. Other products to retain soil moisture and to prevent erosion on relatively flat terrain are gravel and stones. Protect soil from compaction.

Refer to the Central Valley Friendly Landscaping website:

http://ucanr.edu/sites/cvlandscape/Central_Valley_Friendly_Guidelines/Nurture_the_soil

Plants considered to be sustainable are drought tolerant, low maintenance, minimally susceptible to pests and diseases, are appropriate for planting in the microclimate where the project is located and are of a size when mature that extensive pruning to keep the plants within the bounds of the landscaped area is not required. In addition, plants used in the highway landscape must not be listed in the California Invasive Plant Inventory Database, http://www.cal-ipc.org/paf. Why these criteria contribute to a sustainable landscape is due to their requiring minimal resources to remain viable and healthy.

No plant is exempt from of the impacts of pests and diseases; however some species are more resistant than others. The nursery industry develops new cultivars over time that are stronger and more resistant. Control of pests and diseases and fertilizers should rely on certified organic materials that are listed with the Organic Materials Research Institute, http://www.omri.org. Select plants for highway projects from the master plant list in this plan.

6. Landscape Maintenance

Detailed description and guidance on landscape maintenance procedures and methods within the Caltrans right-of-way are found in the Caltrans Maintenance Manual Volume 1 Chapter E:

http://www.dot.ca.gov/hq/maint/manual/maintman.htm

Caltrans' budgets for landscape maintenance are limited. In the event the landscape maintenance costs exceed the amount available to Caltrans, a Caltrans Freeway Maintenance Agreement and Landscape Maintenance Agreement should be entered into that enables part of the maintenance to be undertaken by non-Caltrans staff. A sample agreement can be found in Section E of the Appendices to this document, and is available from Caltrans HQ in Sacramento. Non-Caltrans staff for landscape maintenance must adhere to the requirements of Caltrans for roadside safety.

If non-Caltrans staff agrees to undertake a portion of the Landscape Maintenance work, then landscape maintenance adoption signs should be placed in prominent locations within each area that is adopted by the city, business or by volunteers. These signs should include the details of the adoptees involved and should be securely installed with easily replaceable panels to accommodate changes in the maintenance agreement. Standard "Adopt-a-Highway" sign details are available from Caltrans. However, it is recommended that a unique design be created that reflects the level of involvement by the adoptee, volunteers and staff who will be on site to undertake the maintenance.

7. Recommendations for Implementation

The State of California Department of Transportation has published a State Route 99 Corridor Enhancement Master Plan, http://www.dot.ca.gov/dist6/99masterplan. Refer to Chapter 5, "Implementing the Plan". This document is described as a guide for public and private sector decisions in the development of the Route 99 Corridor by setting specific improvement approaches and themes.

Options for implementing the StanCOG Route 99 Corridor Enhancement Plan could be accomplished through cooperative agreements between Caltrans and single to multiple public agencies such as the County and local municipalities; or the plan could be implemented through individual Caltrans highway contracts as they emerge. Physical, budgetary and legislative constraints would play a large part in how projects are packaged. The StanCOG State Route 99 Corridor Enhancement Plan applies to all new projects within the corridor. The projects may range from new and reconfigured interchanges and mainline to smaller landscape replacement or soundwall projects. See Section C in the Appendices for Funding Opportunities.

The concepts shown in this document are intended to be used as the model for implementing the design of structures and landscaping into existing and proposed road configurations. Realizing that individual site configurations vary, the designer is encouraged to consider the following:

- What are the principal elements within the concept for each theme?
- How will I include the principal elements in the project, maintaining the overall theme and design intent?

For example, the agricultural theme design includes parallel lines of planting to represent rows of trees in an almond orchard and a linear cobbled swale cutting across the design representing an irrigation canal. By changing the orientation and location of these linear elements, the designer is able to fit the design within existing site constraints.

All options for implementation must include Caltrans coordination, approvals and conformance with their standards for construction documents.

8. Cost Estimating

8.1 Assessment of Cost Per Acre

"The California Department of Transportation has available cost-per-acre data for landscaping. While the costs reflect a basic design that includes trees, erosion control and shrubs and does not reflect the level of landscaping shown in the design concepts, the data can be used as a baseline upon which to add the costs required to construct the concepts provided in this planning document.

"The source of the following "Caltrans Highway Planting Cost per Acre and Water Assessment Fee Limits" is a May 4th 2011 memorandum published by the California Department of Transportation Headquarters, Principal Landscape Architect Landscape Architecture Program. Omitted from the text below are costs associated with years prior to 2013:

"Current maximum cost per acre and water assessment fee limits for highway planting are listed by fiscal year below. The costs are shown for both one and three-year plant establishment periods. Design for safety, roadside management and storm water features shall be included in the scope of all projects, but the related project costs are not to be included when determining the maximum cost per acre.

"Three years of plant establishment shall be included with the contract for highway planting projects (including Highway Planting, Highway Planting Restoration, Re-vegetation, and Replacement Planting, as defined in the Project Development Procedures Manual). A three-year plant establishment period assures that plants are healthy and established, and the irrigation systems function as planned. This policy applies to highway planting projects within State right-of-way regardless of the funding source. A plant establishment period of less than three years shall receive concurrence from District Maintenance and District Landscape Architecture through the approval of the Project Report and approval from the Landscape Architecture Program shall be in a concurrence memo attached to the Project Report. A plant establishment period of less than three years may be justified when there will be a benefit to the State.

"If cost over-runs occur after project programming and prior to the programmed year, additional funds may be available from District or program savings. If funds are not available to accommodate cost over-runs, the district must determine what changes can be made to the project to keep within the programmed amount and minimize the impact to the plant establishment period and purpose and need of the project. If cost changes are unavoidable, a Program Change Request should be submitted to the Project Management Program as early as possible in the project development process. If no cost reduction alternatives are available, the project may need to be delayed and reprogrammed when funds become available.

"Maximum highway planting cost/acre including a three-year plant establishment period are:

2013/14 FY (1/14 base year for 2014 SHOPP)	$52,000/ac
2014/15 FY (1/15)	$52,700/ac
2015/16 FY (1/16 base year for 2016 SHOPP)	$53,400/ac
2016/17 FY (1/17)	$54,100/ac

"Maximum water assessment costs/acre are:

2013/14 FY (1/14 base year for 2014 SHOPP)	$1,640/ac
2014/15 FY (1/15)	$1,660/ac
2015/16 FY (1/16 base year for 2016 SHOPP)	$1,680/ac
2016/17 FY (1/17)	$1,700/ac

"Projects shall be identified in the 10-Year SHOPP Plan prior to developing Project Initiation Documents for SHOPP candidate projects. It is imperative that the cost and schedule of every un-programmed project be reviewed annually to ensure they are current, complete and accurate.

If you have any questions regarding this memo, please contact Suzy Namba, Chief, Office of Landscape Architecture Coordination and Planning, at (916)-654-2594 or email at suzy _namba@dot.ca.gov."

8.2. Cost Estimates

The document below is a useful tool for determining construction cost estimates for landscaped areas and structures aesthetics for highway improvement projects within interchanges and straight sections of State Route 99. The costs are itemized for each design theme. All costs will require adjustment to account for physical configuration and size of individual projects, inflation factors and design refinements as a project moves through the process of developing construction documents for contractors to review and submit bids for construction.

SR99 CORRIDOR ENHANCEMENT PLAN
ORDER OF MAGNITUDE ESTIMATED CONSTRUCTION COSTS FOR LANDSCAPING AND STRUCTURES AESTHETICS
Date: November 1, 2016

LANDSCAPE	Agricultural		Light Industrial-Commercial		Riparian		Urban	
	Interchange: (Cost Per Quadrant)	Mainline: Includes Both Sides (Cost Per Mile)	Interchange: (Cost Per Quadrant)	Mainline: Includes Both Sides (Cost Per Mile)	Interchange: (Cost Per Quadrant)	Mainline: Includes Both Sides (Cost Per Mile)	Interchange: (Cost Per Quadrant)	Mainline: Includes Both Sides (Cost Per Mile)
TOTAL LANDSCAPE COST	$ 913,204		$ 646,993		$ 793,172		$ 895,450	
INTERCHANGE LANDSCAPE COST PER SQUARE FOOT	$ 6.03		$ 4.27		$ 5.24		$ 5.91	
MAINLINE LANDSCAPE COST PER MILE		$ 616,281		$ 601,180		$ 722,449		$ 576,439

NOTES ON LANDSCAPE COSTS

Additional factors that will need to be considered:
- The landscape may be part of a larger project.
- The landscape may be a stand alone project.
- The water source for irrigation may be existing or new.
- Storm water management requirements for each interchange will vary.

AESTHETIC FEATURES	Agricultural		Light Industrial-Commercial		Riparian		Urban	
	Interchange: (Cost Per Quadrant)		Interchange: (Cost Per Quadrant)		Interchange: (Cost Per Quadrant)		Interchange: (Cost Per Quadrant)	
AESTHETIC FINISHES AND COMPONENTS	$ 410,421		$ 374,000		$ 346,143		$ 552,483	

NOTES ON AESTHETICS COSTS

1. Costs obtained from the 2014 Pelandale Bridge Project have been increased by 6% to reflect year 2016 estimated construction costs.
2. The costs shown here are for aesthetic finishes and features only and do not include basic structural components of an interchange such as bridges, retaining walls, ramps, paving and lighting
3. Soundwall and retaining wall costs for mainline between interchanges will need to be determined.

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-275

Print

RESOLUTION AMENDING THE FISCAL YEAR 2016-2017 ANNUAL OPERATING AND CAPITAL IMPROVEMENT BUDGET

WHEREAS, a financial analysis has been completed and it has been determined that a budget adjustment is required to the Annual and Capital Improvement Budgets of the City of Modesto for Fiscal Year 2016-17,

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves amending the Fiscal Year 2016-17 Annual Operating and Capital Improvement budgets as shown in **Exhibit A**, which is **attached** hereto and incorporated by reference herein.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to take the necessary steps to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following votes:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold
NOES:	Councilmembers:	None
ABSENT:	Councilmembers:	None

ATTEST: _____
STEPHANIE LOPEZ, City Clerk

ADAM U. LINDGREN, City Attorney

EXHIBIT A

FISCAL YEAR 2016-17

COMMUNITY AND ECONOMIC DELVELOPMENT

A budget adjustment is necessary for a total cash transfer of $94,954 from various Community Facilities District (CFD) Funds to each of their corresponding Capital Funds. This is to correct the fund balances after incorrect calculations of year-end journals related to Fleet Services expenses in previous fiscal years. The total $94,954 includes: $38,948 from Fund 3200 (Village One) to Fund 3201 (Village One – Capital Fund); $721 from Fund 3265 (NorthPointe CFD S.R. Fund) to Fund 3266 (NorthPointe CFD – Capital Fund); $1,850 from Fund 3270 (Carver/Bangs Pelandale/Snyder CFD) to Fund 3281 (Pelandale/Snyder CFD Fund – Capital Fund); and $53,435 from Fund 3290 (Village One #2 CFD Fund) to Fund 3295 (Village One #2 CFD Fund – Capital Fund).

FIRE DEPARTMENT

A budget adjustment is necessary in the amount of $1,766,970 to increase the expense and revenue budgets for the 2017 Emergency Flood Aid project in Fund 1341 (Grants - Operation Grants Reimbursable Fund). The City received notice about reimbursement funding at the State level related to the Emergency Flood Storms and it is estimated that the payroll and non-payroll expenses will require an increase of approximately $1,766,970. This budget adjustment is required in order track expenses for the purpose of tracking against this emergency situation and will be critical in receiving appropriate reimbursement from the State.

HUMAN RESOURCES

A budget adjustment is necessary to recognize $560,106 in unbudgeted revenue for reimbursement for a settlement payment from excess insurance, and the utilization of $250,000 from the Worker's Compensation Fund, 5320, fund balance, and reallocate said funds to the discretionary expense budget for costs associated with claim payments.

UTILITIES

A budget adjustment is necessary to transfer $65,000 from Water Fund Reserves, as well as, establish a transfer from the Wastewater Fund (4210) to the Water Fund (4100) in the amount of $65,000 to create Capital Improvement Project #101030, Customer Services Carpet Replacement. The existing carpet in the Customer Services area of Tenth Street Place is lifting and tearing, posing a tripping hazard.

A budget adjustment is necessary to transfer $200,000 from Wastewater Reserves to establish Capital Improvement Project #101032 for the Rouse Easement Improvement project. This project provides site improvements to 1850 Rouse, which is an existing lot owned by the City as an easement for the existing Emerald Sewer Trunk. The city will be partnering with the Parks Planning Development and a neighborhood committee to maintain the lot as a garden area.

A budget adjustment is necessary to transfer $1,500,000 from Wastewater Fund Reserves to establish Capital Improvement Project #101031 for the Tertiary Phase 1A Membrane Replacement project. The existing membrane units are failing and need to be replaced to continue treatment.

PUBLIC WORKS

A budget adjustment is necessary to increase the Intergovernmental Services – Other account by $100,000 for the 5810 Tenth Street Place expense budget in order to process future TSP Joint Power Agreement invoices for the remainder of the fiscal year. The monthly invoices are coming in higher than originally budgeted as they include costs related to security enhancements. Once all expenses are incurred, a year-end true-up will be performed to ensure that the City and County are paying the appropriate amount for the project.

A budget adjustment is necessary to transfer $855,000 from Green Waste Fund Reserves, Fund 4892, as follows; increase Cost Center 56020, Green Waste Collection, Appropriation Unit C expense budget in the amount of $236,000, and, increase Cost Center 56040, Community Forestry, Appropriation Units A & C expense budgets totaling the amount of $619,000. This is due to unforeseen labor costs related to the Winter Storms of 2017.

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-276

RESOLUTION APPROVING A MEMORANDUM OF UNDERSTANDING BETWEEN THE MODESTO SUNRISE ROTARY AND THE CITY OF MODESTO REGARDING THE INSTALLATION AND MAINTENANCE OF A PARK SIGN IN GARRISON NEIGHBORHOOD PARK AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE MOU

WHEREAS, in late 2016, staff met with members of the Modesto Sunrise Rotary regarding the park sign in Garrison Neighborhood Park, and

WHEREAS, the Modesto Sunrise Rotary wants to donated a pre-cast concrete monument park sign at Garrison Neighborhood Park, and

WHEREAS, meetings were held with Modesto Sunrise Rotary members and City staff to obtain agreement on the project scope, and

WHEREAS, City staff has prepared a Memorandum of Understanding (MOU) to allow the Modesto Sunrise Rotary to install and maintain the donated pre-cast concrete monument park sign on City property, and

WHEREAS, the MOU outlines the terms of the agreement for both parties.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a Memorandum of Understanding between the Modesto Sunrise Rotary and the City of Modesto regarding the installation and maintenance of a park sign in Garrison Neighborhood Park.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the MOU.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the Resolution adopted by the following vote:

RESOLUTION ACCEPTING THE BID AND AWARDING A CONTRACT TO AVAIL TECHNOLOGIES, INC., STATE COLLEGE, PA, FOR THE PURCHASE OF 18 AVL EQUIPMENT UPGRADES AND INSTALLATION FOR THE MODESTO AREA EXPRESS (MAX) BUS FLEET IN THE AMOUNT OF $367,509,AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, on May 9, 2017, a Request for Bids (RFB) was issued, soliciting proposals from qualified firms, and

WHEREAS, Avail Technologies, Inc. submitted a proposal that was determined to be reasonable and cost effective, and

WHEREAS, the RFB conformed to the formal bid procedures in Modesto Municipal Code section 8-3.203, and staff recommends awarding the contract to the lowest responsive and responsible proposal submitted by Avail Technologies, Inc., and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid. The award of contract for the purchase of AVL equipment upgrades, to Avail Technologies, Inc., State College, PA, conforms to the Modesto Municipal Code, 8-3.203, and

WHEREAS, on February 28, 2017, Council, by Resolution No. 2017-86, implemented a spending freeze in order to maintain the fiscal sustainability of the City. The City Manager's Office approved an exception to this freeze for this procurement due to the increased functionality the new AVL system will provide for the MAX system, granting agency expectations and keeping MAX equipment in a state of good repair.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the bid and awards the contract to Avail Technologies, Inc., State College, PA, for the purchase of 18 AVL systems for the Modesto Area Express (MAX) bus fleet in the amount of $367,509.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the agreement in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-278

RESOLUTION APPROVING AN AGREEMENT WITH SCS ENGINEERS, MODESTO, CA FOR THE PREPARATION OF THE SOLID WASTE RATE AND FEE STUDY IN AN AMOUNT NOT TO EXCEED $45,000 FOR THE IDENTIFIED SCOPE OF SERVICES, PLUS $6,750 FOR ADDITIONAL SERVICES (IF NEEDED), FOR A MAXMIMUM TOTAL AMOUNT OF $51,750, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Modesto has service agreements with Gilton Solid Waste and Bertolotti Disposal to provide solid waste and recycling services to approximately 57,000 residential and over 11,000 commercial and industrial customers in Modesto, and

WHEREAS, the City of Modesto provides tree trimming services to over 81,000 trees in our urban forest and street and alley green waste collection, and

WHEREAS, the City owns and operates the Modesto Composting Facility which processes over 65,000 tons of residential and commercial green waste, as well as the forestry/green waste diversion material instead of it being disposed of in a landfill, and

WHEREAS, the Modesto City Council does not set the actual rate the collection companies can charge to pick up the garbage; instead it sets the maximum rates that the collection companies can charge for each type of service, and

WHEREAS, rate reviews are conducted on an annual basis every July 1, and the City last conducted an annual rate review and adopted new rates on July 1, 2016, and

WHEREAS, the City has not conducted a comprehensive review of the Solid Waste rates and fees, or cost of services, for more than 10 years, and

WHEREAS, there have been many factors over that time frame that have created severe negative impacts on the solid waste fund budgets, and

WHEREAS, the tree pruning cycle is currently at 12 years; new environmental

regulations such as AB 32, AB 341, AB 1826, and SB 1383 require compliance; the City has aging and failing equipment; there have been severe staffing reductions; and State Agencies are requiring major infrastructure changes, and

WHEREAS, it was determined that the Solid Waste Division needed a comprehensive analysis of the City's residential, commercial, and industrial solid waste and recycling rates, along with associated fees for service impacts, recycling, illegal dumping, green waste diversion, and composting that would sustain the enterprises while protecting the interests of the community and meeting regulatory requirements, and

WHEREAS, the staff does not have the level of expertise required to conduct such a comprehensive cost of service study, therefore the City Manager approved staff's request to prepare and issue a Request for Proposal (RFP) and

WHEREAS, there were four firms that responded to the RFP and the City had a bid review team of three who reviewed and evaluated the proposals according to the evaluation criteria set forth in the RFP, and

WHEREAS, the proposals were all independently scored and then tallied by the Purchasing Agent for the City, and the award given to the proposal with the highest number of points received, and

WHEREAS, the funding for the consultant services agreement will come from the Professional Services account (53300) equally divided from the following current FY 2017-2018 budgeted funds and cost centers: Forestry, Solid Waste Management, and Compost Operations.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an agreement with SCS ENGINEERS, Modesto, CA for the preparation of the Solid Waste Rate and Fee Study in an amount not to exceed $45,000 for

the identified scope of services, plus $6,750 for additional services (if needed), for a maximum total amount of $51,750.

BE IT FURTHER RESOLVED, that the Interim City Manager, or his designee, is hereby authorized to execute the Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-279

RESOLUTION APPROVING THE QUARTERLY FUEL ADJUSTMENTS TO THE MAXIMUM RATE SCHEDULE FOR CITY SOLID WASTE COLLECTION SERVICES OF $0.08 PER MONTH FOR RESIDENTIAL SERVICES AND $.07 PER CUBIC YARD PER MONTH FOR COMMERCIAL SERVICES, RETROACTIVE TO JULY 1, 2017, AND RESCINDING RESOLUTION NO. 2017-13

WHEREAS, with the adoption of Ordinance No. 3068-C.S. in November of 1997, the City no longer sets rates for the collection of garbage in Modesto, and instead performs a comprehensive review of cost information submitted by the contract garbage haulers, and

WHEREAS, the City sets the maximum rate that the haulers may charge for the various types of services provided under the contracts based on cost data provided by the lowest cost hauler, and

WHEREAS, Section f (2) of the City's Service Agreements with its solid waste collectors requires that when the City makes adjustments to the collection services provided under the Agreements, any additional costs should be covered by adjustments to the maximum rates, and

WHEREAS, in addition, maximum rates for solid waste collection services are reviewed annually as requested by the City's garbage collection companies, and

WHEREAS, the City conducted an analysis using the audited financial statements provided by the garbage haulers, supplemental data provided by the garbage haulers, and fuel price information and forecast prices developed by the United States Department of Energy, and

WHEREAS, new maximum rates were calculated, and a recommendation for a new maximum rate schedule was developed, which included a recommendation that

RESCINDED
JUN 12 2018
THIS RESOLUTION WAS RESCINDED BY MODESTO CITY COUNCIL RESOLUTION NO. 2018-241 & 2018-242

quarterly adjustments to the fuel component of the maximum rates be made, and

WHEREAS, staff has made adjustments related to the fuel component of the maximum rates and has incorporated the fuel component adjustments into the schedule of the Maximum Charges for Garbage Service **attached** hereto, marked **Attachment A,** July 1, 2017, and incorporated herein by reference, and

WHEREAS, fuel adjustments occur on a quarterly basis if needed. The fuel rates were analyzed for the April 1, 2017 adjustment, and it was determined that there was not a significant change to make the adjustment, and

WHEREAS, on January 10, 2017 by Resolution No. 2017-13, the City Council approved the schedule for Maximum Charges for Garbage Service retroactive to January 1, 2017, and incorporated by reference, and

WHEREAS, this action is to adjust maximum rates for existing services and therefore does not require environmental review, and

WHEREAS, it was found and determined by the Council of the City of Modesto that the quarterly adjustments to the fuel component of the maximum rates should be made.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the **attached** quarterly fuel adjustments to the Maximum Rate Schedule for City solid waste collection services of $0.08 per month for residential services and $.07 per cubic yard per month for commercial services retroactive to July 1, 2017.

BE IT FURTHER RESOLVED, that adjustments to the Maximum Rate Schedule for Garbage Services, **Attachment A**, dated July 1, 2017 are approved and shall become effective retroactive to July 1, 2017 and shall remain in effect until rescinded.

BE IT FURTHER RESOLVED that Resolution No. 2017-13 is hereby rescinded effective July 1, 2017.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

ATTACHMENT A
July 1, 2017

MAXIMUM CHARGES FOR GARBAGE SERVICE

STANDARD CONTAINERS

Maximum Monthly Rates (Once a Week Pickup Service)

Standard container service maximum rates shall include the following:

- One 96-gallon container for garbage and one 96-gallon container for organics recycling
- Two bulky item collections per year by appointment
- Maintenance of City trees, including collection & composting of Green Waste/Forestry materials
- Removal of illegally dumped items in streets and alleys
- Drop off program for Household Hazardous Waste at the HHW Facility

Standard container service customers may opt for smaller containers; however, maximum rates apply. Containers must be placed in a location set forth in Section 5-5.111 of the Municipal Code.

1. Standard container service

a. The maximum rate for new sign-ups for service or changes in service that occur after October 1, 1996, shall be **$30.60 per month** regardless of size of container. A fuel component of $.94 per month is included in the maximum rate for January 2017 through March 2017. The fuel component may be adjusted quarterly as needed.

b. The maximum rate for each additional garbage container shall be **$21.44 per month, and $10.27 per month** for each additional organics recycling container.

2. 60-gallon container service (grandfathered customers)

a. The maximum rate for customers with 60-gallon containers who subscribed to service at an address prior to July 1, 1996 and who have not changed their service address shall be **$24.19 per month**. A fuel component of $.94 per month is included in the maximum rate for January 2017 through March 2017. The fuel component may be adjusted quarterly as needed

b. The maximum rate for each additional 60-gallon garbage container shall be **$20.90 per month.**

3. **Fuel Component adjustments** - The fuel component will be analyzed quarterly and adjustments shall be made as needed. The adjustment shall be based on the average price of fuel for a preceding quarter as follows: July 1/January-March; October 1/April-June; January 1/July-September; April 1/October-December. Average prices shall be determined based on published prices for California from the Department of Energy, Energy Information Agency.

90-gallon	$22.95	$45.90	$68.85	$91.80	$114.75	$137.70

1. **Weekly rental/Detachable Containers** - Shall not exceed the rate for 1 pick-up per week for each size container.

2. **Fuel Component** - A fuel component of $.82 per cubic yard per month per pick-up is included in the maximum rate for January 2017 through March 2017. The fuel component shall be analyzed quarterly and adjustments shall be made as necessary. The adjustment shall be based on the average price of fuel for a preceding quarter as follows: July 1/January-March; October/April-June; January 1/July-September; April 1/October-December. Average prices shall be

determined based on published prices for California from the Department of Energy.

DROP BOX CONTAINERS

1. **Pick up charge** - $248.22 per pick-up
2. **Rental** - $0.85 per day up to 7 day maximum rental
   - $3.00 per day for boxes kept 7 or more days without servicing
   - $10.00 per day for boxes kept 21 or more days without servicing
3. **Disposal charge** - Actual charge to be paid by customer. Garbage company will provide up to 40 CY Drop Box containers for above stated charges subject only to load limit of transfer vehicle. An AB 939 Green Waste Diversion Fee of $14 per ton is added to the disposal charges.

COMPACTORS

Front Loader Type:

Compactor Rates						
Container Size	NUMBER OF COLLECTIONS PER WEEK					
	1	2	3	4	5	6
3 CY	$354.24	$708.48	$1,062.72	$1,416.96	$1,771.20	$2,125.44
4 CY	$472.32	$944.64	$1,416.96	$1,889.28	$2,361.60	$2,833.92
6 CY	$708.48	$1,416.96	$2,125.44	$2,833.92	$3,542.40	$4,250.88

Roll-Off Types:

1. **6 CY to 40 CY**	$248.22 per pick-up
2. **Hospital waste compactors**	$265.00 per pick-up
3. **Washing compactor**	$30.00
4. **Disposal Charge:**	Actual charge to be paid by customer
5. **AB 939 Green Waste Diversion Fee**	$14.00 per ton

EXTRA PICKUPS

1. **Standard containers or equivalent**	$3.50 plus $2.30/container
2. **Detachable containers**	$12.00 plus $4.15/cubic yard

SPECIAL SERVICE CONDITIONS

In situations where none of the above maximum rates reasonably apply, the cost of service is to be negotiated between the garbage company and the customer.

DETACHABLE CONTAINER ONLY
REPLACEMENT AND CLEANING SERVICE

1 CY	1½ CY	2 CY	3 CY	4 CY	5 CY	6 CY
$10.12	$11.00	$12.10	$15.40	$20.24	$25.08	$29.92

NOTATIONS

1. The above maximum rates include a $0.25 per month residential recycling fee; a $0.05 per cubic yard ($0.22/cubic yard/month) commercial recycling fee; and a $5.00 per pull ($0.25 per ton) industrial recycling fee; a $0.05 per cubic yard ($0.22/cubic yard/month) commercial litter abatement fee.
2. The above residential maximum rates include a $4.26 per month per household AB 939 Green Waste Diversion Fee.
3. The above commercial bin and front-loader compactor maximum rates include an AB 939 Green Waste Diversion Fee of $7.79 per yard/month.
4. Carpenter Road Landfill Mitigation Fees for residential shall be $.50 per household per month and commercial wastes shall be $.91 per month for 1 cubic yard collected 1 time per week. Carpenter Road Landfill Mitigation fees on Industrial wastes shall be $5.00 per pull on industrial wastes.
5. Pursuant to Section 11-6.16(c)(2) of the Modesto Municipal Code, the garbage company may require a deposit equivalent to two (2) months service charge from customers prior to beginning service. The deposit will be credited back to the customer after 18 months under specified conditions.

RESOLUTION AUTHORIZING STAFF TO AMEND THE EXISTING PURCHASE AGREEMENT WITH CENTRAL VALLEY ELECTRIC, MODESTO, CALIFORNIA, INCREASING THE AMOUNT FROM $350,000 TO $575,000

WHEREAS, the City of Modesto entered into a contract purchase agreement No. 1314-17 with Central Valley Electric in 2013 for an estimated annual cost of $70,000, totaling $350,000 over a five year period, and

WHEREAS, the majority of electrical repairs are performed by City staff Electricians, and

WHEREAS, occasionally contractors are used when electrical repair and preventative maintenance workload exceeds the staff hours available to perform the work, and

WHEREAS, in order to ensure the proper safety for employees and the public the work must be expedited, and

WHEREAS, due to exigent circumstances, the contract amount has been exceeded by $101,440, and

WHEREAS, staff estimates an additional $123,560 will need to be expended between July 1, 2017 and December 31, 2017 for electrical work essential to public and employee safety, and

WHEREAS, Modesto Municipal Code Section 8-3.204(c), Exceptions to the Formal Bidding Procedures, provides that the Purchasing Manager has the authority to exempt certain purchases from the formal bidding process due to exigent circumstances. The Purchasing Manager recommends staff be allowed to increase spending authority

under this purchase agreement to $575,000 to ensure that electrical repair services are not interrupted and needed repairs are not significantly delayed, and

WHEREAS, contracted services need to be available in the event of an emergency condition or specific job and serve to supplement existing City forces.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the existing purchase agreement with Central Valley Electric, Modesto, California be increased from $350,000 to $575,000.

BE IT FURTHER RESOLVED that the Acting City Manager, or his designee, is authorized to execute the Agreement.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-281

RESOLUTION APPROVING AN AGREEMENT WITH CAROLLO ENGINEERS, INC., WALNUT CREEK, CA, FOR ON-CALL HYDRAULIC WASTEWATER COLLECTION SYSTEM MODELING SUPPORT SERVICES FOR A TERM OF ONE YEAR WITH TWO ONE-YEAR EXTENSIONS AT THE SOLE DISCRETION OF THE CITY, NOT TO EXCEED $75,000 PER YEAR FOR A TOTAL COST OF $225,000 OVER THE TERM OF THE AGREEMENT, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT, AND UP TO TWO, ONE-YEAR EXTENSIONS

WHEREAS, a hydraulic model of the City's wastewater collection system was developed in 2005 as part of the City's 2007 Wastewater Master Plan, and

WHEREAS, the model was previously used to analyze the City's wastewater collection system and evaluate development specific projects and proposed improvements, and

WHEREAS, on September 2, 2014, by Resolution No. 2014-334, Council approved an agreement with Carollo Engineers, Inc. (Carollo), for consultant services to update the Wastewater Master Plan, and

WHEREAS, the scope of work included updating, adding new functionality, and recalibrating the City's current hydraulic wastewater collection system model, and

WHEREAS, modeling support is needed for timely analysis related to design of wastewater collection system infrastructure and to assist/optimize wastewater collection system operations, and

WHEREAS, Carollo was selected to develop the City's 2007 Wastewater Master Plan and built a hydraulic model as part of that work, and

WHEREAS, Carollo has been providing wastewater collection system hydraulic modeling support for several years, typically related to a specific task, such as the Tivoli Specific Plan Area Project, and

WHEREAS, when on-call hydraulic wastewater system modeling services are required on an "as needed" basis, written task orders will be issued to the consultant identifying the scope, cost, and schedule to complete the specific task, and

WHEREAS, on February 28, 2017, Council approved Resolution No. 2017-86 implementing a spending freeze in order to maintain fiscal sustainability of the City, and

WHEREAS, as allowed by this resolution, the City Manager's Office approved an exception to this freeze for this procurement, and

WHEREAS, justification for this exception is that the projects were previously approved and adopted as part of the current Fiscal Year 2016-2017 Capital Improvement Program, are needed to provide safe and reliable utilities, and a budget transfer from reserves to provide the required services, will not be required, and

WHEREAS, in accordance with Modesto Municipal Code 8-3.204(a) Exceptions to Formal Bidding Requirements, this agreement for professional services is exempt from the bid requirement, and

WHEREAS, therefore, staff recommends approval of the above on-call consultant agreement for hydraulic wastewater collection system modeling support services,

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an Agreement with West Yost Associates, Inc., Davis, CA, for On-call Grant Writing Services for various City projects for one year, with two one-year

extension options, at the sole discretion of the City, in an amount not to exceed $45,000 per year.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the agreement in a form approved by the City Attorney, and up to two one-year extension options.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-282

Print

RESOLUTION APPROVING A FIRST AMENDMENT TO THE AGREEMENT WITH BARTKIEWICZ, KRONICK & SHANAHAN, P.C., SACRAMENTO, CA, TO PROVIDE LEGAL SERVICES FOR THE STATE WATER RESOURCES CONTROL BOARD SUBSTITUTE ENVIRONMENTAL DOCUMENT IN AN AMOUNT NOT TO EXCEED $35,000, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE FIRST AMENDMENT TO THE AGREEMENT

WHEREAS, the City provides water service to over 73,000 accounts and over 200,000 customers throughout the City of Modesto, the communities of Salida, Empire, Grayson, Del Rio, and portions of the Cities of Ceres and Turlock, and

WHEREAS, the City's water sources consist of approximately two-thirds groundwater and one-third treated surface water purchased from the Modesto Irrigation District (MID), and

WHEREAS, on September 15, 2016, the State Water Resources Control Board (SWRCB) released a revised Draft Substitute Environmental Document (SED) in support of Phase 1 of its Bay-Delta Water Quality Control Plan, which is over 1,850 pages, not including appendices, and

WHEREAS, the State proposes to take 40 percent of unimpaired flow from the Tuolumne River for fish and wildlife beneficial uses and salinity control, and

WHEREAS, this proposal will have a major impact to the existing water supplies and operations of the Don Pedro Reservoir, which is jointly operated by both MID and Turlock Irrigation District (TID), and

WHEREAS, this proposed action would severely impact the City's domestic water supplies, as the Tuolumne River is the source of Modesto's surface water, and

WHEREAS, the reduction of surface water would result in additional groundwater pumping to meet the City's municipal water demands, and will not be sustainable under the Sustainable Groundwater Management Act (SGMA), which was effective January 1, 2016, and

WHEREAS, in addition, the Modesto water rate payers have a substantial investment for the construction of the two phases of the Modesto Regional Water Treatment Plant, which has the capacity to ultimately treat more than 60 million gallons per day, and

WHEREAS, on December 6, 2016, by Resolution No. 2016-479, Council approved an agreement with Bartkiewicz, Kronick & Shanahan, P.C. (BKS) to provide legal services for the State Water Resources Control Board Substitute Environmental Document, and

WHEREAS, BKS has demonstrated that they are experts in California water law, and have recently assisted the City with several important water-related issues, and

WHEREAS, BKS has previously worked with the City on water-rights related issues for the North Valley Regional Recycled Water Program in 2015, and provided exceptional assistance and support, and

WHEREAS, on behalf of the City, BKS most recently prepared extensive comments to the Draft SED, and coordinated their efforts with MID, and

WHEREAS, these comments were submitted to the SWRCB in March 2017, and

WHEREAS, It is anticipated that the SWRCB will be issuing their findings in the summer 2017, and

WHEREAS, should the state prevail in increasing MID's unimpaired flow in the Tuolumne River, it will negatively impact the City's domestic water supplies, and

WHEREAS, staff recommends having BKS available to provide additional legal assistance for City regarding water-related issues, including water rights, current and future water supplies and attending/conducting workshops, and

WHEREAS, therefore, staff recommends approval of a first amendment to the agreement with BKS for legal services for the SWRCB SED, and

WHEREAS, on February 28, 2017, by Resolution No. 2017-86, Council approved implementing a spending freeze in order to maintain fiscal sustainability of the City, and

WHEREAS as allowed by this resolution, the City Manager's Office approved an exception to the freeze for this procurement, and

WHEREAS, justification for this exception is that the agreement was previously approved by Council, and this amendment is needed to provide safe and reliable utilities, and

WHEREAS, in accordance with Modesto Municipal Code 8-3.204(a) Exceptions to Formal Bidding Requirements, the first amendment to the agreement is for professional services and, therefore, exempt from the bid requirement,

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the First Amendment to the Agreement with Bartkiewicz, Kronick & Shanahan, P.C., Sacramento, CA, to provide legal services for the State Water Resources Control Board Substitute Environmental Document in an amount not to exceed $35,000.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the First Amendment to the Agreement in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-283

RESOLUTION REJECTING ALL BIDS RECEIVED FOR RFB NO. 1617-14 FOR RENTAL EQUIPMENT SERVICES AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO RE-RELEASE THE RFB AT A FUTURE DATE, WITH AN AMENDED SCOPE OF SERVICES AND AN UPDATED BIDDER NOTIFICATION PROCESS, FOR RENTAL EQUIPMENT SERVICES

WHEREAS, on March 29, 2017, staff advertised a Notice Inviting Bids for 1617-14 ("Rental Equipment Services"); and

WHEREAS, on May 9, 2017 staff received two bids; and

WHEREAS, upon further review, staff would like to amend the Scope of Services and update the bidder notification process due to comments from local vendors that the Request For Bid (RFB) was not received by some vendors; and

WHEREAS, staff believes that there should be a minimum of three rental equipment providers on the list; and

WHEREAS, staff recommends rejecting bids for Rental Equipment Services and re-bidding the project at a later date in accordance with Modesto Municipal Code section 8-3.203(e).

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby rejects proposals received for RFB No. 1617-214 for Rental Equipment Services.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to re-release an RFB at a future date with an amended Scope of Work.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-284

Print

RESOLUTION APPROVING A WATER SUPPORT SERVICES AGREEMENT WITH ENVIROGEN TECHNOLOGIES, INC., RANCHO CUCAMONGA, CA, FOR SUPPORT SERVICES TO WELL #274 AND WELL #295 WITHIN THE GRAYSON COMMUNITY WATER SYSTEM FOR A ONE-YEAR AGREEMENT WITH FOUR ONE-YEAR EXTENSION OPTIONS AT THE SOLE DISCRETION OF THE CITY, FOR AN ESTIMATED ANNUAL COST NOT TO EXCEED $125,500 AND $627,500 OVER FIVE YEARS, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Modesto provides water service to the Grayson Community through Well #274 and Well #295, which both have high nitrate levels, and

WHEREAS, in August 2002 the California Department of Public Health issued a Compliance Order directing the City to have a reliable treatment system in place by April 2003, and

WHEREAS, Basin Water, Inc. was awarded a contract to install an ion exchange treatment process to reduce the nitrate levels, and

WHEREAS, Basin Water, Inc. was later purchased by Envirogen Technologies, and the City has been on a month-to-month lease for nitrate treatment services with Envirogen Technologies for the last twelve years, and

WHEREAS, on October 11, 2016, City Council approved by Resolution No. 2016-412, an Equipment Lease to Purchase Agreement with Envirogen Technologies for the equipment used at Well #274 and Well #295, and

WHEREAS, at the end of the Equipment Lease to Purchase Agreement on October 31, 2019, Envirogen agrees to sell the equipment to the City of Modesto, and

WHEREAS, the wells with the Grayson Community Water System continue to have high nitrate levels, and

WHEREAS, the equipment leased under the Envirogen Technologies Lease to Purchase Agreement reduces nitrate levels by using an ion exchange treatment process, and

WHEREAS, City staff recommends approval of a Support Services Agreement for the Grayson wells with Envirogen Technologies of Rancho Cucamonga, CA, for an estimated annual cost of $125,500, and over five years of $627,500, and

WHEREAS, Modesto Municipal Code, Section 8-3.204(b), Exceptions to the Formal Bidding Requirements, allows the Purchasing Manager to exempt from the formal bidding requirements certain purchases that can only be met solely by a single article or process. In this case, the Purchasing Manager has determined that this Agreement is exempt because the City has been operating with this water support service with Envirogen for over 12 years, Envirogen currently owns the water treatment system, and removal and replacement of the existing equipment would be unnecessarily costly and could result in delays in service due to additional testing requirements.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves accepting a Water Support Services Agreement with Envirogen Technologies, Inc., Rancho Cucamonga, CA, for support services to Well #274 and Well #295 within the Grayson community water system, for a one-year term with four one-year extension options at the sole discretion of the City for an estimated annual cost not to exceed $125,500 and $627,500 over five years.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION CALLING A SPECIAL ELECTION FOR THE CITY OF MODESTO TO ANNEX TERRITORY TO CITY OF MODESTO COMMUNITY FACILITIES DISTRICT NO. 2007-1 (NORTH BEYER PARK #2)

WHEREAS, this Council did, on May 23, 2017, adopt its Resolution No. 2017-191 (Resolution of Intention to Annex) to indicate it intention to annex certain territory to the City of Modesto Community Facilities District 2007-1 (North Beyer Park #2) (the District) and authorize the levy of District special taxes within the territory proposed to be annexed (Annexed Territory), pursuant to Chapter 2.5 of Part 1 of Division 2 of Title 5 (commencing with Section 53311) of the California Government Code, commonly known as the Mello-Roos Community Facilities Act of 1982 (Act), and setting a hearing thereon, and

WHEREAS, notice of the hearing was duly published as required by law, as evidenced by the proof of publication on file with the City Clerk, and

WHEREAS, a map of the Annexed Territory, entitled "Proposed Boundaries of Annexation No. 1 to the City of Modesto Community Facilities District No. 2007-1 (North Beyer Park #2)" was recorded on June 19, 2017, in the Office of the County Recorded of Stanislaus, in Book 5 of Maps of Assessment and Community Facilities Districts, at page 62, and

WHEREAS, at the time and date set for the hearing July 11, 2017 pursuant to the Resolution of Intention to Annex, this Council held the public hearing, as required by the Act, related to the proposed annexation and the levy of the District special taxes within the Annexed Territory, and all other matters set forth in the Resolution of Intention to Annex, and

WHEREAS, at the hearing all persons desiring to be heard on all matters pertaining to the proposed annexation and the levy of the District special taxes within the Annexed Territory, and all other matters set forth in the Resolution of Intention to Annex, including all interested persons for or against the proposed annexation to the District and the levy of the District special taxes within the Annexed Territory were heard and considered, and a full and fair hearing was held thereon, and

WHEREAS, at the hearing evidence was presented to this Council on the matters before it, and this Council, at the conclusion of the hearing, was fully advised as to all matters related to the proposed annexation and the levy of the District special taxes within the Annexed Territory, and all other matters set forth in the Resolution of Intention to Annex, and

WHEREAS, written protests against the proposed annexation and the levy of the District special taxes within the Annexed Territory have not been filed with the City Clerk by 50 percent or more of the registered voters or six registered voters, whichever is more, residing within the District or residing within the Annexed Territory, or the owners of one-half or more of the land in the District, or in the Annexed Territory, and

WHEREAS, the Stanislaus County Registrar of Voters has certified there are less than 12 registered voters residing in the Annexed Territory; accordingly, the qualified electors are the landowners, and

WHEREAS, the City Clerk, being the Council's designated election official for purposes of the election herein called, has concurred in the election date herein set forth for the election.

NOW, THEREFORE, BE IT RESOLVED that the Council of the City of Modesto, acting as the legislative body of the City of Modesto Community Facilities District No. 2007-1 (North Beyer Park #2), hereby finds and determines as follows:

1. The foregoing recitals are true and correct

2. All prior proceedings taken with respect to the annexation of the Annexed Territory to the District, and the levy of the District special taxes within the Annexed Territory were valid and in conformity with the requirements of the Act. This determination shall be final and conclusive upon all persons.

3. The proposed annexation of the Annexed Territory to the District and the levy of the District special taxes within the Annexed Territory have not been precluded by majority protest pursuant to Section 53339.5 of the Act.

4. As stated in the Resolution of Intention to Annex, it is the intention of this Council, subject to the approval of the qualified electors of the Annexed Territory, to annex the Annexed Territory to the District and levy the District special taxes within the Annexed Territory. Upon such approval the Council will be authorized to levy the District special taxes within the Annexed Territory.

5. A special election is hereby called at which the question of levying the District special taxes within the Annexed Territory shall be submitted to the qualified electors of the Annexed Territory. The election shall be held in accordance with and subject to the Act, all of the terms of which shall, unless waived as herein provided, be applicable to such election. The ballot measure shall be substantially in the form **attached** hereto as **Exhibit A.**

6. Fewer than 12 persons have been registered to vote within the Annexed Territory for each of the 90 days preceding the close of the hearing referenced herein. Accordingly, the vote shall be by the landowners of the Annexed Territory, and each such landowner shall have one vote for each acre or portion thereof that he or she owns within the Annexed Territory. The ballots shall be distributed by mail with return postage prepaid, or by personal service, to each landowner, all as provided in Section 53326 of the Act.

Since the City Clerk has received an appropriate waiver of time limits and other requirements pertaining to the conduct of the election by the owner of all of the land in the Annexed Territory (the "Landowner"), the election shall be held on the 11th day of July 2017. The election shall be conducted by the City Clerk in the manner required by this resolution, the Act and applicable laws.

The City Clerk shall accept the ballots of the qualified electors in the office of the City Clerk up to and including 5:30 p.m., Pacific Time, on July 11, 2017, whether said ballots shall be personally delivered or received by mail.

7. In accordance with Section 53327(b) of the Act, analysis and arguments, as required by Section 53327(a) of the Act are hereby waived, as the City Clerk has received the unanimous consent to such waivers from the Landowner.

8. The publication of this Resolution as notice of the special election is hereby waived as the City Clerk has received the unanimous consent to such waiver from the Landowner.

9. The Annexed Territory shall constitute a single election precinct for the purpose of holding the election.

10. The City Clerk is hereby authorized to take any and all steps necessary for the holding of the election, and to perform and render all services and proceedings incidental to and in connection with the election.

11. The City Clerk shall canvass the returns and certify the results of the election to this Council. If two-thirds or more of the votes cast are in favor of levying the District special taxes in the Annexed Territory, this Council may thereafter order the annexation of the Annexed Territory to the District and levy the District special taxes in the Annexed Territory in the amount and for the purposes specified in Resolution No. 2007-584 adopted by this Council on October 2, 2007 (the "Resolution of Formation").

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Madrigal, who moved its adoption, which motion being duly seconded by Councilmember Kenoyer, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION DECLARING THE RESULTS OF THE JULY 11, 2017 SPECIAL ELECTION AND ORDERING THE ANNEXATION OF THE ADDITIONAL TERRITORY TO CITY OF MODESTO COMMUNITY FACILITIES DISTRICT NO. 2007-1 (NORTH BEYER PARK #2)

WHEREAS, this Council is conducting proceedings pertaining to the annexation of certain territory to the City's Community Facilities District No. 2007-1 (North Beyer Park #2) (the "District") and the levy of the District special taxes (the "District Special Taxes") within such territory, as described in its Resolution No. 2017-191 entitled "Resolution of Intention to Annex Territory to Community Facilities District No. 2007-1 (North Beyer #2), authorizing the levy of a Special Tax within the territory proposed to be annexed. (Annexation No. 1), and

WHEREAS, the owners of all the property within the territory proposed to be annexed to the District waived those provisions related to the timing and conduct of the election referenced in numbers5, 6, 7 and 8 of this Council's Resolution No. 2017-?, adopted on July 11, 2017, and, as a result, this Council called an election within the territory proposed to be annexed to the District (the "Election") for July 11, 2017, or as soon thereafter as practicable, relative to the foregoing, and

WHEREAS, on July 11, 2017, the Election was held, and

WHEREAS, the City Clerk has certified that at the Election the proposition of levying the District Special Taxes within the territory proposed to be annexed to the District was approved by more than two-thirds (2/3) of the votes cast at the Election.

NOW, THEREFORE, BE IT RESOLVED, ORDERED AND FOUND by the City Council of the City of Modesto that:

1. The Election was duly and validly conducted in conformity with all applicable laws pertaining thereto. It is hereby determined that the owner or owners of the territory proposed to be annexed are as set forth in the Certificate of City Clerk as to Distribution of Official Ballots, submitted to this Council and on file with the City Clerk.

2. The ballot proposition presented to the qualified electors of the territory proposed to be annexed at the Election received at least two-thirds (2/3) of the votes cast at the Election. A copy of the City Clerk's certificate of election results is **attached** hereto.

3. Pursuant to Section 53339.8 of the Act, it is hereby ordered that the territory proposed to be annexed to the District pursuant to Resolution No. 2017-191 be annexed to and be a part of the District with full legal effect, and that the District Special Taxes be levied within the territory.

4. The City Clerk is hereby directed to enter this resolution on the minutes of this City Council, which shall constitute the official declaration of the result of the Election.

5. The City Clerk is further authorized and directed to record an amendment to the Notice of Special Tax Lien with the County Recorder of the County of Stanislaus, within 15 days from the date hereof, in accordance with the provisions of Sections 3114.5 and 3117.7 of the California Streets and Highways Code.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Madrigal, who moved its adoption, which motion being duly seconded by Councilmember Kenoyer, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-287

RESOLUTION APPROVING A DEBIT AND CREDIT CARD SERVICE FEE OF 2.4% FOR ALL DEBIT AND CREDIT CARD TRANSACTIONS, EXCLUDING UTILITY SERVICES, PARKING GARAGE FEES, AND TRANSIT FARE MEDIA TO BE EFFECTIVE SEPTEMBER 1, 2017

WHEREAS, the City has been working closely with Elavon to identify the best solution on implementing a service fee for the eligible transaction which will not be including utility services, parking garage fees, and transit fare media. The merchant provider directs the City on what options are available to recover these fees imposed by the debit and credit card companies regulations, and

WHEREAS, the credit card merchants offer "government and higher education payment programs" which enable the City of Modesto to accept credit cards in all payment channels and assess a service fee as a separate transaction, so that the City may recoup its costs in processing debit and credit card transactions, and

WHEREAS, the service fee charged must be a fixed percentage of the transaction amount and must be applied consistently at the same fixed percentage across all transactions, regardless of amount, and

WHEREAS, the types of payments accepted at the City include in person, online and via telephone which have specific governmental merchant category codes that qualify them as eligible governmental transactions for which a service fee may be imposed, and

WHEREAS, debit and credit card service fees will not be proposed for the utility services, parking garages, and for transit fare media transactions at this time. The utility billing services have a specific merchant code which cannot be imposed a fixed

percentage amount but will require a fee that must be a fixed amount convenience fee which will be determined at a later date, and

WHEREAS, the City provided notice of a public hearing on this item to ensure that all interested parties have an opportunity to comment; and

WHEREAS, California Government Code Section 6606a, et seq. requires that before approving certain new or increased fees, a city must comply with the following:

1. Publication of the public hearing shall be posted 10 days in a newspaper regularly published once a week or more frequently;

2. Two publications, with at least five dates between the dates of the first and last publication must occur; and.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a Debit and Credit Card Service Fee of 2.4% for all debit and credit card transactions, excluding utility services, parking garage fees, and transit fare media.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Grewal, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-288

RESOLUTION DESIGNATING THE STANISLAUS COMMUNITY SYSTEM OF CARE COLLABORATIVE/CONTINUUM OF CARE AS THE PLANNING AND COORDINATING BODY TO ADDRESS HOMELESSNESS IN STANISLAUS COUNTY

WHEREAS, in 1988, the Stanislaus County Housing and Support Services Collaborative/Continuum of Care was formed (SHSSC) to serve as an integrated system of care that guides and tracks homeless individuals & families through a comprehensive array of housing & services designed to prevent and end homelessness, and

WHEREAS, since inception, this volunteer body has secured millions in grants from the U.S. Department of Housing & Urban Development to combat the impact of homelessness in our community, and

WHEREAS, in 2001, both the City and County of Stanislaus adopted resolutions recognizing the formation of the SHSSC and designated it as the planning and coordinating body for homeless programs and services in Stanislaus County, and

WHEREAS, since the formation of SHSSC, the Housing Authority of the County of Stanislaus (Housing Authority) has graciously served as the Lead Agency and Homeless Management Information System (HMIS) Administrator for the SHSSC, and

WHEREAS, as the Lead Agency, it coordinated and packaged the annual submission of grant applications to the U.S. Department of Housing and Urban Development (HUD), spearheaded the annual Point-In-Time Count effort, and

WHEREAS, as the HMIS Administrator it oversaw the Homeless Management Information System for SHSSC, and

WHEREAS, over time, the complexity and effort demanded of the SHSSC has eclipsed the capacity of a volunteer group to accomplish all of the compliance, reporting, monitoring, and grant application requirements, and

WHEREAS, in 2015, when Stanislaus County initiated Focus on Prevention, a Homelessness Action Council was established to address the first initiative: Reduce and Prevent Homelessness, and

WHEREAS, in 2016, the Housing Authority initiated discussions with the County, City of Modesto and City of Turlock to transfer the Collaborative Applicant and HMIS Administrator duties to one of the three agencies, and

WHEREAS, in 2017, the SHSCC and the Homeless Action Council merged efforts and became known as the Stanislaus Community System of Care (StanCSOC),

WHEREAS, the StanCSOC will be led by a 25 member Council and will replace SHSSC as the integrated system of care that guides and tracks homeless individuals & families through a comprehensive array of housing & services designed to prevent and end homelessness, and

WHEREAS, in the spirit of collaboration and due to the technical expertise it has on staff, the City of Modesto has agreed to act as the Collaborative Applicant for the StanCSOC, and

WHEREAS, existing City and County employees will act as staff to the StanCSOC.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto hereby designates the Stanislaus Community System of Care Collaborative/Continuum of

Car as the as the planning and coordinating body to address homeless in Stanislaus County.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of July, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION APPOINTING RANDY CLARK, THEODORE MILLS, MIKE REGO, DAVID THOMAS, ALLAN JAMES, AUDREY MILLS, JANICE KEATING, JAMES AJA, AND PATRICIA BRAZELTON TO THE CITY OF MODESTO MEASURE L CITIZENS' TRANSPORTATION SALES TAX COMMISSION

WHEREAS, in November of 2016, Stanislaus County voters approved a county-wide, 25-year, half-cent sales tax increase known as Measure L which went into effect on April 1, 2017, and

WHEREAS, on October 4, 2016, Council approved Ordinance No. 3656-C.S. adding Chapter 10 to Title 8 of the Modesto Municipal Code to establish a Citizens' Transportation Sales Tax Commission, and

WHEREAS, the Commission will consist of eleven (11) members appointed by Council to represent the City's citizens, and

WHEREAS, the purpose of the City's Citizens' Transportation Sales Tax Commission will be to:

- Ensure all transportation revenue collected by the City from Measure L is spent in accordance with the Measure L Ordinance and Expenditure Plan;
- Hold public meetings as necessary regarding the expenditure and status of funds generated by Measure L;
- Review independent audits of the expenditure of tax funds and implementation of the programs and projects in the Expenditure Plan; and
- Issue an annual report on its findings regarding compliance with the requirements of the Expenditure Plan and the Ordinance to Council, and

WHEREAS, the City received 15 applications that were presented to the Appointments Committee for consideration on July 5, 2017, and

WHEREAS, the Appointments Committee recommends appointing the following to the City's Citizens' Transportation Sales Tax Commission:

Representing	**Appointee**
1 member from any association representing business such as Chamber of Commerce	Randy Clark
2 members from Modesto Neighborhood Associations or organizations with similar purposes with tax-exempt status	Theodore Mills Mike Rego
2 members from any local taxpayer's association with tax exempt status	David Thomas Allan James
1 member from large business located within the City of Modesto	Audrey Mills
1 member from small business located within the City of Modesto	Janice Keating
2 members from labor union with members residing in the City of Modesto	James Aja **1 seat vacant**
1 members from a former Stanislaus County Civil Grand Jury served within previous five years of appointment	Patricia Brazelton
1 member from any local nonpartisan political organization with tax-exempt status	**1 seat vacant**

, and

WHEREAS, There are currently 2 seats that remain vacant due to a lack of applicants to represent that specific segment of the City's population, and

WHEREAS, it is staff's intention to continue to accept applications to be considered by the Appointments Committee for this Commission and present them to Council for consideration and approval.

NOW, THEREFORE, BE IT HEREBY RESOLVED by the Council of the City of Modesto as follows:

1. Randy Clark, Theodore Mills, Mike Rego, David Thomas, Allan James, Audrey Mills, Janice Keating, James Aja, and Patricia Brazelton are hereby appointed to the City of Modesto Measure L Citizens' Transportation Sales Tax Commission effective July 1, 2017, and

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-295

RESOLUTION APPROVING A WILL SERVE LETTER AND OUTSIDE SERVICE AGREEMENT BETWEEN THE CITY OF MODESTO AND THE CITY OF MODESTO UTILITIES DEPARTMENT TO CONNECT TO THE CITY OF MODESTO'S EXISTING WATER SYSTEM FOR THE PROPERTY LOCATED AT LITT ROAD (APN 084-003-005) AND AUTHORIZING THE INTERIM CITY MANAGER OR HIS DESIGNEE, TO EXECUTE THE WILL SERVE LETTER AND AUTHORIZING THE UTILITIES DEPARTMENT DIRECTOR AND THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE OUTSIDE SERVICE AGREEMENT

WHEREAS, the City of Modesto, owns commercial property located at Litt Road, which is located outside of Modesto City limits and inside the City's Sphere of Influence, and

WHEREAS, the property located at Litt Road is not connected to City's water system and is requesting a water connection due to construction of a new Corporation Yard Facility, and

WHEREAS, on May 22, 2012, the City Council approved Resolution No. 2012-202 that amended City Council Policy 5.001, and

WHEREAS, on June 5, 2012, the City Council approved final adoption of Ordinance No. 3566-C.S. amending City of Modesto Municipal Code Section 11-1.05, and

WHEREAS, on November 25, 2014, the City Council approved Resolution No. 2014-472 that amended City Council Policy 5.001, and

WHEREAS, on December 9, 2014, the City Council approved adoption of Ordinance No. 3611-C.S. amending City of Modesto Municipal Code Section 11-1.05, and

WHEREAS, both of these amendments included language allowing the City Manager upon the recommendation of the Director responsible for utility system planning, to approve standard agreements of service for extension of water services into certain unincorporated areas that are located within the former Del Este Water Service Area without City Council approval, and

WHEREAS, the property located at Litt Road is not located within the former Del Este Water Service area and therefore requires City Council approval prior to allowing the new water service connection, and

WHEREAS, City staff has completed an analysis and determined that a sufficient quantity of potable water is available for normal usage by the proposed development, and

WHEREAS, the water connection fees shall be paid and associated permits be obtained prior to beginning any on site construction, and

WHEREAS, the property owner, the City of Modesto, will execute an Outside Service Agreement for water service with the City as required prior to receiving water service outside the City limits.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Will Serve Letter and Outside Service Agreement for water service for the property located at Litt Road (APN: 084-003-005).

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the Will Serve Letter and the Utilities Department Director and the Interim City Manager, or his designee, are hereby authorized to execute the Outside Service Agreement for water service.

The foregoing documents were introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-296

RESOLUTION APPROVING A WILL SERVE LETTER AND OUTSIDE SERVICE AGREEMENT BETWEEN THE CITY OF MODESTO AND THE CITY OF MODESTO UTILITIES DEPARTMENT TO CONNECT TO THE CITY OF MODESTO'S EXISTING SEWER SYSTEM FOR THE PROPERTY LOCATED AT LITT ROAD (APN: 084-003-005) AND AUTHORIZING THE INTERIM CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE WILL SERVE LETTER AND AUTHORIZING THE UTILITIES DEPARTMENT DIRECTOR AND THE INTERIM CITY MANAGER OR HIS DESIGNEE, TO EXECUTE THE OUTSIDE SERVICE AGREEMENT

WHEREAS, The City of Modesto owns commercial property located at Litt Road which is located outside of Modesto City Limits and inside the City's Sphere of Influence, and

WHEREAS, the property located at Litt Road, is not connected to City's sewer system and is requesting a sewer connection due to the construction of a new Corporation Yard Facility, and

WHEREAS, on May 22, 2012, the City Council approved Resolution No. 2012-203 that amended City Council Policy 5.002, and

WHEREAS, on June 5, 2012, the City Council approved final adoption of Ordinance No. 3567-C.S. amending City of Modesto Municipal Code Section 5-6.309, and

WHEREAS, on November 25, 2014, City Council approved Resolution No. 2014-473 amending City Council Policy 5.002, and

WHEREAS, on December 9, 2014, City Council approved adoption of Ordinance No.3612-C.S. amending City of Modesto Municipal Code Section 11-1.05, and

WHEREAS both of these amendments included language allowing the City Manager, upon the recommendation of the Director responsible for utility system

planning to approve standard agreements of service for extension of sewer services into certain unincorporated areas without City Council approval, and

WHEREAS, the property located at Litt Road is not located within one of those designated areas and therefore requires City Council approval prior to allowing the sewer connection, and

WHEREAS, City staff has completed an analysis and determined that it is reasonable for the City of Modesto to provide sewer service to this property, and

WHEREAS, consistent with Government Code 56133, the City is requesting a service in anticipation of an upcoming annexation, and

WHEREAS, the sewer connection fees shall be paid and associated permits will be obtained prior to connecting to the City sewer system, and

WHEREAS, the property owner, the City of Modesto, will execute an Outside Service Agreement for sewer service with the City as required prior to receiving sewer service outside the City limits.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Will Serve Letter and Outside Service Agreement for sewer service for the property located at Litt Road (APN: 084-003-005).

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, are hereby authorized to approve the Will Serve Letter and the Utilities Department Director and the Interim City Manager, or his designee, are hereby authorized to execute the Outside Service Agreement for sewer service.

The foregoing documents were introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-297

RESOLUTION APPROVING AWARD OF PROPOSAL AND AGREEMENT WITH HDL SOFTWARE, LLC, DIAMOND BAR, CA FOR THE PURCHASE AND INSTALLATION OF A NEW BUSINESS LICENSING AND TAX COLLECTION SOFTWARE FOR THE FINANCE DEPARTMENT AND AUTHORIZING THE INTERIM CITY MANAGER OR HIS DESIGNEE TO EXECUTE A FIVE (5) YEAR CONTRACT AT AN ESTIMATED COST OF $151,748 AND AN ADDITIONAL ESTIMATED $21,000 FOR ONE-TIME PROFESSIONAL SERVICES AND $11,000 FOR HARDWARE NECESSARY TO COMPLETE THE IMPLEMENTATION

WHEREAS, the Finance Department requires the use of specialized tax collection software to manage approximately $14 million in General Fund revenues from the City's 13,000 licensed businesses, and

WHEREAS, in Fiscal Year 2016-17 the 100 Day Revenue Committee along with the Information and Technology Steering Committee prioritized and recommended the purchase of new Business Licensing Software that would allow for advancements in updated technology such as expanded reporting capabilities, integrated email communication with business owners and the ability for customers to file for a license, report and pay their taxes online, and

WHEREAS, the Purchasing Division issued RFP 1617-07 under commodity codes for computer software for microcomputers, database software, computer software for mini/mainframe, computer software consulting and applications software, and

WHEREAS, two (2) companies chose to respond, none of which are local companies, and

WHEREAS, an evaluation committee comprised of five (5) City staff members evaluated the proposals and Councilmember Douglas Ridenour was chosen by the Mayor to observe the RFP process, and

WHEREAS, based on total evaluation criteria with HDL having the highest ranking, the evaluation committee recommends the award of proposal for the purchase, installation and five-year maintenance of Business Licensing and Tax Collection Software to HDL Software, LLC, and

WHEREAS, in addition to the software system other necessary modifications and infrastructure components shall also be required in the estimated amount of $32,000 and will be procured following City purchasing rules and regulations, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid and the award of proposal for the purchase and installation of Business Licensing and Tax Collection Software to HDL Software, LLC, conforms to the Modesto Municipal Code, 8-3.203.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby awards the contract to HDL Software, LLC, Diamond Bar, CA for the purchase and installation of a new Business Licensing and Tax Collection Software for the Finance Department.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute a five year contract with HDL Software, LLC at an estimated cost of $151,748 and an additional estimated $21,000 for one-time professional services and $11,000 for hardware in a form approved by the City Attorney.

The foregoing resolution was introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-298

RESOLUTION ACCEPTING THE ACCOUNTS RECEIVABLE WRITE-OFF REPORTS FROM THE INTERIM CITY MANAGER AND FINANCE DIRECTOR THROUGH JUNE 30, 2016 TOTALING $719,153, AND APPROVE A REPORT OF DISPOSITION BE FILLED WITH THE CITY CLERK

WHEREAS, the Finance Department maintains a billing system to track monies owed to the City, and

WHEREAS, occasionally the responsible party does not pay the City as required, and

WHEREAS, it is the City's policy to actively pursue collection of past-due accounts and write off amounts deemed to be uncollectible, and

WHEREAS, the City employs various different means of trying to collect past-due accounts, and

WHEREAS, collection efforts continue until the legal statute restricts the City's collections actions, and

WHEREAS, the following amounts with an outstanding balance less than $5,000 have been approved for write-off by the Director of Finance for the Fiscal Year 2015-2016 and as such all available collection remedies have been exhausted: (1) Utilities Accounts - $433,589 and (2) Miscellaneous Receivables - $215,943, and

WHEREAS, the following amounts with an outstanding balance less than $25,000 have been approved for write-off by the City Manager for the Fiscal Year 2015-2016 and as such all available collection remedies have been exhausted: Miscellaneous Receivables - $69,351, and

WHEREAS, the City's Write-off of Uncollectible Accounts Receivable policy, as allowed under by Section 2-3.406 of Article 4 of Title 2 of the Municipal Code, requires the following approval authority: the Director of Finance is authorized to approve the write-off of accounts with an outstanding balance due of up to $5,000, and the City Manager is authorized to approve the write-off of accounts with an outstanding balance due in excess of $5,000 and up to $25,000; and

WHEREAS, for write-offs in excess of $25,000, Section 2-3.406 of Article 4 of Title 2 of the Municipal Code requires the City Manager to report the accounts to the City Council with his recommendation.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the Interim City Manager's and Director of Finance reports of uncollectible utility and accounts receivable in the total amount of $719,153, and authorizes a report of disposition be filled with the City Clerk,

The foregoing resolution was introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-299

RESOLUTION REJECTING ALL BIDS FOR THE DENNETT DAM REMOVAL PROJECT

WHEREAS, Dennett Dam was constructed in the 1930's, was condemned by the State of California in 1947 and has acted as a partial barrier to fish passage and impediment to recreational boating, and

WHEREAS, the one bid received for the Dennett Dam Removal Project was opened at 11:00 a.m. on June 13, 2017, and later tabulated by the Utilities Department for the consideration of the Council, and

WHEREAS, Sierra Mountain Construction of Sonora, California was the sole and apparent low bidder at 215% above the engineer's estimate, and

WHEREAS, the Parks Planning and Development Division staff determined that the lack of bids and the single bid submitted at 215% above the engineer's estimate was due to the extreme river flows in the Tuolumne River, limited access to the site and short construction window which made it a high risk project. In addition, there were other contractors that did not bid due to the scope of the project not meeting their time lines for the construction period of the removal of the dam, and

WHEREAS, City staff recommends that the City reject the bids, make some modifications to the scope of work and re-advertise the project for bid in late 2017 with the intention of attracting a higher number of contractors and more competitive bids.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby rejects the bid received for the Dennett Dam Removal Project.

The foregoing resolution was introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-300

RESOLUTION ACCEPTING THE FEDERAL TRANSIT ADMINISTRATION TRIENNIAL REVIEW FINAL REPORT

WHEREAS, the Federal Transit Administration (FTA) Triennial Review is one of the management tools for examining grantee performance and adherence to current FTA requirements and policies, and

WHEREAS, in October 2016, the City of Modesto was notified that the FTA Triennial Review process would begin, and

WHEREAS, during the triennial review process, before and during the on-site visit, the reviewer examined records, interviewed staff, conducted tests and reviewed the facilities, and

WHEREAS, on March 30, 2017, the FTA and Triennial Reviewer met with Modesto transit staff to discuss their findings in an exit conference, and

WHEREAS, of more than 17 compliance areas examined, Modesto was found to have seven areas of deficiencies, and

WHEREAS, Modesto has been given until August 31, 2017, to take corrective action on these seven areas.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the Federal Transit Administration Triennial Review final report, which is **attached** hereto.

The foregoing resolution was introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-301

RESOLUTION AUTHORIZING SUBMITTAL OF A GRANT APPLICATION TO THE CALIFORNIA GOVERNOR'S OFFICE OF EMERGENCY SERVICES REQUESTING CALIFORNIA TRANSIT ASSISTANCE FUNDS FOR TRANSIT SECURITY PROJECTS FOR $435,985 OF FISCAL YEAR 2015-16 FUNDS UNDER THE CALIFORNIA TRANSIT SECURITY GRANT PROGRAM FOR TRANSIT SECURITY PROJECTS AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE ALL GRANT DOCUMENTS

WHEREAS, the Highway Safety, Traffic Reduction, Air Quality, and Port Security Bond Act of 2006 authorizes the issuance of general obligation bonds for specified purposes, including, but not limited to, funding made available for capital projects that provide increased protection against security and safety threats, and for capital expenditures to increase the capacity of transit operators to develop disaster response transportation systems, and

WHEREAS, the California Governor's Office of Emergency Services (Cal OES) administers such funds deposited in the Transit System Safety, Security, and Disaster Response Account under the California Transit Security Grant Program (CTSGP), and

WHEREAS, the Stanislaus Council of Governments (StanCOG) is the designated recipient for regional funds under GC 8879.58 (a)(2), and

WHEREAS, the StanCOG Policy Board passed Resolution 16-38, designating $400,000 of the Fiscal Year 2015-16 regional funds for the City of Modesto for transit security projects, and

WHEREAS, the City of Modesto is the designated recipient of $35,985 in Fiscal Year 2015-16 local funds under GC 8879.58 (a)(3) resulting in a total allocation of $435,985 for Fiscal Year 2015-16, and

WHEREAS, the City of Modesto is eligible to review CTSGP funds, and

WHEREAS, the City of Modesto recognizes that it is responsible for compliance with all Cal OES CTSGP grant assurances and state and federal laws, including, but not limited to, laws governing the use of bond funds, and

WHEREAS, Cal OES requires the City of Modesto to complete and submit a Governing Body Resolution for the purposes of identifying agent(s) authorized to act on behalf of the City of Modesto to execute actions necessary to obtain CTSGP funds from Cal OES and ensure continued compliance with Cal OES CTSGP assurances and state and federal laws.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the submittal of an application to the California Governor's Office of Emergency Services requesting California Transit Assistance Funds for transit security projects for $435,985 in Fiscal Year 2015-16 funds.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is authorized to execute all necessary grant documents with the California Governor's Office of Emergency Services on behalf of the City of Modesto.

The foregoing resolution was introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-303

RESOLUTION APPROVING A FIRST AMENDMENT TO THE AGREEMENT WITH BROWN AND CALDWELL, INC., RANCHO CORDOVA, CA, FOR DESIGN AND CONSTRUCTION SERVICES FOR THE REPLACEMENT WELL 226 PROJECT IN THE AMOUNT OF $107,847, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE FIRST AMENDMENT TO THE AGREEMENT

WHEREAS, City water supply Well 226, located at the northwest corner of Conant Avenue and Brenner Way, was taken offline in 2006 due to elevated arsenic and nitrate concentrations. Well 226 was originally drilled in 1954, and strategically located near the Highway Village neighborhood, and

WHEREAS, Well 226 is over 60 years old and no longer productive due to its shallow depth of 270-feet, and its drilled configuration does not allow isolation of specific water layers, and

WHEREAS, on April 7, 2009, by Resolution No. 2009-149, Council approved a short-list of hydrogeologists to be used on an as-needed rotational basis, and

WHEREAS, in accordance with Administrative Directive 3.1, Selection Procedures for Professional Consultants Who Provide Architectural and Engineering Services for Capital Projects, Brown and Caldwell (B&C) was selected as the most qualified firm to provide design services for well remediation at Well 226, and

WHEREAS, on November 24, 2009, by Resolution No. 2009-554, Council approved an agreement with B&C for Design Services for Well Remediation at Well 226, and

WHEREAS, the proposed design included a new well on the existing site, drilling to a deeper level and constructing to current well standards, and

WHEREAS, in 2011, plans and specifications for removal and replacement of Well 226 were prepared, but the project was deferred due to the downturn of the economy, and

WHEREAS, the agreement with B&C was subsequently closed, and

WHEREAS, on June 28, 2016, by Resolution No. 2016-270, Council approved the specifications for destruction of certain water wells, and awarded a contract to Howk Systems of Modesto, CA, and

WHEREAS, Well 226 was destroyed as part of this work, and

WHEREAS, on February 7, 2017, by Resolution No. 2017-42, Council approved an agreement with B&C to provide design, bid and engineering during construction services for the Replacement Well 226 Project, and

WHEREAS, during the design phase of the Replacement Well 226 project, the Utilities' Water Division determined that a pump house was needed to protect the well from outside interference from the general public and minimize the sound that will be generated from the pump, and

WHEREAS, Well 226 is bounded by residential properties to the north, south & west and to the east of Chrysler Elementary School, and

WHEREAS, the proposed well is anticipated to be installed roughly 30-feet from a residential property to the west and will be located approximately 20-feet from the current right-of-way on Brenner Way, and

WHEREAS, the initial scope of services negotiated and approved with B&C did not include a pump house, and

WHEREAS, it was assumed that the current chain link fencing would be upgraded to 1-inch mesh fencing to shield and protect the well site, and

WHEREAS, prior to determining a pump house was needed, B&C explored other noise & safety mitigation measures but those options did not work from an operational and safety standpoint, and

WHEREAS, additionally, as the design progressed, B&C determined that the existing motor control center (MCC) and electrical panels that help control the production of the well, needed to be upgraded, and

WHEREAS, B&C originally assumed that the existing MCC and electrical panels would be sufficient, and

WHEREAS, the design and construction document additions resulted in extended effort in the following tasks: 1) Well Equipping Design; 2) Engineering Services During Construction; and 3) Project Management, and

WHEREAS, in accordance with Modesto Municipal Code 8-3.204(a) Exceptions to Formal Bidding Requirements, the first amendment to the agreement is for professional services and, therefore, exempt from the bid requirement.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the First Amendment to the Agreement with Brown and Caldwell, Inc., Rancho Cordova, CA, for design and construction services in the amount of $107,847.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the First Amendment to the Agreement in a form approved by the City Attorney.

The foregoing resolution was introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-304

RESOLUTION APPROVING THE AWARD OF BID AND CONTRACT FOR PUMP EFFICIENCY TESTING TO PUMPING EFFICIENCY TESTING SERVICES, SEBASTOPOL, CA, FOR A TWO-YEAR AGREEMENT WITH THREE ONE-YEAR EXTENSION OPTIONS AT THE SOLE DISCRETION OF THE CITY, FOR AN ESTIMATED ANNUAL COST OF $30,000, OR A TOTAL OF UP TO $150,000 OVER FIVE YEARS, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE A PURCHASE AGREEMENT

WHEREAS, the City has a need for pump efficiency testing for its pumps and panels, and

WHEREAS, the Water Services Division expects to have 120 pump efficiency tests performed each year for an annual cost of $30,000, and

WHEREAS, the Interim City Manager authorizes the Purchasing Manager to issue formal Request for Bids (RFB) for pump efficiency testing, and

WHEREAS, on February 21, 2017, the Purchasing Division issued RFB No.1617-22 Pump Station Efficiency on the City's website under the commodity codes for pumping equipment and accessories, water pumps and accessories, testing apparatus and instruments, water supply groundwater sewage treatment related equipment, testing services, and wastewater treatment plant operations and testing, and nine companies chose to download the RFB document, and

WHEREAS, bids were formally opened in the City Clerk's Office. Three (3) companies chose to respond, one was a local vendor. All companies provided responsive and responsible bids, and

WHEREAS, based on the responsive and responsible bids received, City staff recommends the award of bid for pump efficiency testing to Pumping Efficiency Testing Services, Sebastopol, CA, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid. The award of bids for the pump efficiency testing to Pumping Efficiency Testing Services, Sebastopol, CA, conforms to the Modesto Municipal Code, 8-3.203,and

WHEREAS, the cost for these services will be covered by the Water Fund through existing budget in 4100-45050-53300, Water Services – Wells and Tanks.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the award of bids for pump efficiency testing to Pumping Efficiency Testing Services, Sebastopol, CA, for a two-year agreement with three one-year extension options at the sole discretion of the City, for an estimated annual cost of $30,000, or a total of up to $150,000 over five years.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to issue a purchasing agreement.

The foregoing resolution was introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-305

RESOLUTION APPROVING THE PLANS AND SPECIFICATIONS FOR THE BOWEN, JOHANSEN, NARAGHI AND ORCHARD STORM LIFT STATIONS IMPROVEMENTS PROJECT, ACCEPTING THE BID, AND AWARD A CONSTRUCTION CONTRACT TO TRI-TECHNIC, INC., OF SONORA, CA IN THE AMOUNT OF $1,126,510, AND AUTHORIZING THE INTERIM CITY MANAGER, OR DESIGNEE, TO EXECUTE THE CONTRACT

WHEREAS, Contract Documents have been prepared for the Bowen, Johansen, Naraghi, and Orchard Storm Lift Stations Improvements Project, and the Interim City Manager authorized City staff to solicit the Project for bids, and

WHEREAS, City staff solicited the Project in conformance of Section 1307 of the City's Charter, and

WHEREAS, the bids received for the Bowen, Johansen, Naraghi, and Orchard Storm Lift Stations Improvements Project were publicly opened at 11:00 a.m. on June 27, 2017, and

WHEREAS, the Interim City Manager recommends the bid of $1,126,510 received from Tri-Technic, Inc., of Sonora, California, be accepted as the lowest responsible bidder and responsive bid and the contract be awarded to Tri-Technic, Inc.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Plans and Specifications for the Bowen, Johansen, Naraghi and Orchard Storm Lift Station Improvements, accepts the bid and awards the construction contract to Tri-Technic, Inc. of Sonora, California, in the amount of $1,126,510.

BE IT FURTHER RESOLVED that the Interim City Manager, or designee, is hereby authorized to execute the contract in a form approved by the City Attorney.

The foregoing resolution was introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-306

RESOLUTION AMENDING THE FISCAL YEAR 2017-18 CAPITAL IMPROVEMENT PROGRAM BUDGET IN THE AMOUNT OF $1,154,140 TO BE TRANSFERRED INTO THE PROJECT FROM STORM DRAIN FUND RESERVES TO FULLY FUND THE CONSTRUCTION, CONTINGENCY, CONSTRUCTION ADMINISTRATION, AND DESIGN SUPPORT DURING CONSTRUCTION FOR THE BOWEN, JOHANSEN, NARAGHI, AND ORCHARD STORM DRAIN LIFT STATIONS IMPROVEMENTS PROJECT

WHEREAS, certain budgetary transactions are necessary in the amount of $1,154,140, in order to fund construction, contingency, construction administration, design support during construction plus City staff support for the Bowen, Johansen, Naraghi, and Orchard Storm Lift Stations Improvements Project, and

WHEREAS, the Fiscal Year 2017-2018 Capital Improvement Program Budget must be amended as shown in **Exhibit A**, which is incorporated by reference herein.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the amendment of the Fiscal Year 2017-2018 Capital Improvement Program Budget as shown in **Exhibit A**, **attached** hereto.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to implement the provisions of this resolution.

The foregoing resolution was introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

Exhibit A

Due to construction costs being higher than initially budgeted for the project, line item increases/decreases are necessary for CIP Account #100845 "SD Pump Station Electrical", and the total project costs need to be increased by $1,154,140. This would be done by adjusting Construction Admin by $113,916, Construction by $921,510, Contingency-CIP by $67,621, and Eng/Design/Admin by $51,093.

To fund the above account, $1,154,140 will be transferred from Storm Drain Fund Reserves into CIP Project 100845 for the Bowen, Johansen, Naraghi, and Orchard Storm Lift Stations Improvements Project.

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-307

RESOLUTION AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO PAY RELOCATION BENEFITS PURSUANT TO MODESTO MUNICIPAL CODE 4-12.501 *ET SEQ.*, AND STATE LAW, IF NECESSARY, UP TO A MAXIMUM AMOUNT OF $60,000, TO THE LEGAL TENANTS OF PROPERTY LOCATED AT 624 9TH STREET, MODESTO, WHICH FUNDS SHALL BE SECURED BY A LIEN

WHEREAS, Ordinance 3514-C.S., made significant amendments to Chapter 12 of Title 4 of the Municipal Code, including the addition of Article 5 (section 4-12.501 *et seq.*), entitled "Tenant Relocation Benefits," to provide a method for reimbursement to tenants forced to relocate due to severe code violations which threaten the life, health and safety of the tenants and require the units or rooms to be vacated to allow for extensive repairs, and

WHEREAS, during its annual inspection, the Modesto Fire Department found deteriorated conditions at the property located at 624 9th Street (APN 106-043-010), and

WHEREAS, upon notice from the Fire Department and further inspections by Building Safety Division Staff, said property was found to be unfit for human occupancy, and

WHEREAS, the property located at 624 9th street was condemned and a 30-day notice to vacate was posted, and

WHEREAS, due to significant violations of both the Modesto Municipal Code and State building and health and safety standards, the City issued a Notice and Order to the property owner on May 18, 2017 and a Notice to Vacate to the tenants at property located at 624 9th Street on June 29, 2017, and

WHEREAS, there are 29 dwelling units at the property at 624 9th Street, and

WHEREAS, section 4-12.502 provides that "[a]ny tenant who is displaced from any residential unit as a result of a Notice and Order to vacate due to unsafe or hazardous living conditions, issued by an authorized City official, shall be entitled to receive relocation benefits from the owner as specified in this article," and

WHEREAS, the amount of relocation benefits owed to a tenant is either an amount equal to twice the established monthly rental rate paid by the tenant for the unit being vacated or the monthly amount paid by the tenant for the new unit where the tenant moves, whichever is less, and

WHEREAS, the relocation benefits owed to the tenants at 624 9th Street is anticipated to exceed the Interim City Manager's authority of $50,000, and

WHEREAS, applications for relocation benefits shall be received by the Community and Economic Development Department and reviewed for compliance with sections 4-12.503, 4-12.505 and 4-12.507, and

WHEREAS, before the City pays any relocation benefits to the tenants, the property owner shall be given the requisite notice and opportunity to pay the relocation benefits directly to the tenants, and

WHEREAS, the multi-year enterprise fund for abatements (Project 100673 CED) was established through Resolution No. 2011-438 and was intended to create a separate funding source to fund the abatement of public nuisances, blight and dangerous and unsafe buildings, and

WHEREAS, any relocation benefits paid by the City shall be paid from the multi-year enterprise fund for abatements.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the Interim City Manager, or his designee, to pay relocation benefits pursuant to Modesto Municipal Code section 4-12.501 *et seq.*, if necessary, up to a maximum amount of $60,000, to the legal tenants of property located at 624 9th Street, Modesto, California.

BE IT FURTHER RESOLVED that any amounts paid to the tenants for relocation benefits shall be secured by a lien.

The foregoing resolution was introduced at a special meeting of the Council of the City of Modesto held on the 2nd day of August, 2017, by Councilmember Ah You, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-308

RESOLUTION APPROVING A FIRST AMENDMENT TO THE LEGAL SERVICES AGREEMENT DATED DECEMBER 21ST, 2016 WITH NORTON ROSE FULBRIGHT US LLP IN AN AMOUNT NOT TO EXCEED $47,500 TO CONTINUE REPRESENTING THE CITY OF MODESTO IN FINANCE MATTERS, AND AUTHORIZING THE INTERIM CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE AGREEMENT

WHEREAS, the City Attorney's Office is in need of outside counsel services that relate to finance matters; and

WHEREAS, Norton Rose Fulbright US LLP has represented the City in finance matters since December of 2016; and

WHEREAS, additional essential legal work needs to be performed that will result in fees exceeding the agreed upon budget of $47,500; and

WHEREAS, the City Attorney's Office desires to extend the agreement with Norton Rose Fulbright US LLP; and

WHEREAS, the City Attorney's office has drafted a First Amendment to the Legal Services agreement with Norton Rose Fulbright US LLP to continue services.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the City of Modesto to execute a First Amendment to the Legal Services Agreement with Norton Rose Fulbright US LLP in an amount not to exceed $47,500 to continue representing the City of Modesto in finance matters, as provided in **Exhibit A attached** hereto and incorporated herein, and further authorizes the City Attorney to execute such agreement in a form substantially similar to **Exhibit A.**

BE IT FURTHER RESOLVED that the Interim City Manager or his designee, are hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced in a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

FIRST AMENDMENT TO LEGAL SERVICES AGREEMENT

This First Amendment for Legal Services (this "**First Amendment**"), is made and entered into on _____ day of _____ 2017 ("**Effective Date**"), by and between the **CITY OF MODESTO**, a California Municipal Corporation ("**City**"), and **NORTON ROSE FULBRIGHT US LLP**, a Texas limited liability partnership ("**Attorney**"), located at 580 California Street, Floor 16, San Francisco, California 94104. City and Attorney are hereinafter collectively referred to as the "**Parties**," and singularly as "**Party**".

RECITALS

WHEREAS, City and Attorney entered into a Legal Services Agreement ("**Agreement**") for services for legal advice, representation and assistance on matters involving finance matters; and

WHEREAS, Attorney is specially trained, experienced and competent to perform such services; and

WHEREAS, the public interest, economy and general welfare will be served by the Agreement; and

WHEREAS, City and Attorney desire to amend the Agreement for further service by increasing the previously approved amount of fees from $47,500 to $95,000.

NOW, THEREFORE, it is hereby agreed that the Legal Services Agreement between the City of Modesto and Norton Rose Fulbright US LLP, dated December 21st, 2016, is amended as follows:

1. Section 2(a) of Paragraph 2, "Fees and Costs," Hourly Rates is amended to state as follows:

"The total of all fees paid to Attorney for the performance of all services set forth in Section 1(thereafter the "**Service**"), and for all authorized Reimbursable Expenses (as defined hereafter), shall not exceed a total sum of ninety five thousand dollars ($95,000)."

2. **Entire Agreement**. The parties to this First Amendment understand and agree that except as stated herein all terms and conditions of the original Agreement, dated December 21st, 2016, remain in full force and effect to the extent they are not in conflict with this First Amendment. This document, including all exhibits, contain the entire amendment to the Agreement between the Parties and supersedes whatever oral or written understanding they may have had prior to the execution of this First Amendment. No alteration to the terms of this First Amendment shall be valid unless approved in writing by Attorney and by City, in accordance with applicable provision of the Modesto City Code.

3. **Authority**. The person signing this First Amendment for Attorney hereby represents and warrants that he/she is fully authorized to sign this First Amendment on behalf of Attorney and to bind Attorney to the performance of its obligations hereunder.

IN WITNESS WHEREOF, the Parties have executed this First Amendment as of the dates stated below.

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-309

RESOLUTION APPROVING AN AMENDED BOUNDARY MAP OF CITY OF MODESTO COMMUNITY FACILITIES DISTRICT 2016-1 (KIERNAN BUSINESS PARK EAST #2)

WHEREAS, the Kiernan Business Park Specific Plan Area encompasses approximately 614 acres and is comprised of regional commercial, office, medical campus, mixed use, medium high density residential and business park land uses, and

WHEREAS, within this specific plan area, there are three distinct sub-areas: Kiernan Business Park West, Kiernan Business Park South and Kiernan Business Park East (KBP East), and

WHEREAS, KBP East covers approximately 160 acres and is bounded Kiernan Avenue to the North, Pelandale Avenue to the South, Dale Road to the West and American Avenue to the East, and

WHEREAS, on January 26, 2016 the Council authorized staff to record the formation boundary map which included future annexation areas, and

WHEREAS, the formation boundary map was recorded on February 8, 2016 (Recorded Boundary Map) which did not include future annexation areas, and

WHEREAS, on March 8, 2016, the City Council approved the formation of Community Facilities District No. 2016-1 (Kiernan Business Park East #2), and

WHEREAS, when the City Council formed City of Modesto Community Facilities District No. 2016-1 (Kiernan Business Park East #2), the intent was to identify future annexation areas in the Recorded Boundary Map, and

WHEREAS, identification of future annexation areas would allow future annexations to be processed administratively and would reduce the cost and time to developers and/or property owners, and

WHEREAS, Resolution 2016-20 provided that the boundaries of the Community Facilities District include future annexation areas and it established the future annexation areas as shown on the map designated "Boundary Map of Proposed City of Modesto Community Facilities District No. 2016-1 (Kiernan Business Park East #2)", and

WHEREAS, public convenience and necessity requires that additional property be annexed to the Kiernan Business Park East #2 in the future, and

WHEREAS, in 2016 by Resolution 2016-20 the Council found that Resolution 2016-20 did constitute a resolution of intention to annex territory to the Kiernan Business Park East #2 pursuant to Government Code Sections 53339.2 and 53339, and

WHEREAS, the Recorded Boundary Map provided by the engineer for recordation made some of the changes requested by City staff but inadvertently removed the *future annexation area* designation and the *limits of future annexation area* language from the map legend, and

WHEREAS, Streets and Highways Code of the State of California section 3113, states the legislative body shall not order a modification in the boundaries of a district shown on a previously filed map of the district unless the legislative body describes the proposed modification by reference to an amended map of the district boundary, and

WHEREAS, an Amended Boundary Map can be approved by a resolution adopted by the legislative body, and

WHEREAS, the clerk of the legislative body shall file the Amended Boundary Map showing the modification of boundaries of the district with the county recorder not later than fifteen days after the resolution of the legislative body approving the amended boundary, and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that an amended boundary map of City of Modesto Community Facilities District No. 2016-1 (Kiernan Business Park East #2) is hereby approved.

BE IT FURTHER RESOLVED that the City Clerk, or her designee, is hereby directed to sign the original amended boundary map of the Community Facilities District and record it with all proper endorsements thereon with the County Recorder of the County of Stanislaus within fifteen days after the adoption of this resolution, all as require by Section 3111 of the Streets and Highways Codes of the State of California.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Kenoyer, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-310

RESOLUTION APPROVING A CAPITAL FACILITIES FEES PUBLIC IMPROVEMENT REIMBURSEMENT AGREEMENT BETWEEN THE CITY OF MODESTO AND FINDLAY SHACK PROP, LLC, FOR PUBLIC IMPROVEMENTS IDENTIFIED IN THE CAPITAL FACILITIES FEES PROGRAM THAT THE DEVELOPER WILL CONSTRUCT IN CONNECTION WITH THE NEW AUDI DEALERSHIP ON MCHENRY AVENUE NOT TO EXCEED $957,975 AND AUTHORIZING THE INTERIM CITY MANAGER TO EXECUTE THE AGREEMENT

WHEREAS, in May 2013, City of Modesto adopted the Capital Facilities Fees Policies and Procedures (Resolution 2013-177), and

WHEREAS, the policy allows developers to install public improvements and be reimbursed for the work if certain parameters are met, and

WHEREAS, In June 2017, an application was submitted by Findlay Shack Prop LLC (Applicant) to develop the southwest corner of McHenry and Pelandale Avenues with 13,156 square foot Audi dealership and showroom and 15,162 square foot Audi auto service repair shop, and

WHEREAS, the proposed project includes the construction of public improvements on McHenry Avenue (south of the McHenry/Pelandale intersection) and on Pelandale Avenue (west of McHenry), and

WHEREAS, a Capital Facilities Fees Public Improvement Reimbursement Agreement between the City of Modesto and Findlay Shack Prop LLC, a California limited liability company (CFF Agreement) must be executed prior to commencement of work in order for the Applicant to be reimbursed for the public improvement costs associated with the project, and

WHEREAS, the proposed CFF Agreement has maximum reimbursement amount of $957,975, reimbursement will be based upon actual expenses incurred, and

WHEREAS, in no event will reimbursement exceed the maximum reimbursement amount. Reimbursement is strictly limited to funds from the Capital Facilities Fees – Streets Fund.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto hereby approves a Capital Facilities Fees Public Improvement Reimbursement Agreement between the City of Modesto and Findlay Shack Prop, LLC, a California limited liability company for public improvements in connection with the new Audi Dealership on McHenry Avenue (south of the McHenry/Pelandale intersection) and on Pelandale Avenue (west of McHenry), not to exceed $957,975.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-311

RESOLUTION APPROVING AN ACQUISITION AND SHORTFALL AGREEMENT BETWEEN THE CITY OF MODESTO, CITY OF MODESTO COMMUNITY FACILITIES DISTRICT NO. 2004-1, AND BERBERIAN HOLDINGS, LP, IN THE AMOUNT NOT TO EXCEED $2,635,322, FOR CONSTRUCTION OF CERTAIN PUBLIC IMPROVEMENTS COMPLETED BY THE DEVELOPER AS PART OF THE DEVELOPMENT OF AN 18-ACRE NEIGHBORHOOD SHOPPING CENTER KNOWN AS THE MARKETPLACE AND AUTHORIZING THE INTERIM CITY MANAGER TO EXECUTE THE AGREEMENT IN BOTH THE CAPACITY OF INTERIM CITY MANAGER AND AS DISTRICT ADMINISTRATOR

WHEREAS, in January 2008, by Resolution No. 2008-024 City of Modesto adopted the Policies and Procedures for the Formation, Annexation, and Administration of Community Facilities Districts Created Pursuant to the Provisions of the Mello-Roos Community Facilities Act of 1982, , and

WHEREAS, the policy allows developers to install public improvements which benefit properties within a proposed CFD, and be reimbursed for the work if certain parameters are met, and

WHEREAS, on April 6, 2004, the City of Modesto formed City of Modesto Community Facilities District No. 2004-1 (CFD No. 2004-1) to pay for various infrastructure improvements as well as the maintenance of parks, parkways and open space, storm drainage basin and related facilities that serve the Village One area, and

WHEREAS, a developer may construct identified improvements for CFD No. 2004-1 and be reimbursed, provided an agreement for such improvements is entered into with the City and CFD No. 2004-1 prior to commencement of work, and

WHEREAS, on April 26, 2017, Berberian Holdings, LP (Applicant) submitted an application to develop an 18-acre neighborhood shopping center known as "The

Marketplace" on property located at the southwest corner of Sylvan Avenue and Oakdale Road, and

WHEREAS, the proposed project includes the construction of certain public improvements at Sylvan Avenue and Oakdale Road intersection as well as improvements along Oakdale Road that are eligible for reimbursement, and

WHEREAS, an Acquisition & Shortfall Agreement between the City of Modesto, City of Modesto Community Facilities District No. 2004-1 (Village One #2) and Berberian Holdings, LP, must be executed prior to commencement of work in order for Applicant to be reimbursed for certain public improvements, and

WHEREAS, the proposed Acquisition and Shortfall Agreement has a maximum reimbursement amount of $2,635,322; however, reimbursement will be based upon actual expenses incurred and in no event will exceed the maximum reimbursement amount, and

WHEREAS, reimbursement is strictly limited to funds from the City of Modesto Community Facilities District No. 2004-1 (Village One #2), and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto hereby approves an Acquisition and Shortfall Agreement between the City of Modesto, City of Modesto Community Facilities District 2004-1, and Berberian Holdings, LP, in the amount not to exceed $2,635,322, for construction of certain public improvements completed by the developer as part of the development of the 18-acre neighborhood shopping center known as "The Marketplace" located at the southwest corner of Sylvan Avenue and Oakdale Road.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the agreement in both the capacity of Interim City Manager and as District Administrator, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-312

RESOLUTION AMENDING SECTION 4 (HOME INVESTMENT PARTNERSHIPS PROGRAM) AND ADDING SECTION 13 (NEIGHBORHOOD STABILIZATION PROGRAM SUBRECIPIENT MANAGEMENT) AND SECTION 14 (ENVIRONMENTAL REVIEW PLAN) TO THE HOUSING AND URBAN DEVELOPMENT POLICIES & PROCEDURES MANUAL

WHEREAS, on October 25, 2016, by Resolution No. 2016-425, the City Council consolidated all Housing and Urban Development policies & procedures into one comprehensive manual entitled Housing and Urban Development Policies & Procedures Manual (HUD Policies & Procedures Manual), and

WHEREAS, on June 29, 2017, the City of Modesto's Citizen's Housing and Community Development Committee reviewed, approved and forwarded an amended Section 4 (Home Investment Partnerships Program) and added Section 13 (Neighborhood Stabilization Program Subrecipient Management) and Section 14 (Environmental Review Plan) to the HUD Policies & Procedures Manual, to the City Council for review and approval, and

WHEREAS, the updated Home Investment Partnerships Program Policies and Procedures reflect current policies and processes set forth in 24 Code of Federal Regulations and address eligible activities, ineligible activities, national objectives, grant administration, program income, sub recipient application and award process, program/sub-recipient monitoring, and compliance with specific program requirements, and

WHEREAS, the Neighborhood Stabilization Program Subrecipient Management Policies and Procedures reflect subrecipient management policies that comply with the

"Dodd-Frank Act" and address internal controls, subrecipient, developer, buyer, security, and construction related agreements and contracts, and

WHEREAS, the Environmental Review Plan reflects current policies and processes as set forth in 40 CFR Parts 1500-1508 and 24 CFR Parts 35, 51, 55, and 58 of the Code of Federal Regulations; helps address a process to collectively protect and enhance the environment by removing health and safety related concerns by providing citizens with the benefit of a healthier environment; and assists the City to meet HUD's mission to provide "safe, decent and affordable housing,"

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto hereby amends Section 4 (Home Investment Partnerships Program) of and adds Section 13 (Neighborhood Stabilization Program Subrecipient Management) and Section 14 (Environmental Review Plan) to the HUD Policies & Procedures Manual, as set forth in **Exhibit A**, which is **attached** hereto and incorporated by reference.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

Appendix 1 30

Appendix 2 33

1. INTRODUCTION

1.1. The HOME Investment Partnerships Program (HOME) was created under Title II of the National Affordable Housing Act of 1990. The HOME program has been amended several times since then by subsequent legislation, most recently on December 2, 2016. Under the HOME program, the Department of Housing and Urban Development (HUD) allocates funds to Participating Jurisdictions (PJ) to be used to implement housing strategies in accordance with Federal HOME regulations (24 CFR Part 92). The City of Modesto has been designated as the Participating Jurisdiction (PJ) to receive HOME funds.

1.2. Through the use of HOME funds, the City of Modesto strives to encourage and stimulate neighborhood revitalization. As a HUD designated PJ, the City is charged with the proficient administration of HOME funds. In an effort to increase the efficiency in which HOME funds are utilized and increase the impact of these dollars on our community, the City has developed the following policies and procedures.

2. OBJECTIVE

2.1. The intent of the HOME program as established by HUD is to:

- 2.1.1. Provide decent, safe, and affordable housing to low-income families, up to 80% of Area Median Income (AMI);
- 2.1.2. Expand the capacity of non-profit housing providers;
- 2.1.3. Strengthen the ability of local government to provide housing; and
- 2.1.4. Leverage private sector participation through public, private and non-profit partnerships to address affordable housing.

2.2. HOME funds may be used for the purposes of creating, maintaining and expanding affordable rental and homeownership housing for low income families through the following eligible activities:

- 2.2.1. Acquisition (including assistance to homebuyers);
- 2.2.2. New construction (including adding additional units to an existing structure);
- 2.2.3. Rehabilitation of non-luxury housing with suitable amenities including related costs such as:
  - 2.2.3.1. Property acquisition, Site improvements, Demolition, and
  - 2.2.3.2. Other eligible expenses including financing costs, relocation expenses of any displaced persons, families, businesses, or organizations;
  - 2.2.3.3. Down payment and/or Closing Cost assistance;
  - 2.2.3.4. Operating expenses of Community Housing Development Organizations (CHDO's).
- 2.2.4. All housing supported with HOME funds must be permanent or transitional housing.
- 2.2.5. A HOME assisted project that is terminated before completion, either voluntarily or otherwise, constitutes an ineligible activity and will be

subject to recapture by the City of Modesto.

3. Distribution of Funding

3.1. The City of Modesto distributes HOME funds geographically within its boundaries and among different categories of housing need, according to the priorities of housing need identified in its approved consolidated plan and HOME Program Description. The City of Modesto only invests HOME funds in eligible projects within its boundaries.

3.2. Applications for City of Modesto HOME funds are solicited on a continuous basis, with the exception of CHDO funds, (subject to fund availability) and reviewed competitively.

3.2.1. CHDO funds are available on annual basis. Existing CHDO's are required to submit a CHDO Recertification document to the City by June of each calendar year.

3.2.2. The City of Modesto only accepts applications for projects noted as "Eligible HOME Program Activities" in the adopted Annual Action Plan. Before committing funds to a project, the City of Modesto underwrites and evaluates the project and will not invest any more HOME funds, in combination with other governmental assistance, than is necessary to provide affordable housing.

3.2.3. The competitive selection criteria for projects, if applicable, will be published at the time applications are solicited.

4. Definitions

4.1. Action Plan: The one-year portion of the Consolidated Plan. It includes the PJ's annual allocation of HOME funds.

4.2. Adjusted Income: Adjusted income is annual (gross) income reduced by deductions for dependents, elderly households, medical expenses, handicap assistance expenses and childcare (these are the same adjustment factors used by the Section 8 Program). The low HOME rent in rental projects in which rents are based on 30% of a family's adjusted gross income.

4.3. Affordability: The requirements of the HOME Program that relate to the cost of housing both at initial occupancy and over established time frames, as prescribed in the HOME Final Rule. Affordability requirements vary depending upon the nature of the HOME assisted activity (i.e., homeownership or rental housing).

4.4. Annual Income: Annual income as defined in 24 CFR 5.609, referred to as "Part 5 annual income", also known as the rules for determining income under the Section 8 voucher program, or adjusted gross income as defined for the purposes of reporting under Internal Revenue Service (IRS) Form 1040 series for individual Federal annual tax purposes. Adjusted gross income as reported on Form 1040 shall be used for homebuyer, homeowner rehabilitation and down payment assistance programs.

4.5. Commitment: Commitment means (1) The participating jurisdiction has executed a legally binding written agreement (that includes the date of the signature of each person signing the agreement) with a Community Housing Development Organization (CHDO), subrecipient, or a contractor to use a specific amount of HOME funds to produce affordable housing, provide down payment assistance; or has met the requirements to commit to a specific local project, as defined in paragraph (2) of this definition. (See § 92.504(c) for

minimum requirements for a written agreement.) An agreement between the participating jurisdiction and a subrecipient that is controlled by the participating jurisdiction (e.g., an agency whose officials or employees are official or employees of the participating jurisdiction) does not constitute a commitment.

4.6. Commitment to a specific local project: Commitment to a specific local project means that a legally binding agreement was executed meeting one of the following sets of requirements:

4.6.1. For rehabilitation or new construction projects, the PJ (or other entity) and the project owner will execute an agreement for an identifiable project for which all necessary financing has been secured, a budget and schedule have been established, and underwriting has been completed and under which construction is scheduled to start within 12 months of the agreement date. If the project is owned by the City of Modesto, the project must be set up in the disbursement and information system and construction reasonably expected to start within 12 months of the set-up date.

4.7. If the project consists of acquisition of standard housing by the PJ, the agreement must be a binding contract for the sale of an identifiable property and the property title must be transferred to the PJ (or other entity) within six (6) months of the date of the contract.

4.8. If the project involves the acquisition of standard housing and the City of Modesto is providing HOME funds to a purchaser, under the agreement, the title of the property must be transferred to the purchaser within six (6) months of the agreement date.

4.8.1. Note that preliminary or conditional "commitments" may be made, but no funds are considered committed under the rules unless the above conditions have been met.

4.9. Consolidated Plan: A plan prepared in accordance with the requirements set forth in 24 CFR Part 91 which describes community needs, resources, priorities and proposed activities to be undertaken under certain HUD programs, including HOME.

4.10. Community Housing Development Organization (CHDO): A private, nonprofit organization that meets a series of qualifications prescribed in the HOME regulations at 24 CFR Part 92.2. The HOME New Rule requires that CHDO's have paid staff with demonstrated capacity appropriate to the CHDO's role (this requirement cannot be met through volunteer, donated staff, shared staff, or board members). A participating jurisdiction must award at least 15 percent of its annual HOME allocation to CHDOs.

4.11. Draw-Down: The process of requesting and receiving HOME funds. The City of Modesto draws down funds from a line of credit established by HUD.

4.12. Final Rule: The Final HOME Rule was published at 24 CFR Part 92 on July 24, 2013 and became effective on August 24, 2013.

4.13. HOME-Assisted Units: A term that refers to the units

within a HOME project for which rent, occupancy and/or resale restrictions apply. The number of units designated as HOME-assisted affects the maximum HOME subsidies that may be provided to a project as such may be amended.

4.14. HOME Funds: All appropriations for the HOME Program, plus all repayments and interest or other returns on the investment of these funds.

4.15. Household: One or more persons occupying a housing unit.

4.16. Jurisdiction: A unit of general local government.

4.17. Low-Income Families: Families whose annual incomes do not exceed 80 percent of the median income for the area (adjusted for family size).

4.18. Match: Match is the City of Modesto's contribution to the HOME Program - the local, non- Federal contribution to the partnership. The City of Modesto's match contribution must equal not less than 25 percent of the HOME funds drawn down for projects in that fiscal year.

4.19. New Construction: The creation of new dwelling units. Any project which includes the creation of new or additional dwelling units in an existing structure is considered new construction.

4.20. Participating Jurisdiction (PJ): The term given to any state, local government or consortium that has been designated by HUD to administer a HOME Program. HUD designation as a PJ occurs if a state or local government meets the funding thresholds, notifies HUD that they intend to participate in the program and has a HUD-approved Consolidated Plan.

4.21. Program Income: Gross income received by the City of Modesto, a CHDO that does not retain CHDO Proceeds, or a sub recipient directly generated from the use of HOME funds or matching contributions.

4.22. Project: A site or an entire building or two or more buildings, together with the site or sites on which the building or buildings is located, that are under common ownership, management and financing and are to be assisted with HOME funds, under a commitment by the owner, as a single undertaking.

4.23. Project completion: All necessary title transfer requirements and construction work have been performed; the project complies with all HOME requirements; the final draw-down of HOME funds has been disbursed for the project; and the project completion information has been entered in the disbursement and information system established by HUD, except that with respect to rental housing project

completion, for the purposes of § 92.502(d) of this part, project completion occurs upon completion of construction and before occupancy.

4.24. Reconstruction (also rehabilitation): The rebuilding, on the same lot, of housing standing on a site at the time of project commitment. Except that housing that was destroyed may be rebuilt on the same lot if HOME funds are committed within 12 months of the date of destruction the number of housing units on the lot may not be changed as part of the reconstruction project, but the number of rooms per unit may change. Reconstruction also includes replacing an existing substandard unit of manufactured housing with a new or standard unit of manufactured housing.

4.25. Sub recipient: A public agency or nonprofit organization selected by the City of Modesto to administer all or a portion of the City of Modesto's HOME Program. A public agency or nonprofit organization that receives HOME funds solely as a developer or owner of housing (CHDO) is not a sub recipient.

4.26. Targeting: Requirements of the HOME Program relating to the income or other characteristics of households that may occupy HOME-assisted units.

4.27. Very-Low-Income Families: Families whose annual incomes do not exceed 50 percent of the median income for the area (adjusted for family size).

5. APPLICATION FOR FUNDS

5.1. Application Timeline

5.1.1. The City of Modesto accepts applications on a continuous basis, unless otherwise noted.

5.1.2. Prior to submitting applications to the City of Modesto, applicants are required to discuss project details with City of Modesto Community Development Division program staff to allow program staff to provide any Technical Assistance that may be needed to ensure the project application complies with HOME Program requirements.. Complete applications must be submitted to the office of the Community Development Division. Faxed or emailed applications will NOT be accepted.

5.1.3. Three original proposals with original signatures including a hard copy of the required pro forma pages must be submitted to:

5.1.3.1. City of Modesto HOME Program Attention: Aaron Farnon 1010 Tenth Street, Suite 3100 Modesto, CA 95354

5.1.4. Applications will become the property of the City of Modesto and will not be returned. Inaccurate information contained in an application will disqualify the Applicant from consideration.

5.1.5. The Minimum Threshold Requirements for each HOME application are included in the Ranking Criteria. Applicants who fail to meet any minimum threshold requirement will not be considered for funding.

5.1.6. Minor corrections to applications may be allowed, but applications

requiring substantial revision or which are substantially incomplete will not be reviewed or ranked.

6. Allocation

6.1.1. The amount for eligible activities on an annual basis is 90% of HUD allocated HOME funds, after allocating the allowable 10% administrative funding. Up to 90% of Program Income funds may also be used for eligible activities.

6.1.2. A minimum of 15% of the total HOME funds is available exclusively for certified Community Housing Development Organizations (CHDO) performing CHDO eligible activities. Please refer to the CHDO section of these policies to determine an organization's eligibility as a CHDO and also to determine eligible CHDO activities.

6.1.3. An additional 5% of the total annual HOME grant funding may be used for CHDO administrative expenses.

7. Maximum Funding Amount

7.1.1. When allocating funds, HOME considers the total amount of assistance from both public and private sources needed to ensure project feasibility.

7.1.2. Applicants are encouraged to request only the amount of HOME funds needed as gap financing to make the project feasible.

7.1.3. Requesting funds for administration is not allowed; however, applicants may request reasonable amounts for developer fees and soft costs in an amount corresponding to the following housing activities.

7.1.4. All HOME costs, including soft costs must be tied to specific housing addresses.

7.1.4.1. Eligible Project Related Soft Costs, as described in 24 CFR 92.206(d), area costs that can be directly tied to an address of the project or individual being assisted. These costs must be reasonable and necessary costs associated with the financing or development (or both) of new construction, rehabilitation, or acquisition of housing assisted with HOME funds. These include the following:

7.1.4.1.1. Project-specific fees for a HOME-assisted project (such as private lender origination fees, credit reports, fees for title evidence, fees for recordation and filing of legal documents, building permits, attorney's fees, private appraisal fees, and fees for an independent cost estimate);

7.1.4.1.2. Architectural, engineering, or related professional services required to prepare plans, drawings or specifications of a project;

7.1.4.1.3. Preparation of work write-ups, work specifications, and cost estimates or review of these items if an owner has had them independently prepared;

7.1.4.1.4. Construction inspection and oversight;

7.1.4.1.5. Project document preparation;

7.1.4.1.6. Costs to process and settle the mortgage financing for

a project;

7.1.4.1.7. Pre-purchase homebuyer counseling for a HOME-assisted homebuyer;

7.1.4.1.8. Costs to inspect property for compliance with property standards or to conduct a visual assessment for deteriorated paint;

7.1.4.1.9. Cost of inspection units for the presence of lead hazards or defective paint;

7.1.4.1.10. Developer fees (limited).

7.1.4.1.11. NOTE: Indirect costs are not eligible soft costs.

7.1.4.2. Applicants should request only the level of funding necessary to carry out their projects and must be in combination with other proposed funding sources, to complete the proposed activities within the contract period.

7.2. Eligible Applicants/Sponsors and Capacity

7.2.1. Applicants/Sponsors must have prior experience in developing and managing the type of project they plan to undertake. Applicants/Sponsors must demonstrate that they or their development team has the skills, experience, and capacity needed to develop and operate the property for a minimum period of affordability. Collaborative efforts with experienced parties and/or experienced development teams will be considered.

7.2.2. The following types of organizations are eligible to apply for funds:

7.2.2.1. Non-profit organizations, including Community Housing Development Organizations (CHDO). The CHDO must be certified by the City of Modesto.

7.2.2.2. For profit entities, including individuals, partnership, corporation and limited liability companies.

7.2.2.3. Housing Authority of the County of Stanislaus or a controlled affiliate thereof.

7.3. Joint Applicants

7.3.1. Two or more eligible applicants may submit one application under the following conditions:

7.3.1.1. One joint applicant is designated as the Lead Applicant during the term of the HOME project and period of affordability. The lead applicant must accept full responsibility for application submission and for administrative, regulatory, and financial management requirements.

7.4. Eligibility Requirements

7.4.1. Applicants, including all entities of a joint application, currently administering a HOME project are eligible to apply for additional HOME funds if:

7.4.1.1. The applicant is in compliance with the project implementation schedule contained within its HOME funding agreement with the City for any open HOME-assisted housing project.

7.4.1.2. There are no unresolved audit, monitoring, or performance findings for any previous HOME funding allocations to the

applicant.

7.4.1.3. All projects three years or older are completed and conditionally closed out (have submitted the final draw and may just be awaiting the submittal of demographic information) before applying for additional funds

7.5. Consolidated Plan

7.5.1. HOME program applicants must submit proposals that are consistent with the City's current Consolidated Plan (Con Plan) and HOME Program Description. Before submitting an application, the applicant must review the Con Plan and HOME Program Description (found on the Community Development Division web site, https://www.modestogov.com/1849/Five-Year-Consolidated-Plan) to ensure that the activities are in conformance with the Plan and Description. Additionally, applicants are required to discuss the project and receive Technical Assistance from Program staff prior to submitting an application.

7.6. Disclaimers

7.6.1. The City of Modesto reserves the right to recommend to the Citizens Housing and Community Development Committee (CH&CDC) and City Council to not award all available funds if submitted proposals do not meet the project threshold, evaluation and funding criteria, or do not address the program priorities.

7.6.2. Funds not allocated during a funding cycle may be awarded during a subsequent application cycle. The City of Modesto also reserves the right to allocate these funds to projects during the course of the year, prior to the next application round.

7.6.3. The City of Modesto reserves the right to reserve and allocate HOME funds to any project. The City of Modesto may deny HOME funds for any project, regardless of the ranking score under the project selection criteria, if applicable, if it determines, in its sole discretion, the project is unacceptable based on, but not limited to the following:

7.6.3.1. Negative comments or lack of support from community organization(s) and stakeholder(s), or

7.6.3.2. Information that a particular market is saturated with affordable housing projects, or

7.6.3.3. The likelihood that the project may not comply with HOME program requirements in a timely manner, or

7.6.3.4. The applicant's (including any related party) lack of or unacceptable prior experience and performance related to compliance with housing assistance or other government-sponsored programs, regardless of type and location.

7.7. Use of Contractors

7.7.1. In accordance with federal regulations, HOME funds may not be used to directly or indirectly employ, award contracts to, or otherwise engage the services of any contractor or Sub-recipient during any period of debarment, suspension, or placement of ineligibility status.

7.7.2. The City of Modesto will require participants in lower-tier transactions to certify that neither it nor its principals are presently debarred, suspended, proposed for debarment, declared ineligible or voluntary excluded from any equity from a federally funded transaction.

7.7.3. Any participant that remains on a debarred or suspended condition shall be prohibited from participation in the City of Modesto HOME as long as they are classified in this manner.

7.7.4. The City of Modesto will verify this information by requiring that the applicant submit its Dun and Bradstreet (DUNS) number with the project application.

8. Project Threshold Criteria

8.1. All projects submitted for funding consideration through the HOME Investment Partnership Program must meet the following threshold criteria to be eligible for a funding commitment:

8.2. **Contributes To Implementation Of Strategic Goals Of The Consolidated Plan**

8.2.1. Proposed projects must match one or more of City of Modesto Funding Priorities as listed in the Consolidated Plan. Applicants must familiarize themselves with the City of Modesto Consolidated Plan. The current plan will expire June 30, 2020. The next Consolidated Plan will cover the period of July 1, 2020 - June 30, 2025.

8.3. **Site Control**

8.3.1. For projects that require site control, applicant must have site control or the opportunity of site control for all properties necessary for project completion. Applicant must provide proof of site control with its application for funding.

8.4. **Financially Feasible Project**

8.4.1. Applicants must submit a Project Development Pro Forma, which must cover the entire HOME affordability period of the proposed project. The development proforma must provide evidence of a financially feasible project, evidenced by a complete listing of committed and anticipated funding sources available to the project and illustrate reasonable assumptions regarding interest rates, confidence in availability of funds, and evidence of market need. For homeownership projects, cost, sales, and market analyses are required. For rental projects, reasonable rent and operating cost assumptions are required.

8.4.2. If the applicant has applied for tax credits, a copy of the Subsidy Layering Review must be included with the application.

8.5. **Project Time Frame**

8.5.1. Applicant must submit a timeline for project completion that makes reasonable assumptions concerning land acquisition and site-preparation, funding cycles and parameters for all funding sources, construction time, sales absorption or rent-up period, and capacity of the development team. An applicant's history in project development/completion will also be considered.

8.6. **Leverage Of Home Funds**

8.6.1. Priority consideration will be given to projects with budgets that

require less than 50% of permanent funds from the sum of HOME and CDBG sources. Although projects that serve very low-income households may require higher public subsidies, leveraging other funds with HOME and CDBG is strongly encouraged. For awarded projects, the City of Modesto may make conditional commitments early in the project development process to assist the developer in seeking funds from other sources.

8.6.2. Commitment of HOME funding (in the form of the signed Funding Agreement) will not occur until all project financing has been secured and a budget and project time frame provided. The Project must also be ready to expend funds within 12 months of project commitment.

8.7. Evidence And Capacity Of Development Team

8.7.1. The Applicant must have a track record of successful project development, timely completion and projects-in-service, or in the case of a new or emerging developer, evidence of real estate development and project management expertise. The Application must indicate what skills and roles the non-profit staff will be assuming and any other members of the project development team.

8.7.2. Note: The City of Modesto is interested in investing HOME Partnership Funding only in viable projects that will provide quality affordable housing in an efficient, and timely manner. Housing developers with minimal development experience are encouraged to partner with experienced developers to enhance their ability to produce and deliver housing efficiently. All applications for HOME funding will be reviewed for tangible evidence that the capacity of the development and construction team is solid. Projects with strong development capability will receive higher consideration for HOME funding

9. General Policies and Procedures

9.1. Minimum Subsidy

9.1.1. The minimum HOME subsidy for any project is $1,000 per unit in accordance with HOME regulations.

9.2. Types Of Housing

9.2.1. HOME funds may be used for the construction or purchase of single-family (one unit) homes, doubles (two units sharing a common wall but owned individually), townhomes, cooperatives, and/or multi-unit rental apartments. All housing units developed with HOME assistance (homeownership and rental) must be affordable to buyer and renter households earning 80% of Area Median Income (AMI) or below.

9.2.2. Construction may be one or a combination of several methods including stick-built, panelized, or modular. Mobile and manufactured homes are not eligible for HOME funding assistance. For the purposes of this manual, the following definitions apply:

9.2.2.1. Stick-Built - a house that is constructed primarily on-site from raw

materials. This construction method may utilize some pre-constructed elements such as roof framing.

9.2.2.2. Panelized - a house that is brought to the construction site in pre-built panels (wall sections), assembled on-site, and finished. Panelized houses are stick built houses with some of the components constructed off-site.

9.2.2.3. Modular - a home which is stick-built in modules (two or more boxes) in a factory, transported to the site by truck, and placed on a permanent basement or crawl space foundation.. The modules are bolted together, finished and may also involve on-site additions i.e. porches, garages, and other customization. These houses are essentially the same as stick-built on-site only the majority of the construction is accomplished in a controlled factory environment.

9.2.2.4. Mobile- a house that is fully constructed in a factory on a steel chassis, brought to the site on wheels, but not permanently affixed to a foundation.

9.2.2.5. Manufactured - a house that is fully constructed as a single unit in a factory, brought to the site by truck and placed on a fixed foundation.

9.3. **Expenditure Time Frames**

9.3.1. Unless otherwise noted, all HOME funds for a project must be expended within twelve (12) months of project commitment (see information above relative to project commitment).

9.3.2. Exceptions may be made by the City of Modesto HOME program under special circumstances. Projects must be closed out (completion and demographic data submitted) within 90 days of the final HOME request for funds.

9.4. PROJECT MAXIMUMS

9.4.1. Rent Limits

9.4.1.1. HOME rent limits apply to all rental housing projects. HOME rent limits are published each year by HUD. The current rent limits can be found at https://onecpd.info/resource-library/home-rent-limits/ .

9.4.2. Per Unit Subsidy - Rental

9.4.2.1. HUD establishes maximum per unit subsidy, known as the 221(d)3 limits. The maximum per unit subsidy can be requested from CDD staff. HOME funding may not be utilized on projects that exceed these maximum per unit subsidies.

9.4.3. Homeownership Value Limit

9.4.3.1. HUD establishes, and updates periodically, the maximum allowable value for homeownership housing units. This is the after-rehab value for units that are either acquired or rehabilitated utilizing HOME funding. This is called the Homeownership Value Limes or the 95% limit. Section 92.254(a)(2)(iii) states that two (2) values will be established for the median purchase price/after rehab value. One is for newly constructed housing and one for existing housing.

HOME funds may not be utilized on any property that exceeds these values. The current limits can be accessed at: https://www.onecpd.info/resource/2312/home- maximum-purchase-price-after-rehab-value/ .

9.4.4. SECTION 504 AND FAIR HOUSING ACT

9.4.4.1. All projects receiving HOME funds must comply with section 504 of the Rehabilitation Act of 1973 and the Fair Housing Act of 1988. It is the applicant's responsibility to become familiar with these legislative acts. The applicant may be asked to submit certification from a certified access specialist that the funded project design and construction complies with this requirement.

9.4.5. MONITORING

9.4.5.1. Quarterly Status Reports

9.4.5.1.1. Quarterly progress reports must be submitted to the City of Modesto by the tenth (10th) working day of October, January, April, and July . Completion Reports must be provided to the City of Modesto within ninety (90) days of the final draw of funds allocated for a project. Failure to submit reports in a timely manner could result in retention of future funds.

9.4.5.2. Annual Monitoring

9.4.5.2.1. At a minimum, City of Modesto staff will conduct a "desk monitoring" of all HOME funded projects on an annual basis. Rental Projects, in accordance with the updated 2013 Final Rule, will be monitored a minimum of every 3 years. Construction projects will be monitored more frequently at the discretion of City of Modesto. Follow-up monitoring and inspections will be completed in accordance with HUD guidelines. There will be a physical inspection of all HOME projects every 3 years.

9.4.5.2.2. During the Affordability Period, rental projects that contain 10 or more HOME-assisted units will be required to submit financial reports annually to the City of Modesto. Financial reports may include copies of the Operating Budget, Balance Sheet and Profit and Loss Statement, Rent Roll, as well as certified Audits. The City will assess the financial condition of the project to ensure continued compliance with HOME Program requirements and to prevent project failure and repayment of HOME funds. Where feasible, the City is required to take action to correct problems that threaten the project's financial viability. City of Modesto actions may consist of technical assistance, increased oversight, financial modifications, consultations with HUD and other project stakeholders, foreclosure, transfer of project ownership, or

receivership.

9.4.6. Payment Requests

9.4.6.1. At a minimum, entities receiving HOME funding commitments must submit requests for payment on a quarterly basis, or as such time as specified in funding agreement. Failure to draw funds in a timely manner could result in a reduction of funding. Requests for payment may be made as often as needed (i.e. does not necessarily need to be done by the 1st of the month).

9.4.6.2. Requests for payment must be on the prescribed City of Modesto form or forms acceptable to the City of Modesto.

9.4.7. Income Determination and Eligibility

9.4.7.1. Individuals receiving assistance through the HOME program must be determined income eligible using the most current definition of IRS Form 1040 Adjusted Annual Gross Income. Individuals receiving rental assistance must be determined income eligible using the most current definition of the "Part 5" Annual Income as defined at 24 CFR 5.609. The income eligibility determination is the responsibility of the entity providing the assistance, not that of the City of Modesto.

9.4.7.2. Initial income must be verified via third-party documentation. Income must be re- certified annually in accordance with HOME regulations, utilizing third-party documentation. A minimum of three (3) months of income source documentation shall be reviewed when determining income.

9.4.7.3. Applicant requirements and documentation must be consistent for all participants of a project (i.e. criminal history checks, credit reports, etc.)

9.4.8. Record Retention

9.4.8.1. All records must be maintained and accessible for a minimum of five (5) years beyond the end of the affordability period.

9.4.9. General

9.4.9.1. The City of Modesto will not accept proposals from any applicant for previously approved projects that have not commenced and that received previous years' City of Modesto HOME funding commitments.

9.4.10. In the event there is a turnover in agency staff administering any HOME funded project, the City of Modesto must be notified within thirty (30) days in order to provide technical assistance to new and/or reassigned staff to ensure program compliance.

9.4.11. All applications for either homeownership projects containing more than one unit or rental projects, must be accompanied by a 10-year (or longer) operating Pro Forma, as well as, a "Sources and Uses Statement". Applications not containing this information may not be reviewed or funded.

9.5. Match Requirements

9.5.1. All projects for HOME assistance must provide a minimum of 25% match. Homebuyer projects will be subject to Section 92.221(d).

9.5.2. Eligible forms of project match include:

9.5.2.1. Cash contributions from non-federal sources

9.5.2.2. Participation of Federal Home Loan Bank Affordable Housing Program, Trust Fund, State and other public or private sources

9.5.2.3. Grants contributing to a below-market interest rate loan

9.5.2.4. Waived fees for a HOME-eligible project

9.5.2.5. Donation of real property

9.5.2.6. Donated labor and/or sweat equity

9.5.3. Ineligible forms of match include:

9.5.3.1. Owner equity or investment in a project

9.5.3.2. Interest rate subsidy attributable to the Federal tax-exemption on financing or Federal tax credits

9.5.3.3. Cash or other forms of contributions from applicants or recipients of HOME assistance (with the exception of sweat equity).

9.5.3.4. Documentation of match must be submitted to the City of Modesto upon

9.5.4. Agencies must also maintain documentation of match for a minimum of five (5) years after the completion of the project.

9.6. **Affordability Period**

9.6.1. HOME project owners/buyers are required to maintain HOME funded properties as affordable for a minimum affordability period based on the amount of HOME funds spent on the project. The guidelines are as follows:

Under $15,000 per unit	**5 years**
$15,000 - $40,000 per unit	**10 years**
Over $40,000	**15 years**
New construction or acquisition within one year of construction (for rental)	**20 years**

HOME rental project owners are subject to a minimum 15 year affordability period (but more typically 20 years), regardless of funds invested, (See 92.206(b)(2)).

9.6.2. A deed restriction and/or restrictive covenant will be prepared by the City of Modesto, a subrecipient, or a CHDO, and must be signed by the owner/buyer. The agreement will establish the occupancy and affordability requirements for the property as well as the owner's obligations to the City of Modesto.

9.6.3. In signing the agreement, the owner will agree to the restrictions on the use of the property set forth in the document. This agreement will be recorded by the City of Modesto, its sub-recipient, or CHDO, in the office of the Stanislaus County Clerk Recorder and bind the project owner and all subsequent owners for the full term of the agreement.

9.6.4. In the event the Property or any interest therein is sold, refinanced, conveyed or transferred without advanced written consent of CITY during the period of the Affordable Housing Covenant, CITY shall be entitled to share in the sale proceeds under the recapture provision.

9.6.5. Pursuant to 24 CFR 92.254 (a) (5) (ii), CITY requires that HUD Funds be recaptured if the Property does not continue to be the principal residence of BUYER for the duration of the Affordable Housing Covenant. If all or any portion of the Property or any interest in it is sold, refinanced, conveyed or transferred the "Equity" as hereafter defined, in the Property shall be shared between BUYER and CITY on the following basis:

Number of Years After Date of Purchase	BUYER's Equity Share	CITY's Equity Share
0-5	25%	75%
6-10	50%	50%
11-15	75%	25%
Thereafter	100%	0%

9.6.6. If, for example, the Property is sold, rented, refinanced (outside the City's allowable terms), conveyed, or transferred in the first year of the Affordable Housing Covenant, BUYER shall receive fifty percent (50%) of the Equity in the Property and the CITY shall receive fifty percent (50%) of the Equity. "Equity" is defined as the dollar amount that constitutes the difference between the sales price of the Property and the sum of the following amounts:

9.6.7. a. The principal on a Promissory Note and Deed of Trust from private financing; and

9.6.8. b. The principal on the Promissory Note, and Deed of Trust to CITY; and

9.6.9. c. All costs of sale, including costs of brokers' commissions, escrow fees, title costs and fees, recording charges, etc.; and

9.6.10. d. Current year taxes, including all pro-rata real estate taxes calculated to the date of sale; and

9.6.11. e. BUYER's down payment or cash contribution not including the Assumed Debt; and

9.6.12. f. the costs of any improvements to the Property, provided such improvements were approved by the CITY prior to construction and provided that such improvements have been documented to the satisfaction of CITY.

9.6.13. In the event that no Equity exists at the time of transfer or sale, the current balance of the Debt under the Promissory Note and Deed of Trust will still be due and payable.

9.6.14. In the event that a negative Equity exists at the time of transfer or sale, and the full amount of the current balance of the Promissory Note is not available to be recaptured, the amount of the HUD Funds required to be repaid to CITY shall be as set forth in 24 CFR 92.254(a)(ii)(A)(3). The formulas are as follows:

$$\frac{\text{HUD Funds}}{\text{HUD Funds + BUYER'S Investment}} \times \text{Net Proceeds} = \text{HUD Funds amount to be recaptured}$$

$$\frac{\text{BUYER'S Investment}}{\text{HUD Funds + BUYER's Investment}} \times \text{Net Proceeds} = \text{Amount to BUYER}$$

HUD Funds means the amount of Debt assumed under the Promissory Note and Deed of Trust.

9.6.15. BUYER's Investment means the amount of down payment or other cash contribution towards purchase of the Property and the amount of any capital improvements made by BUYER to the Property since BUYER's purchase. Capital improvements must be documented with receipts and provided to CITY at time of recapture proceedings.

9.7. **Lead-based Paint**

9.7.1. Housing that is purchased, rehabilitated or assisted in some way with HOME is subject to the Lead-based Paint Poisoning Prevention Act, the Residential Lead-based Paint Hazard Reduction Act and the implementing regulations for these Acts.

9.7.2. HUD maintains a website for the Office of Healthy Homes and Lead Hazard Control where lead- based paint requirements are described as they apply to HUD programs. The website is www.hud.gov/offices/lead/index.cfm.

9.7.3. Applicants for HOME funds shall discuss acquisition projects where units that are older than 1978 are being purchased with City of Modesto program staff prior to purchase.

9.7.4. Testing for lead, an assessment of its presence, and a plan for stabilization or removal will be required if HOME funds are used to acquire pre-1978 units. Testing for lead, an assessment of its presence, and a plan for stabilization or removal will be required if HOME funds are used to acquire pre-1978 units, and as otherwise required to comply with all applicable HUD regulations.

9.8. **Useful Life of Major Systems and Capital Needs Assessments**

9.8.1. The 2013 Final Rule requires a Capital Needs Assessment to estimate the useful life of major systems when HOME funds assist a project. To this extent, the City of Modesto is required to estimate the remaining useful life of majors systems (based on age and current condition). Where it is estimated that the useful life is less than the affordability period, the City through project underwriting is required to ensure that a replacement reserve is established and

annual payments made to the replacement reserve are adequate to replace and/or replace major systems when needed. The City reserves the right to inspect Major Life Systems and may require owner to conduct Capital Needs Assessment periodically during affordability period, as necessary to comply with HUD requirements.

9.8.2. HOME funds are not eligible to fund replacement reserve accounts, but a larger HOME subsidy may be permitted to reduce debt payments and overall operating expenses, allowing a larger share of operating revenue to fund the replacement reserves.

9.8.3. For homeowner acquisition and/or rehabilitation projects and rehabilitation of owner-occupied housing, the City of Modesto is required to ensure that each major system has a remaining useful life of at least five (5) years at the time of project completion.

9.8.4. Major systems with a useful life of less than five years after project completion would be required to be rehabilitated or replaced to meet this requirement.

10. CHDO

10.1. Federal regulations require a minimum of 15% of the annual HOME allocation to the City be set aside for housing projects that are owned, sponsored or developed by CHDOs. A CHDO is a non-profit organization that meets a variety of criteria outlined in the HOME regulations. HUD has specific requirements to qualify as the owner, sponsor, or developer.

10.2. Rental Housing

10.2.1. OWNER - A CHDO that is an owner is required to own the HOME project during the development and throughout the period of affordability, and is required to hire a project manager or have a contract with a development contractor to oversee all aspects of the development.

10.2.2. DEVELOPER - A CHDO that is a developer of rental housing must arrange for the construction financing and is in sole charge of the construction, and must own the HOME-assisted housing throughout the period of affordability.

10.2.3. SPONSOR - A CHDO that is a sponsor of HOME-assisted rental housing "owns" and "develops" the rental housing project that it agrees to convey to a private non-profit organization at a predetermined time after completion of the development of the project.

10.2.4. Homebuyer Projects

10.2.4.1. DEVELOPER - Housing is developed by a CHDO if it is the owner (in fee simple absolute, or long-term ground leases) and developer of new housing that will be constructed or existing substandard housing that is owned or will be acquired by the CHDO and rehabilitated for sale to low-income families, in accordance with 92.254. The CHDO must arrange financing of the project and be in sole charge of the construction.

10.2.4.2. Sole General Partner

10.2.4.2.1. 24 CFR 92.300(a)(a1) requires that if a CHDO owns a

project in partnership, or owns the project through its wholly-owned for-profit or non-profit subsidiary, it must be the managing general partner. This also extends to LLCs.

10.3. **CHDO Commitment of Funds**

10.3.1. CHDO funds must be committed by City of Modesto within 24 months of the obligation of HOME funds from HUD. Funds may not be committed to a project until all necessary project financing is secured, a budget and time schedule are established and underwriting and subsidy layering review are completed, as noted in Appendix 2. Construction must commence within 12 months of the project commitment.

10.3.2. The City of Modesto urges CHDOs, which plan to submit applications for projects, to plan well in advance so that all financing is secured and the budget and time schedule are completed. This ensures that HOME funding may be utilized and that no funds will be withdrawn from the project for lack of being able to move forward and meet the HOME requirements.

10.3.3. The City of Modesto will not undertake the underwriting and subsidy layering review until all funding has been identified.

10.3.4. The CHDO and City of Modesto will enter into a written agreement which will stipulate all of the conditions of the HOME funding as well as the legal documents that will need to be signed and/or recorded for the project.

10.3.5. CHDOs must apply for certification as a City of Modesto CHDO at the time of project application. It is recommended to begin work on this process prior to application submission as it may take some time for the City to certify.

10.3.6. **CHDO Certification**

10.3.6.1. An organization that meets the requirements of a CHDO found at 24 CFR 92.300 may apply for City CHDO Certification. This application must be done at the same time that application for funding is made. City of Modesto will certify only those organizations applying for CHDO set- aside funding each year. City of Modesto reserves the right to make the final determination on whether an organization meets all of the requirements of the HOME regulations.

10.3.7. **CHDO Policies and Procedures**

10.3.7.1. CHDO Policies and Procedures are reviewed and modified as needed on an annual basis. Those policies and procedures are included as a part of the ZoomGrants application process. The applications and information should be made available to the City as well.

11. Rental Projects

11.1. HOME funds may be used for acquisition, new construction or rehabilitation of affordable rental housing. Owners of the rental housing may be small property owners, for-profit developers, non-profit housing providers, CHDOs or government agencies. Owners will be "desk monitored" on an annual basis by

the City of Modesto to ensure compliance in occupancy, rent restrictions, affordability requirements, and property standards. Additionally, an on-site inspection will be required to be conducted a minimum of once every three (3) years.

11.2. **General Requirements**

11.2.1. Funds may not be committed to a project until all necessary project financing is secured, a budget and time schedule are established and underwriting and subsidy layering review (if necessary) are completed, as noted in Appendix 1. Construction must commence within 12 months of the project commitment. Agreements will not be signed until this information has been submitted to and approved by the City of Modesto.

11.2.2. Project records must be maintained by the owner for a minimum of five (5) years beyond the required affordability period.

11.2.3. Owners must adopt a written tenant selection policy. A copy of the policy must be on file with the City of Modesto. Any changes to an existing policy must be provided to the City of Modesto immediately.

11.2.4. Tenant files must be maintained on all HOME units. Files must contain a current lease signed by the tenant, documentation of income, application and household information including family composition, documentation of Section 8 subsidy showing tenant and subsidized portions and documentation of correspondence with tenant, yearly income verifications, as well as any other pertinent information on the tenant (i.e. background/criminal checks, etc.)

11.2.5. Third party documentation of income must be verified to determine eligibility prior to family moving in. Income documentation must be no more than three (3) months old. The tenant selection policy must conform with HUD requirements and must be approved in writing by the City.

11.2.6. Income must be verified annually to ensure compliance and maintained in the tenant's files. Third-party documentation must be performed every six (6) years.

11.2.7. Tenant files must be maintained for a minimum of five (5) years after the tenant vacates the unit.

11.2.8. All units must be maintained in compliance with HUD Housing Quality Standards and City of Modesto Minimum Housing Rehabilitation Standards and/or other governing jurisdiction building codes.

11.2.9. Owner must adhere to Equal Opportunity, Affirmative Marketing and Fair Housing (contained within these policies) practices in all marketing efforts, eligibility determinations and other transactions. Owners must solicit applications from persons in the housing market not likely to apply without special outreach efforts. All marketing efforts must be documented. The Owner may be required to complete an Affirmative Fair Housing Marketing Plan, to comply with HUD requirements.

11.2.10. The Equal Housing Opportunity Logo or statement must be used in

all written communication and advertising of vacant units and must be displayed in the housing/ rental office.

11.2.11. No bidding or contracting may occur prior to written authorization of the City of Modesto. Failure to follow these requirements will cause the funding agreement to become void.

11.2.12. Progress inspections will be conducted by the City of Modesto in order to ensure that work is progressing in a timely manner, that the work is completed in accordance with the codes and construction contract and documents, and to initiate a progress payment. No final payment of HOME funds will be made until all construction is complete and the unit is ready for occupancy.

11.2.13. City of Modesto will monitor the project during the period of affordability. This will include on-site inspections to determine that the unit(s) continues to meet the property standards as well as a monitoring of files as required by HOME regulations. The Owner may be required to pay a fee that will be invoiced to the Owner by the City of Modesto to cover the cost of on-going monitoring.

11.3. PROPERTY STANDARDS

11.3.1. New Construction

11.3.1.1. All newly constructed rental units must meet the applicable State and Local residential and building codes upon project completion.

11.3.1.2. All newly constructed rental units must also meet the accessibility requirements of 24 CFR Part 8 (implements Section 504 of the Rehabilitation Act of 1973) and Titles II and II of the Americans with Disabilities Act implemented at 28 CFR Parts 35 and 36, as applicable. Covered multifamily dwellings, (buildings consisting of 4 or more dwelling units if such buildings have one or more elevators; and ground floor dwelling units in other buildings consisting of 4 or more dwelling units) must also meet design and construction requirements at 24 CFR 100.205.

11.3.2. Rehabilitation

11.3.2.1. City of Modesto has adopted a modified version of the Minimum Housing Quality Standards (HQS) as the standard for all rehabilitation work.

11.3.2.2. Eligible projects may be existing one or more multifamily buildings with rental units on a single site; or multiple sites that are under common ownership, management and financing. In no case shall funding be provided for a unit to be converted to a rental unit if the existing use or former use was owner-occupied housing.

11.3.2.3. A Capital Needs Assessment is required for rehabilitation projects with a total of 26 or more units. The City will require that the scope of the rehabilitation work and replacement reserves deposits are sufficient to ensure the useful life of essential building components throughout the required Affordability Period.

11.3.3. Occupancy

11.3.3.1. Upon initial occupancy, renters must be at or below 50% of the Area Median Income (AMI). If after initial occupancy the family's income increases above 80% AMI, the family may continue to occupy the unit with the stipulation that they pay at least thirty percent (30%) of their adjusted monthly income as rent. An exception is made for units financed with Low Income Housing Tax Credits, in which case tax credit regulations apply.

11.3.3.2. In rental project of five (5) or more units, at least twenty percent (20%) of the HOME assisted units must be occupied by families with an annual gross income at or below fifty percent (50%) of the AMI. Rents for these units must be at or below the Low HOME rents. The City of Modesto's current policy is that all HOME assisted units in rental projects are subject to Low HOME rents.

11.3.3.3. All HOME assisted units must be fully occupied within 18 months of construction/rehab completion. Project completion is specified below. If a unit is not occupied within 18 months, the Owner will be required to repay the HOME funds that have been invested on that unit.

11.3.3.4. All tenants in HOME assisted units must have a lease that meets all of the requirements of the HOME program.

11.3.3.5. Leases

11.3.3.5.1. Lease must be for at least one year

11.3.3.5.2. Lease may not contain any of the following provisions:

11.3.3.5.2.1. Agreement to be sued: Agreement by the tenant to be sued, to admit guilt, or to a judgment in favor of the owner in a lawsuit brought in connection with the lease.

11.3.3.5.2.2. Treatment of property: Agreement by the tenant that the owner may seize or sell personal property of household members without notice to the tenant and a court decision on the rights of the parties. This provision does not apply to disposition of personal property left by a tenant who has vacated a property.

11.3.3.5.2.3. Excusing owner from responsibility: Agreement by the tenant not to hold the owner or the owner's agents legally responsible for any action or failure to act, whether intentional or negligent.

11.3.3.5.2.4. Waiver of notice: Agreement of the tenant that the owner may institute a lawsuit without notice to the tenant.

11.3.3.5.2.5. Waiver of legal proceedings: Agreement of the tenant that the owner may evict the tenant or household members without instituting a civil

court proceeding in which the tenant has the opportunity to present a defense, or before a court decision on the rights of the parties.

11.3.3.5.2.6. Waiver of a jury trial: Agreement by the tenant to waive any right to a trial by jury.

11.3.3.5.2.7. Waiver of right to appeal court decision: Agreement by the tenant to waive the tenant's right to appeal or to otherwise challenge in court a court decision in connection with the lease.

11.3.3.5.2.8. Tenant chargeable with cost of legal actions regardless of outcome: Agreement by the tenant to pay attorney's fees or other legal costs, even if the tenant wins in a court proceeding by the owner against the tenant. The tenant, however, may be obligated to pay costs if the tenant loses.

11.3.3.5.2.9. Mandatory supportive services: Agreement by the tenant (other than a tenant in transitional housing) to accept supportive services that are offered.

11.3.3.5.3. Owners may terminate tenancy or refuse to renew a lease upon 30 days' written notice, and only for: serious or repeated violation of the terms and conditions of the lease; violation of applicable federal, state, or local law; completion of the tenancy period for transitional housing or for other good cause in accordance with 24 CFR 92.253(c).

11.3.4. **Tenant Selection**

11.3.4.1. The Owner must comply with the Affirmative Marketing Policy (Appendix 1). The Owner must also adopt and follow written tenant selection policies and criteria (24 CFR 92.253 (d)). The Owner must submit the tenant selection policies and criteria to the City of Modesto with the funding agreement. These policies and criteria must be approved by the City of Modesto prior to the leasing/renting of any properties.

11.3.5. Fixed/Floating Units

11.3.5.1. For properties with both HOME-assisted and Non-HOME-assisted units (which is usually the case in the City HOME Program's funding history), HOME regulations require that a choice between fixed and floating unit designation must be determined at the time of project commitment.

11.3.5.2. A fixed unit designation requires that specific units be identified for HOME rent and occupancy restrictions. A floating unit designation indicates that the HOME-assisted units may change over time as long as the total number of HOME=assisted units in the project remains constant.

11.3.5.3. It is the policy of the City HOME Program to always fund only floating units and this designation is to be understood in all new City HOME Program funded rental projects.

11.3.6. Rent Restrictions

11.3.6.1. Owners of HOME projects must keep units affordable to low-income tenants during the entire affordability period. Maximum rent limits are published by HUD annually and distributed to recipients of funds. Current rent limits are contained in Appendix 1. In the event that limits go below the rate published at the time of contract execution, owners will not be required to lower rents and may retain their current rates.

11.3.6.2. Owners may request an increase in rent as rent limits change. However, the owners may not change a tenant's rent prior to the expiration date on the lease agreement. Owners must provide tenants at least thirty (30) days notification of rent increases. The City of Modesto shall review and approve all proposed rent increases.

11.3.7. Site and Neighborhood Standards

11.3.7.1. New construction rental projects must ensure that the project conforms to the "Site and Neighborhood Standards" as described in 24CFR 983.6(b).

11.3.8. Project Completion

11.3.8.1. Rental projects are considered complete once construction is completed and the units are ready for occupancy. All HOME units within a rental projects must be rented to an initial occupant within 18 months of project completion. All HOME funding will be required to be repaid to HUD for units not occupied within the 18 month time frame.

11.3.8.2. All HOME assisted units must be completed within four (4) years of signing the funding agreement between the Owner and the City of Modesto. Funds expended on units that are not complete within the required 4 years will result in the repayment of all HOME funding to the City of Modesto for reimbursement to HUD. Funding agreements must be signed within 12 months of the beginning of the program year.

11.3.9. Funding Levels

11.3.9.1. The minimum amount of funding that can be applied to a HOME assisted unit is $1,000.

11.3.9.2. The maximum amount of funding that can be applied to a HOME assisted unit is the 221(d)(3) limit as published each year and provided to the City of Modesto by HUD. The current limit is available upon request.

12. Homeownership Activities

12.1. Construction/Rehab of Homeownership Units for Resale

12.1.1. City of Modesto HOME funds may be utilized by entities for the construction or rehabilitation of units for resale for homeownership to qualified low-income (up to 80% of AMI) individuals and/or families.

12.1.2. Environmental and historical reviews must be conducted by City of Modesto on every project. City of Modesto will notify the agency of

documentation needed to complete the review. It is the responsibility of the owner/developer to insure that City of Modesto has all information necessary to complete the reviews. Environmental and historical reviews will be completed prior to the award of a Grant Agreement.

12.1.3. Projects may not commence and funds may not be expended (federal or non-federal) until the review is completed and HUD releases the project.

12.1.4. Grant agreements will only be signed upon the submission of project timeline and final commitment and proof of all other funding sources.

12.1.5. Construction plans and/or work specifications must be submitted to City of Modesto to be reviewed prior to the execution of the HOME Grant Agreement between the City of Modesto and the owner/developer (non-profit). All plans must be approved prior to commencement of construction. Any changes to the approved plans must be submitted to City of Modesto for approval.

12.1.6. Funds may not be committed to a project until all necessary project financing is secured, a budget and time schedule are established and underwriting and subsidy layering review (if necessary) are completed, as noted in Appendix 2. Construction must commence within 12 months of the project commitment. Grant agreements will not be signed until this information has been submitted to and approved by the City of Modesto.

12.1.7. The City of Modesto will not approve a grant agreement until a buyer is pre-approved to purchase the property upon completion.

12.1.8. HOME Grant Agreements must be signed within fourteen (14) days of the receipt of the funding agreement from the City of Modesto.

12.1.9. Construction must begin within three (3) months of plans and/or work specification approval by the City of Modesto.

12.2. **For projects that require acquisition of land or property, the agency may obtain a purchase option agreement in lieu of full ownership. The agreement must state that the purchase of the property is contingent upon the results of the environmental review and the release of funds by HUD.**

12.2.1. All legal notices and advertisements pertaining to construction of the project must be reviewed by the City of Modesto prior to publication.

12.2.2. All new construction projects must meet the federal energy efficiency standards and must meet or exceed building codes as established by City of Modesto.

12.2.3. All rehabilitation projects must meet the City of Modesto Minimum Housing

12.2.4. Quality Standards adopted by the City of Modesto and adopted local applicable building codes.

12.2.5. Construction files must be maintained and accessible for a minimum of five (5) years beyond the affordability period

12.3. Bid Procedures

12.3.1. All projects, except for CHDO projects, must be sent out for public

bid regardless of other funding sources in the project. (Projects involving Low-Income Housing Tax Credit (LIHTC) funding may request a waiver of this requirement.) Bid documents must be approved by the City of Modesto prior to advertisement. Failure to receive prior approval will result the project non-compliance and termination of the funding agreement.

12.3.2. Bid packets must be available for pickup for a minimum of two (2) weeks.

12.3.3. Bids must be sealed when submitted to the agency. All bids will be opened by the agency at a pre-designated date and time.

12.3.4. City of Modesto staff and all bidders must be notified of date and time of bid opening.

12.3.5. Normally the lowest, responsive bidder will be awarded the contract. In the event the agency selects a bid other than the lowest, they must submit the bids along with documentation to support the selection to the City of Modesto for approval. This may or may not be approved by the City of Modesto.

12.4. Payment/Release of funds

12.4.1. Funds are disbursed on a reimbursement basis. If the Agency is unable to meet the cost of construction and/or services on a reimbursement basis, payment terms must be discussed and approved by City of Modesto CDD staff prior to construction.

12.4.2. Agencies must submit one copy of a CDD Request for Payment form along with copies of the invoice from the contractor or service provider. Claims submitted without proper back-up documentation will be returned to the Agency. No faxed copies of the "Request for Payment" form will be accepted. However, a scanned copy with an original signature in blue ink will be accepted.

12.4.3. The City of Modesto may hold payment including final payment for the project pending inspection and approval by the City of Modesto for possible Davis Bacon and all other federal requirements as well as requirements of the Grant Agreement. The funds will not be released until the City of Modesto has received and approved all required documentation. All new construction projects must have a Certificate of Occupancy from City of Modesto or other governing jurisdiction. All rehab projects must be inspected by a City of Modesto housing inspector and have documentation indicating theproperty complies with building code regulations.

12.5. Relocation

12.5.1. HOME projects must comply with the Uniform Relocation Act (URA) whenever displacement occurs as a direct result of HOME-assisted rehabilitation, demolition or acquisition, including acquisition for homebuyer activities. If the proposed project is occupied at the time of application, contact the City of Modesto for detailed regulations. Failure to do so may result in disqualification ofyour application as you may be required to submit notifications as part of your application. It is the expressed policy of City of Modesto to strictly comply with the URA and to minimize displacement.

12.6. Cost Overruns

12.6.1. Applicants should make every effort to be realistic when developing the construction and development budgets. Construction budgets should be comprehensive and should consider items such as the removal of lead based paint and asbestos, the effect of cost estimating now for work to be performed some months into the future, and contingencies.

12.6.2. The City of Modesto does not keep a reserve account for cost overruns. Funds will not be available to pay for cost overruns. Overruns will be the responsibility of the owner or developer. The protocol for payment of HOME funds to the project is:

12.6.3. GAP

Cannot exceed the result of the maximum subsidy layering calculation, and the City of Modesto reserves the right to provide gap funding in an amount below the maximum subsidy layering calculation cap.

12.6.4. Contingency

Contingency may not exceed 12% of the total project costs.

12.6.5. Developer Fee

Developer fees may not exceed 15% of the total project costs. The final payment of Developer fees will be the last funds paid for a project. In the event of cost overruns, developer fees must be used as a contingency fund if no other funds are available.

12.7. Project Completion

12.7.1. A Homeownership housing project is considered complete when:

12.7.2. - all necessary title transfer requirements and construction work are complete; and

12.7.3. the project complies with the property standards under 24 CFR 92.251; and the final payment of HOME funds has been disbursed; and

12.7.4. all project completion data has been submitted to City of Modesto including demographic information on the homeowner and City of Modesto has approved and entered the completion data into IDIS (Integrated Disbursement Information System).

12.7.5. Project must be completed within four (4) years of the signing of the Grant Agreement with the City of Modesto.

12.7.6. The 2013 amended HOME Final Rule requires that all units must be sold within nine (9) months of a certificate of occupancy (6 months for projects funded with 2012 HOME funds). Units not sold within this time frame must be converted to rental units. The City's HOME policy is that homeownership units are preferred over rental units. Therefore, the City will not enter into a grant agreement until a buyer is prequalified, and there is a pool of alternate buyers (92.254).

12.7.7. Owner must provide a market study to ensure that the units will be sold within the required time frame, along with documentation of a prequalified buyer and pool of alternate buyers.

12.8. Funding Levels

12.8.1. The minimum amount of funding that can be applied to a HOME

assisted unit is $1,000.

12.8.2. The maximum amount of funding that can be applied to a HOME assisted unit is determined by the HOME Homeownership Value Limits as published each year and provided to the City of Modesto by HUD. The current limit is attached as Appendix 2.

12.9. Labor Standards

12.9.1. Davis-Bacon wage compliance and other federal laws and regulations pertaining to labor standards apply to all construction and rehabilitation contracts that are financial in whole or in part with HOME funds for residential property consisting of 12 or more assisted units.

12.9.2. Davis-Bacon and Related Acts (40 USC 276a-276a-7; Contract Work Hours and Safety Standards Act (40 USC 327-333); Copeland (Anti-Kickback) Act (18 USC 874; 40 USC 276c); Fair Labor Standards Act of 1938, as amended (29 USC 201, et.seq.)

13. Owner Occupied Housing Rehabilitation

13.1. The City of Modesto manages and operates an in-house owner occupied housing rehabilitation program. The Rehabilitation Loan Program provides assistance for owner-occupied single family homes to rehabilitate their homes through a deferred loan.

13.2. Loans up to a maximum of $60,000, and $10,000 ($20,000 mobile homes) grants are available based on property equity, less any existing mortgage balances.

13.3. Applicants are required to have proof of Homeowner's insurance, be current with any existing mortgage payments and not be tax-delinquent. Applicants will be required to permit the City to inspect the interior and exterior of their property and to conduct a HQS assessment.

13.4. All identified lead paint hazards and violations of the City's Property Maintenance Code will be required to be completed through the loan program. Additionally, major building components such as roofing, windows, furnaces and water heaters will be evaluated to ensure a useful life of at least five (5) years. Where the useful life of a major building component is determined to be less than five years, replacement or repair shall be required.

13.5. The maximum after-rehab value of a property assisted with HOME funds may not exceed the HOME Homeownership Value Limits as published each year by HUD.

13.6. Repayment will not be required until the applicant no longer resides at the property or upon transfer of the property to a new owner. Repayment will consist of the principal balance of the loan, 3% deferred interest.

14. Down Payment Assistance

14.1. The City of Modesto, a subrecipient, or a CHDO may provide a Homebuyer Assistance Loan to eligible homebuyers through HOME Program funds. The Homebuyer Assistance Loan requires the homebuyer to provide a minimum of 25% of the required down payment amount, or$1000, whichever is greater. Additional Homebuyer Assistance Program (HAP) guidelines can be found within the City of Modesto's HAP Policies and Procedures

Appendix 1

1. Affirmative Marketing Policy

1.1 ***Policy:***

14.1.1. The City shall use a variety of public service announcements to inform persons of all genders, races, ages, ethnic groups, religious orientation, employment status, sources of income, marital status and sexual orientation of the availability of the housing opportunities made under the HOME Program

1.2 ***Actions:***

1.2.1 By virtue of the above policy, the City of Modesto:

1.2.1.1 Will continue to periodically publish information about programs it is implementing. Such information will include reference to the Affirmative Marketing Policy; Federal, State and local fair housing laws; and contain information on the program and housing units. New programs are introduced to the community through special news releases and as such call attention and impart information about them.

1.2.1.2 Does include in its contractual agreement with sub-recipients in the HOME Program, the requirements of an Affirmative Marketing Policy for a period of time equal to their HOME loan term.

1.2.1.2.1 **This policy is to include the following requirements:**

1.2.1.2.1.1 Inform the Housing Authority of the County of Stanislaus (HACS) and those community organizations offering referral services when a unit becomes available.

1.2.1.2.1.2 Maintain a log of all households and applications received for occupancy in vacant units and to assess marketing effectiveness.

1.2.1.2.1.3 Use the Equal Housing Opportunity logo, slogan, or statement in all advertising:

1.2.1.2.1.3.1 Equal Opportunity Logo

1.2.1.2.1.3.2 Slogan: "Equal Housing Opportunity"

1.2.1.2.1.3.3 Statement: "We are pledged to the letter and spirit of US policy for achievement of equal housing opportunity throughout the nation.

1.2.1.2.1.4 We encourage and support an affirmative advertising and

marketing program in which there are no barriers to obtaining housing because of race, color, religion or national origin."

1.2.1.2.1.5 This information will be provided individually unless the advertisement appears in publication which carries a blanket Equal Opportunity logo, slogan, or statement.

1.2.1.2.1.6 Maintain a nondiscriminatory hiring policy.

1.2.1.3 Display the Equal Housing Opportunity logo (in office or where there is a project sign).

1.2.2 Requires that in support of the Affirmative Marketing Policy, the sub-recipient makes every effort to solicit applications from persons not likely to apply for the housing without special outreach.

1.2.3 This shall include in addition to notifying the HACS of occurring vacancies, and any other community organizations the City identifies as providing housing referral services.

1.2.4 Review sub-recipient efforts to affirmatively market their units on an annual basis and suggest corrective action for sub-recipients who fail to follow the affirmative marketing requirements.

1.2.5 Through the Community Development Division, the City will develop and distribute informative materials through community outlets to aid in the affirmative marketing effort of these units.

1.3 **Records**

1.3.1 As a result of the Affirmative Marketing Policy and the actions outlined above, the City of Modesto will:

1.3.1.1 document its good faith efforts to inform persons about vacant units and how they can be occupied.

1.3.1.2 Conduct evaluations of assisted units to ensure compliance with the Affirmative Marketing Policy and to determine the policy's impact.

1.3.1.3 Maintain and make available records which will detail affirmative marketing actions by the City of Modesto. The City also maintains documentation and communication with the Equal Housing and Equal Opportunity Office of the Milwaukee Area HUD office.

1.3.1.4 Maintain and make available the following data from each program-assisted project:

1.3.1.4.1 The race, family size, gender, and income of households moving into assisted projects.

1.3.1.4.2 The race, gender family size, and income of any household displaced as a result of program activities.

1.3.1.5 This data will be reviewed annually or periodically as determined by the City to effectively and efficiently report

such information to HUD. This data will be used to assess the program's impact, households benefiting from program activities and the sub-recipients efforts to affirmatively market the assisted units. Any sub-recipient found not marketing the units in an affirmative manner will face actions outlined in this policy.

1.4 **Affirmative Marketing And Outreach To Minority And Women Owned Businesses Policy**

1.4.1 The City of Modesto shall administer its HOME Program in a manner that will further the purposes of federal, state, and local affirmative marketing and equal opportunity requirements. To that end, the City of Modesto will:

1.4.1.1 Conduct its affirmative marketing and outreach to minority (MBE) and women owned businesses (WBE) in conformance with 24 CFR Part 85.36 (e).

1.4.1.2 Compile and utilize a listing of all known MBE;s and WBE's, their capabilities, services, supplies and/or products in the Modesto area.

1.4.1.3 Encourage MBE's and WBE's to participate in the City of Modesto's HOME Program.

1.4.1.4 Require HOME sub-recipients to take affirmative steps to use MBE's and/or WBE's in HOME funded projects.

1.4.1.5 Require HOME sub-recipients to maintain appropriate records to document the number and types of contracts and subcontracts it awards, the dollar value of each award, and the gender and ethnic/racial status of the management/ownership of the business.

1.4.1.6 Compile an annual record of MBE's and WBE's participating in the HOME Program and conduct an annual review to assess the effectiveness of efforts to encourage participation by minority and women owned businesses.

1.4.1.7 Section 3: Requires that employment and other opportunities generated by federal financial assistance for housing and community development programs shall, to the greatest extent feasible, be directed toward low and very low income persons, particularly those who are recipients of government assistance by the City of Modesto.

Appendix 2

1. Subsidy Layering Review and Underwriting Guidelines:

1.1. As described in 24 CFR 92.250, the City of Modesto is required to:

1.1.1. Evaluate subsidy layering and conduct or examine the underwriting of all projects to ensure that the HOME subsidy is not excessive and does not result in an undue or excessive return to the owner; and

1.1.2. Assess, at a minimum, the current market demand in the neighborhood in which the project will be located, the experience of the developer, the financial capacity of the developer, and firm financial commitments for the project.

1.2. Underwriting capacity does not apply to owner-occupied rehabilitation projects where is assistance is provided as a grant or deferred, forgivable loans to owner-occupants, or to homebuyer assistance projects that do not involve development or rehabilitation of housing, such as down payment assistance.

1.3. Underwriting capacity does apply to owner-occupied rehabilitation projects with an amortizing HOME-funded rehabilitation loan.

1.4. The City of Modesto also will not be required to perform neighborhood market analyses or evaluate developer capacity for owner-occupied rehabilitation projects, or projects involving HOME-funded down payment assistance, but no HOME-funded development.

1.5. The City of Modesto will use the following types of subsidy layering review before committing HOME program funds to any project:

1.5.1. A subsidy layering review produced by HUD, when the source of funding is provided by HUD, and HUD conducts a subsidy layering review;

1.5.2. Subsidy layering analysis produced when Low-Income Housing Tax Credit (LIHTC)is used, and an evaluation to determine whether there are excess tax subsidies;

1.5.3. A subsidy layering analysis produced by the developer and reviewed by the City of Modesto in accordance with the guidelines in HUD Notice CPD 98-1

1.6. Documentation Needed:

1.6.1. Project Pro Forma including sources and uses of funds statement, operating pro forma (rate of return on equity investment) that covers the entire HOME affordability period of the proposed

1.6.2. project, project development budget along with certification of federal assistance. The pro forma should include achievable rent levels, market vacancies, and operating expenses.

1.7. Sources of Funds

1.7.1. Commitment letters with all terms and conditions for all mortgages, grants, subordination agreements, bridge (interim) loans and investment tax credits (historical, low-income, if applicable); and

1.7.2. If a partnership, a copy of the partnership agreement, which indicates the cash contribution by the general partner(s) and/or limited partner(s)

1.7.3. Documentation of owner cash equity and any deferred developer fees

1.8. Uses of Funds

1.8.1. Earnest money agreement; option or closing statement for land and/or buildings

1.8.2. Construction cost estimate including acquisition costs, rehabilitation or new

1.8.3. construction costs, financing costs and professional fees
1.8.4. Construction contract or preliminary bid(s)
1.8.5. Agreements governing the various reserves which are capitalized at closing (to verity
1.8.6. that the reserves cannot be withdrawn later as fees or distributions)
1.8.7. Appraisal (to substantiate the value of the land and the value of the property after
1.8.8. rehabilitation or construction of the structure being built)
1.8.9. If low-income tax credits are utilized, documentation on the syndication costs (legal,
1.8.10. accounting, tax opinion, etc) from the organization/individual who will syndicate and sell the offering to ensure that the project can support the fees necessary to syndicate/fund the project
1.8.11. Supporting documentation for all other costs specified in the Sources/Uses of Funds statement

1.9. Certification of Federal Assistance

1.9.1. Formal certification concerning any other governmental assistance provided or to be provided to the project - one certification for each funding source
1.9.2. If no other governmental assistance, certification to this affect
1.9.3. If this changes during the course of the project, the City of Modesto needs to be informed immediately in the form of a new certification.

1.10. Project Development Budget

1.10.1. The City of Modesto will review the project development budget to determine that the development costs are necessary and "reasonable". The budget will include all costs associated with the development, regardless of the funding sources.
1.10.2. "Reasonableness" of costs shall be based on the following factors:
1.10.2.1. Cost of comparable projects in the same geographical area;
1.10.2.2. The qualifications of the cost estimators for the various budget line items; and
1.10.2.3. Comparable costs published by recognized industry cost index services.

1.11. Underwriting Standards

1.11.1. City of Modesto HOME projects will utilize the underwriting criteria as set forth below. Generally underwriting will review the risk analysis of the project including: market risk, developer risk, and project risk. Market risk is defined as the likelihood that the units can be sold. Developer risk is defined as the likelihood that the developer can complete the project on-time and budget. Project risk is defined as the adequacy and reasonableness of the costs and sources to complete and sell the project.
1.11.1.1. Developer fees & overhead and any consultant fees may not exceed the sum of:
1.11.1.1.1. 15% of total rehabilitation and new construction eligible basis; and
1.11.1.1.2. 5% of total acquisition eligible basis; however a fee up to 10% of total acquisition eligible basis will be permitted for projects that require the approval of HUD for the transfer of

the property.

1.11.1.2. Limits for Contractor Fee, Contractor Overhead and General Requirements will be calculated as follows:

1.11.1.2.1.1. Contractor Fee = 6% of hard construction costs

1.11.1.2.1.2. Contractor Overhead = 2% of hard construction costs

1.11.1.2.1.3. General Requirements = 6% of hard construction costs.

1.11.1.2.2. Total soft costs may not exceed 35% of total eligible basis. Total soft costs equal the sum of general requirements, contractor overhead, contractor profit, architectural fees, survey costs, engineering fees, permanent loan fees, cost of tax-exempt bond issuance, taxes, appraisal, market study, environmental report, rent-up/marketing costs, title & recording fees, non¬syndication legal fees, accounting fees, developer fees & overhead, consultant fees, organizational fees, and syndication expenses.

City of Modesto
Neighborhood Stabilization Program 3

NSP3 Subrecipient Management Policies and Procedures

(2 CFR Part 225 appendix A (C)(1)(c))

1. During the period of affordability, the City of Modesto will perform annual on-site compliance or desk monitoring inspections of all single-family and multi-family developments utilizing NSP3 funds to determine compliance with the applicable regulations and requirements outlined below utilizing NSP3 regulations to govern activities.
   - 1.1. This monitoring will consist of the following parties and unit types:
     - 1.1.1. All participating NSP Developers
     - 1.1.2. All NSP Rental Properties
     - 1.1.3. All NSP Re-Sale Properties
   - 1.2. Developers will be notified of their monitoring date and time through a formal letter no less than 2 weeks prior to the date of monitoring. The letter contains information notifying the developer as to which program is being monitored, which properties are being reviewed, and the type of monitoring being conducted.
     - 1.2.1. Type of monitoring is dependent on which program component is being monitored by City of Modesto Staff. Types of monitoring are as follows:
       - 1.2.1.1. "Windshield" Inspection - Upon sale of the property to a qualified buyer, notification of annual inspection and guarantee of general property upkeep is agreed to by the buyer for the life of the affordability covenant.
         - 1.2.1.1.1. A "Windshield" inspection is done annually to ensure that the exterior of the home is adequately maintained and that the property does not become blight to the neighborhood. This 10 point visual inspection is done by a City of Modesto Housing Rehabilitation Specialist (HRS).
         - 1.2.1.1.2. Upon completion, any egregious concerns are turned over to the Neighborhood Preservation Unit and the property will be served with a Notice of Violation.
       - 1.2.1.2. Physical Monitoring - Every property shall be physically inspected by city staff no less than every three (3) years for property damage, code violations, and maintenance issues and concerns (primarily Rental Properties).
         - 1.2.1.2.1. The Developer/Property management firm informs the current tenant of the time and date of the city inspection.
         - 1.2.1.2.2. A City of Modesto Housing Rehabilitation Specialist does a full Housing Quality Standards (HQS) walkthrough of the facility and grounds. For multi-unit properties HOME guidelines are followed and 10% of the units are reviewed.
         - 1.2.1.2.3. The property is given a Pass/Fail/Inconclusive check on all health and safety components of the inspection. Once completed, the HRS determines if any of the deficiencies are severe enough for a FAIL result on the property as a whole or if the item is a "Concern" to reinsert at the next monitoring.
         - 1.2.1.2.4. An electronic copy of the report is given to the Housing Finance Specialist (HFS) and to the developer representative for signature. If the items that are discovered are easily remedied, and the developer says that they will fix the items immediately, a 2 week period of time will be allowed before an unresolved finding is recorded.

1.3. Subrecipient/Developer File Monitoring:

1.3.1. Developers are expected to annually provide to City Staff a completed "Rental Housing Project Compliance Report" (City of Modesto Monitoring Form 2-A) prior to staff conducting a monitoring session. Form 2-A is a program summary containing all pertinent data for the monitoring and serves as a starting point for data verification.

1.3.2. Developer monitoring will be conducted at the developer's place of business or at the City of Modesto (optional).

1.3.2.1. Monitoring Form 1-A: Developer Compliance (File Monitoring), is a checklist utilized by the City of Modesto to verify developer specific information and documentation dealing with:

1.3.2.1.1. Program Compliance

1.3.2.1.2. Rental Compliance

1.3.2.2. Monitoring Form 1-C: Acquisition & Rehab (File Monitoring), is a checklist utilized by the City of Modesto to verify property specific information and documentation dealing with

1.3.2.2.1. Property Acquisition

1.3.2.2.2. Construction/Rehabilitation

1.3.2.2.3. Property Financials

1.3.3. NSP Rental Property Monitoring:

1.3.3.1. Developers are expected to annually provide to City Staff a completed "Recertification Packet" for every tenant at the time of lease renewal. This information will be used in conjunction with Monitoring Form 2-A to provide a basis for monitoring of the developer's tenant files. The "Recertification Packet" consists of:

1.3.3.1.1. Part V Income Certification (Section 8 method)

1.3.3.1.2. Household Characteristics form

1.3.4. Monitoring Form 1-B: Tenant Compliance & Verification (File Monitoring), is a checklist utilized by City of Modesto Monitoring Staff to verify that the developer is complying with program guidelines for rent and occupancy.

2. Monitoring Follow-Up

2.1. When both the Physical and File Monitoring have been completed, staff will draft one of 2 letters and send them to the developer stating the results of the findings: Finding Letter or Clearance Letter. As clarification, a "finding" is an element which does not comply with a Federal or State statute or regulation; whereas a "concern" represents a potential finding or a program deficiency that should be improved before it leads to a finding.

2.2. Finding Letter

2.2.1. This letter notifies the developer that one or more serious issues were uncovered during the course of monitoring. It will identify whether the finding was discovered during the Physical Monitoring or the File Monitoring, the nature of the finding and the remedy available.

2.2.2. The developer has 30 days to respond to the City of Modesto with their corrective actions at which point an additional inspection will be done within a reasonable timeline.

2.2.3. Clearance letter

2.2.3.1. This letter informs the developer that there were no findings discovered during the monitoring and their property has been cleared for 1 year.

2.2.3.2. If there are any concerns that were discovered during the monitoring, the letter will disseminate the details. Any concerns will be inspected at the next monitoring, and staff will determine if the concern had graduated to a finding.

These policies supersede any previously adopted policies and are subject to review and revision by the City of Modesto's Citizens Housing and Community Development

Environmental Review Process – City of Modesto

City of Modesto Environmental Review Process for Activities Utilizing Funding From the U.S. Department of Housing and Urban Development

1. *Overview of Environmental Review*

1.1. All Federal Agencies must comply with the National Environmental Policy Act of 1969 (NEPA). This means that all activities proposed to receive Federal funding must be reviewed for compliance with applicable Federal laws and authorities (including Executive Orders and Agency regulations) which collectively protect and enhance the environment by removing healthy and safety related concerns and providing citizens with the benefits of a healthy environment. A few of these laws and authorities are: the Endangered Species Act, the National Historic Preservation Act, the Clean Air Act, the Flood Insurance Reform Act, as well as regulations and policies implemented by other federal agencies. These laws and authorities help the Department of Housing and Urban Development (HUD) in its mission to provide "safe, decent and affordable housing."

1.2. NEPA provides the basic requirements for the review process. Title II of the Act established the Council on Environmental Quality (CEQ) within the White House. The CEQ regulations that implement NEPA are spelled-out in the Code of Federal Regulations (CFR) at 40 CFR Parts 1500 – 1508.

1.3. Each federal agency has their own regulations that implement NEPA and fall in line with those of the CEQ. For HUD, regulations listed at 24 CFR apply to their programs and operations as a whole. Within 24 CFR there are numerous "Parts." Of particular importance to the environmental review process are Parts 35, 51, 55, and 58.

1.4. Generally, Federal agencies have their own staff to conduct their environmental reviews; the one notable exception is HUD. Due to the vast number of projects and activities that HUD assists, they delegate many, but not all environmental review responsibilities to states and units of local government. In this capacity each is referred to as a "Responsible Entity" (RE). As an RE, the City of Modesto, California, acts as an official agent of HUD, taking-on legal obligations on behalf of HUD, and overseeing the on-going implementation and monitoring of grant funded activities. The specific portion of HUD's regulation that outline's the City's obligations and procedures for the environmental review process is 24 CFR Part 58.

1.5. As an entitlement community, Modesto, California must review large numbers of activities. These include projects funded through the following programs:

1.5.1. Community Development Block Grant Program (CDBG)

1.5.2. HOME Investment Partnerships Program (HOME)

1.5.3. Neighborhood Stabilization Program (NSP)

1.5.4. Emergency Solutions Grant Program (ESG)

1.5.5. Any local funds that are to be repaid with these Federal funds (Section 108 Loans)

1.6. The City's Community & Economic Development Department (CEDD) is tasked with managing the expenditure and oversight of any of these HUD funds and programs that are provided through the City. The City's Environmental Review Specialist (ERS) is responsible for carrying-out the review process and determining whether activities are compliant with NEPA and related laws and authorities. The ERS enlists the assistance of others who have specific knowledge or skills pertinent to the process, such as the City's CEDD staff, the City's Planning Department, Stanislaus County Appraiser's Office, Development Management staff, Plans Review staff, and staff of the City's Parks and Recreation, Water Services and Public Works Departments. Additionally, the U.S. Fish and Wildlife Service and other non-municipal resources are brought into the process.

1.7. Frequently, non-profit agencies become direct recipients of other HUD grant funds. In these circumstances, such grantees must request the City to act as Responsible Entity for the purposes of performing environmental review. The grantee must provide the ERS with a formal request to act as RE and provide full project information. The grants typically involved are:

1.7.1. Supportive Housing Program (SHP);

1.7.2. Self-Help Homeownership Opportunity Program (SHOP);

1.7.3. Public Housing Authority (Capital Fund Program, etc.) grants, and

1.7.4. Housing Opportunities for Persons with AIDS Program (HOPWA)

1.7.5. A complete listing of programs that REs review can be found at 24 CFR 58.1(b)

2. *The Environmental Review Process*

2.1. Early Documentation

2.1.1. Once applications (proposals) have been received by the City, copies are provided to the ERS by CEDD staff and a cursory review is conducted to determine whether there are items that would require clarification in the environmental review process. If warranted, a follow up to the applicant may be provided to help avoid conflicts

with statutory or regulatory requirements, should their proposal be selected for inclusion in the Consolidated Action Plan. However, it is the responsibility of applicants to understand the limitations and requirements that are placed on HUD funds at the time of application. ("Choice-limiting actions," are not allowed per 24 CFR 58.22).

2.1.2. The environmental review process starts with good information about projects or programs being considered for funding. As part of the Consolidated Planning RFP process, applicants must provide detailed descriptions of projects that clearly state all proposed uses for HUD funds as well as Non-HUD funds. Applicants must also provide a budget associated with all related activities and all funding sources. "Activities" include such things as tenant based rental assistance, acquisition, public services, sidewalk replacement (Curb Improvements, Street Improvements, etc.), preparation of vacant lots for new construction, construction of Energy Star for New Homes rated housing, and multi-family housing, etc.

2.1.3. Once a project, program or activity has been identified for inclusion in the Consolidated Action Plan, the ERS will generate an Environment Review Record for such activities. The ERS will contact the sponsors of those activities to ensure that they are aware of the level of review necessary, and to request any further clarification and documentation necessary to begin the review. Additional documentation that may be requested includes maps; photographs with a key which shows, on a project site map, the locations where photos were taken and in which direction they were taken; and existing Environmental Site Assessments.

2.1.4. Note: An Environmental Site Assessment or ESA is a site investigation conducted to determine the presence of contamination, and should not be confused with an Environmental Assessment which is a NEPA defined level of review (discussed later).

2.1.5. For all project types, the review process can only progress only once the necessary information has been received by the ERS.

2.1.6. CEDD staff is responsible for communicating to the ERS, all changes in project scope as they happen.

2.1.7. HUD's regulations specify the activities that can be undertaken using particular program funds. Various portions of the regulations define those activities. Part 58 of the regulations tie program definitions to

NEPA definitions. This is crucial, as it allows activities to be grouped together in the environmental review process.

2.1.8. Aggregation (24 CFR 58.32) - A responsible entity may group together and evaluate as a single project all individual activities which are related either on a geographical or functional basis, or are logical parts of a composite of contemplated actions. [24 CFR Sec. 58.32(a)]. This is done so that we address adequately and analyze, in a single environmental review, the separate and combined impacts of activities that are similar, connected and closely related, or that are dependent upon other activities and actions; and consider reasonable alternative courses of action; and schedule the activities to resolve conflicts or mitigate the individual, combined and/or cumulative effects; and prescribe mitigation measures and safeguards including project alternatives and modifications to individual activities. [24 CFR Sec. 58.32(c)].

2.1.9. Once the types of projects have been identified, the ERS determines the level of environmental review needed for those projects and records that determination in the Environmental Review Record (ERR). Again, this can only be done if the project is defined well enough and its activities appropriately aggregated (24 CFR 58.32).

3. *Determination of Level of Review*

3.1. Environmental reviews can range from very simple documentation for "Exempt" activities, to a Finding of Significant Impact (FOSI) which would require that an Environmental Impact Statement (EIS) be conducted as prescribed by NEPA. [Note: given the range of activities typically associated with HUD funding, an EIS is highly improbable, which is an indication that suitable alternatives have been found for large scale projects during the course of the environmental review.

3.2. <u>Exempt</u>

3.2.1. "Exempt" activities (listed at 24 CFR 58.34) require clear notation of a project's activities and funding. They include environmental and other studies, development of plans and strategies; information and financial services; administrative and management activities; public services that will not have a physical impact or result in any physical changes; inspections and testing of properties for hazards or defects; purchase of insurance; purchase of tools; engineering or design costs; technical assistance and training; payment of principal and interest on loans made or obligations guaranteed by HUD, etc. "Exempt" means the activity is not considered capable of having a

direct impact on the environment and is therefore exempt from a NEPA proscribed review [the full range of project activities must be considered in making such a determination].

3.3. Categorically Excluded

3.3.1. "Categorically Excluded" means that the activity is one of a category of activities that, by their nature, do not have the potential to cause a significant impact to the environment and are therefore excluded from the NEPA Environmental Assessment requirements. Though, because they can have an impact, they must be reviewed for compliance with all applicable laws and authorities to determine what must be done in order for the project or activity to comply with those laws. Within this general group of activities there are two subgroups: CENST and CEST. Their differences are significant.

3.4. *CENST (Categorically Excluded and are Not Subject To)*

3.4.1. This level of determination is associated with activities which are "Categorically Excluded [from an Environmental Assessment] and are Not Subject to" authorities listed at 24 CFR 58.5 (CENST). Over the course of several years, HUD has determined that CENST activities should be treated much like Exempt activities because they do not themselves have a physical impact on the environment. However, because these activities are associated with physical locations, they do require review for compliance with the requirements listed at 58.6. These activities (listed at 24 CFR 58.35(b)) include tenant-based rental assistance; supportive services such as short term payment of utilities or rent; operational support of homeless facilities and daycare facilities; activities to assist homebuyers in purchasing an affordable dwelling that is existing or under construction; etc. Compliance with the Flood Insurance stipulations must be documented for Tenant Based Rental Assistance and Homebuyer Assistance activities. CENST activities are documented in the ERR and do not require any further review or authorization by HUD (discussed later).

3.5. CEST *(Categorically Excluded and are Subject To)*

3.5.1. The next level of determination is associated with activities which are "Categorically Excluded [from an Environmental Assessment] and are Subject To" authorities listed at 24 CFR 58.5 (CEST). These activities (listed at 24 CFR 58.35(a)) include acquisition (including leasing) or disposition of land and improvements; rehabilitation of housing and other property; new construction of single family housing where there are four (4) or fewer units being developed on any one site; a

project of five (5) or more new housing units being developed on scattered sites when each of the sites is at least 2,000' from any one of the other sites and, there are not more than four (4) housing units on any one site. Because these activities are of a physical nature or are committing HUD funds to a property that may or may not be suitable, these activities must be reviewed for compliance with the laws listed at 58.5. HUD regulations are very specific about what scale of activity is accepted into this category of review. Housing density, for example, can mean a great deal in determining whether the environment will be suitable for a project or, vice versa.

3.5.2. CEST activities are documented in the ERR and require public notification, completion of a Request for Release of Funds (RROF) *(only if there is a mitigation measure (otherwise, converts to exempt),* and subsequent authorization by HUD.

3.5.3. As noted at 24 CFR 58.34(a)(12) some CEST activities may "convert" to Exempt if, after the environmental review process has been completed, they have been found not to trigger any of the 58.5 Statutory Authorities. In these cases, CEST activities are documented in the ERR but do not require the completion of a RROF and subsequent authorization by HUD. Such projects must still comply with Requirements set forth at 24 CFR 58.6.

4. Environmental Assessment

4.1. If a project does not fit within one of the above classifications, an Environmental Assessment (EA) is required. The EA, in turn, forms the basis for determining whether the project/activity will have a significant impact on the environment. This determination results in either:

4.1.1. the requirement to perform an EIS as mentioned previously; or

4.1.2. a finding that the project/ activity will have no finding of significant impact on the environment (FONSI).

4.2. To get to a FONSI, the EA will take into consideration many more factors than the CEST level review. Included are: review for consistency with area plans; land use and zoning requirements; stated policies of City Council; federal, state and local recommended best practices for such developments; possible infrastructure needs; etc.

4.3. Additionally, alternatives including the "No Action" alternative must be considered along with alternative sites. On-going NEPA compliance must be maintained (see "On-going Compliance with Related Federal Authorities" below). Once the level of review has been determined, the next step is a full review for compliance with 24 CFR Part 58.

5. *Review Process Environmental Review Focus*

5.1. Compliance with Federal environmental statutes and regulations listed at 58.5 include compliance with Section 106 of the National Historic Preservation Act (Often referred to as the "Section 106 Review," the regulation implementing this compliance process is found at 36 CFR Part 800), floodplain regulations set-out in 24 CFR Part 55, HUD noise regulations set-out in 24 CFR Part 51, Subpart B, Executive Order 11990 Protection of Wetlands, the Endangered Species Act, the Clean Air Act, the Clean Water Act, as well as other requirements. [for specific citations refer to 24 CFR 58.5]

5.2. Additionally, projects are reviewed for compliance with State and Local laws that govern the environmental conditions relevant to the project site or activities. All activities undertaken using HUD funds must comply with the authorities listed at 58.6 as well; these include the Flood Disaster protection Act which requires that, for those properties located within the 100 Year Floodplain, flood insurance be obtained and maintained for the life of the property that is receiving HUD assistance. [for specific citations refer to 24 CFR 58.6]

5.3. Compliance can be determined through review of on-line resources (as in the case of Wild and Scenic Rivers or Sole Source Aquifers), through consultation with authorities who track data associated with a given subject (e.g. Clean Air Act and the State Implementation Plan), or through appropriate procedures that involve legally proscribed consultation (e.g. Section 106 review or Endangered Species and Habitat).

5.4. The environmental review must be concluded before clearance can be gained and funding provided. To reach conclusion, all compliance issues must be adequately addressed. This does not always mean that the statutory or regulatory issues have been fully resolved prior to release of funds. Indeed, there may be on-going requirements that are needed to insure that outstanding issues are resolved prior to completion of the program or project (e.g. - nesting birds cleared prior to tree removal). This means that, in some cases, the program developer must satisfy compliance steps as properties are identified for inclusion in a program (e.g. is the property located in the floodplain or within proximity to a major roadway). In some cases, full evaluation of potential contamination cannot be undertaken until the site has been further prepared for development. In these cases, Conditions of Approval are made to prescribe specific actions required to ensure that the property is safe for its intended reuse. It is important to note that the type of activity or program drives the determination that no significant impact would result and therefore some issues are weighed more heavily in the decision-making process.

5.5. Most often, issues are resolved prior to release of funds. As part of the review process the ERS and developer work together to find solutions that ensure the protection and enhancement of the environment that will eventually benefit residents or patrons. This process is crucial and always

results in a better project (Is bicycle parking being provided? Is the playground protected from highway noise? What steps have been taken to protect the historic integrity of the building? Is there enough street lighting or sidewalks?). In all cases there must be a clear path to compliance for any outstanding issues that may remain at the time of clearance.

5.6. Note: Once an application has been submitted for a project that anticipates the use of Department of Housing & Urban Development (HUD) funding, neither HUD funds or non-HUD funds can be committed to that project until the environmental review has been approved by HUD or the Release of Funds obtained. No choice limiting action can be taken until the environmental review is approved (24 CFR 58.22) and Release of Funds obtained. Choice limiting actions include real property ACQUISITION, DEMOLITION, SITE CLEARANCE, REPAIR, REHABILITATION, CONSTRUCTION and LEASING activities. If you are not certain about where your project stands with regard to this statement, please contact the Environmental Review Specialist.

5.7. Once the project has been reviewed and a determination has been made that a project can proceed, the City must publish a notice for the project/activity, and a RROF must be completed and submitted to HUD, with subsequent approval by HUD.

6. *Categorical Exclusion Approval Process*

6.1. Public Notice & Comment Period

6.2. Once the environmental review has been concluded, CEST activities require that the City publish what is called a "Notice of Intent to Request Release of Funds" (NOI-RROF), which is published in the local paper of general circulation. Typically the publication is run in the public notice section of the Modesto Bee and the Vida en el Valle. This notice provides the public with a 7-day window within which they can comment on the proposed use of funds. Comments received in the specified time will be responded to and any appropriate modifications will be incorporated into the ERR.

6.3. Submittal of Request for Release of Funds to HUD
The day after the expiration of the comment period, a "Request for Release of Funds and Environmental Certification" form is sent to HUD for authorization. This RROF is signed by the City's Certifying Officer, Cynthia Birdsill, or her designee.

6.4. Objection Period & HUD Approval of RROF
The day after HUD receives the RROF, they open a 15-day Objection Period, during which time the public can object to the release of funds - if such objections meet criteria specified at 24 CFR 58.75. The day after expiration of the Objection Period, HUD approves the RROF and transmits their "Authority to Use Grant Funds" form (AUGF) to the City. Once received, the City notifies grant sub-recipients that they can commit funds to, and undertake actions authorized via the environmental review. That

authorization includes any stipulations identified in the review - these conditions become legal obligations of any contractual agreements associated with the project.

7. Environmental Assessment Approval Process
   7.1. The approval process for an EA is nearly the same as the process for CEST activities. The difference is that the City must publish its Finding of No Significant Impact or FONSI, as well as a NOI-RROF. Typically this is accomplished through what is called a "combined notice" which simply publishes the two together. This notice provides the community a 15-day Comment Period rather than a 7-day period. Under exceptional circumstances, a 30 day Period may be necessary. Because there are many more aspects to an EA review, the process may result in several "Conditions of Approval." Those conditions become legal obligations of any contractual agreements associated with the project, and must be adhered to in order for the grantee or sub-recipient to remain in compliance with their grant obligations.
8. On-going Compliance with Related Federal Authorities
   8.1. Some CEST or EA reviews are associated with programs involving multiple properties over the course of time. These programs are designed to assist properties not identified at the time of program inception. In these cases, as sites are identified, they must be reviewed to ensure compliance with statutory or regulatory requirements not fully addressed at the time clearance was provided to the program. This "site-specific" review is in line with the NEPA concept of "Tiering." This approach allows compliance issues to be reviewed once they are "ripe," expediting what would otherwise be successive reviews for similar projects that would each require their own release of funds.
   8.2. Examples of program-based activities that require such on-going review and compliance for site-specific projects include the following:
      8.2.1. *Programs*
         8.2.1.1. Property Acquisition
         8.2.1.2. New Housing Construction
         8.2.1.3. Housing Rehabilitation
         8.2.1.4. Commercial Rehabilitation
         8.2.1.5. Demolition
      8.2.2. *Compliance Issues*
         8.2.2.1. Floodplains
         8.2.2.2. Historic preservation (i.e., Noise Impacts)
         8.2.2.3. Explosive hazards
         8.2.2.4. Hazardous substances
         8.2.2.5. Lead-Based Paint
         8.2.2.6. Asbestos Containing Materials
9. Grant recipients and sub-recipients must ensure that the Conditions of Approval or other required actions are carried out as part of any executed contracts associated

with HUD-funded activities. Documentation of such compliance must be maintained in program / project files.

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-313

RESOLUTION APPROVING AN AGREEMENT WITH TRANSYSTEMS OF LAKE FOREST, CA FOR CONSULTANT SERVICES FOR THE ENGINEERING PLAN CHECK AND DESIGN REVIEW OF THE PLANS, SPECIFICATIONS AND ESTIMATES (PS&E) FOR THE SR-132 WEST FREEWAY/EXPRESSWAY – PHASE 1 PROJECT IN AN AMOUNT NOT TO EXCEED $375,459 FOR THE IDENTIFIED SCOPE OF SERVICES, PLUS $37,550 FOR ADDITIONAL SERVICES (IF NEEDED) FOR A TOTAL AMOUNT OF $413,009; AND AUTHORIZING THE INTERIM CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE CONTRACT

WHEREAS, Stanislaus Council of Governments (StanCOG), City of Modesto, Stanislaus County and the California Department of Transportation (Caltrans) are completing the formal studies for the Project Approval and Environmental Document (PA&ED) Phase for the State Route 132 West Freeway/Expressway Project (Ultimate Project), and

WHEREAS, the Ultimate Project is presently in the final stage of the environmental approval process, with approval expected in the January of 2018, and

WHEREAS, the SR132 West Freeway/Expressway – Phase 1 Project (Phase 1 Project) proposes to construct a two-lane highway on a new alignment in Stanislaus County and the City of Modesto from State Route 99 just south of Kansas Avenue to Dakota Avenue, and

WHEREAS, delivery of the PA&ED phase of the Ultimate Project has been slowed due to problems with gaining environmental clearance of contaminated soils stockpiles, and Project construction must commence on or before June 30, 2019, and

WHEREAS, the combination of environmental clearance delay along with a shortened window for startup of construction has resulted in the need to accelerate

supporting services of the final design (PS&E) phase of the Phase 1 Project to meet the construction startup deadline of June 2019, and

WHEREAS, this acceleration must be performed so that approximately $71,500,000 of programmed construction funds will not be lost, and

WHEREAS, it is anticipated that Caltrans will complete CEQA and NEPA review in January 2018 as part of the current PA&ED Phase and select a Project alternative at that time. It is anticipated that Caltrans will select one of the two build alternatives, but there is potential risk that Caltrans will select the no-build alternative, which would mean no Project would go forward, and

WHEREAS, the design phase must proceed "at risk" to progress the final design concurrently with the Final Environmental Document approval, and

WHEREAS, Staff proceeded through an RFP process pursuant to Administrative Directive 3.1 and the City solicited for proposals for Engineering Plan Check & Design Review Services for the SR132 Freeway/Expressway - Phase 1 Project on May 12, 2017 in compliance with Modesto Municipal Code section 8-3.401 – 8-3.404, and

WHEREAS, proposals were received, evaluated and ranked, and

WHEREAS, City entered into negotiations with the top ranked firm, TranSystems on July 7, 2017, and

WHEREAS, TranSystems has agreed to a contract for professional services in the amount of $375,458.44 to provide the Engineering Plan Check & Design Review Services for the SR132 Freeway/Expressway - Phase 1 Project, and

WHEREAS, Staff recommends approval of the agreement with TranSystems for the SR132 West Freeway/Expressway-Phase 1 Project, and

WHEREAS, City of Modesto previously committed $4,000,000 of funds to support the design PS&E phase of the Phase 1 Project, and

WHEREAS, City staff has worked diligently in coordination with Stanislaus County and StanCOG to agree to a financing strategy to support the remainder of funding required to support the PS&E design phase, and

WHEREAS, City will provide $4,000,000 of CFF money and StanCOG will provide $6,000,000 of Measure L Regional Account money to support the PS&E design phase, and

WHEREAS, on April 19, 2017 StanCOG Policy Board approved Resolution 16-36 designating the State Route 132 West Freeway/Expressway Project as the top regional project to receive Measure L Regional funding up to $10,000,000 to be used to support the total PS&E project cost, and

WHEREAS, the Director of Community and Economic Development and the Interim City Manager have recommended that the bid of $375,458.44 received from TranSystems be accepted as fair and reasonable and the contract be awarded to TranSystems of Lake Forest, CA.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an agreement with TranSystems of Lake Forest, CA for consultant services for the Engineering Plan Check & Design Review Services for the SR132 Freeway/Expressway - Phase 1 Project in an amount not to exceed $375,458.44 for the identified scope of services, plus $37,550 for additional services (if needed) for a total amount of $413,008.44.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the contract, in a form approved by the City Attorney, in a form approved by the City Attorney as may be necessary to ensure compliance with state and federal grant requirements.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-315

RESOLUTION ACCEPTING THE *DESTINATION MODESTO* REPORT FOR THE THIRD AND FOURTH QUARTER OF FISCAL YEAR 2016-17

WHEREAS, in 2015, the City absorbed the functions of the Convention & Visitor's Bureau within the Community & Economic Development Department and a *Destination Modesto* Task Force was created to promote travel, tourism and entertainment, and

WHEREAS, the *Destination Modesto* report for the convention and tourism activity are periodically submitted to the City Council for their consideration, and

WHEREAS, subsequent *Destination Modesto* reports have been expanded to also include activity from the McHenry Mansion, McHenry Museum, all three (3) City-owned golf courses, and City parks, and

WHEREAS, the *Destination Modesto* Report – Third and Fourth Quarter Fiscal Year 2016-17 reflects activity from all Destination Modesto assets in addition to second quarter Convention & Tourism activity that was not included in earlier reports.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the *Destination Modesto* Report – Third and Fourth Quarter Fiscal Year 2016-17.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-316

RESOLUTION APPROVING THE APPLICATION FOR GRANT FUNDS FOR THE CALIFORNIA URBAN RIVERS GRANT PROGRAM UNDER THE WATER QUALITY, SUPPLY, AND INFRASTRUCTURE IMPROVEMENT ACT OF 2014 (PROPOSITION 1) FOR REMOVAL OF THE REMNANT DENNETT DAM PROJECT IN THE AMOUNT OF $368,183 AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, AS AGENT TO CONDUCT ALL NEGOTIATIONS, EXECUTE AND SUBMIT ALL DOCUMENTS INCLUDING BUT NOT LIMITED TO APPLICATIONS, AGREEMENTS, PAYMENT REQUESTS, WHICH MAY BE NECESSARY FOR THE COMPLETION OF THE AFOREMENTIONED PROJECT

WHEREAS, the Tuolumne River Trust applied for a grant from the California Urban Rivers Grant Program and it is in the best interest of all parties that the City of Modesto replaces the Tuolumne River Trust as the applicant for this grant, and

WHEREAS, the Legislature and Governor of the State of California have provided Funds for the California Urban Rivers Grant Program, and

WHEREAS, the California Natural Resources Agency has been delegated the responsibility for the administration of this grant program, establishing necessary procedures, and

WHEREAS, said procedures established by the California Natural Resources Agency require a resolution certifying the approval of application(s) by the Applicants governing board before submission of said application(s) to the State, and

WHEREAS, the City of Modesto, if selected, will enter into an agreement with the State of California to carry out the Project.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby

1. Approves the filing of an application for the *Remnant Dennett Dam Removal Project*;

2. Certifies that the City of Modesto understands the assurances and certification in the application; and

3. Certifies that City of Modesto or title holder will have sufficient Funds to operate and maintain the Project(s) consistent with the land tenure requirements; or will secure the resources to do so; and

4. Certifies that it will comply with all provisions of Section 1771.5 of the California Labor Code; and

5. Certifies that the project will comply with any laws and regulations including, but not limited to, the *California Environmental Quality Act* (CEQA), legal requirements for building codes, health and safety codes, disabled access laws, and, that prior to commencement of construction, all applicable permits will have been obtained; and

6. Certifies that the City of Modesto will work towards the State Planning Priorities intended to promote equity, strengthen the economy, protect the environment, and promote public health and safety as included in Government Code Section 65041.1, and

7. Appoints the Interim City Manager, or his designee, as agent to conduct all negotiations, execute and submit all documents including, but not limited to applications, agreements, payment requests, which may be necessary for the completion of the aforementioned Project(s).

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-317

RESOLUTION APPROVING AN APPLICATION FOR OUTDOOR ENVIRONMENTAL EDUCATION FACILITIES GRANT FUNDS FROM THE STATE OF CALIFORNIA DEPARTMENT OF PARKS AND RECREATION FOR THE TUOLUMNE RIVER REGIONAL PARK (TRRP) RIVER CENTER PAVILION AND LEARNING THEATER IN THE AMOUNT OF $500,000 AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO CONDUCT ALL NEGOTIATIONS, SIGN AND SUBMIT DOCUMENTS, INCLUDING, BUT NOT LIMITED TO APPLICATIONS, AGREEMENT, AMENDMENTS, AND PAYMENT REQUESTS, WHICH MAY BE NECESSARY FOR THE COMPLETION OF THE GRANT SCOPE

WHEREAS, the State Department of Parks and Recreation has been delegated the responsibility by the Legislature of the State of California for the administration of the Outdoor Educational Education Facilities Grant Program, setting up necessary procedures governing the application, and

WHEREAS, said procedures established by the State Department of Parks and Recreation require the Applicant to certify by resolution the approval of the application before submission of said application to the State, and

WHEREAS, successful Applicants will enter into a contract with the State of California to complete the Grant Scope project.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby:

Approves the filing of an application for the Tuolumne River Regional Park (TRRP) River Center Pavilion and Learning Theater; and

1. Certifies that the City of Modesto has or will have available, prior to commencement of any work on the project included in this application, sufficient funds to complete the project; and

2. Certifies that if the project is awarded, the City of Modesto has or will have sufficient funds to operate and maintain the project; and
3. Certifies that the City of Modesto has reviewed, understands, and agrees to the General Provisions contained in the contract shown in the Grant Administration Guide; and
4. Delegates the authority to the Interim City Manager, or his designee, to conduct all negotiations, sign and submit all documents, including but not limited to applications, agreements, amendments, and payment requests, which may be necessary for the completion of the Grant Scope; and
5. Agrees to comply with all applicable federal, state and local laws, ordinances, rules, regulations and guidelines.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-318

RESOLUTION APPROVING A MEMORANDUM OF UNDERSTANDING BETWEEN THE SHADOWCHASE RUNNING CLUB (SCRC) AND THE CITY REGARDING THE INSTALLATION OF SIX FITNESS EQUIPMENT STATIONS ALONG THE VIRGINIA CORRIDOR TRAIL AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE MOU

WHEREAS, in late 2016, ShadowChase Running Club approached the City of Modesto to seek approval to install six outdoor fitness equipment stations along the Virginia Corridor Trail, and

WHEREAS, the ShadowChase Running Club wants to donate the fitness stations to the City and has agreed to maintain the fitness stations, and

WHEREAS, City staff has prepared a Memorandum of Understanding (MOU) to allow the ShadowChase Running Club to install and maintain the donated fitness stations on City property, and

WHEREAS, the MOU outlines the terms of the agreement for both parties.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a Memorandum of Understanding between the ShadowChase Running Club and the City of Modesto regarding the installation of six outdoor fitness equipment stations along the Virginia Corridor Trail.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the MOU, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the Resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-319

RESOLUTION APPROVING THE TERMS AND CONDITIONS OF THE NON-EXCLUSIVE NON-CONSENSUAL FRANCHISE TOWING SERVICES AGREEMENT

WHEREAS, it is the intent of the Modesto Police Department to secure safe and reliable towing services and a manageable contract that will also offset the City's costs of its Non-Exclusive Non-Consensual Towing Program, and

WHEREAS, in September 2016, Police Department staff embarked on formulating an improved contract for the City that would provide optimum service, greater accountability and a tiered fees structure that would offset the growing cost of the City's Non-Exclusive Non-Consensual Towing Program, and

WHEREAS, a Non-Exclusive Non-Consensual Franchise Towing Service Agreement with specific requirements, including a tiered fee structure and implementation of dispatching and tracking software will ensure safe, prompt, reliable and professional service to the Police Department and the citizens of Modesto, and

WHEREAS, on April 4, 2017, City Council approved extending the current Non-Exclusive Non-Consensual Franchise Towing Services agreement for a six month period, which was set to expire on April 13, 2017, to allow staff time to complete the Request for Application (RFA) process, and

WHEREAS, on May 23, 2017, the Purchasing Division solicited Request for Applications (RFA) No. 1617-37, for City generated Non-Exclusive Non-Consensual Franchise Towing Services, and

WHEREAS, on June 22, 2017, applications were opened in City Clerk's Office, and

WHEREAS, eleven (11) applications were received and opened, all of which were local vendors; and

WHEREAS, the applicants have passed all financial, business and insurance requirements, site equipment verification and background checks as required,

WHEREAS, the Non-Exclusive Non-Consensual Franchise Towing Services Agreement contains the terms and conditions under which the franchise agreements may be granted.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the terms and conditions of the Non-Exclusive Non-Consensual Franchise Towing Services Agreement, **attached** hereto.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

Non-Exclusive, Non-Consensual Tow Service Franchise Agreement 22-43

NOTICE FOR APPLICATIONS

NOTICE IS HEREBY GIVEN that the City of Modesto, County of Stanislaus, State of California is accepting applications for City generated non-exclusive non-consensual franchise towing services for vehicle towing, impound services, street sweeps, and vehicle storage as directed by the Modesto Police Department. To be eligible for a non-exclusive franchise, applicants must: Submit a completed application packet, meet any and all requirements identified in the request for application, agree to comply with the terms and conditions of the non-exclusive non-consensual towing services franchise agreement and meet any other terms and conditions imposed by the City of Modesto for the granting of a non-exclusive franchise.

All Costs associated with the preparation of an application shall be borne by the Applicant.

Applications must be submitted on the application form prescribed by the City of Modesto. An application form is included with the Request for Application or may be downloaded from the City's website at: http://www.modestogov.com/257/contracting-bidopportunities under Bid Opportunities.

Each application packet shall be sealed and filed with the City Clerk's Office, 1010 Tenth Street, Suite 6600, Modesto, CA 95354 no later than Tuesday, June 20, 2017 at 11:00 A.M.at which time application packets will be opened and announced. Application packets will be received only at the City Clerk's Office address shown above, and prior to the date and time indicated. Any application packet received at or after said date and time or at a place other than the stated address shall not be considered and will be returned to the applicant unopened.

All application packets will be on file for review, following the City Managers recommendation for granting of a non-exclusive non-consensual towing services franchise to Modesto City Council, at the City Clerks Office, 1010 Tenth St., Suite 6600, Modesto Ca. 95354 and at the Modesto Police Department Office-Tow Administrator, 600 Tenth St., Modesto Ca. 95354

All application packets, whether delivered by the applicant or agent of the applicant, U.S. Postal Service, courier or package delivery service must be received and time stamped by the date and time stated, at the stated address. The City Clerk's time stamp shall be considered the official timepiece for the purpose of establishing the actual date and time of receipt of the application packet. The City of Modesto assumes no responsibility for delay in the delivery of the application packet. It is solely the applicants responsibility to ensure that the application packet has been delivered to the proper location prior to the date and time indicated on this notice for application. On the outside of the application packet envelope, the applicant shall indicate the following:

NAME AND ADDRESS OF APPLICANT

The applicant agrees to and acknowledges all RFA specifications, terms, and conditions and indicates the ability to perform by submission of an application packet. By the submission of an application packet, the applicant certifies that if awarded a non-exclusive non-consensual towing service franchise, applicant will make no claim against the City based upon ignorance or misunderstanding of the terms, conditions or specifications.

REQUEST FOR APPLICATION (RFA) NO. 1617-37
For
CITY GENERATED NON-EXCLUSIVE NON-CONSENSUAL FRANCHISE TOWING SERVICES

SECTION 1

1.1 BACKGROUND

The main goal of the program is to provide safe, responsible and reliable towing of vehicles on behalf of the City of Modesto. In addition, California Vehicle Code (CVC) 12110 authorizes a fee in connection with the award of a franchise for towing vehicles on behalf of the CITY. However, the fee may not exceed the amount necessary to reimburse the CITY for its actual and reasonable costs incurred in connection with the towing program.

1.2 SCOPE OF WORK

The City of Modesto is accepting applications for City generated non-exclusive non-consensual towing services on behalf of the Modesto Police Department. Non-consensual towing services include but are not limited to:

1) Vehicles impounded by The City of Modesto for investigation, as evidence in a criminal case, asset forfeiture or vehicle forfeiture;

2) Vehicles involved in collisions, stalled vehicles, illegally parked vehicles, vehicles whose driver is incapacitated or physically unable to drive or has been arrested or detained;

3) Vehicles towed under any authority section of the California Vehicle Code or Modesto Municipal Code including but not limited to, 30 day impounds, abandoned vehicles, inoperative vehicles or abated vehicles from any street, alley, highway, or any other private or public property in the City of Modesto;

4) Any other towed vehicle or vessel as may be ordered by any police officer, police employee, or any other employee or agent of the City of Modesto who is properly authorized to order such removal.

1.3 ELIGIBILITY REQUIREMENTS

To be eligible for a non-exclusive non-consensual towing services franchise applicants must:

1) Submit a completed application packet.

2) Meet any and all requirements identified in this request for application.

3) Agree to comply with the terms and conditions of the non-exclusive non-consensual towing services franchise agreement.

4) Meet any other terms and conditions imposed by the City of Modesto for the granting of a non-exclusive, non- consensual tow franchise.

All Costs associated with the preparation of an application packet shall be borne by the Applicant.

Applications must be submitted on the application form prescribed by the City of Modesto. An application form has been included with this Request for Application in Section 4, or may be downloaded from the City's purchasing website at: http://www.modestogov.com/257/contracting-bidopportunities Bid Opportunities.

Each application packet shall be sealed and filed with the City Clerk's Office, 1010 Tenth Street, Suite 6600, Modesto, CA 95354 prior to 11:00a.m. on June 20, 2017 , at which time the applications will be opened and announced.

All application packets will be on file for review, following the City Managers recommendation for granting of a non-exclusive non-consensual towing services franchise agreement to the Modesto City Council, at the City Clerks Office, 1010 Tenth St., Suite 6600, Modesto Ca. 95354 and at the Modesto Police Department Office-Tow Administrator, 600 Tenth St., Modesto Ca. 95354

Applications will be received only at the City Clerk's Office address shown above, and prior to the date and time indicated. Any application received at or after said date and time or at a place other than the stated address shall not be considered and will be returned to the applicant unopened.

SECTION 2

2.1 APPLICATION PACKET AND APPLICATION PROCESS:

The submission of an application is a two (2)-phase process. Each application packet shall consist of two (2) parts.

2.1.1 Application Packet

Each application packet shall consist of the following two (2) parts.

Part 1: The required Business and Insurance documents as defined in Section 3 of this Request for Application shall be placed in a sealed envelope. The outside of the envelope shall be marked "Business/Insurance Documents, Part 1" Failure to provide all documents as required in Section 3 will result in the rejection of the application and the application will be returned to the applicant with no further consideration.

Part 2: The completed Franchise Application, all required documents listed in section 4 and the **Franchise application deposit of $500 (MMC 11-2.03),** shall be placed in a sealed envelope marked "Franchise Application, Part 2". Incomplete applications and/or failure to submit all required documents listed in Section 4 will result in the rejection of the application and the application will be returned to the applicant with no further consideration.

A complete application packet shall consist of the Business/Insurance requirements envelope, Part 1, and the Franchise Application envelope, Part 2. Both application parts shall be placed in an envelope with the following information on the outside of the envelope:

> NAME AND ADDRESS OF APPLICANT
> REQUEST FOR APPLICATION NO. 1617-37
> NON-EXCLUSIVE NON-CONSENSUAL FRANCHISE TOWING SERVICES
> APPLICATION OPENING TIME AND DATE: JUNE 20, 2017 at 11:00 a.m.

The complete application packet shall be submitted at the place, date and time specified in the Notice for Applications.

2.1.2 Application Process

The application process consists of two phases.

Phase 1: The Finance Director and the Risk Manager will open and review the Business/ Insurance Documents, Part 1 envelope. The envelope marked "Franchise Application, Part 2" will remain sealed until it has been demonstrated that the Business /Insurance requirements have been met. If the documents submitted by the applicant do not satisfy all the requirements as detailed in Section 3, the entire Application Packet will be rejected and returned to the applicant and receive no further consideration. Applicants meeting all Financial/Business and Insurance requirements will proceed to phase 2 of the application process.

Phase 2: The Police Department will open and review all documents and statements in the Franchise Application, Part 2 envelope. If the submitted Franchise Application does not satisfy all the requirements as

detailed in Section 4, the entire Application packet will be rejected and returned to the applicant and receive no further consideration.

Applicants satisfying all requirements in both Phase 1 and Phase 2 shall be presented to the Modesto City Council for referral to the City Manager for his recommendation and report.

2.2 REQUIRED DOCUMENTS:

Applicants shall submit one (1) "inked" (preferably blue inked) signed original application packet, plus four (4) copies of a signed original application packet. **Original application packets are to be clearly marked, "Original".** Photocopies do not constitute an original application packet.

A complete application packet shall consist of the Business/Insurance requirements envelope, Part 1, and the Franchise Application envelope, Part 2. Both application parts shall be placed in an envelope.

FAILURE TO FURNISH ONE (1) "INKED" SIGNED ORIGINAL APPLICATION PACKET WILL RESULT IN DISQUALIFICATION.

It is the responsibility of the Applicant to identify information in their application responses that they consider to be confidential under the California Public Records Act. To the extent that the City agrees with that designation, such information will be held in confidence whenever possible. All other information will be considered public.

All costs associated with the preparation of this application packet shall be borne by the Applicant.

2.3 REJECTION OF IRREGULAR APPLICATIONS:

Application packets shall be rejected if they show alterations of form, additions not called for, conditional applications, incomplete application packets, erasures or irregularities of any kind.
All required documents as stated in this Request for Application must be submitted at the time of application. Failure to submit all required documents will result in the rejection of your application packet and your application packet will be eliminated from the application/award process.

Any of the following may be considered cause to disqualify an applicant without further consideration:

A. Any attempt to improperly influence any staff person reviewing the applications;

B. Any applicant having a governmental agency-generated towing services agreement cancelled or terminated within the past 5 years.

2.4 NON-DISCRIMINATION:

a. During the performance of this non- exclusive franchise, Franchisee shall not unlawfully discriminate against any employee or applicant for employment because of race, color, ancestry, religion, sex, national origin, marital status, age, medical condition (cancer related), physical handicap (including AIDS), or sexual orientation. Equal employment opportunity extends, but is not limited to recruitment, compensation, benefits, layoff, termination, and all other conditions of employment. Franchisee shall ensure that the evaluation and treatment of their employees and applicants for employment are free of such discrimination. Contractor/Franchisee and

subcontractors shall comply with the provisions of the Fair Employment and Housing Act (Government Code, Section 12900 et seq.) and the applicable regulations promulgated hereunder (California Administrative Code, Title 2, Section 7285.0 et seq.). The applicable regulations of the Fair Employment and Housing Commission implementing Government Code, Section 12900, set forth in Chapter 5 of Division 4 of Title 2 of the California Administrative Code are incorporated into this Request for Application and non-exclusive non- consensual towing services franchise agreement by reference and made a part thereof as if set forth in full.

b. Franchisee shall give written notice of their obligations under this clause to labor organizations with which they have a collective bargaining or other agreement.

c. Franchisee shall include the nondiscrimination and compliance provisions of this clause in all subcontracts to perform work under the franchise.

d. Franchisee shall permit access by representatives of the Department of Fair Employment and Housing and the City upon reasonable notice at any time during the normal business hours, but in no case less than 24 hours notice, to such of its books, records, accounts, other sources of information and its facilities as said Department or City shall require to ascertain compliance with this clause.

NON-DISCRIMINATION OF THE HANDICAPPED:

Policy Statement

In compliance with Section 51.55, Office of Revenue Sharing, Department of the Treasury, it is the policy of the City of Modesto that it will not aid or perpetuate discrimination against a qualified handicapped individual by funding an agency, organization, or person that discriminates on the basis of handicap in providing an aid, benefit, or service to beneficiaries of the program or activity.

CERTIFICATION OF BIDDER REGARDING NON-DISCRIMINATION OF THE HANDICAPPED

By executing a non-exclusive non-consensual towing services franchise agreement, the applicant hereby certifies that he/she is in compliance with the Americans with Disabilities Act of 1990, the applicable administrative requirements promulgated in response thereto, and any other applicable Federal laws and regulations relating to handicap discrimination and participation, and will continue to do so for at least the duration of the agreement and any extensions thereof.

2.5 DRUG FREE WORKPLACE:

Applicant certifies that he/she is in compliance with Sections 8350 - 8355 of Chapter 5.5 of the Government Code, Drug Free Workplace Act. Every person or organization awarded a contract/purchase order or grant for the procurement of any property or service from any state agency (city) shall certify to the contracting or granting agency that it will provide a drug free workplace.

2.6 CONSEQUENCE OF SUBMISSION OF APPLICATION

The City shall not be obligated to respond to any application packet submitted nor be legally bound in any manner by the submission of an application packet.

Acceptance by the City of an application packet obligates the applicant to enter into a non-exclusive non-consensual towing services franchise agreement with the City.

Statistical information contained in these documents is for informational purpose only. The City shall not be responsible for the accuracy of said data. City reserves the right to increase or decrease the project scope.

2.7 AWARD

The CITY intends to award a non-exclusive non-consensual towing services franchise to all applicants who meet all CITY requirements outlined below.

A. Business, and Insurance requirements as defined in Section 3 of this Request for Application as determined by the City of Modesto Finance and Risk Management Departments.

B. Complete Franchise application with all required documentation and application deposit as determined by the Modesto Police Department.

C. Verification of applicant's statements and documentation, including but not limited to; Public restrooms in compliance with all applicable federal, state and local laws and ordinances, public phone, storage and fleet as determined by the Modesto Police Department.

D. In the event a material change is made to the agreement, applicant will be given written notice of the material change, and the ability to withdraw from the application process, without penalty, within ten (10) calendar days of the noticed material change.

SECTION 3

3.1 BUSINESS / INSURANCE REQUIREMENTS

All information, documentation, deposits and attachments required in this section must be provided by the applicant and submitted as part of the Business/Insurance requirements, Part 1 envelope. Failure to include all Business/Insurance information, documentation, deposits and attachments will be cause for rejection of your application packet and your application packet will be eliminated from the application/award process.

3.1.1 Business Experience Requirement

Applicants shall have a minimum of three (3) verifiable years for hire towing experience, as an owner or principal in the State of California immediately preceding the date of application packet submission. Applicant shall provide and submit as part of the Financial/Business/Insurance requirements part 1 envelope, a copy of the business license/s that was/were filed during the three (3) years with the jurisdiction in which they were/are licensed to operate if they were/are a partnership or sole proprietorship form of ownership, or for a corporate entity, a copy of the applicant's annual filing with the secretary of state that shows the listing of officers must be provided in addition to a copy of the business license/s that was/were filed during the two (3) years with the jurisdiction in which they were/are licensed to operate.

3.1.2 Insurance Requirements

The applicant shall provide and submit as part of the Financial/Business/Insurance requirements part 1 envelope, evidence (Acord Certificate) of valid insurance to the CITY in the coverage limits listed below. The policies or certificates thereof shall provide that, thirty (30) days prior to cancellation or material change in the policy, notices of same shall be given to the Risk Manager of the CITY by registered mail, return receipt requested, for all of the following stated insurance policies.

A. Workers' Compensation - in compliance with the statutes of the State of California, plus employer's liability with a minimum limit of liability of $1,000,000.

B. General Liability - insurance with a minimum limit of liability per occurrence of $1,000,000 for bodily injury, property damage and personal injury. This insurance shall indicate on the certificate of insurance the following coverage's and indicate the policy aggregate limit applying to: premises and operations; broad form contractual; independent consultants and subcontractors; products and completed operations; and professional liability.

C. Commercial Business Automobile Liability- Bodily injury and property damage with a combined single limit of not less than One Million Dollars ($1,000,000) shall be maintained. These minimum standards are to include scheduled, non-owned, and hired auto coverage.

D. Uninsured Motorist- Legal minimum combined single limit.

E. On-Hook Coverage- Insuring the vehicle in tow with limits based on the size of the tow truck.

1. Class-A tow truck- One Hundred Thousand Dollars ($100,000)
2. Class B tow truck- One Hundred Fifty Thousand Dollars ($150,000)
3. Class C tow truck- Two Hundred Thousand Dollars ($200,000)

F. Garage Liability- Includes premises and operations. Coverage for bodily injury and property damage with a combined single limit of not less than One Million Dollars ($1,000,000).

G. Garage Keepers Liability - Shall be the same minimum as on hook coverage for vehicles in the care, custody, and control of the FRANCHISEE in the storage yard.

If at any time any of said policies shall be unsatisfactory to the CITY, as to form or substance or if a company issuing such policy shall be unsatisfactory to the CITY, the FRANCHISEE shall promptly obtain a new policy, submit the same to Risk Manager for approval and submit a certificate thereof as hereinabove provided. Upon failure of the FRANCHISEE to furnish, deliver or maintain such insurance and certificates as above provided, this FRANCHISE, at the election of the CITY, may be forthwith declared suspended or terminated. Failure of the FRANCHISEE to obtain and/or maintain any required insurance shall not relieve the FRANCHISEE from any liability under this Agreement, nor shall the insurance requirements be construed to conflict with or otherwise limit the obligations of the FRANCHISEE concerning indemnification. The CITY, it agents, officers, employees, and volunteers shall be named as an additional insured on all insurance policies required herein, except Workers' Compensation. The Workers' Compensation insurer shall agree to waive all rights of subrogation against the CITY, its agents, officers, employees, and volunteers for losses arising from work performed by FRANCHISEE for the CITY. The FRANCHISEE'S insurance policy(ies) shall include a provision that the coverage is primary as respects the CITY; shall include no special limitations to coverage provided to additional insured; and, shall be placed with insurer(s) with acceptable Best's rating of A:VII or with approval of the Risk Manager.

For any claims related to this project, the FRANCHISEE'S insurance coverage shall be primary insurance as respects the Entity, its officers, officials, employees, and volunteers. Any insurance or self-insurance maintained by the Entity, its officers, officials, employees, or volunteers shall be excess of the Franchisee's insurance and shall not contribute with it.

FRANCHISEE shall either require any subcontractor to procure and to maintain during the term of the subcontract all insurance in the amounts specified above, or shall insure the activities of subcontractors in the policy specified above. The limits of liability required may vary, depending on the type of permit or contract.

Proof of insurance shall be in the form of a certificate of insurance and separate endorsements naming the City as an additional insured for all insurances except Workers' Compensation. Policy expiration or cancellation will immediately nullify the agreement. FRANCHISEE'S insurance policy should provide for a thirty (30) day advance notice to City in the event the insurance policy will expire of be cancelled. FRANCHISEE shall also immediately notify the Tow Administrator in the event the insurance policy has expired or is canceled. Failure to maintain insurance or to notify the City and Tow Administrator of insurance lapses shall constitute a material breach of contract and City shall have the right to suspend and/or terminate the contract or agreement as determined by the Chief of Police or his designee.

The ultimate responsibility of any damage to a vehicle or property or the loss of a vehicle or any property contained in the vehicle while the vehicle and/or property are in the FRANCHISEE'S care and custody rests with the FRANCHISEE. The FRANCHISEE shall reimburse the vehicle or property owner for any

loss or damage which has been identified in a Modesto Police Department Motor Vehicle Report or other official document and is not covered by FRANCHISEE'S insurance.

Deductibles and Self-Insured Retention

Any deductibles or self-insured retention must be declared to and approved by the City of Modesto Risk Manager.

3.2 SAMPLE AGREEMENT

In the event a material change is made to the agreement, applicant will be given written notice of the material change, and the ability to withdraw from the application process, without penalty, within ten (10) calendar days of the noticed material change.

Section 4

NON-EXCLUSIVE, NON-CONSENSUAL FRANCHISE TOW SERVICES VERIFIED APPLICATION

All information, documentation and attachments in this section must be provided by the applicant and submitted in the Franchise Application, Part 2 envelope. Statements must be complete and accurate in the form requested and included in the envelope identified as Franchise Application, Part 2. Omission, inaccuracy, or misstatement will be cause for rejection and the application will not be considered any further in the application/award process.

A. APPLICANT (Business Name): (as it is to appear on the contract if awarded)

_____

B. BUSINESS LOCATION/ADDRESS: (Location where applicant will conduct business)

_____

MAILING ADDRESS (if different from above)

_____

C. BUSINESS PHONE NUMBER: _____ Fax: _____

Email: (if none, write 'none'): _____

D. BUSINESS OWNERSHIP/PRINCIPALS:

Name: _____ Phone: _____

Address: _____

Name: _____ Phone: _____

Address: _____

Name: _____ Phone: _____

Address: _____

E. ALL APPLICANTS MUST HAVE THE FOLLOWING PERMITS AND LICENSING:

(1) Motor Carrier Permit: You must attach a copy of your company's current/valid Department of Motor Vehicles Motor Carrier Permit to this application. Failure to do so will result in the rejection of your application and your application will be eliminated from the application/award process.

(2) Pull Notice Program Enrollment: You must attach a copy of your current/valid Pull Notice Contract with the Department of Motor Vehicles. Failure to do so will result in the rejection of your application and your application will be eliminated from the application/award process.

(3) City of Modesto Business License: You must attach a copy of your company's current/valid City of Modesto Business License to this application. Failure to do so will result in the rejection of your application and your application will be eliminated from the application/award process.

(4) Other Business Licenses: If your primary business or any storage facility for your business is located outside the City of Modesto, you must attach a copy of the current/valid business license for that jurisdiction to this application. Failure to do so will result in the rejection of your application and your application will be eliminated from the application/award process.

F. FLEET:

At a minimum, applicant must own or lease and possess at the time of application, and at all times thereafter, two (2) fully operational Tow Trucks with a Gross Vehicle Weight Rating (GVWR) of at least 14,000 pounds, a minimum of one (1) truck shall be capable of towing all vehicles with a (GVWR) up to and including 10,000 pounds. All trucks must be currently registered with the California Department of Motor Vehicles. Failure to meet these requirements will result in the rejection of your application and your application will be eliminated from the application/award process.

1. How many tow trucks do you own or lease: _____

2. You must attach and submit with this application a copy of all current valid vehicle registrations and a photograph of all tow-trucks that will be used for the purposes of towing under the Non-Exclusive Non-Consensual Tow Service Franchise Agreement. Failure to do so will result in the rejection of your application and your application will be eliminated from the application/award process.

3. Modesto Police Department will physically verify possession, registration and operational status of all tow trucks listed in your application. Failure to possess a minimum of two (2) currently registered, fully operational tow trucks with a GVWR of at least 14,000 pounds, including one (1) truck capable of towing all vehicles with a GVWR up to and including 10,000 pounds will result in the rejection of your application and your application will be eliminated from the application /award process.

G. FACILITIES

The Applicant must maintain an office facility with a primary storage yard and interior storage facility within two (2) miles of the city limits of Modesto. Secondary storage locations may be used; secondary storage lots must be within two (2) miles of the City limits of Modesto. Failure to meet these requirements at time of application will result in the rejection of your application and your application will be eliminated from the application/award process.

Outdoor storage lots shall be fenced with a solid wall or chain link fence at least six (6) feet in height for maximum security and lighted during hours of darkness. Fencing shall be in accordance with all applicable building and zoning codes. The lot must have an improved surface (e.g., gravel, concrete, paved). The storage facility shall have interior storage used exclusively for the storage of impounded/stored vehicles.

Failure to meet these requirements at time of application will result in the rejection or your application and your application will be eliminated from the application/award process.

Applicant's facilities must be neat and clean in appearance. You must attach and submit two (2) photographs of the interior lobby/public access area of your facility and two (2) photographs of your storage area to this application. Failure to do so will result in the rejection of your application and your application will be eliminated from the application/award process.

Applicants' facility must have a working public restroom in compliance with all applicable federal, state and local laws and regulations and a working telephone accessible to customers. You must attach two (2) photographs of the public restroom and telephone to this application. Failure to do so will result in the rejection of your application and your application will be eliminated from the application/award process.

(1) What is the approximate total square footage of your exterior vehicle storage area (including secondary storage facility if applicable): _____ _____square feet.

(a) Do you have more than one vehicle storage facility? _____

(b) If yes, what is the address/location of your secondary storage facility:

_____

(2) Do you have an accessible public restroom in compliance with all federal, state and local laws and regulations, and a telephone accessible to the public? _____

Modesto Police Department will physically inspect the applicant's facilities for compliance with the requirements for storage, restrooms and a working telephone. Failure to meet any of the requirements as defined in this application will result in the rejection of your application and your application will be eliminated from the application /award process.

H. FRANCHISE APPLICATION DEPOSIT-(MMC11-20.3)

This application for a franchise shall be accompanied by a cash deposit of five hundred dollars ($500.00) or by a certified check for said amount, payable to the City, as a fund out of which to pay all expenses connected with the application.

The deposit of the applicant shall be retained until the acceptance of the franchise and the filing of any bond or other security required, or until the Council determines not to grant the franchise. Whereupon the remainder, if any, of the amount deposited shall be returned after the payment there from of all expenses incurred by the City in connection with the advertising, engineering, clerical work and awarding of such franchise.

In the event that the amount of the deposit is insufficient to pay the expenses incurred by the City in connection with the advertising, engineering, clerical work and processing of such franchise, the applicant shall be held liable for such costs as are in excess of the amount deposited.

I. APPLICANT BACKGROUND

Applicant understands and agrees that a background investigation shall be conducted on all applicants. A release and waiver is included with this application and shall be signed by the applicant and returned as part of this application. Failure to sign and return the Release and Waiver will result in the rejection of your application packet and your application packet will be eliminated from the application/award process.

In addition, any of the following will result in the rejection of your application packet and your application packet will be eliminated from the application/award process.

Any applicant under the age of eighteen (18) years;

Any applicant who is currently required to register pursuant to Section 290 of the California Penal Code;

Any applicant who has been convicted of a crime involving any misdemeanor or felony driving offense, any crime involving stolen or embezzled vehicles, fraud, stolen or embezzled property, crimes of violence, possession and/or sales of drugs or crimes of moral turpitude, unless a period of not less than five (5) years shall have elapsed since the date of conviction or the date of release from confinement for such offense, whatever is later;

Any applicant who has been convicted of driving a vehicle recklessly within the two (2) years immediately preceding application;

Any applicant who has been convicted of driving a vehicle while under the influence of intoxicating liquors or drugs within the five (5) years immediately preceding application.

Any applicant not possessing a valid driver's license, issued by the State of California;

Do you have a valid drivers license issued by the California Department of Motor Vehicles?_____. CDL #_____

J. APPLICANT'S REPRESENTATION

Applicant understands, agrees, and warrants the following:

(1) Applicant has carefully read and fully understands the information that was provided by the City to serve as a basis for submission of this application to provide City-generated non-exclusive non-consensual franchise towing services on behalf of the City of Modesto.

(2) All statements, answers, and representations made in this questionnaire and in the Application are true and accurate, including all supplementary statements attached hereto.

(3) Applicant did not receive unauthorized information from the City during the application period except as provided for in the Request for Application document package and addenda thereto.

(4) By submission of this Application, Applicant acknowledges that City has the right to make any inquiry it deems appropriate to substantiate the information supplied by Applicant, and Applicant hereby grants the City

permission to make such inquiries and further agrees to provide any and all documentation requested in furtherance of such inquiry in a timely manner.

(5) Applicant understands and acknowledges any required information not attached to the application packet, including omissions of information will result in the rejection of the application packet and the application packet will be eliminated from the application/award process.

(6) Applicant acknowledges receipt of the non-exclusive non-consensual towing services franchise agreement included with this application and agrees to the terms of the contract in the event that a non-exclusive non-consensual towing services franchise is awarded to the applicant. In the event a material change is made to the agreement, applicant will be given written notice of the material change, and the ability to withdraw from the application process, without penalty, within ten (10) calendar days of the noticed material change.

(7) Application must be signed by owner or officer having authority to negotiate on behalf of the Applicant.

Questions regarding the application requirements should be directed to:
Purchasing Division, Cindy Medley, Buyer, (209)-571-1564

K. PURPOSE

The purpose of a non-exclusive non-consensual towing services franchise agreement is to provide for City generated non-exclusive non-consensual towing services on behalf of the Modesto Police Department. Non-consensual towing services include, but are not limited to:

1) Vehicles impounded by The City of Modesto for investigation, as evidence in a criminal case, asset forfeiture or vehicle forfeiture;

2) Vehicles involved in collisions, stalled vehicles, illegally parked vehicles, vehicles whose driver is incapacitated or physically unable to drive or has been arrested or detained;

3) Vehicles towed under any authority section of the California Vehicle Code or Modesto Municipal Code including 30 day impounds, abandoned vehicles, inoperative vehicles or abated vehicles from any street, alley, highway, or any other private or public property in the City of Modesto;

4) Any other tow of a vehicle or vessel as may be ordered by any police officer, police employee, or any other employee or agent of the City of Modesto who is properly authorized to order such removal.

L. TERM

The initial term of the non-exclusive non-consensual towing services franchise agreement shall be three (3) years. The City reserves the right to extend the non-exclusive non-consensual towing services franchise agreement for two (2) additional, one-year extensions at the sole discretion of the City. Either party may terminate the franchise agreement by giving the other party thirty (30) days written notice.

M. FRANCHISE FEE

In the event the applicant is awarded a non-exclusive franchise, commencing with the start date and for the first year of the non-exclusive non-consensual towing services franchise agreement, the FRANCHISEE shall pay to the CITY a fee in the sum of $60.00 for each and every non-consensual tow. Commencing on the third year (i.e. the 731st day from the start date) the franchise fee will increase to $70.00 for each and every non-consensual tow.

CITY OF MODESTO NON-EXCLUSIVE NON-CONSENSUAL TOW FRANCHISE APPLICANT AUTHORIZATION TO RELEASE INFORMATION/HOLD HARMLESS

TO WHOM IT MAY CONCERN:

I_____, the owner and operator of _____, am an applicant for a Non-Exclusive Non-Consensual Tow Franchise with the City of Modesto. As part of the Non-Exclusive Non-Consensual Tow Franchise application process the Modesto Police Department is required to conduct a background investigation. I fully understand that personnel of the Modesto Police Department will conduct a reasonable investigation into my personal, driving, arrest and criminal investigation records.

I hereby direct you, your organization, its Custodian of Records, and/or persons in your employ to release any and all information which you may have concerning me, including information which may be of a confidential, privilege, and/or derogatory nature, including, but not limited to: driving, arrest, or criminal investigation records, administrative and/or local criminal history information (pursuant to Penal Code Section 13300[b][10]), and/or any other information that you possess.

I hereby exonerate, release and discharge you, your organization, the City of Modesto, the Modesto Police Department, its officers, agents, and assigns, from any and all liability, claims or damages, of every nature or kind, whether in law or in equity, now or in the future arising out of or for the furnishing of any information or documents, and/or records whatsoever requested by the bearer of this authorization form. This release shall be binding on my legal representatives, heirs and assigns.

I hereby waive my right, now and in the future, to examine, review, or otherwise discover the contents of this investigation and all documents and responses related thereto. I further exonerate, release, and discharge the City of Modesto, the Modesto Police Department and their officers, agents, or assigns for their refusal to make available any and all information and/or documentation contained in this background investigation, including but not limited to, the identity of any person or organization who may have supplied information in the course of this investigation, as well as the substance of such information supplied, even where such information has been the basis for my disqualification for a tow driver permit.

I have specifically and permanently waived any rights I may have to review and inspect any and all information developed in this investigation so your response will be completely confidential. You may retain this form for your files.

I further hereby knowingly, voluntarily, specifically and permanently waive all my legal rights and causes of action to the extent that this background investigation violates or infringes upon my legal rights and causes of action. I agree to hold harmless and release from any and all liability under any and all possible causes of legal action against the City of Modesto, the Modesto Police Department, and their officers, agents, employees and assigns for any statement, question, interview, act, or omission in the course of the investigation into my background, personal habits and reputation.

CERTIFICATION:

I CERTIFY THAT I HAVE HAD ADEQUATE TIME TO REVIEW THIS FORM, I UNDERSTAND IT'S MEANING AND PURPOSE AND HAVE BEEN FURNISHED A COPY OF IT. I MAY REVOKE THIS AUTHORIZATION AT ANY TIME BY DELIVERING, IN WRITING, SUCH REVOCATION TO YOU/YOUR ORGANIZATION.

NOTARIZATION OF APPLICANTS SIGNATURE REQUIRED.

A photocopy of this release is to be considered as valid as an original. This release is valid for 180 days from the date of signature.

EXHIBIT A

NON-EXCLUSIVE NON-CONSENSUAL TOWING SERVICE FRANCHISE AGREEMENT

1. SCOPE OF WORK

FRANCHISEE shall furnish all labor, materials, and equipment necessary to provide non-exclusive non-consensual towing services as specified in the Notice for Application, Request for Application **#1617-37** Non-Exclusive Non-Consensual Franchise Towing Services Verified Application, and all documents requested in response thereto, all of which are incorporated herein by this reference, and this Agreement (which collectively shall constitute the Non-Exclusive Non-Consensual Towing Service Franchise Agreement and which is referred to herein as "this Agreement"). All non-consensual towing services shall be furnished and performed in strict compliance with the terms and conditions of this Agreement. Non-Consensual towing services include, but are not limited to;

A. Towing of all vehicles impounded by the City of Modesto (CITY) for investigation, as evidence in a criminal case, asset forfeiture, and vehicles towed pursuant to the California Vehicle Code ("CVC") including, but not limited to, CVC Section 14607.6.

B. Towing of vehicles involved in collisions, and/or stalled vehicles obstructing traffic, and/or vehicles illegally parked, and/or vehicles whose driver is incapacitated or physically unable to drive the vehicle, and/or vehicles whose driver has been arrested and/or detained and cannot drive the vehicle, and/or vehicles under the 30-day impound authority including, but not limited to, CVC Section 14602.6, and/or vehicles with five (5) or more outstanding parking citations;

C. Towing of all vehicles necessitating special procedures to ascertain vehicle identification numbers, VIN tows, in compliance with the requirements of the CVC;

D. Towing of any abandoned vehicle, inoperative vehicle, or abated vehicle, from any street, alley, highway, or any other private or public property in the CITY pursuant to the Modesto Municipal Code ("MMC") and CVC including, but not limited to, MMC Section 3-2.1006 and CVC Section 22669 respectively;

E. Towing any other vehicle or vessel as may be ordered by any police officer, police employee, or any other employee or agent of the CITY who is properly authorized to order such tow. This shall include, but is not limited to, any vehicle that is submerged, either wholly or in part. This shall also include, but is not limited to, the removal and storage of any abandoned vessel from city streets/property, whether or not said vessel is attached to a trailer;

F. Towing trailers, boats, motor homes, etc.

2. TERM OF AGREEMENT

The initial term of this Agreement shall be for three (3) years, commencing _____, 2017. The CITY reserves the right to extend this Agreement for two (2) additional, one-year terms, at the sole discretion of CITY. This Agreement is an "at will" agreement; either party may terminate this Agreement by giving the other party thirty (30) days written notice.

3. PAYMENT/FRANCHISE FEES PAYABLE TO CITY

A. FRANCHISEE agrees to pay to CITY a franchise fee in accordance with the terms of this Agreement.

B. Commencing with the start date and for the first two (2) years this Agreement, the FRANCHISEE shall pay CITY a franchise fee of $60.00 for each and every non-consensual tow, as defined in this Agreement, performed by FRANCHISEE on behalf of or at the request of CITY. **The $60.00 franchise fee will not apply to abandoned and stolen vehicles towed by the Modesto Police Department**

C. Commencing with the third year of this Agreement (i.e. the 731st day from the start date) the FRANCHISEE shall pay CITY a franchise fee of $ 70.00 for each and every non-consensual tow, as defined in this Agreement, performed by FRANCHISEE on behalf of or at the request of CITY.

D. All franchise fees owed to CITY for each and every non-consensual tow performed by the FRANCHISEE shall be due and payable on a monthly basis as set forth in the invoice detailing the franchise fees owed. CITY shall receive payment no later than thirty (30) days proceeding each month as illustrated in Paragraph 3(E). Payment shall be made in the form of a preprinted company bank check or cashier's check payable to the City of Modesto.

E. CITY/TFA shall mail an itemized bill/invoice of the franchise fees owed by FRANCHISEE to CITY on or before the 10th of each month, for the preceding month's non-consensual tows. Payment on the invoice is due to the CITY by the 1st day of the following month. (E.g. FRANCHISE fees for the month of January will be invoiced and mailed by February10th. Payment of the total amount invoiced shall be post marked or received by CITY no later than March 1st, everyday thereafter the invoice is delinquent.)

F. Payments shall not be made contingent on any payments due or payable to the FRANCHISEE by either CITY or the registered owner.

G. If any itemized bill/invoice is more than five (5) calendar days delinquent, the Chief of Police or his designee shall have the authority to immediately suspend the FRANCHISEE until payment of any and all billed/invoiced amounts are paid in full to CITY. Furthermore, if any itemized bill/invoice is more than sixty (60) calendar days delinquent, the Chief of Police or his designee shall have the authority to immediately terminate this Agreement.

4. INSURANCE

FRANCHISEE shall provide, at its own expense, and maintain at all times, the following insurance with insurance companies licensed in the State of California and shall provide evidence of such insurance to CITY as may be required by the City Clerk of CITY. The policies or certificates thereof shall provide that, thirty (30) days prior to cancellation or material change in the policy, notices of same shall be sent by registered mail to the Risk Manager of CITY, 1010 10th St. Modesto, Ca. 95354, return receipt requested, for all of the following stated insurance policies.

A. Workers' Compensation - in compliance with the statutes of the State of California, plus employer's liability with a minimum limit of liability of $1,000.000.

B. General Liability - insurance with a minimum limit of liability per occurrence of $1,000,000 for bodily injury, property damage, and bodily injury. This insurance shall indicate on the certificate of insurance the following coverage's and indicate the policy aggregate limit applying to: premises and

operations; broad form contractual; independent consultants and subcontractors; products and completed operations; and/or professional liability.

C. Automobile Liability insurance with a minimum limit of liability per occurrence of $1,000,000 for bodily injury, property damage, and personal injury. This insurance shall cover any automobile for bodily injury and property damage.

D. Commercial Business Automobile Liability - Bodily injury and property damage with a combined single limit of not less than One Million Dollars ($1,000,000) shall be maintained. These minimum standards are to include scheduled, non-owned, and hired auto coverage.

E. Uninsured Motorist - Legal minimum combined single limit.

F. On-Hook Coverage - Insuring the vehicle in tow with limits based on the size of the tow truck.

Class A tow truck - One Hundred Thousand Dollars ($100,000)

Class B tow truck - One Hundred Fifty Thousand Dollars (150,000)

Class C tow truck - Two Hundred Thousand Dollars ($200,000)

G. Garage Liability - Includes premises and operations. Coverage for bodily injury and property damage with a combined single limit of not less than One Million Dollars ($1,000,000).

H. Garage Keepers Liability - Shall be the same minimum as on-hook coverage for vehicles in the care, custody and control of the FRANCHISEE in the storage yard.

i. If at any time any of said policies shall be unsatisfactory to the CITY, as to form or substance or if a company issuing such policy shall be unsatisfactory to the CITY, the FRANCHISEE shall promptly obtain a new policy, submit the same to the Risk Manager for approval and submit a certificate thereof as hereinabove provided. Upon failure of the FRANCHISEE to furnish, deliver or maintain such insurance and certificates as above provided, this FRANCHISE, at the election of the CITY, may be forthwith declared suspended or terminated. Failure of the FRANCHISEE to obtain and/or maintain any required insurance shall not relieve the FRANCHISEE from any liability under this Agreement, nor shall the insurance requirements be construed to conflict with or otherwise limit the obligations of the FRANCHISEE concerning indemnification. The CITY, its agents, officers, employees, and volunteers shall be named as an additional insured on all insurance policies required herein, except Workers' Compensation. The Workers' Compensation insurer shall agree to waive all rights of subrogation against the CITY, its agents, officers, employees, and volunteers for losses arising from work performed by FRANCHISEE for the CITY. The FRANCHISEE'S insurance policy (ies) shall include a provision that the coverage is primary as respects the CITY; shall include no special limitations to coverage provided to additional insured; and, shall be placed with insurer(s) with acceptable Best's rating of A: VII or with approval of the Risk Manager.

ii. For any claims related to the work performed pursuant to this Agreement the FRANCHISEE'S insurance coverage shall be primary insurance as respects the CITY, its officers, officials, employees, and volunteers. Any insurance or self-insurance maintained by the CITY, its officers, officials, employees, or volunteers shall be in excess of the FRANCHISEE'S insurance and shall not contribute with it.

iii. FRANCHISEE shall either require any subcontractor to procure and to maintain during the term of the subcontract all insurance in the amounts specified above, or shall insure the activities of subcontractors in the policy specified above. The limits of liability required may vary, depending on the type of permit or contract.

iv. Proof of insurance shall be in the form of a certificate of insurance and separate endorsements naming the CITY as an additional insured for all insurances except Workers' Compensation. Policy expiration or cancellation will immediately nullify this Agreement. FRANCHISEE'S insurance policy shall provide for a thirty (30) day advance notice to CITY in the event the insurance policy will expire or be cancelled. FRANCHISEE shall also immediately notify the Tow Administrator in the event the insurance policy has expired or is cancelled. Failure to maintain insurance or to notify the CITY and Franchise Tow Administrator of insurance lapses shall constitute a material breach of this Agreement and CITY shall have the right to immediately suspend and/or terminate this Agreement as determined by the Chief of Police or his designee.

v. The ultimate responsibility for any damage to any vehicle or property or the loss of any vehicle or any property contained in the vehicle while the vehicle and/or property is in the FRANCHISEE'S care and/or custody rests with the FRANCHISEE. The FRANCHISEE shall reimburse the vehicle or property owner for any loss or damage which has been identified in a Modesto Police Department Motor Vehicle Report or other official document and is not covered by FRANCHISEE'S insurance.

vi. Any deductibles or self-insured retention must be declared to and approved by the City of Modesto Risk Manager.

5. HOLD HARMLESS AGREEMENT

FRANCHISEE shall hold CITY, its agents, officers, employees, and volunteers, harmless from and save, defend and indemnify them against any and all claims, losses, liabilities and damages from every cause, including but not limited to, injury to person or property or wrongful death, with the indemnity to include reasonable attorney's fees, and all costs and expenses, arising directly or indirectly out of any act or omission of FRANCHISEE, whether or not the act or omission arises from the sole negligence or other liability of CITY, or its agents, officers, employees, or volunteers relating to or during the performance of its obligations under this Agreement.

6. PROHIBITION OF GIFTS

A. FRANCHISEE shall be subject to CITY's prohibition against acceptance of any gift by a CITY officer or employee.

B. FRANCHISEE agrees not to offer any CITY officer or employee any gift. In addition to any other remedy(ies) CITY may have at law or equity, CITY may immediately terminate this Agreement for a violation of this Paragraph notwithstanding any provision of this Agreement to the contrary.

7. DRIVERS

A. FRANCHISEE shall, at a minimum, maintain the following information for each employee/driver providing services to CITY pursuant to this Agreement.

i. Full name

ii. Date of birth.

iii. Valid California Driver's License number and photocopy of said driver's license.

iv. Copy of Social Security Card

v. Job title-description.
vi. Current home address

vii. Current phone number.

viii. Copy of employment application.

ix. Medical certificate (if applicable)

B. It is the responsibility of FRANCHISEE to maintain a sufficient number of employees and/or properly licensed and permitted drivers to meet all the terms and conditions set forth in this Agreement. Any violation of CVC Section 12500 or 14601 through 14601.5, by a FRANCHISEE or FRANCHISEE'S employee/driver which is committed while in the process of providing towing service for the CITY under the terms of this Agreement, may be grounds for immediate suspension of this Agreement, notwithstanding any provisions of this Agreement to the contrary.

C. At the start of this Agreement, FRANCHISEE shall provide to the Tow Franchise Administrator a current list of its employees who will be providing services under the terms of this Agreement. Any drivers hired thereafter that will provide services to CITY pursuant to the terms of this Agreement and/or any change in the employment status of any driver including, but not limited to, suspension or dismissal from employment, shall be reported to the Franchise Tow Administrator within twenty-four (24) hours.

D. FRANCHISEE and all tow truck drivers providing services to CITY pursuant to the terms of this Agreement shall be enrolled in the Pull Notice Program with the Department of Motor Vehicles. FRANCHISEE shall enroll all newly hired tow truck drivers in the Pull Notice Program within fifteen (15) calendar days of hire.

E. All drivers providing services for the CITY under this Agreement shall be covered under the Workers Compensation Insurance Policy required under section 3(A) of this agreement.

8. TOW DRIVERS PERMIT / IDENTIFICATION BADGES

A. FRANCHISEE tow driver(s) who provide services under this Agreement shall apply for and obtain a Tow Driver Permit / Identification Badge annually from the Modesto Police Department.
A Tow Driver Permit fee will be charged for each permit applied for and shall be paid by the FRANCHISEE at the time of permit application. The fee, which may be amended from time to time, will be established by resolution of the Modesto City Council.

B. FRANCHISEE'S tow driver(s) shall wear a valid Modesto Police Department issued Tow Driver Identification Badge in plain view, at all times when responding to a CITY generated tow. If a tow truck driver responds to a scene without his authorized name badge, the tow truck driver will be

dismissed from the scene and the next Tow Operator in rotation will be called. Failure to obtain a Tow Driver Permit / Identification Badge shall, at a minimum, be deemed a failure to provide adequate

service. The purpose of these badges will be to identify those employees of the FRANCHISEE who have been fingerprinted by the City and have passed the record check by the Department of Justice.

C. A Tow Driver Permit application can be obtained from the Tow Franchise Administrator at the Modesto Police Department, 600 10th St., Modesto Ca. 95354. The Tow Driver Permit will be valid for one year from the date of issuance. It is the responsibility of the FRANCHISEE to ensure that all drivers maintain a valid Tow Driver Permit.

D. If a Tow Driver's Permit / Identification Badge is lost or stolen, the tow driver must contact the Tow Franchise Administrator for a replacement. The cost of the replacement will be $10.00 per card.

E. A Tow Driver Permit shall NOT be issued to any of the following persons:

i. Any person under the age of eighteen (18) years.

ii. Any person who is currently required to register pursuant to Section 290 of the California Penal Code;

iii. Any person who has been convicted of a crime involving any misdemeanor or felony driving offense, any crime involving stolen or embezzled vehicles, fraud related to the towing business, stolen or embezzled property, crimes of violence, possession and/or sales of drugs or crimes of moral turpitude, unless a period of not less than five (5) years shall have elapsed since the date of conviction or the date of release from confinement for such offense, whichever is later;

iv. Any person not possessing a valid class specific driver's license issued by the State of California

v. Any person on current probation or parole.

F. The requirement to currently possess a Tow Driver Permit shall be waived for a period of sixty (60) calendar days following the start date of this Agreement, to provide the CITY sufficient time to process all Tow Driver Permit applications. FRANCHISEE shall ensure that all tow drivers who are to provide services under this agreement, and who do not possess a Tow Driver Permit at the start of this agreement apply for a Tow Driver Permit within ten (10) calendar days following the start date of this Agreement Failure to do so shall, at a minimum, be deemed a failure to provide adequate service.

G. All identification badges are the property of the City and will be returned by the FRANCHISEE to the City within forty-eight (48) hours of an employee's separation. FRANCHISEE will provide a current list of all drivers. Anytime there are any changes to this list, the City is to be notified by the next business day and provided with an updated and current list of drivers.

H. Any employee of the FRANCHISEE that has left employment with said FRANCHISEE and returned and been rehired must complete an additional background check before performing services pursuant to this Agreement.

I. Nothing herein shall prohibit the Chief of Police, or his designee from denying the issuance of, or imposing an immediate suspension and/or termination of, any Tow Driver Permit when the applicant's/permit holder's conduct, in the opinion of the Chief of Police, or his designee, is considered

to be a danger to the motoring public or who has engaged in conduct constituting a violation of this Agreement.

9. DEMEANOR AND CONDUCT

While providing towing services pursuant to this Agreement, the FRANCHISEE, its employee(s) and/or agents shall refrain from any of the following acts of misconduct:

A. Rude or discourteous treatment of the public or CITY employees.

B. Lack of service or refusal to provide service to the public or CITY employees.

C. Any act of sexual harassment or sexual impropriety.

D. Unsafe driving practices.

E. Exhibiting any objective symptoms of alcohol and/or drug intoxication. FRANCHISEE/tow truck driver shall submit to a Preliminary Alcohol Screening Test upon demand of a peace officer.

F. Appearing at the scene of a CITY-generated tow with the odor of an alcoholic beverage emitting from his/her breath or person. FRANCHISEE /tow truck driver shall submit to a Preliminary Alcohol Screening Test upon demand of a peace officer.

G. Appearing at the scene of a CITY-generated tow without being attired in the FRANCHISEE'S established uniform and Identification Badge. A description of which shall be provided to the Tow Franchise administrator in writing prior to the commencement of this Agreement. At a minimum, the name of the tow business and the name of the employee shall be displayed on the uniform shirt.

H. **However, nothing herein shall prohibit the Chief of Police, or his designee, from imposing an immediate suspension and/or termination on any FRANCHISEE and/or employee(s) whose conduct, in the opinion of the Chief of Police, or his designee, is considered to be a danger to the motoring public or who has engaged in conduct constituting a gross violation of this Agreement**.

I. All complaints received by the Modesto Police Department against the FRANCHISEE or its agent(s) or employee(s) will be accepted and investigated in a fair and impartial manner. At a minimum, any substantiated complaint will be deemed a failure to provide adequate service. Furthermore, as a result of the investigation, the Chief of Police or his designee may initiate such disciplinary action as he or she deems appropriate.

J. FRANCHISEE must notify CITY of all contracts with other cities or governmental agencies to provide tow services within California. Any FRANCHISEE that is under contract with any other city or agency and who is either suspended or terminated by that city or agency shall notify in writing the CITY/ Tow Franchise Administrator within twenty-four (24) hours of such suspension or termination; Failure to do so shall, at a minimum, be deemed a failure to provide adequate service.

10. FACILITIES

A. FRANCHISEE shall maintain an office facility with a primary storage yard and interior storage within two (2) miles of the Modesto City limit.

B. Hours of Operation:

i. The business office shall be open to the public, staffed and available for vehicle releases, storage, inquiries, telephone calls and all other business purposes during business hours. Business hours are defined as Monday through Friday, between the hours of 8:00 a.m. and 5:00 p.m., except the following observed holidays: New Year's Day, Martin Luther King Jr. Day, Presidents Day, Cesar Chavez Day, Memorial Day (observed), Independence Day, Labor Day, Veterans' Day (observed), Thanksgiving Day, Day after Thanksgiving and Christmas Day.

ii. In order to ensure that the vehicle owner or his/her agent may claim vehicles towed on behalf of the CITY at any time, on any day and to promptly release CITY towed vehicles, the FRANCHISEE must have an employee available after business hours, who can arrive at the primary office facility within thirty (30) minutes of a request by the CITY or a citizen. Vehicle owners or their agents who request entry to the storage facilities after business hours may be assessed an after-hour gate fee. CITY shall not be assessed an after-hour gate fee.

11. BUSINESS OFFICE

A. FRANCHISEE shall have an accessible public restroom that complies with all federal, state and local laws and regulations and FRANCHISEE shall have a telephone available for customers to use.

B. FRANCHISEE shall display the FRANCHISEE'S business name, address and telephone number at the primary business and secondary storage lot/facility location with a sign clearly visible day and night from the street.

C. Shall be neat and clean in appearance.

D. The following documents, printed in a minimum of 12-point type (unless otherwise stated or required by the California Vehicle Code) shall be posted by FRANCHISEE in the Primary business office in a conspicuous location clearly visible to the public

i. Name and address of FRANCHISEE'S insurance broker carrying the insurance required pursuant to this Agreement;

ii. A notice explaining the procedure by which unclaimed vehicles are sold at public auction stating that all in attendance at such auction shall have an equal opportunity to bid. Notice shall include the locations of such auctions and publications in which such auctions are advertised.

iii. "Vehicle Impound Rights and Obligations" informing the public of their rights pursuant to CVC Section 22852.

iv. A notice advising that complaints against FRANCHISEE related to CITY generated non-consensual tows can be made by contacting the Modesto Police Department, Tow Franchise Administrator, 600 10th St., Modesto Ca. 95354, (209) 572-9500. This notice shall be displayed in a conspicuous place clearly visible to the public in lettering not less than 1" in size.

v. Maximum Fee/Rate Schedule for CITY generated non-consensual tows. This notice shall be displayed in a conspicuous place clearly visible to the public in lettering not less than 1" in size.

E. The facility shall have a telephone, on site fax machine and the necessary computer equipment to properly run DTS software and to send and receive email.

F. If an operator's place of business is staffed with only one employee, the business office may be closed for one hour at lunch.

i. A sign shall be posted which reflects a lunch closure and phone number where a request by a vehicle's owner/agent shall result in an immediate response to release property and/or vehicle.

ii. Response to the office shall be within thirty (30) minutes.

12. STORAGE LOT

A. FRANCHISEE'S lot(s) must have an improved surface (e.g., gravel, concrete, paved) and the storage lot(s) shall be free of litter, debris and weeds.

B. The storage lot(s)/facilities must be adequately lit during hours of darkness.

C. The storage lot(s) must comply with all applicable local, state and federal rules, regulations and laws.

D. Stored vehicles shall be parked with a minimum of two (2) feet of clearance on each side and one (1) foot of clearance in the front and one foot of clearance in the rear.

E. The storage lot(s)/facility(ies) shall have interior storage used exclusively for the storage of impounded/stored vehicles.

F. Secondary storage locations may be utilized, however, neither customers nor CITY shall be charged any additional fees for vehicles stored at a secondary facilities. Secondary storage lots/facilities must be within two (2) miles of the Modesto City limit. In addition, all vehicles must be released to the registered owner or their agent at the primary business location. Both primary and secondary storage lots shall be enclosed by a solid wall or chain link fence at least six (6) feet in height for maximum security. Said wall or fence shall comply with all local, state and federal rules, ordinances, codes and regulations.

G. All towed vehicles shall be stored on private property only. At no time shall a towed vehicle be deposited, placed, left standing or stored on a public roadway or right of way.

H. A request for outside or inside storage on a CITY generated non-consensual tow by a customer shall be honored. If no request is made, the vehicle shall be stored in the least costly manner to the customer.

I. It is the responsibility of the FRANCHISEE to determine and maintain a sufficient amount of storage to meet all the terms and conditions of this Agreement.

13. TRUCKS

A. FRANCHISEE shall own or lease, and have in their possession a minimum of two (2) fully operational Tow Trucks, as defined in Section 615(a) of the California Vehicle Code, with a minimum GVWR of 14,000 pounds, a minimum of one (1) tow truck shall be capable of towing all vehicles with a (GVWR) up to and including 10,000 pounds. All tow trucks must be currently registered with the California Department of Motor Vehicles and must display a current Modesto Police Department inspection sticker.

B. Tow Truck Classifications and Equipment Specifications:

i. To properly and safely tow and service the wide variety of vehicles being operated on the highway, a towing procedure may require the use of auxiliary equipment specifically designed for the purpose. This auxiliary equipment shall be used when appropriate.

ii. Tow truck equipment and specifications listed are the minimum acceptable. Auxiliary equipment will be required in each class.

iii. Equipment Limitations: All towing equipment, recovery equipment, and carrier ratings are based on structural factors only. Actual towing, carrying, and recovery capacity may be limited by the capacity of the chassis and the optional equipment selected.

iv. Towing Limitations:

The criteria to use in determining the safe towing limits for a tow truck are:

a. The total weight of the tow truck, including the lifted load, must fall within the manufacturer's GVWR and not exceed either the Front or Rear Axle Weight Ratings (FAWR/RAWR).
b. The tow truck must meet all applicable local, state and federal standards, regulations and laws.
c. For proper steering and braking, the front axle load must be at least 50% of its normal or unladen weight after the load is lifted.

v. Identification Label

Each piece of towing equipment shall have a label or identification tag permanently affixed to the equipment in a prominent location to identify the manufacturer, serial number, model and rated capacity when applicable.

vi. Recovery Equipment Rating

The basic performance rating of the recovery equipment is the weight the equipment can lift in a winching mode when the boom is static at a 30-degree elevation with the load lines vertical and the lifting cables sharing the load equally, measured with a live load (weight or load cell).

a. The structural design of the recovery equipment must have a higher load capacity than the performance rating(s).
b. Winches shall conform to or exceed the specifications set forth by the Society of Automotive Engineers (SAE) Handbook, SAE J706.
c. All ratings for cable and chain assemblies are for the undamaged assembly condition. All cable and chain assemblies shall be the same type, construction, and rating as specified by the Original Equipment Manufacturer (OEM) for the equipment.

vii. Safety Chains:

Safety chains shall be rated at no less than the rating specified by the OEM.

viii. Control/Safety Labels:

All controls shall be clearly marked to indicate proper operation as well as any special warnings or cautions.

ix. Wire Rope (Cable):
Wire rope shall be maintained in good condition. Only wire rope with swaged ends with metal sleeves in the loops shall be approved for use on CITY generated tows. Wire rope is not in good condition when it is stranded, knotted, crushed, excessively rusty, kinked, badly worn, when there are two or more wires broken in lay length, or when there is other visible evidence of loss of strength.

x. Class A – Light Duty: For the purposes of this Agreement, a Class A tow truck is defined as a tow truck that has a manufacturer's GVWR of at least 14,000 pounds.

xi. Class B – Medium Duty: For the purposes of this Agreement, a Class B tow truck is defined as a tow truck with a GVWR of at least 26,001 pounds. The tow truck shall be equipped with air brakes and a tractor protection valve or device, and be capable of providing and maintaining continuous air to the towed vehicle.

xii. Class C- Heavy Duty: For the purposes of this Agreement, a Class C tow truck is defined as a tow truck with a GVWR of at least 48,000 pounds. The tow truck shall be equipped with air brake and a tractor protection valve or device, and be capable of providing and maintaining continuous air to the towed vehicle.

C. All tow trucks utilized by FRANCHISEE to provide CITY generated non-consensual tow services shall pass a California Highway Patrol (CHP) Level One inspection annually. FRANCHISEE shall notify the Tow Administrator of the date and time of their scheduled CHP inspection as soon as practicable, and no later than two (2) weeks prior to the scheduled inspection date.

D. An inspection sticker will be issued by the Modesto Police Department Franchise Tow Administrator for each tow truck once the tow truck has passed CHP inspection. FRANCHISEE shall place the Modesto Police Department inspection sticker on the exterior windshield, upper left hand corner. Failure to display a valid inspection sticker shall, at a minimum, be deemed a failure to provide adequate service and may at the discretion of the officer or agent on scene result in the tow being cancelled. Storage lots/facilities will also receive a bi-annual inspection by the Modesto Police Department at no additional cost to the FRANCHISEE.

E All tow trucks shall maintain a broom, shovel, reflective triangles, fire extinguisher and a covered container with a minimum of 5 gallons of absorbent at all times.

F. FRANCHISEE hereby allows the Modesto Police Department to inspect any and all storage lots/facilities, used to store CITY generated tows, business office(s), and all equipment owned by FRANCHISEE at any time and for any reason, with or without notice. FRANCHISEE shall not utilize a tow truck on a CITY generated tow that has not been inspected and issued a valid inspection sticker by the Modesto Police Department.

G. All tow trucks shall be clearly marked with the FRANCHISEE'S business name, address and telephone number on both sides of the vehicle FRANCHISEE shall not display any sign or engage in any advertisement indicating an official connection with the CITY or the Modesto Police Department; (e.g., "Official Modesto Police Tow," "Approved by MPD," etc.). This will not preclude the Chief of Police, or his designee, from implementing a system of marking and/or identifying particular tow trucks as having passed a Modesto Police Department inspection or as being certified as a FRANCHISEE for CITY generated tows.

H. Towed vehicles shall be loaded, secured and transported in compliance with this Agreement and all applicable local, state and federal rules, regulations and laws. Any violation of local, state or federal rules, regulations or laws, including, but not limited to a violation of the GVWR, safe loading requirements or a violation of the equipment requirements shall, at a minimum, be deemed a failure to provide adequate service.

I It is the responsibility of the FRANCHISEE to provide a sufficient number of tow trucks to meet all the terms and conditions of this Agreement. The number of tow trucks listed in this Agreement is a minimum. It is the FRANCHISEES responsibility to determine the number and type of tow trucks required to fulfill all the requirements of this Agreement.

14. DTS REQUIREMENTS

A. FRANCHISEE shall utilize the most recent, updated and upgraded DTS software program, to dispatch and track, via a web-based Internet connection. FRANCHISEE will be required to enter the towed vehicle information as instructed by the City. At no time will a vehicle be released, subject to lien, or junked from impound without all required data fields being entered into the DTS system by the FRANCHISEE. The FRANCHISEE shall clearly identify and enter into DTS the name of the person to whom the vehicle was actually released. All City tow requests shall be made utilizing this program.

B. Failure at any time to have the DTS program in full operation shall cause the immediate removal of the FRANCHISEE from the tow rotation and be grounds for immediate termination by the City. This does not include technical issues that occur from DTS software and/or internet provider.

C. FRANCHISEE must enter into a separate agreement, or license for the DTS software program with the owner of the proprietary software. The City shall not provide the DTS software program, any licensing or sub-licensing thereof or any intermediary services for the procurement by the FRANCHISEE of the DTS software program. This Agreement shall not be executed by the City until the FRANCHISEE has demonstrated to the City's satisfaction compliance with the requirements set forth herein. FRANCHISEE shall be liable for all fees, charges, prices, rates and service charges required from DTS.

D. DTS shall be utilized in "real time" and all entries should reflect as such. Invoices shall be used from DTS when releasing vehicles and be pursuant to section 22651.07 of the CVC. The only FRANCHISEE personnel authorized to utilize and access DTS are those that have fully complied with the provisions set forth in Section 8, "Tow Driver's Permit / Identification Badges" of this Agreement. If the FRANCHISEE is not in FULL compliance with the above stated requirement, the FRANCHISEE will be removed from the City towing rotation. Third party dispatch call center personnel shall be exempt from the completion of the background process to utilize the DTS program.

E. In the event that DTS fails to provide software services, or the City elects to utilize a new software provider, the FRANCHISEE will be required to use the replacement towing software system. If that occurs, all references to DTS in this Agreement shall instead be interpreted as references to the new software program.

15. TOWING AND STORAGE CHARGES

A. The following schedule reflects the maximum rates established for services or materials in connection with any vehicle towed pursuant to a CITY generated non-consensual tow which includes but is not limited to the following.

i. Towing of all vehicles impounded by the CITY for investigation, as evidence in a criminal case, asset forfeiture or vehicles towed under the CVC including, but not limited to, CVC Section 14607.6 (vehicle forfeiture);

ii. Towing of vehicles involved in accidents, and/or stalled vehicles obstructing traffic, and/or vehicles illegally parked, and/or vehicles whose driver is incapacitated or physically unable to drive the vehicle, and/or vehicles whose driver has been arrested and/or detained and cannot drive the vehicle, and/or vehicles under the 30-day impound authority including, but not limited to, CVC Section 14602.6, and/or vehicles with five (5) or more outstanding parking citations;

iii. Towing of all vehicles necessitating special procedures to ascertain vehicle identification numbers, VIN tows, in compliance with requirements of the CVC;

iv. Towing of any abandoned vehicle, inoperative vehicle, or abated vehicle, from any street, alley, highway, or any other private or public property in the CITY pursuant to the MMC and CVC including, but not limited, to MMC 3-2.1006 or CVC 22669 respectively;

v. Towing any other vehicle or vessel as may be ordered by any police officer, police employee, or any other employee or agent of the CITY who is properly authorized to order such tow. This shall include, but is not limited to, any vehicle that is submerged, either wholly or in part. This shall also include, but is to, the removal and storage of any abandoned vessel from city streets/property, whether or not said vessel is attached to a trailer.

vi. Towing trailers, boats, motor homes, etc.

B. **MAXIMUM CHARGES**

Time expended on a CITY generated tow shall be charged at a rate not to exceed the rates set forth hereinafter. There shall be no additional charge(s) for towing after 5 p.m., weekend tows, holiday tows, use of a dolly or any other equipment, mileage and labor, which includes, but is not limited to, crane charges, winching and recovery from areas not accessible to the tow truck. FRANCHISEE shall collect all towing and storage charges from the vehicle owner unless otherwise stated in this Agreement.

Tow Fees

Year 1

Class A tow (GVWR – 14,000 pounds)	$220.00
Class B tow (GVWR – 26,001 pounds)	$345.00
Class C tow (GVWR – 48,000 pounds)	$390.00
Recovered Stolen Vehicles tow	$160.00
Evidence Vehicle tow	$100.00 (any vehicle towed to MPD)

Year 2

Class A tow (GVWR – 14,000 pounds)	$225.00
Class B tow (GVWR – 26,001 pounds)	$350.00
Class C tow (GVWR – 48,000 pounds)	$400.00
Recovered Stolen Vehicles tow	$160.00
Evidence Vehicle tow	$105.00

Year 3

Class A tow (GVWR – 14,000 pounds)	$230.00
Class B tow (GVWR - 26,001 pounds)	$355.00
Class C tow (GVWR – 48,000 pounds)	$410.00
Recovered Stolen Vehicles tow	$160.00
Evidence Vehicle tow	$110.00

In the event that CITY exercises its right to extend the term of this Agreement pursuant to Paragraph 2, Term of Agreement, the maximum amount allowed for towing shall be:

Year 4

Class A tow (GVWR – 14,000 pounds)	$235.00
Class B tow (GVWR – 26,001 pounds)	$360.00
Class C tow (GVWR – 48,000 pounds)	$420.00
Recovered Stolen Vehicles tow	$165.00
Evidence Vehicle tow	$115.00

Year 5

Class A tow (GVWR – 14,000 pounds)	$240.00
Class B tow (GVWR – 26,001 pounds)	$365.00
Class C tow (GVWR – 48,000 pounds)	$430.00
Recovered Stolen Vehicles tow	$170.00
Evidence Vehicle tow	$120.00

Additional Charge for 2nd tow truck required for removal of a vehicle. $75.00 (Must have direct approval by MPD officer on scene and must be itemized on the invoice.)

Storage Fees:

Year 1

Outside Daily Storage Fee	$55.00
Inside Daily Storage Fee.....	$60.00
Class B/C Storage Fee.....	$65.00

Year 2

Outside Daily Storage Fee	$57.00
Inside Daily Storage Fee.....	$62.00
Class B/C Storage Fee.....	$67.00

Year 3

Outside Daily Storage Fee.....	$59.00
Inside Daily Storage Fee.....	$64.00
Class B/C Storage Fee.....	$69.00
After business hours gate fee.....	$100.00

In the event that the CITY exercises its right to extend the term of this Agreement pursuant to Paragraph 2, Term of Agreement, the maximum amount allowed for storage fees shall be:

Year 4

Outside Daily Storage Fee.....	$60.00
Inside Daily Storage Fee.....	$65.00
Class B/C Storage Fee.....	$70.00

Year 5

Outside Daily Storage Fee.....	$62.00
Inside Daily Storage Fee.....	$67.00
Class B/C Storage Fee.....	$72.00
After business hours gate fee.....	$100.00

City of Modesto Vehicle Release Fee:

Illegal Parker / Abandoned Vehicle	$120.00
Unlicensed Driver / Expired Registration	$160.00
Suspended / Revoked Driver / Arrested Driver	$250.00
DUI Driver	$450.00

The above rates represent the maximum a FRANCHISEE may charge on a CITY generated non-consensual tow. A FRANCHISEE is not precluded from charging less when deemed appropriate. No FRANCHISEE, or their employee or agent, shall refer to any rate as the minimum required or set by CITY.

C. Time expended in excess of sixty (60) minutes on-scene may be charged in one-minute increments at a rate of $90.00 per hour and shall be properly documented on the FRANCHISEE'S invoice. These additional-service fees may be charged only under the following conditions or circumstances:

i. When directed to "stand-by" by an authorized CITY employee or agent. "Stand-by" fees shall be billed to the Modesto Police Department on a separate invoice and shall include the name of the CITY employee or agent who authorized the charge and the Modesto Police Department case number.
ii. Necessary accident and/or recovery operations and when directed and approved by an authorized CITY employee or agent. This fee is the responsibility of the registered owner and shall be listed on the invoice with the name of the CITY employee or agent authorizing this charge

D. Lock out fees: When directed by an authorized CITY employee or agent to unlock a vehicle. Lock out fees may be charged at a rate of $55.00 per vehicle. Lock out fees shall be billed to the Modesto Police Department on a separate invoice and shall include the name of the CITY employee or agent who authorized the charge and the Modesto Police Department case number. (Ex. FRANCHISEE is called out to only unlock a vehicle so a search warrant can be executed.) Lock out fees cannot be charged in addition with towing fees. This type of call will count as the FRANCHISEE's rotation call.

E. The schedule of rates charged by FRANCHISEE shall be available in the tow truck, and shall be presented upon demand to the person(s) for whom the non-consensual tow services were provided or his/her agent at the scene.

F. Vehicles stored twenty-four (24) hours or less shall be charged for no more than one-day storage. Each day of storage thereafter shall be calculated by calendar day (Civil Code Section 3068.1).

G. If a request for a non-consensual tow is cancelled by the CITY or vehicle's owner/agent prior to the FRANCHISEE taking possession of the vehicle, there shall be no charge to the CITY or to the vehicle owner by the FRANCHISEE

H. FRANCHISEE may charge a fee for lien sale preparations in compliance with California Vehicle Code Section 22851.12. All lien preparations and/or sales performed by FRANCHISEE shall be done in strict compliance with all applicable laws. All forms shall be accurate and complete.

I. Notwithstanding any other provision of this Agreement to the contrary, any violations of sections 15(A) through 15(G) shall, at a minimum, be deemed a failure to provide adequate service and a material breach of this Agreement, and shall constitute grounds for up to immediate termination of this Agreement.

J. FRANCHISEE shall furnish a fully itemized billing to the vehicle owner or agent at the time of payment and/or upon request of the vehicle owner or agent. Failure to do so shall, at a minimum, be deemed a failure to provide adequate service.

K. FRANCHISEE shall accept a valid bank credit card or cash tendered by the registered owner, legal owner or the owner's agent claiming the vehicle for payment of towing and/or storage (CVC Section 22651.1). Appropriate credit card equipment shall be located at the primary business location and available for immediate processing from each tow truck. Failure to do so shall, at a minimum, be deemed a failure to provide adequate service

L. A record of all vehicles towed by FRANCHISEE under this Agreement shall be retained by the FRANCHISEE and shall be readily available for inspection and/or transcription or copying at the primary business location of the FRANCHISEE for a minimum of three (3) years. Failure to retain and provide complete and accurate records upon request of the CITY shall, at a minimum, be deemed a failure to provide adequate service. All records shall contain the following information

i. Date and time vehicle towed

ii. Modesto Police Department Case Number

iii. License Plate/Vehicle Identification Number

iv. Date and time of vehicle release

v. Year, Make and Model of Vehicle

vi. Copy of Modesto Police Dept. Vehicle Release (if applicable)

vii. Date Lien Filed (if applicable)

viii. Date Lien Sale (if applicable)

ix. All Lien Documents (if applicable)

x. All DMV paperwork (if applicable)

M. FRANCHISEE shall post the Modesto Police Department case number on the windshield of any and all vehicles towed and stored by CITY. Failure to do so shall at a minimum be deemed a failure to provide adequate service.

N. A trailer with a vessel as a load (e.g. boat, motorcycle, jet ski,) shall be considered one vehicle for the purposes of the maximum rate allowed for tow and storage.

16. **RELEASE OF VEHICLES**

An authorized Modesto Police Department employee will authorize the release of a vehicle through the DTS System. Once the DTS System authorizes the release of a stored or impounded vehicle, it is the FRANCHISEE's responsibility for the vehicle's release. The FRANCHISEE is hereby granted authority to release to the registered owner, legal owner, or authorized representative, pursuant to section 22850.3 of the CVC.

17. **RELEASE OF MULTI-DAY IMPOUNDS**

A vehicle impounded with a multiple day hold (ex: 30 day hold) may only be released prior to the impound period with written authorization by the City in the DTS System. The DTS System will automatically schedule the release date of an impounded vehicle.

18. **UNAUTHORIZED RELEASE**

Unauthorized release of an impounded vehicle, accidental or otherwise, not officially released by the City, and determined to be the fault of the FRANCHISEE, will result in the issuance of a violation as set forth in this Agreement.

19. **RESPONSE / RESPONSE TIMES**

A. FRANCHISEE shall respond to a dispatch order for a CITY generated tow and be on-scene within thirty (30) minutes of the time of dispatch by a Stanislaus Regional 911 dispatcher, a police officer, a community service officer, employee, agent, or other officer of the CITY who has been duly authorized to request tow services. The dispatcher shall record the time of dispatch into the incident history. The dispatcher's computer entry record shall be the official time piece for the time of dispatch. If the tow truck arrives on scene after the thirty (30) minute requirement, the dispatcher or the officer on scene shall log the time of arrival into the incident history. The officer's or dispatcher's computer entry record shall be the official time piece for the time of arrival of the tow truck.

Failure of the FRANCHISEE to respond to a call with necessary towing equipment (i.e. flat bed, conventional rig etc.) at the designated point of the tow within thirty (30) minutes may, at the discretion of the officer on scene result in the FRANCHISEE being cancelled. Three (3) failures by the FRANCHISEE to respond to a call at the designated point of tow within thirty (30) minutes in a calendar year, commencing April 13, 2014, shall result in a failure to provide adequate service

Exception: Tows requested off the Over Weight Vehicle List shall respond to a dispatch order and be on scene within forty-five (45) minutes of the time of dispatch by a Stanislaus Regional 911 dispatcher, a police officer, community service officer, employee, agent, or other officer of the CITY who has been duly authorized to request such tow services. Three (3) failures by the FRANCHISEE to respond to a tow request from the Over Weight Vehicle List and furnish a tow truck capable of towing the vehicle at the designated point of tow within forty five (45) minutes shall be deemed a **failure to provide adequate service.**

B. Any officer or CITY employee may at his/her discretion cancel a tow that in his/her opinion is unable to provide the necessary equipment to safely tow the vehicle.

C. FRANCHISEE shall maintain a phone line dedicated to Stanislaus Regional 911. Said phone line will be staffed twenty-four (24) hours a day, seven (7) days a week, including weekends and holidays. If the FRANCHISEE fails to answer the dedicated phone, they will be passed and fall to the bottom of the list. Three (3) failures by the FRANCHISEE to answer their designated phone line in a calendar year, commencing _____, 2017, shall result in a failure to provide adequate service.

20. **NON-RESPONSE**

The FRANCHISEE shall update the DTS System at the time of dispatch to a tow rotation request. If the FRANCHISEE is either unable to respond or unable to meet the maximum response time, the tow operator shall immediately update the DTS System accordingly. If, after accepting the call, the FRANCHISEE is unable to respond or will be delayed in responding, the FRANCHISEE shall immediately update the DTS system accordingly.

To decline or refuse to respond will be considered a non-response. Each non-response will be immediately documented in the DTS system. Each non-response will be logged by the DTS System and reviewed by the City. Three (3) failures to respond to a City generated tow in a calendar year, commencing _____, 2017, shall result in a failure to provide adequate service.

21. ROTATION TOW LIST

A. The CITY will make a good faith effort to provide an even distribution of work among the FRANCHISEES. A list shall be established for non-consensual towing of all vehicles with a GVWR of 10,000 pounds or less. FRANCHISEE agrees to the rotation system established by CITY.

B. A separate list (Over Weight Vehicle List) will be established for non-consensual towing of vehicles with a GVWR of 10,001 pounds or more. FRANCHISEES who own or lease a tow truck with a minimum GVWR of 26,001 pounds may be placed on the Over Weight Vehicle List on a voluntary basis. However, once placed on the Over Weight Vehicle List FRANCHISEE shall give thirty (30) calendar days written notice to the Franchise Tow Administrator in order to be removed from the Over Weight Vehicle List.

C. This Agreement applies to non-consensual towing as defined in this Agreement. Nothing contained herein shall be construed to regulate consensual tows.

D. CITY reserves the right to request any tow company, regardless of its position on the rotation tow list.

22. AUDITING OF CHARGES AND SERVICES

A. The CITY reserves the right to audit all records, charges, and/or services provided by FRANCHISEE pursuant to this Agreement. CITY's duly authorized representative shall have access to and the right to examine, transcribe, and/or copy, during business hours, as defined in Section 10 (B) (i), any and all reports, records, documents, and/or files necessary in order to audit and verify charges and services provided by FRANCHISEE under this Agreement. A complete record of all vehicles towed by FRANCHISEE pursuant to this Agreement, including, but not limited to; date and time of tow, Modesto Police Department case number, license plate number, vehicle identification number, date and time of release, year, make and model of vehicle, copy of Modesto Police Department vehicle release (if applicable), all lien and sale documents (if applicable) and vehicle disposition, shall be readily available for inspection at the primary business location of the FRANCHISEE and provided to CITY promptly upon request, and shall be retained for a minimum of three (3) years.

23. RESPONSIBILITY

A. FRANCHISEE shall be responsible for the protection of all CITY generated towed and/or stored vehicles in its possession until the vehicle has been released to its owner, or disposed of through the legal process, and shall be responsible for safeguarding all articles or property left in the towed and/or stored vehicle.

B. FRANCHISEE shall release personal property from a towed/stored vehicle at the request of the vehicle owner or his/her agent, subject to the below listed exceptions. (Personal property is considered to be items, which are not affixed to the vehicle; i.e. papers, cell phones, pull out stereos, clothes, luggage, tools, cargo, etc.) EXCEPTION: No personal property shall be released from vehicles impounded by CITY for evidence, investigation, asset forfeiture or vehicle forfeiture without prior authorization from the towing officer or the Tow Franchise Administrator.

C. Any vehicle towed by the Modesto Police Department for evidence, investigation, asset forfeiture and vehicle forfeiture (CVC Section 14607.6) and stored by the FRANCHISEE shall be stored at the primary storage facility and shall not be moved until authorized by the Chief of Police, the Tow Franchise Administrator or their designee. The need for inside storage shall be indicated on the tow sheet. Vehicles towed by the Modesto Police Department for evidence, investigation, asset forfeiture and vehicle forfeiture (CVC Section 14607.6) shall not be lien sold until such time as the Modesto Police Department Tow Franchise Administrator provides the FRANCHISEE with a written release of the vehicle.

D. FRANCHISEE shall not release any vehicle that is marked as an "Agency Hold" on the Vehicle Report without a the release in the DTS program and/or signed Modesto Police Department Vehicle Release form.

E. FRANCHISEE shall ensure that all debris and fluids are cleared from the scene of a CITY generated tow prior to leaving the scene.

24. COMPLIANCE WITH THE LAW

A. FRANCHISEE and its tow truck driver(s) and employees must be in compliance with all terms and conditions of this Agreement and all applicable federal, state, and local laws, rules, and regulations which are in force or become effective during the franchise period which, in any manner, affect towing and storage of vehicles, including, without limitation, the requirement that any person who drives a tow truck for FRANCHISEE is properly licensed and permitted and that all tow trucks meet any and all applicable Vehicle Code requirements.

B. In the event that FRANCHISEE is cited, arrested, charged, or convicted for any misdemeanor or felony driving offense, any crime involving stolen or embezzled vehicles, fraud related to the towing business, stolen or embezzled property, crimes of violence, driving while under the influence of alcohol and/or drugs, possession and/or sales of drugs or crimes of moral turpitude, FRANCHISEE may be immediately suspended or terminated at the discretion of the Chief of Police. FRANCHISEE shall notify the Tow Administrator within seventy-two 72 hours of any citation, arrest or conviction of the FRANCHISEE.

C. In the event that FRANCHISEE's employee is cited, arrested and/or charged and/or convicted for any misdemeanor or felony driving offense, any crime involving stolen or embezzled vehicles, fraud related to the towing business, stolen or embezzled property, crimes of violence, driving while under the

influence of alcohol and/or drugs, possession and/or sales of drugs or crimes of moral turpitude, notwithstanding any provision of this Agreement to the contrary, the employees Tow Driver Permit may be immediately suspended or revoked. FRANCHISEE shall notify the Tow Administrator within seventy-two (72) hours of FRANCHISEE becoming aware of any such citation, arrest, charging or conviction.

D. In the event that any FRANCHISEE employee is cited for any two (2) infractions while operating a tow truck within a rolling 12 month period, the employee's tow driver's permit may, at the discretion of the Chief of Police, be suspended or terminated. The FRANCHISEE shall notify the Tow Administrator within seventy-two (72) hours of becoming aware of any such citation having been issued to an employee.

E. Nothing in Paragraph 19 of this Agreement shall in any way affect the "at will" nature of this Agreement, or the right of any party to this Agreement to terminate it without cause on thirty (30) day written notice, as provided in Paragraph 2, above.

25. FAILURE TO PROVIDE ADEQUATE SERVICE/DISCIPLINARY ACTION

A. Except as otherwise provided in this Agreement, FRANCHISEE'S failure to meet **any** of the terms and conditions of this Agreement shall be deemed a failure to provide adequate service. Any failure to provide adequate service is a **violation** of the terms of this Agreement and shall result in the following disciplinary action unless otherwise stated in this Agreement:

i. First violation within a calendar year commencing with the start date of the agreement, _____, 2017, Written Notice via certified mail

ii. Second violation within any calendar year commencing _____, 2017 Written Warning via certified mail.

iii. Third violation within any calendar year commencing _____, 2017, thirty (30) Day Suspension.

a. Upon serving a suspension of any length the FRANCHISEE must pay a reinstatement fee of five hundred dollars ($500.00). The suspension will not be lifted until the reinstatement fee is received by the Chief of Police or his/her designee through the Franchise Tow Coordinator.

B. **Nothing herein shall be deemed to prohibit the Chief of Police, or his designee, from imposing an immediate suspension and/or termination on any FRANCHISEE and/or employee(s) whose conduct, in the opinion of the Chief of Police, or his designee, is considered to be a danger to the motoring public or who has engaged in conduct constituting a gross violation of this Agreement.**

C. Nothing in Paragraph 20 of this Agreement shall in any way affect the "at will" nature of this Agreement, or the right of any party to this Agreement to terminate it without cause on thirty (30) day written notice, as provided in Paragraph 2, above.

26. FRANCHISEE'S REVIEW/APPEAL

A. FRANCHISEE may request a review of a **violation** within ten (10) calendar days of receipt of the notice of violation by submitting a request in writing to the Administrative Services Supervisor. If a review is

requested by FRANCHISEE, it shall be done as soon as practicable by the Administrative Services Supervisor or his/her designee. FRANCHISEE shall be notified in writing of the Administrative

Services Supervisor's decision(s) within ten (10) calendar days of the date of completion of the review. The Administrative Services Supervisor's decision on review of the violation shall be final.

B. Following receipt of a notice of suspension, FRANCHISEE may appeal the suspension by submitting a request in writing to the Chief of Police within ten calendar days of receipt of the decision. If an appeal is requested, it shall be done as soon as practicable. On appeal, the FRANCHISEE may raise the alleged invalidity of any violation upon which the CITY relies in imposing the suspension for which review has previously been sought. The appeal shall be decided in a hearing conducted in accordance with the provisions of section 1-6.504 through 1-6.507 of the Modesto Municipal Code by an Administrative Hearing Officer appointed by the City Manager or his/her designee.

C. A suspension resulting from a violation shall not be imposed until the review and/or appeal process for that violation or suspension, if it has been timely requested, has been exhausted, except where this Agreement permits an immediate suspension or termination or where a FRANCHISEE'S conduct is deemed to be a danger to the motoring public or who has engaged in conduct constituting a gross violation of this Agreement. Failure to request a review or appeal in writing within the time specified or failure of FRANCHISEE to appear at a scheduled review or appeal hearing shall constitute a waiver of his or her right to a review or appeal and adjudication of the violation and/or disciplinary action and the violation and/or disciplinary action shall become final.

27. MOTOR CARRIER PERMIT/OTHER PERMITS AND LICENSES

A. FRANCHISEE must possess a current/valid Department of Motor Vehicles Motor Carrier Permit.

B. FRANCHISEE and his/her officers, officials, employees and agents shall obtain and maintain during the term of this Agreement all necessary licenses, permits and certificates required by law for the conduct of FRANCHISEE'S activities and for the provision of services hereunder, including a business license issued by the City of Modesto.

C. Failure to comply with any provision of Paragraph 23 shall be grounds for immediate suspension and/or termination of this Agreement.

28. EXPERIENCE/SALE OR TRANSFER OF BUSINESS

A. FRANCHISEE must have owned a towing business in the State of California for a minimum of two (2) years immediately preceding the date of its application for a non-exclusive non-consensual towing service franchise.

B. FRANCHISEE agrees that sale or transfer of the controlling interest in FRANCHISEES Tow Company shall immediately terminate this Agreement.

29. ENTIRE AGREEMENT

This Agreement constitutes the entire understanding among the parties with regard to the matters herein. The terms of this Agreement are contractual and not a mere recital. There have been no representations, promises, or inducements of any kind made by any party other than those that appear as signatories hereto. Each covenant and condition mentioned in this Agreement is material consideration for each party to enter into this Agreement.

30. **PARTIES TO AGREEMENT.**

This Agreement is intended to confer rights and benefits only on the signatories hereto and is not intended to confer any right or benefit upon any other person or entity. No person or entity other than the signatories hereto shall have any legally enforceable right under this Agreement. All rights of action of any breach of this Agreement are hereby reserved to the signatories hereto.

31. **VOLUNTARY AND KNOWING AGREEMENT.**

Each of the parties hereto states that this Agreement voluntarily and with knowledge of its significance and legal effect.

32. **AUTHORITY AND COMPETENCY.**

Each party hereto expressly warrants and represents that the person executing this Agreement on its behalf is legally competent to and is authorized to enter into this Agreement and to bind said party to their representations, terms, conditions, and covenants as set forth herein.

33. **BINDING EFFECT.**

This Agreement shall be binding upon and shall insure to the benefit of the signatories and their respective heirs, executors, administrators, trustors, trustees, beneficiaries, predecessors, successors, affiliated and related entities, officers, directors, principals, agents, employees, assigns, representatives, and all persons, firms, associations, and/or corporations connected with them including, with limitation, their insurers, insureties, and/or attorneys.

34. **SEVERABILITY.**

If any provision or any part of any provision of this Agreement is for any reason held to be invalid, unenforceable, or contrary to any public policy, law, stature and/or ordinance, the remainder of this Agreement shall not be affected thereby and shall remain valid and fully enforceable.

35. **ASSIGNMENTS.**

The TOWING CARRIER shall not assign, subcontract or transfer by operation of law any obligation hereunder without prior written consent of the CITY.

36. **INDEPENDENT CONTRACTOR.**

The TOWING CARRIER is and shall at all times remain as to the CITY a wholly independent contractor. Neither the CITY nor any of its officers, employees nor agents shall have control over the conduct of the TOWING CARRIER nor any of the TOWING CARRIER'S officers, employees nor agents, except as herein set forth. The TOWING CARRIER shall not at any time or in any manner represent that it or any of its officers, employees or agents are in any manner officers or agents of the CITY.

37. **NOTICE** This Agreement may be terminated by either party, without prejudice, upon thirty (30) days written notice to the other party. Any notice to be given pursuant to this Agreement by either party to the other shall be deposited with the United States Postal Service, postage prepaid.

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-320

RESOLUTION ACCEPTING THE INTERIM CITY MANAGER'S RECOMMENDATION FOR AWARD OF THE NON-EXCLUSIVE NON-CONSENSUAL FRANCHISE TOWING SERVICES CONTRACT TO ELEVEN (11) APPLICANTS; DECLARING CITY COUNCIL'S INTENTION TO CONSIDER THE APPLICATIONS AT THE SEPTEMBER 5, 2017, CITY COUNCIL MEETING; AND DIRECTING THE CITY CLERK TO PUBLISH NOTICE OF THE HEARING IN ACCORDANCE WITH MODESTO MUNICIPAL CODE SECTION 11-2.01 ET SEQ

WHEREAS, on April 4, 2017, City Council approved extending the current Non-Exclusive Non-Consensual Franchise Towing Services agreement for a six month period, which was set to expire on April 13, 2017, to allow staff time to complete the Request for Application (RFA) process, and

WHEREAS, on May 23, 2017, the Purchasing Division solicited Request for Applications (RFA) No, 1617-37, for City Generated Non-Exclusive Non-Consensual Franchise Towing Services, and

WHEREAS, on June 22, 2017, applications were opened in City Clerk's Office, and

WHEREAS, eleven (11) applications were received and opened, all of which were local vendors; and

WHEREAS, the applicants have passed all financial, business and insurance requirements, site equipment verification and background checks, with the exception of those still pending background and/or DOJ fingerprint processing, as noted on the Applicant List with an asterisk on the list **attached** hereto, and

WHEREAS, the list of eleven (11) applicants were forwarded to the Interim City Manager on July 14, 2017, for review and recommendation to City Council.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the Interim City Manager's recommendation to consider the award of Non-Exclusive Non-Consensual Franchise Towing Services contracts to the applicants in the list **attached** hereto.

BE IT FURTHER RESOLVED, the City Council declares its intent to consider the applications at the public hearing which shall be held at 5:30 p.m. on September 5, 2017, in City Council Chambers located in City Hall, at 1010 10th Street, Modesto, CA 95354 and the City Clerk is directed to publish the notice of said hearing in accordance with Modesto Municpal Code Section 11-2.01 *et seq*.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-321

RESOLUTION APPROVING A FOUR MONTH RENTAL AGREEMENT WITH PACIFIC GAS & ELECTRIC COMPANY (PG&E), FOR THE RENTAL OF REAL PROPERTY AT SUTTON COMMUNITY PARK CONSISTING OF 2.07 ACRES FOR AN AREA TO STORE AND STAGE CONSTRUCTION MATERIALS, LOCATED AT CLAUS ROAD AND YOSEMITE MEADOWS DRIVE (APN: 009-001-025), IN THE AMOUNT OF $3,400 FOR A PG&E GAS LINE RELOCATION PROJECT, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Modesto owns Sutton Community Park on Claus Road and Yosemite Meadows Drive (APN 009-001-025), and

WHEREAS, Pacific Gas and Electric Company (PG&E) requires temporary use of an area at this park for a construction project, and

WHEREAS, PGE's construction project requires a secure area to store its materials and construction equipment for a four-month period, and

WHEREAS, PG&E's project will relocate an existing buried natural gas pipeline and perform maintenance and safety checks on its facilities, and

WHEREAS, PG&E will use the City's property to store materials and construction equipment for its project, and

WHEREAS, staff determined the rental rate to be reasonable given the temporary nature of the access and it is consistent with past rental agreements with PG&E.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the rental agreement for a 2.07-acre portion (90,000 square feet) of Sutton Community Park, located at Claus Road and Yosemite Meadows Drive (APN 009-001-025).

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the Rental Agreement for a temporary rental of City property in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION APPROVING THE SUBMITTAL OF A GRANT APPLICATION TO THE FEDERAL TRANSIT ADMINISTRATION (FTA) REQUESTING $300,000 IN FTA SECTION 5339 FUNDS FOR BUS STOP SHELTERS AND RELATED BUS STOP IMPROVEMENTS AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE ALL GRANT AGREEMENT DOCUMENTS

WHEREAS, the Federal Transit Administration (FTA) has been delegated authority to award federal financial assistance for transportation related projects, and

WHEREAS, the City of Modesto has provided all annual certifications and assurances required by the FTA to be eligible for funding under 49 U.S.C. Section 5339, and

WHEREAS, the FTA has made available funding under 49 U.S.C. Section 5339 for transit agencies to purchase bus stop facilities, and

WHEREAS, Section 5339 funds will be used to purchase new bus stop shelters and related improvements for the Modesto Area Express bus system, and

WHEREAS, Modesto is eligible to use federally approved Transportation Development Funds, known as Toll Credits, in lieu of a local match.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the submittal of an application to the FTA for $300,000 in Section 5339 funds for bus stop shelters and related bus stop improvements.

BE IT FURTHER RESOLVED, the Interim City Manager, or his designee, is hereby authorized to execute all grant related application documents.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-323

RESOLUTION ACCEPTING THE GRANT FROM THE CALIFORNIA DEPARTMENT OF TRANSPORTATION (CALTRANS) FOR $255,849 IN FY 2016-17 LOCAL AND REGIONAL FUNDING UNDER THE LOW CARBON TRANSIT OPERATIONS PROGRAM (LCTOP) FOR IMPROVEMENTS AND UPGRADES TO THE DOWNTOWN TRANSIT CENTER, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE ALL GRANT AGREEMENT DOCUMENTS

WHEREAS, the City was awarded a grant from the California Department of Transportation (Caltrans) in the amount of $255,849 in local and regional funding under the Low Carbon Transit Operations Program (LCTOP) for improvements and upgrades to the downtown Transit Center, and

WHEREAS, these funds will be used to make improvements and upgrades to the Transportation Center located in downtown Modesto, and

WHEREAS, the plans for this project are to reconfigure and enlarge the existing customer service and operational administrative space to provide for a better customer service experience and a better work environment for the contractor operating the MAX system, and

WHEREAS, the additional space may allow for future StaRT and the Altamont Commuter Express (ACE) customer service and administrative space.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the grant award from the Low Carbon Transit Operations Program.

BE IT FURTHER RESOLVED that the Interim City Manager is authorized to execute all necessary grant documents with the California Governor's Office of Emergency Services on behalf of the City of Modesto.

BE IT FURTHER RESOLVED that the Interim City Manager may designate the Transit Manager to execute all grant application and grant agreement documents.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-325

RESOLUTION APPROVING AN INCREASE OF $547,823 OVER A FIVE YEAR PERIOD TO THE PURCHASING AGREEMENT WITH DC FROST ASSOCIATES, WALNUT CREEK, CA., TO INCLUDE PARTS FOR THE PHASE 2 TERTIARY TREATMENT PLANT, FOR A TOTAL AGREEMENT AMOUNT OF $1,069,205

WHEREAS, the City uses a tertiary treatment process for its wastewater, which utilizes several different types of equipment requiring specific parts that are only available from one vendor, and

WHEREAS, these specific parts are purchased through DC Frost Associates, and

WHEREAS, on December 6, 2016, by Resolution No. 2016-483, Council authorized the purchase of UV Lamps as a sole source from DC Frost for five years at a total cost of $521,382, and

WHEREAS, DC Frost and Associates is the local exclusive distributor for Sanitaire, Parson and Trojan parts that are used by staff to maintain our tertiary treatment equipment, and

WHEREAS, **Attachments A1, A2 and A3** are the quotations for repair parts that are required to maintain the tertiary treatment equipment, and

WHEREAS, staff has added the column in red to indicate the anticipated annual costs for the quantity required by staff for each piece of equipment, and

WHEREAS, the City has negotiated with DC Frost Associates to hold the cost of these parts for three years; the following two years there will be an increase of 5% each year, and

WHEREAS, staff recommends an increase of the purchasing agreement with DC Frost and Associates since they are the sole provider of these parts and should be exempt

from the formal bidding process in accordance with Modesto Municipal Code 8-3.204(b), and

WHEREAS, MMC 8-3.204(b) provides that a purchase may be exempted from the City's formal bidding requirements where the Purchasing Agency's requirements can be met solely by a single article or process; this purchase qualifies for exemption from formal bidding for that reason.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an increase of $547,823 over five years to the purchasing agreement with DC Frost Associates, Walnut Creek, CA, for a total agreement amount of $1,069,205.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-326

RESOLUTION APPROVING THE AWARD OF BID FOR THE PURCHASE OF FERRIC CHLORIDE FROM KEMIRA WATER SOLUTIONS, LAWRENCE, KS, FOR A TWO-YEAR AGREEMENT WITH THREE ONE-YEAR EXTENSION OPTIONS, AT AN ANNUAL COST OF $32,276 AND OVER FIVE YEARS OF $161,381, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE A PURCHASING AGREEMENT

WHEREAS, the City Manager's Office authorized the Purchasing Division to issue a Request for Bids (RFB) for Ferric Chloride and RFB No. 1617-31 was issued on April 25, 2017, and

WHEREAS, the bids were publicly opened on May 23, 2017, and four companies; California Water Tech, Santa Fe Springs, CA, Kemira Water Solutions, Lawrence, KS, Sierra Chemical Co, Sparks, NV and Thatcher Company of California, Inc., Sacramento, CA, all provided bids, and

WHEREAS, based on providing the overall lowest responsive and responsible bid, staff and the Interim City Manager recommend the award of bid for the purchase of Ferric Chloride to Kemira Water Solutions, Lawrence, KS, at an annual cost of $32,276 and over five years of $161,381, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services, to be formally bid and the award of bid for digester cleaning services conforms to Modesto Municipal Code Section 8-3.203.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the award of bid for the purchase of Ferric Chloride from Kemira Water Solutions, Lawrence, KS, for a two-year agreement with three one-year

extension options at the sole discretion of the City Manager for annual cost of $32,276 and over five years of $161,381.

BE IT FURTHER RESOLVED, that the Interim City Manager or his designee is authorized to execute the purchase agreement.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-327

RESOLUTION APPROVING A LICENSE AGREEMENT AND A COMMON USE AGREEMENT BETWEEN THE MODESTO IRRIGATION DISTRICT AND THE CITY FOR THE CODONI TRANSMISSION MAINS PROJECT AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENTS, IN A FORM APPROVED BY THE CITY ATTORNEY

WHEREAS, the City and the Modesto Irrigation District (MID) continue to make improvements for the delivery of drinking water for it users, and

WHEREAS, the City will construct two 24-inch diameter transmission pipelines for this purpose, and

WHEREAS, MID requires a License Agreement and a Common Use Agreement to install, maintain and operate the two transmission pipelines, and

WHEREAS, the License Agreement is needed to construct a pipeline through a portion of MID's Lateral No. 1 property, and

WHEREAS, the Common Use Agreement is needed to construct a pipeline through a portion of MID's Highline Lateral, and

WHEREAS, the Agreements will allow for the completion of the Codoni Transmission Mains Project.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a License Agreement and a Common Use Agreement with the MID for the purpose of installing, maintaining and operating the two transmission pipelines located on MID property.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the License Agreement and the Common Use Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-328

RESOLUTION RESCINDING DIRECTION TO STAFF, REGARDING BOUNDARIES FOR A GENERAL PLAN AMENDMENT, BY PRIOR CITY COUNCIL ACTIONS OF JANUARY 28 AND MARCH 25, 2014, AND AUTHORIZING A RETURN TO THE 1995 ADOPTED GENERAL PLAN AND SPHERE OF INFLUENCE BOUNDARIES FOR FINALIZATION OF THE GENERAL PLAN AMENDMENT ANALYSIS, PROVIDED THAT THE RESIDENTIAL LAND USE DESIGNATION AT THE NORTHEAST CORNER OF OAKDALE ROAD AND FLOYD AVENUE BE MAINTAINED

WHEREAS, on January 28, 2014, the City Council of the City of Modesto provided certain direction to planning staff regarding land use designations and boundaries associated with a general plan amendment project, and

WHEREAS, on March 25, 2014, the City Council of the City of Modesto provided additional direction and clarification to planning staff regarding land use designations and boundaries associated with a general plan amendment project, and

WHEREAS, on June 8, 2016, the Healthy Economy Committee of the City Council of the City of Modesto voted to recommend that the City Council of the City of Modesto rescind the prior direction of 2014 described above and return the general plan amendment boundaries to those of the 1995 adopted general plan, and

WHEREAS, the "Residential" land use designation shown on the adopted 1995 general plan land use diagram at the northeast corner of Oakdale Road and Floyd Avenue should not be changed to "Commercial" as was included in the prior City Council direction from 2014.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby rescinds direction to staff, regarding boundaries for a General Plan Amendment, by prior City Council actions of January 28 and March 25, 2014, and

authorizing a return to the 1995 adopted General Plan and Sphere of Influence boundaries for finalization of the General Plan Amendment analysis, provided that the residential land use designation at the northeast corner of Oakdale Road and Floyd Avenue be maintained.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Kenoyer, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-329

RESOLUTION APPROVING A DEVELOPMENT PLAN FOR PLANNED DEVELOPMENT ZONE, P-D(602)

WHEREAS, a verified application for an amendment to Section 16-3-9 of the Zoning Map was filed by Harless Properties Inc. on January 20, 2017, to reclassify from Planned Development Zone, P-D(237) to Planned Development Zone, P-D(602) to allow for a senior assisted and independent living housing development comprised of two single-story residential buildings and a 16-unit storage building, in addition to an existing radio broadcasting tower with cellular equipment and cellular equipment lease area, property located on 1.1 acres at 1192 Norwegian Avenue, described as follows:

Planned Development Zone P-D(237) to Planned Development Zone P-D(602):

All that portion of Section 16, Township 3 South, Range 9 East, Mount Diablo Base and Meridian, Stanislaus County, California, described as follows:

All of Parcel "A" as shown on the map filed in Volume 21 of Parcel Maps at Page 81, Stanislaus County Records.

Including also the southerly 30-feet of Norwegian Avenue, all being immediately adjacent to the above-described property.

APN: 120-048-013

WHEREAS, after a public hearing held on June 19, 2017, in the Tenth Street Place Chambers located at 1010 Tenth Street, Modesto, California, it was found and determined by the Planning Commission, by its Resolution No. 2017-17, that rezoning of the property as requested will not be detrimental to the public health, safety or welfare, and

WHEREAS, because the rezone would provide for the development of senior assisted and independent living housing, the requested zone change will result in an orderly planned use of land because the senior housing development would be compatible with the surrounding low and medium-high density residential uses surrounding the site, and

WHEREAS, the requested zone change is in accordance with the community objectives as set forth in the Modesto Urban Area General Plan and any applicable specific plans(s) because the allowable uses of the Planned Development Zone P-D(602) is consistent with the General Plan Land Use Designation of Mixed Use (MU) which allows for senior housing and commercial uses such as cellular and radio broadcast facilities, and

WHEREAS, said matter was set for a public hearing of the City Council to be held on August 8, 2017, in the Tenth Street Place Chambers located at 1010 Tenth Street, Modesto, California, at which date and time said duly noticed public hearing was held, and

WHEREAS, after said public hearing the Council found and determined that the application of Harless Properties Inc. for a Planned Development Zone will not be detrimental to the public health, safety or welfare, will result in an orderly planned use of land, and is in accordance with the community objectives as set forth in the Modesto Urban Area General Plan and any applicable specific plans(s) for the reasons set forth in Planning Commission Resolution No. 2017-17 and quoted above, and

WHEREAS, the Council has introduced Ordinance No. 3677-C.S. on the 8th day of August, 2017, reclassifying the above-described property from Planned Development Zone, P-D(237)to Planned Development Zone, P-D(602).

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto as follows:

1. DEVELOPMENT PLAN. The development plan for Planned Development Zone, P-D(602), is hereby approved subject to the following conditions:

1. Prior to the issuance of a building permit, all development shall conform to the Development Plan titled "Site Plan, 120-048-013, Harless Properties Inc., 1192 Norwegian Avenue", as amended in red and stamped approved by the City Council on August 8, 2017

2. Prior to the issuance of a building permit, any variation from the approved site plan or building elevations on file with the City must be reviewed and approved by the Director of Community and Economic Development or designee.

3. Any public improvements that are missing damaged or not to current City standards shall be designed per City standards in accordance with City Code (Article 7-1.701), standards and specifications. Such improvements may include, but not be limited to curb & gutter, drive approach, sidewalk, ADA access ramps, fire hydrants and street lights. All public improvement plans shall be designed by a Registered Engineer, reviewed and approved by the City Engineer prior to issuance of an Encroachment or Building permit.

4. The improvement plans shall include all landscaping, parking and common areas, and any and all easements required for the establishment of new utilities and the preservation of existing utilities.

5. All existing underground and aboveground utilities, irrigation, and electrical lines shall be protected, relocated, or removed as required by the utility companies and City Engineer or designee. Easements for utilities, irrigation and electrical lines to remain shall be reserved as required. A 10-foot PUE is required along the Norwegian Avenue frontage.

6. Prior to the issuance of a building permit, building elevations shall be submitted for review and approval by the Community and Economic

Development Director or designee for conformance to the City's Neighborhood Design Guidelines. Building elevations shall demonstrate wall materials, roof types, exterior colors and all appropriate dimensions.

7. No individual residential unit within the development shall be offered for sale until a Final Map for airspace condominium purposes is recorded.

8. The proposed storage buildings shall be for the use of the development's residents and management staff only, and shall not be made available for use by the general public.

9. Prior to the issuance of a building permit, plans for the residential units shall incorporate construction techniques to achieve an interior noise limit of 45 decibels or less, to the satisfaction of the Chief Building Official.

10. Prior to occupancy of any structure, fences and/or walls shall be constructed as follows, to the satisfaction to the Director of Community and Economic Development:

    a. An eight foot high decorative masonry wall with cap treatment along the west and south property lines.

    b. A seven-foot high decorative wrought-iron fence along the property's Norwegian Avenue frontage, fifteen feet back from the northern property line.

    c. The decorative masonry wall shall be treated with an anti-graffiti coating along the west and south exterior facades.

11. Prior to issuance of a building permit, trash enclosures shall be designed using building materials, colors and finishes which are consistent or compatible with those used in the major buildings of the development, as approved by the Community and Economic Development Director.

12. Prior to issuance of a building permit, the developer shall submit a lighting plan that includes the location and design of proposed lighting fixtures for review and approval by the Director of Community and Economic Development. Said plans shall include specifications of the proposed lighting fixtures and demonstrate the adequate shielding of lighting fixtures to minimize glare or light spillage upon neighboring residents west of the project site. The height of the lighting should not exceed 15 feet above grade.

13. Along pedestrian corridors, the use of low mounted bollard light standards, which reinforce pedestrian scale, shall be used. Steps and ramps should be illuminated wherever possible, with built-in light fixtures

to the satisfaction of the Director of Community and Economic Development.

14. All signs shall comply with the sign requirements of the R-3 Zone.

15. Prior to issuance of a building permit, the applicant shall submit a cross-section drawing, showing how all rooftop equipment is to be screened from view (including dimensions, materials, colors, etc.) to the satisfaction of the Director of Community and Economic Development. Roof-mounted equipment, including but not limited to air conditioners, fans, vents, antennas, and dishes should be set back from the roof edge and placed behind a parapet wall or in an enclosure, so they are not visible to motorists or pedestrians. Screening for equipment should be integrated into the building and roof design by the use of compatible materials, colors and forms. Wood lattice and fence-like coverings are not allowed for screening.

16. Prior to Certificate of Occupancy of any structure, all ground mounted utility structures such as transformers and HVAC equipment shall be located out of view from a public street to the satisfaction of the Director of Community and Economic Development. Equipment shall be placed underground or adequately screened though the use of landscaping or masonry walls.

17. Exterior building elevations showing building wall materials, roof types, exterior colors and appropriate vertical dimensions shall be included in the development construction drawings.

18. Construction drawings shall demonstrate that all building drainage gutters, down spouts, vents, etc. located on exterior walls, are be completely concealed from public view or designed to be architecturally compatible (decorative) with the exterior building design and color to the satisfaction of the Director of Community and Economic Development.

19. Construction drawings shall demonstrate that new ladders for roof access are mounted on the inside of the building to the satisfaction of the Director of Community and Economic Development.

20. This property is served by an existing service from an 8-in water main in Norwegian Avenue. The project shall utilize existing water service laterals for the new buildings.

21. This property conveys its wastewater to the City's existing 8-in main located in Norwegian Avenue. The project shall utilize existing sewer service laterals to service the new buildings.

22. This area of the City does not have a positive storm drainage system. The project shall manage storm water impacts on site per current City Standards and its amendments.

23. Prior to the issuance of a Grading, Demolition, or Building Permit, Developer shall submit improvement plans conforming to design requirements of the most current edition of the City of Modesto Guidance Manual for Development, Stormwater Quality Control Measures and the City of Modesto Municipal Code.

24. Prior to the issuance of a Grading, Demolition, or Building Permit, Developer shall submit a plan to integrate Low Impact Development (LID) principles into the project design. The plan shall retain, treat, and infiltrate the first 0.5" of stormwater runoff on site, and incorporate pervious landscape features into the project design wherever possible.

25. Prior to the issuance of a Grading, Demolition, or Building Permit, Developer shall submit a plan to provide permanent, post-construction treatment (grass swale, bioretention, vegetative strip, or other approved proprietary device) to remove pollutants from the first 0.5" of stormwater run-off from site.

26. Prior to the issuance of a Grading, Demolition, or Building Permit, Developer shall submit a plan for trash enclosures to be sufficiently elevated to prevent stormwater run-on from parking lot and floor of enclosures shall be graded to drain into adjacent landscape areas.

27. Prior to the issuance of a Grading, Demolition, or Building Permit, Property Owner shall provide a signed and notarized Stormwater Treatment Device Access and Maintenance Agreement to Land Development Engineering, Stormwater for recording.

28. Prior to the issuance of a Grading, Demolition, or Building Permit, Property Owner shall obtain coverage for project under the State Water Resources Control Board (SWRCB) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities Order No. 2009-0009-DWQ, National Pollutant Discharge Elimination System (NPDES) General Permit No. CAS000002, as amended by 2010-0014-DWQ and 2012-0006-DWQ.

29. The Construction General Permit requires the Property Owner to develop a Stormwater Pollution Prevention Plan (SWPPP) for the project. The SWPPP shall include a description of all erosion, sediment, and pollution control BMPs to be used at the construction or demolition site to prevent sediment and other sources of pollution from entering the City storm drain system as well as a site plan showing their placement. Prior to issuance of

a Grading, Demolition, or Building Permit, provide one paper copy of SWPPP to Land Development Engineering, Stormwater.

30. All aspects of this project to comply with current City of Modesto Standards and also current California Building, Electrical, Mechanical, Plumbing, Energy codes adopted by the City of Modesto.

31. Developer shall provide designated parking for any combination of low-emitting, fuel-efficient and carpool/van pool vehicles as required by the Green Building Standards Code.

32. Developer shall provide bicycle parking as required by the California Green Building Standards Code.

33. Fire hydrant spacing and distribution for this project is 500-feet O.C. Improvement plans shall demonstrate the provision of onsite fire hydrants as required.

34. Buildings shall be equipped with automatic fire sprinkler systems installed in accordance with NFPA 13 or 13R. Electronic monitoring of automatic fire sprinkler may be required if a separate sprinkler water supply or a separate shutoff valve from the domestic supply is provided.

35. Improvement plans shall demonstrate the provision of required fire hydrants within 90-feet of the Fire Department Connection (FDC) to fire sprinklers.

36. Plans for any electronically controlled vehicle access gates shall be submitted to an approved by the Fire Marshall prior to installation.

37. Where roadways are less than 28-feet in width, no parking shall be allowed within the aisle-way. When parking is prohibited or restricted, approved signs or curb markings complying with Modesto Standard Specifications for fire lanes shall be provided and maintained.

38. Prior to issuance of a building permit, applicant shall submit Landscape and Irrigation plans for review and approval by the City's Park Planning and Development Division. L&I plans shall meet current State of California water use requirements, MMC requirements and City of Modesto standards at time of submittal.

39. Landscape and Irrigation Plans shall demonstrate a minimum of 15' landscaped setback from Norwegian Avenue planted with street trees that shall be equally spaced at a maximum of 35' on center. Provide 3ft. high screen landscaping between the parking lot and Norwegian Avenue to

screen vehicle headlights in parking lot. The landscaping shall conform to the clear vision triangle regulation.

40. Applicant shall install parking lot shade trees per Modesto Municipal Code requirements; one (1) shade tree for every eight (8) parking spaces. There shall be a four-foot by five foot planting area for each tree planted. Parking lot shade trees shall be located no closer than fifteen (15') feet from parking lot light fixtures. Planter areas shall have permanent borders around the perimeter to prevent cars and pedestrians from damaging plant materials.

41. Applicant shall install a separate landscape water meter.

42. Climbing vines shall be included in the landscape surrounding the trash enclosures and CMU block walls to prevent tagging.

43. All department Conditions of Approval for the project shall be included with building plans and shall be continuously maintained on-site during project construction to the satisfaction of the Chief Building Official.

44. All existing underground and aboveground utilities, irrigation, and electrical lines shall be protected, relocated, or removed as required by the City Engineer or designee. Easements for utilities, irrigation, and electrical lines to remain shall be reserved as required.

45. All landscaping, fences, and walls shall be maintained and the premises shall be kept free of weeds, trash, and other debris.

46. At the time of issuance of a building permit, the developer shall pay development impact fees at the established rate. Such fees may include but are not limited to, sewer and water connection fees, community facility fees, building permit and plan check fees.

47. Prior to start of construction, all-weather, hard-surfaced roadways shall be constructed and maintained free of obstructions at all times during construction as required by Director of Community and Economic Development.

48. Prior to Certificate of Occupancy for any structure, cable television service shall be stubbed into all units.

49. The property owner and developer shall, at their sole expense, defend, indemnify and hold harmless the City of Modesto, its agents, officers, directors and employees, from and against all claims, actions, damages, losses, or expenses of every type and description, including but not limited to payment of attorneys' fees and costs, by reason of, or arising out of, this

development approval. The obligation to defend, indemnify and hold harmless shall include but is not limited to any action to arbitrate, attack, review, set aside, void or annul this development approval on any grounds whatsoever. The City of Modesto shall promptly notify the developer of any such claim, action, or proceeding and shall cooperate fully in the defense.

The following conditions are mitigation measures from the City of Modesto General Plan Master EIR to be applied to the project:

50. All disturbed areas, including storage piles, which are not being actively utilized for construction purposes, shall be effectively stabilized of dust emissions using water, chemical stabilizer/suppressant, covered with a tarp or other suitable cover or vegetative ground cover. [GPMEIR Policy AQ-42]

51. All on-site unpaved roads and off-site unpaved access roads shall be effectively stabilized of dust emissions using water or chemical stabilizer/suppressant. [GPMEIR Policy AQ-43]

52. All land clearing, grubbing, scraping, excavation, land leveling, grading, cut & fill, and demolition activities shall be effectively controlled of fugitive dust emissions utilizing application of water or by presoaking. [GPMEIR Policy AQ-44]

53. With the demolition of buildings up to six stories in height, all exterior surfaces of the building shall be wetted during demolition. [GPMEIR Policy AQ-45]

54. When materials are transported off-site, all material shall be covered, or effectively wetted to limit visible dust emissions, and at least six inches of freeboard space from the top of the container shall be maintained. [GPMEIR Policy AQ-46]

55. All operations shall limit or expeditiously remove the accumulation of mud or dirt from adjacent public streets at the end of each workday. (The use of dry rotary brushes is expressly prohibited except where preceded or accompanied by sufficient wetting to limit the visible dust emissions.) (Use of blower devices is expressly forbidden.) [GPMEIR Policy AQ-47]

56. Following the addition of materials to, or the removal of materials from, the surface of outdoor storage piles, said piles shall be effectively stabilized of fugitive dust emissions utilizing sufficient water or chemical stabilizer/suppressant. [GPMEIR Policy AQ-48]

57. Within urban areas, track out shall be immediately removed when it extends 50 or more feet from the site and at the end of each workday. [GPMEIR Policy AQ-49]

58. Any site with 150 or more vehicle trips per day shall prevent carryout and track out. [GPMEIR Policy AQ-50]

59. The City has also established a noise ordinance to control noise within the City. The City's noise ordinance (Modesto Municipal Code Section 4-9.101) prohibits the "loud and raucous discharge into the open air of the steam of any steam equipment or exhaust from any stationary internal-combustion engine." [GPMEIR Policy N-1]

60. Additionally, the noise ordinance prohibits the loud and raucous operation or use of any of the following before 7:00 a.m. or after 9:00 p.m. daily (except Saturday and Sunday and state or federal holidays, when the prohibited time shall be before 9:00 a.m. and after 9:00 p.m.):

    A hammer, or any other device or implement used to pound or strike an object.

    a. An impact wrench, or other tool or equipment powered by compressed air.

    b. A hand-powered saw.

    c. Any tool or piece of equipment powered by an internal-combustion engine such as, but not limited to, chain saw, backpack blower, and lawn mower.

    d. Any electrically powered (whether by alternating current electricity or by direct current electricity) tool or piece of equipment used for cutting, drilling, or shaping wood, plastic, metal, or other materials or objects, such as, but not limited to, a saw, drill, lathe, or router.

    e. Any of the following: heavy equipment (such as but not limited to bulldozer, steam shovel, road grader, back hoe), ground drilling and boring equipment (such as but not limited to derrick or dredge), hydraulic crane and boom equipment, portable power generator or pump, pavement equipment (such as but not limited to pneumatic hammer, pavement breaker, tamper, compacting equipment), piledriving equipment, vibrating roller, sand blaster, gunite machine, trencher, concrete truck, and hot kettle pump.

f. Any construction, demolition, excavation, erection, alteration, or repair activity. In the case of urgent necessity and in the interest of public health and safety, the Chief Building Official may issue a permit for exemption from these. Such period shall not exceed three (3) working days in length while the emergency continues but may be renewed for successive periods of three (3) days or less while the emergency continues. The Chief Building Official may limit such permit as to time of use and/or permitted action, depending upon the nature of the emergency and the type of action requested. [GPMEIR Policy N-2]

61. The City of Modesto shall require construction activities to comply with the City's noise ordinance (Title 4, Chapter 9), and noise-reducing construction practices to be implemented as conditions of approval for development projects where substantial construction-related noise impacts would be likely to occur (e.g., where construction would include extended periods of pile driving, where construction would occur over an unusually long period, or where noise-sensitive uses like homes and schools would be in the immediate vicinity, etc.). The city should consider potential mitigation measures, including, but not limited to, the following: Construction equipment and vehicles should be equipped with properly operating mufflers according to the manufacturers' recommendations. Air compressors and pneumatic equipment should be equipped with mufflers, and impact tools should be equipped with shrouds or shields. Equipment that is quieter than standard equipment should be utilized. Haul routes that affect the fewest number of people should be selected. [GPMEIR Policy N-3]

62. Construction activities shall comply with the requirements of the City's Storm Water Management Plan under its municipal NPDES stormwater permit, and the State Water Resources Control Board's General Permit for Discharges of Storm Water Associated with Construction Activity. [GPMEIR Policy SD-9 and FWQ-13]

2. DEVELOPMENT SCHEDULE. The following development schedule is hereby approved for said Planned Development Zone, P-D(602):

The entire construction program be accomplished in one phase, construction to begin on or before two (2) years from the adoption of the rezone, and completion to be not later than three (3) years from the date of adoption.

3. CHANGES IN DEVELOPMENT PLAN. Any changes in the above approved development plan shall be made in accordance with the provisions of Section 10-7.108 of the Modesto Municipal Code.

4. COMPLIANCE WITH CODE PROVISIONS, ETC. In all other respects said planned development shall be accomplished in accordance with and in strict adherence to the provisions of Article 1 of Chapter 7 of Title 10 of the Modesto Municipal Code relating to Planned Development Zones and other applicable City laws, rules, regulations and procedures.

5. EFFECTIVE DATE. This resolution shall not become effective unless and until the ordinance reclassifying the above-described property to Planned Development Zone, P-D(602), becomes effective.

BE IT FURTHER RESOLVED that the conditions of project approval set forth herein include certain fees, dedication requirements, reservations requirements, and other exactions, and that pursuant to Government Code Section 66020(d)(1), these conditions constitute written notice of a statement of the amount of such fees, and a description of the dedications, reservations, and other exactions.

BE IT FURTHER RESOLVED that the applicant is hereby further notified that the ninety (90) days approval period in which a protest of these fees, dedications, reservations, and other exactions, pursuant to Government Code Section 66020(a) can be filed, begins on August 8, 2017, and that if a protest is not filed within this ninety (90)-day period complying with all of the requirements of Section 66020, the applicant will be legally barred from later challenging such exactions.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Grewal, who moved its adoption, which motion being duly seconded by Councilmember Kenoyer, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-330

RESOLUTION FINDING THAT THE FOLLOWING SUBSEQUENT PROJECT IS WITHIN THE SCOPE OF THE PROJECT COVERED BY THE MODESTO URBAN AREA GENERAL PLAN MASTER ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2007072023): AMENDMENT OF SECTION 16-3-9 OF THE CITY OF MODESTO ZONING MAP TO REZONE FROM PLANNED DEVELOPMENT ZONE P-D(237) TO PLANNED DEVELOPMENT ZONE P-D(602) TO ALLOW FOR SENIOR ASSISTED AND INDEPENDENT LIVING HOUSING, PROPERTY LOCATED AT 1192 NORWEGIAN AVENUE (HARLESS PROPERTIES INC.)

WHEREAS, on October 14, 2008, the City Council of the City of Modesto certified the Final Master Environmental Impact Report ("Master EIR") (SCH No. 2007072023) for the Modesto Urban Area General Plan, and

WHEREAS, Harless Properties Inc. has proposed the rezone of property located at 1195 Norwegian Avenue from Planned Development Zone P-D(237) to Planned Development Zone P-D(602) to allow for a senior assisted and independent living housing project, and

WHEREAS, pursuant to Section 21157.1 of the Public Resources Code, the City of Modesto's Community & Economic Development Department prepared an Environmental Assessment Initial Study EA/C&ED 2017-09 ("Initial Study") which analyzed whether the subsequent project may cause any significant effect on the environment that was not examined in the Master EIR and whether the subsequent project was described in the Master EIR as being within the scope of the report, and

WHEREAS, in accordance with CEQA guidelines beginning July, 18, 2017, the City caused to be published a 20-day notice of the City's intent to make a finding that the subsequent project conforms with the Master EIR, and

WHEREAS, said matter was considered by the City Council at a duly noticed public hearing which was held on August 8, 2017, at 5:30 p.m., in the Tenth Street Place Chambers located at 1010 Tenth Street, Modesto, California.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the Council has reviewed and considered the Initial Study prepared for the proposed rezone, a copy of which is **attached** hereto as **Exhibit "A"**, and incorporated herein by reference, and based on substantial evidence in the Initial Study makes the following findings:

1. An Initial Study was prepared by the City of Modesto that analyzed whether the subsequent project may cause any significant effect on the environment that was not examined in the Master EIR and whether the subsequent project was described in the Master EIR as being within the scope of the report.

2. The subsequent project will have no additional significant effect on the environment, as defined in subdivision (d) of Section 21158 of the Public Resources Code, that was not identified in the Master EIR.

3. No new or additional mitigation measures or alternatives are required.

4. The subsequent project is within the scope of the project covered by the Master EIR.

5. All applicable policies, regulations, and mitigation measures identified in the Master EIR have been applied to the subsequent project or otherwise made conditions of approval of the subsequent project.

6. No substantial changes have occurred with respect to the circumstances under which the Master EIR was certified, and no new information, which was not known and could not have been known at the time that the Master EIR was certified as complete, has become available.

BE IT FURTHER RESOLVED by the Council of the City of Modesto that the Community & Economic Development Director is hereby authorized and directed to file a notice of approval or determination within five (5) business days with the Stanislaus County Clerk pursuant to Section 21152 of the Public Resources Code.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 8th day of August, 2017, by Councilmember Grewal, who moved its adoption, which motion being duly seconded by Councilmember Kenoyer, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold
NOES:	Councilmembers:	None

EXHIBIT A

Initial Study

EA/C&ED 2017-09

City of Modesto

Finding of Conformance to General Plan Master EIR:

Initial Study Environmental Checklist C&ED No. 2017-09

For the proposed:

PDZ-17-001: Planned Development Zone to Allow for Senior Independent and Assisted Living Condominiums

TSM-17-001: Tentative Subdivision Map for Airspace Condominium Purposes; 16 units plus seven common-area lots

1192 Norwegian Avenue

Prepared by:
City of Modesto

Planning Division

March 7, 2017

Updated: September 2013

(Intentional Blank Page)

City of Modesto
Master EIR Initial Study Environmental Checklist

I. PURPOSE

CEQA allows for the limited environmental review of subsequent projects under the City's Master Environmental Impact Report ("Master EIR" or "MEIR"). This Initial Study Environmental Checklist ("Initial Study") is used in determining whether the proposed Planned Development Zone and concurrent tentative maps to facilitate senior assisted and independent living housing ("Project") are "within the scope" of the project analyzed in the Modesto Urban Area General Plan Master EIR (SCH# 2007072023) (Public Resources Code section 21157.1). When the Initial Study supports this conclusion, the City will issue a finding of conformance.

A subsequent project is "within the scope" of the Master EIR when:

1. it will have no additional significant effects on the environment that were not addressed as significant effects in the Master EIR; and

2. no new or additional mitigation measures or alternatives are required.

"Additional significant effects" means a project-specific effect that was not addressed as a significant effect in the Master EIR. [Public Resources Code Section 21158(d)]

The determination must be based on substantial evidence in the record. "Substantial evidence" means facts, reasonable assumptions predicated upon facts, or expert opinion based on facts. It does not include speculation or unsubstantiated opinion. (CEQA Guidelines Section 15384)

II. PROJECT DESCRIPTION

A. Title: Planned Development Zone to facilitate senior assisted and independent living condominiums

B. Address or Location: 1192 Norwegian Avenue (APN 120-048-013)

C. Applicant: Harless Properties, c/o Gerald Hughes
945 Coffee Road, Suite 1; Modesto, CA 95355

D. City Contact Person: Katharine Martin, Associate Planner

Project Manager: Katharine Martin
Department: Community and Economic Development, Planning Division
Phone Number: 209-577-5465
E-mail address: kamartin@modestogov.com

E. Current General Plan Designation(s): Mixed Use (MU)

F. Current Zoning Classification(s): Planned Development Zone P-D(237), Radio Broadcasting Studio

G. Surrounding Land Uses:

North: Low Density Residential (R-1) Zone, single family residential; Planned Development Zone P-D(86), Residential Condominiums

South and East: Planned Development Zone P-D(208), The House Church (formerly Calvary Temple), open space, soccer playing fields

West: Low Density Residential (R-1) Zone, single family residential; Planned Development Zone P-D(208), The House Church (formerly Calvary Temple), driveway to church facility parking lots.

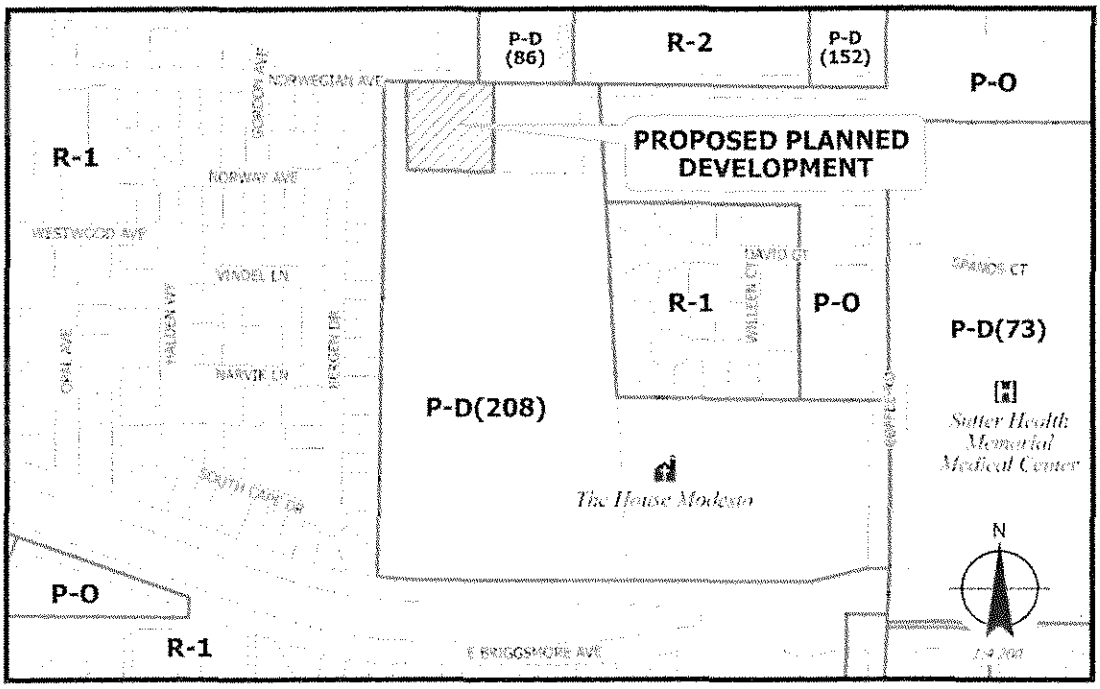
H. Project Description, including the project type listed in Section II.C (Anticipated Future Projects) of the Master EIR (Attach additional maps/support materials as needed for complete record):

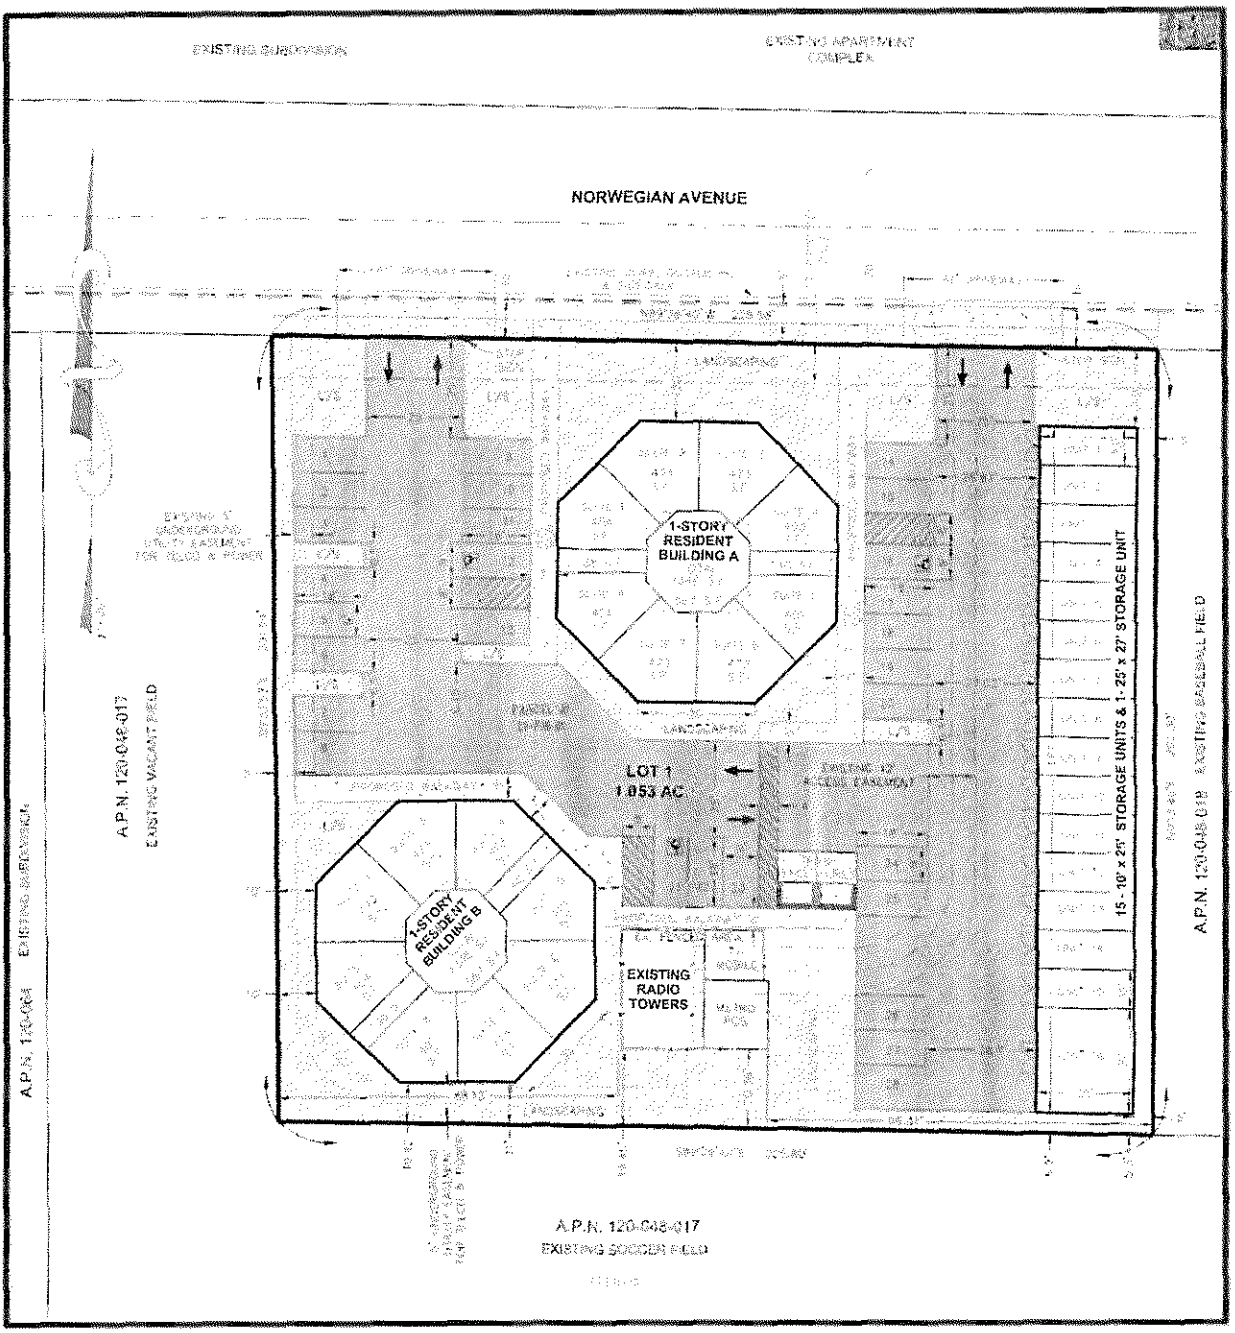
Proposal to redevelop a site formerly used as a radio broadcasting station facility (station building since demolished, radio broadcasting tower with cellular equipment in a 30-ft by 37-ft lease area to remain) into a new senior independent and assisted living housing complex comprised of two residential buildings on a 1.1-acre parcel. The site plan provides for 28 parking spaces and 16 storage units for the use of the residents.

Project involves:

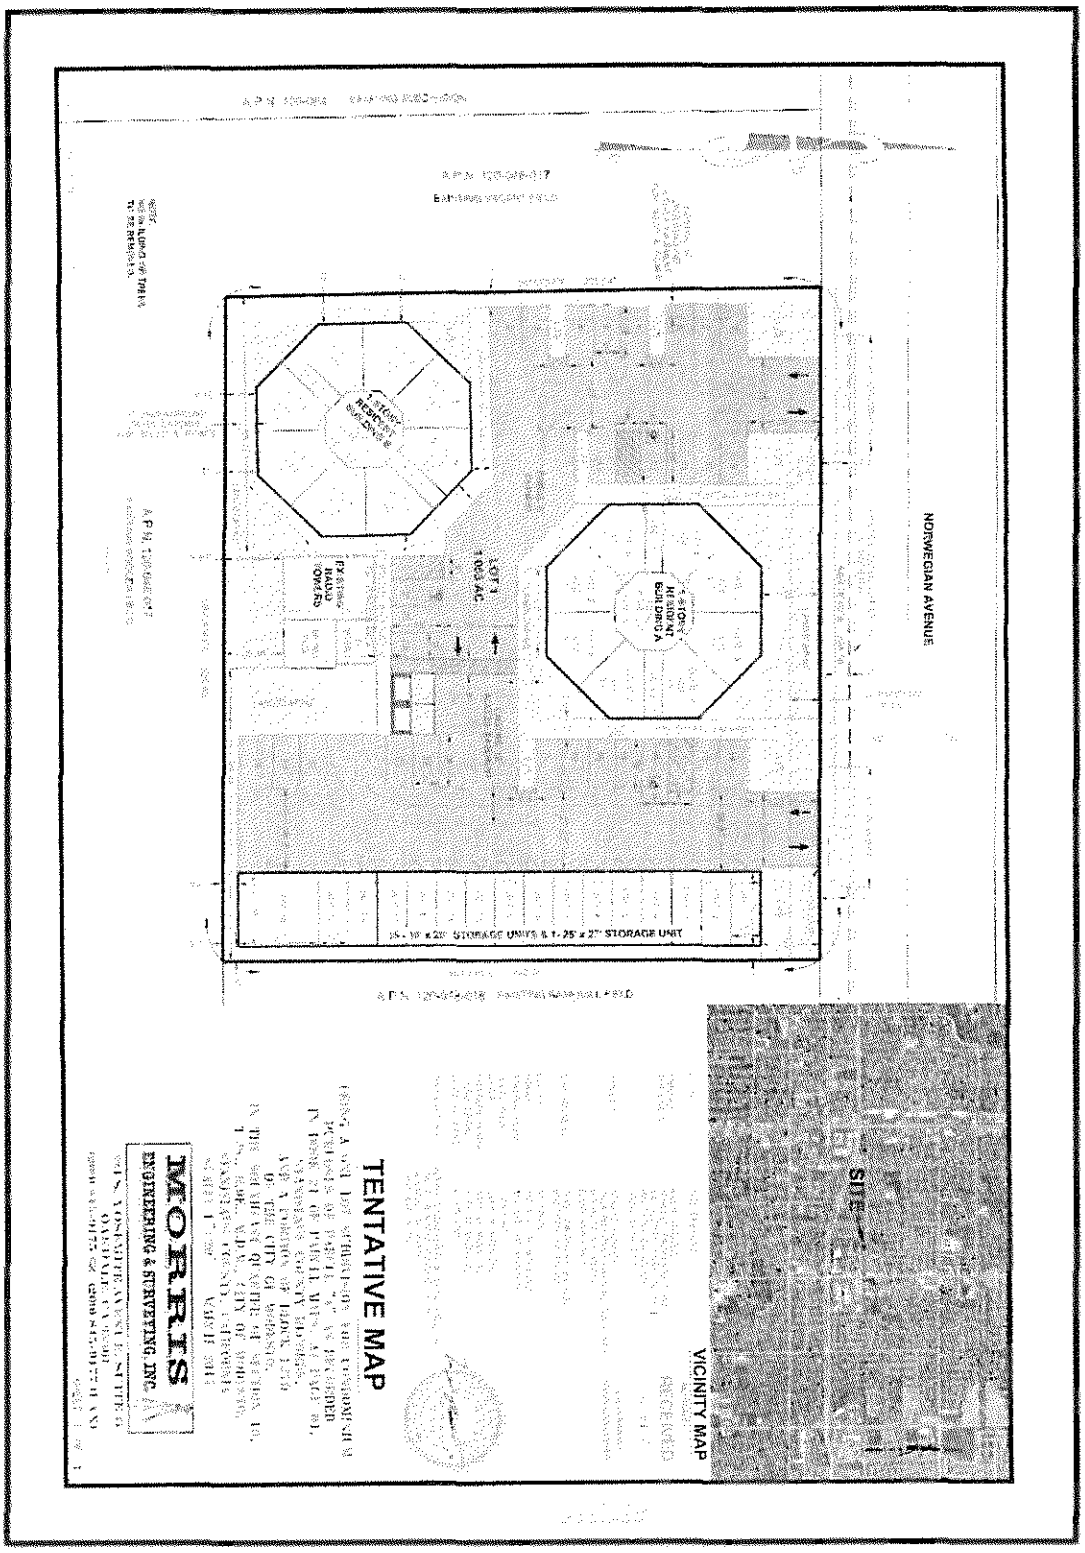
- Planned Development Zone to allow for senior independent and assisted living housing within two single-story buildings on the 1.1-acre site. Each building to consist of eight residential condominium units and three interior common areas, with exterior common area consisting of parking areas, landscaping, and a 16-unit storage building for use by the site's residents. Planned Development Zone would also allow for existing radio broadcasting tower and cellular equipment.

- Tentative Subdivision Map of 1.1-acre site for airspace condominium units and seven common areas, including interior common areas, and exterior common area comprised of parking area, landscaping and 16-unit storage building.





SITE PLAN FOR PLANNED DEVELOPMENT
SENIOR INDEPENDENT AND ASSISTED LIVING HOUSING
PDZ-17-001



TENTATIVE SUBDIVISION MAP FOR AIRSPACE CONDOMINIUMS
TSM-17-001

I. Other Public Agencies Whose Approval is Required: None.

III. FINDINGS/DETERMINATION (SELECT ONE ON THE BASIS OF THE ANALYSIS IN SECTION IV)

1. _X_ Within the Scope - The project is within the scope of the Master EIR and no new environmental document or Public Resources Code Section 21081 findings are required. All of the following statements are found to be true:

A. The subsequent project will have no additional significant effect on the environment, as defined in subdivision (d) of Section 21158 of the Public Resources Code, that was not identified in the Master EIR.

B. No new or additional mitigation measures or alternatives are required.

C. The subsequent project is within the scope of the project covered by the Master EIR.

D. All applicable policies, regulations, and mitigation measures identified in the Master EIR have been applied to the subsequent project or otherwise made conditions of approval of the subsequent project.

E. No substantial changes have occurred with respect to the circumstances under which the Master EIR was certified, and no new information, which was not known and could not have been known at the time that the Master EIR was certified as complete, has become available.

2. ____ Mitigated Negative Declaration Required - On the basis of the above determinations, the project is not within the scope of the Master EIR. A mitigated negative declaration will be prepared for the project. The following statements are all found to be true:

A. The subsequent project is within the scope of the project covered by the Master EIR.

B. All applicable policies, regulations, and mitigation measures identified in the Master EIR have been applied to the subsequent project or otherwise made conditions of approval of the subsequent project.

C. The project will have one or more potential new significant effects on the environment that were not addressed as significant effects in the Master EIR. New or additional mitigation measures are being required of the project that will reduce the effects to a less-than-significant level.

D. No substantial changes have occurred with respect to the circumstances under which the Master EIR was certified, and no new information, which was not known and could not have been known at the time that the Master EIR was certified as complete, has become available.

3.____ Focused EIR Required- On the basis of the above determinations, the project is not within the scope of the Master EIR. A Focused EIR will be prepared for the project. All of the following statements are found to be true:

A. The subsequent project is within the scope of the project covered by the Master EIR.

B. All applicable policies, regulations, and mitigation measures identified in the Master EIR have been applied to the subsequent project or otherwise made conditions of approval of the subsequent project.

C. The project will have one or more new significant effects on the environment that were not addressed as significant effects in the Master EIR. New or additional mitigation measures or alternatives are required as a result.

D. No substantial changes have occurred with respect to the circumstances under which the Master EIR was certified, and no new information, which was not known and could not have been known at the time that the Master EIR was certified as complete, has become available.

Project Manager — Title: Associate Planner — Date: 4-14-17

4. Within the Scope Analysis of this Document:

The Master EIR allows projects to be found within the scope of the MEIR if certain criteria are met. If the following statements are found to be true for all 21 impact categories included in this Initial Study, then the proposed project is addressed by the MEIR analysis and is within the scope of the MEIR. Any "No" response must be discussed.

		YES	NO
(1)	The lead agency for subsequent projects shall be the City of Modesto or a responsible agency identified in the Master EIR.	☒	☐
(2)	City policies which reduce, avoid, or mitigate environmental effects will continue to be in effect and, therefore, would be applied to subsequent projects where appropriate. The policies are described in the list of policies in place and mitigation measures attached to the Initial Study template. Project impacts would be mitigated to a less-than-significant level using MEIR mitigations only.	☒	☐
(3)	Federal, State, regional, and Stanislaus County regulations do not change in a manner that is less restrictive on development than current law (i.e., would not offer the same level of protection assumed under the Master EIR).	☒	☐
(4)	No specific information concerning the known or potential presence of significant resources is identified in future reports, or through formal or informal input received from responsible or trustee agencies or other qualified sources.	☒	☐
(5)	The development will occur within the boundaries of the City's planning area as established in this Urban Area General Plan.	☒	☐
(6)	Development within the project will comply with all appropriate mitigation measures contained and enumerated in the 2008 General Plan Master EIR.	☒	☐

5. Currency of the Master EIR Document

The MEIR should be reviewed on a regular basis to determine its currency, and whether additional analysis/mitigation should be incorporated into the MEIR via a Supplemental or Subsequent EIR (CEQA Section 21157.6). Staff has reviewed Sections 1 through 21 of this document in light of the criteria listed below to determine whether the MEIR is current. The analysis contained within the Master EIR is current as long as the following circumstances have not changed. Any "no" response must be explained.

		YES	**NO**
(1)	Certification of the General Plan Master EIR occurred less than five years prior to the filing of the application for this subsequent project.	☐	☒
(2)	This project is described in the Master EIR and its approval will not affect the adequacy of the Master EIR for any subsequent project because the City can make the following findings:	☒	☐
(a)	No substantial changes have occurred with respect to the circumstances under which the Master EIR was certified.	☒	☐
(b)	No new information, which was not known and could not have been known at the time the Master EIR was certified as complete, has become available.	☒	☐
(c)	Policies remain in effect which require site-specific mitigation, and avoidance or other mitigation of impacts as a prerequisite to future development.	☒	☐

Discussion:

(1) The General Plan Master EIR was certified on October 14, 2008, so more than five years has passed since the MEIR was certified. However, the analysis contained in the MEIR is still adequate for subsequent projects, as documented in the discussion below.

(2) The project is consistent with the analysis contained in the MEIR. This is documented in the discussion of the individual issue areas of this initial study.

(2)(a) There have been no substantive changes to the General Plan since the MEIR was certified that would create additional significant environmental effects that were not analyzed by the MEIR.

(2)(b) There has been no new information that would affect the adequacy of the analysis contained in the MEIR.

(2)(c) All policies contained in the MEIR that require site-specific mitigation or avoidance of impacts remain in effect and will be applied to the project as appropriate.

IV. ENVIRONMENTAL ANALYSIS

This Initial Study, in accordance with Section 21157.1(b) of the Public Resources Code, discloses whether the proposed project may cause any project-specific significant effect on the environment that was not examined in the Final Master EIR (MEIR) for the General Plan and whether new or additional mitigation measures or alternatives may be required as a result. The Initial Study thereby documents whether or not the project is "within the scope" of the Master EIR.

Pursuant to Public Resources Code Section 21157.1, no new environmental document or findings are necessary for projects that are determined to be within the scope of the MEIR. Adoption of the findings specified in Section III.1, above after completion of the Initial Study fulfills the City's obligation in that situation.

All environmental effects cited reflect 2025 conditions resulting from the Urban Area General Plan, as identified in the Master EIR.

The environmental impact analysis in the Master EIR for the Urban Area General Plan is organized in twenty-one subject areas. The following analysis is based on the impact analyses contained in Chapter V of the Master EIR. For ease of reference, the sections are numbered in the same order as the analyses in Chapter V.

1. TRAFFIC AND CIRCULATION

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable traffic and circulation impacts expected after application of mitigations/policies:

Direct Impacts

Effect: Increased automobile traffic will result in roadway segments (see MEIR on Table 1-7, pages V-1-32 to V-1-34) operating at LOS D, Modesto's significance threshold for automobile traffic, or lower (LOS E or F).

Effect: The substantial increase in traffic relative to the existing load and capacity of the street system will cause, either individually or cumulatively, the violation of automobile service standards established by StanCOG's Congestion Management Plan for designated roads and highways.

Effect: A substantial increase in automobile vehicle miles traveled and automobile vehicle hours of travel and a decrease in average automobile vehicle speed (see MEIR Table 1-6, page V-1-31).

Cumulative Impacts

Effect: Potential for growth inducement or acceleration of development resulting from highway and local road projects.

Effect: Substantial increase in traffic in relation to the existing traffic load and capacity of the street system, including a violation, either individually or cumulatively, of an automobile LOS standard established by the Congestion Management Plan for designated roads and highways.

Effect: Increased demand for capacity-enhancing alterations to existing roads or automobile traffic reduction.

Other impact categories affected by Traffic and Circulation are addressed throughout this Initial Study (see also Section 2, Degradation of Air Quality; Section 3, Generation of Noise; Section 7 Loss of Sensitive Wildlife and Plant Habitat; Section 8, Disturbance of Archaeological/Historic Sites; Section 14 Increased Demand for Fire Services; Section 18, Energy; Section 19, Visual Resources; Section 20, Land Use and Planning, and Section 21, Climate Change).

b. Master EIR and/or New Mitigation Measures Applied to the Project

Traffic and Circulation mitigation measures pertinent to this project are found on MEIR pages V-1-9 through V-1-28. All mitigation measures appropriate to the project, including any new measures, will be incorporated into or made conditions of approval of this project and are listed in Section V, Mitigation Measures Applied to Project.

Discussion:

No mitigation measures regarding traffic from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-1.B of the Master EIR provides analysis of Traffic and Circulation impacts of development of the General Plan, the following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: A subsequent development project will have a new significant effect on the environment if it would exceed the following criteria:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
1. TRAFFIC AND CIRCULATION				
1) The proposed project exceeds traffic generation assumptions in the Master EIR for the site by 100 trips or more and City Engineering and Transportation staff has determined that the project would have additional potentially significant project-specific effects that are not avoided or reduced by the Master EIR's mitigation measures.	☐	☐	☐	☒
2) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?	☐	☐	☐	☒
3) The proposed project would cause additional roadway segments in the General Plan area to exceed LOS D and/or cause additional violations of standards in the Congestion Management Plan, and/or cause an increase in automobile vehicle miles or vehicle hours of travel or a decrease in automobile travel speed, as compared to the impacts disclosed in the Master EIR.	☐	☐	☐	☒
4) The proposed project would cause emergency response times to exceed acceptable standards established by the Fire Department, as compared to impacts disclosed in the Master EIR (see Section 14, Increased Demand for Fire Services).	☐	☐	☐	☒
5) The proposed project would result in less parking than required by the Municipal Code or as determined by staff.	☐	☐	☐	☒
6) The proposed project would conflict with adopted policies, plans, or programs that support alternative transportation, including, but not limited to the Regional Transportation Plan, the Sustainable Communities Strategy, the Bicycle Action Plan, and so on.	☐	☐	☐	☒
7) The proposed project would result in an increase	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
in automobile vehicle miles traveled on a per capita basis, in excess of that considered in the Urban Area General Plan MEIR.				

Discussion:

(1) The project consists of the development of approximately 1.1 acres within the Baseline Urbanized Area for senior independent and assisted living housing. The site was formerly the location of a radio broadcasting studio, of which the studio building has been since demolished but the radio tower with cellular equipment is to remain within a 30x37-ft lease area. The development would allow for a total of sixteen residential units. The project was referred to Land Development Engineering, Traffic, who indicated no concerns with traffic volumes exceeding 100 trips.

(2) The project would not exceed a level of service standard established by the county congestion management agency (StanCOG).

(3) There are no significant changes in the level of service or the volume-capacity ratio as a result of the project, and therefore there are no significant cumulative (long-term) traffic impacts.

(4) Police and Fire Staff have reviewed this proposal and have not indicated that there is an emergency access problem.

(5) The proposed single-family dwellings will provide parking in accordance with the Municipal Code.

(6) Traffic Staff have reviewed this proposal and indicated no issues with adopted plans for alternative transportation. A bus stop is located on Norwegian Avenue at the northeast corner of the site.

(7) The proposed project would not result in a significant increase in automobile vehicle miles traveled (per capita) in excess of what was considered in the Urban Area General Plan.

2. DEGRADATION OF AIR QUALITY

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable air quality impacts expected after application of mitigations/policies:

Direct Impacts

Effect: Expected automobile traffic will result in increased operational emissions of reactive organic gases (ROG) and oxides of nitrogen (NO_X) (see MEIR Table 2-8, page V-2-27).

Effect: Expected automobile traffic will result in increased emissions of particulate matter 10 microns or less (PM_{10}) and 2.5 microns or less in diameter ($PM_{2.5}$) (see MEIR Table 2-8, page V-2-27).

Effect: Expected automobile traffic will result in increased carbon monoxide (CO) levels in the project area (see MEIR Table 2-7, page V-2-26, and Table 2-8, page V-2-27).

Cumulative Impacts

The Master EIR indicates the same impacts identified as direct impacts above will contribute to regional impacts on air quality for the criteria pollutants ROG, NO_x, PM_{10}, and $PM_{2.5}$.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Air quality mitigation measure(s) pertinent to the proposed project are found on pages V-2-13 through V-2-24 of the Master EIR. All mitigation measures appropriate to the project will be incorporated into or made conditions of approval of this project and are listed in Section V, Mitigation Measures Applied to Project.

Discussion:

The appropriate mitigation to be applied to this project includes AQ-42 through AQ-50 from the MEIR. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-2.B of the Master EIR is the analysis of air quality impacts resulting from development of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project -specific effect not analyzed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
2. DEGRADATION OF AIR QUALITY				
1) The proposed project exceeds the project-level emissions thresholds established for CO, ROG, NO_x, PM_{10}, and $PM_{2.5}$ by the San Joaquin Valley Air Pollution Control District (SJVUAPCD) and is not consistent with the development assumptions for the project site, as established in the Urban Area General Plan and Master EIR.	☐	☐	☐	☒
2) The proposed project does not incorporate the best management practices established by the SJVAPCD for CO, ROG, NO_x, PM_{10}, and $PM_{2.5}$.	☐	☐	☐	☒
3) The proposed project does not comply with the air quality policies in the Modesto Urban Area General Plan.	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
4) The proposed project would expose sensitive receptors to pollutant concentrations in excess of those expected to occur as a result of implementation of the Urban Area General Plan.	☐	☐	☐	☒
5) The proposed project would create objectionable odors affecting a substantial number of people.	☐	☐	☐	☒

Discussion:

(1) The project consists of the development of approximately 1.1 acres for senior independent and assisted living housing with a total of sixteen residential units. The subsequent development would not exceed emissions thresholds established by the SJVUAPCD, and is consistent with the development standards for a residential use as established by the General Plan.

(2) Development of the site will be required to adhere to applicable City Zoning Ordinances, Standards, and applicable best management practices during the construction process.

(3-5) The project would comply with the air quality policies in the General Plan, and would not expose sensitive receptors to pollutants or odors in excess of assumptions for residential uses.

3. GENERATION OF NOISE

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable noise impacts expected after application of mitigations/policies:

Direct Impacts

Effect: Future automobile traffic noise levels and roadway construction and maintenance activities resulting from development of the Urban Area General Plan will exceed the City's noise thresholds at various locations, but particularly in areas adjacent to heavily traveled roadways (see MEIR Table 3-3, page V-3-10, and Figure VII-2 and Table 3-6, pages V-3-18 and V-3-19).

Effect: Expected noise from airport operations and airport construction projects may expose up to 468 dwellings and three churches to noise levels of 65 dB CNEL and up to eight dwellings to noise levels of 70 dB CNEL.

Effect: Expose noise-sensitive land uses to noise from the construction of bicycle and transit projects.

Effect: Expose noise-sensitive land uses to noise from freight and passenger rail operations.

Cumulative Impacts

Effect: Traffic from development in the City of Modesto would, when combined with traffic from new development in the County and other cities, contribute to a cumulative increase in roadside noise levels on major roads and highways throughout Stanislaus County.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Noise policies and mitigation measures pertinent to the project being analyzed in this Initial Study are found on pages V-3-11 through V-3-15 of the Master EIR. All mitigation measures appropriate to the project will be incorporated into or made conditions of approval of this project and any new measures are listed in Section V, Mitigation Applied to Project.

Discussion:

The appropriate mitigation to be applied to this project includes N-1 through N-3 from the Master EIR. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-3.B of the MEIR discloses noise impacts resulting from development of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project -specific effect not analyzed in the Master EIR.

Significance Criteria: Determination of the proposed project's effects are based on the following thresholds. Project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
3. GENERATION OF NOISE				
1) The proposed project will exceed the standards for noise level and hours of operation established by the Modesto noise ordinance.	☐	☐	☐	☒
2) The proposed project will not comply with the noise policies of, or otherwise be inconsistent with, the Modesto Urban Area General Plan.	☐	☐	☐	☒
3) The proposed project will result in an increase in ambient noise levels in the project vicinity above those disclosed in the Master EIR.	☐	☐	☐	☒
4) The proposed project will result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels disclosed in the Master EIR implementation of the Urban Area General Plan.	☐	☐	☒	☐

Discussion:

(1) The project consists of the development of approximately 1.1 acres for senior independent and assisted living housing with a total of sixteen residential units. The subsequent development would be required to adhere to the City's noise ordinance.

(2-4) The development would not be inconsistent the noise policies of the General Plan, nor result in ambient noise levels above those assumed by the General Plan for a residential use. Any increase in ambient noise levels would be construction-related and temporary in the process of developing the residential units.

4. EFFECTS ON AGRICULTURAL LANDS

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on agricultural lands expected after application of mitigations/policies:

Direct Impacts

Effect: Between 1995 and 2025, development of the Urban Area General Plan may convert up to approximately 26,000 acres of farmland in various categories in the Planned Urbanizing Area to urban uses.

Effect: Approximately 1,200 acres of urban development along a 28.5-mile boundary 350 feet wide between urban and agricultural uses could be affected by continued agricultural operations, including noise, dust, and chemical overspray or drift.

Cumulative Impacts

Effect: Growth within Modesto's planning area would contribute considerably to the loss of agricultural land within Stanislaus County, accounting for the conversion of as much as approximately 26,000 acres of farmland in various categories in the Planned Urbanizing Area from 1995 to 2025.

b. Master EIR and/or New Mitigation Measures Pertinent to the Project

Agricultural land mitigation measures pertinent to the proposed project are found on pages V-4-6 to and V-4-8 of the Master EIR. All mitigation measures appropriate to the project and any new mitigation to be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Applied to Project.

Discussion:

No mitigation measures regarding agricultural lands from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-4.B of the Master EIR discloses the impacts resulting from the implementation of the Urban Area General Plan on agricultural lands. The following is an analysis of whether the proposed project would result in a new, significant, project -specific effect not previously analyzed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
4. EFFECTS ON AGRICULTURAL LANDS				
1) The proposed project is inconsistent with the Urban Area General Plan's policies relating to agricultural land.	☐	☐	☐	☒
2) The proposed project will either directly or indirectly result in the development of land outside the 2008 Urban Area General Plan's planning area boundary.	☐	☐	☐	☒
3) The proposed project will conflict with existing zoning for agricultural use, or there is an existing Williamson Act contract on the project site.	☐	☐	☐	☒
4) The proposed project will involve other changes in the existing environment not anticipated in the Master EIR which, due to their location or nature, could result in conversion of farmland to non-agricultural use.	☐	☐	☐	☒

Discussion:

(1) The project is a vacant infill area within the Baseline Developed Area not in agricultural production, and is completely surrounded by urbanized area consisting of residential uses and the House Church of Modesto. The project would therefore not be inconsistent with the General Plan's policies related to agricultural land.

(2-4) The project site is not zoned for agricultural use, and no Williamson Act contract is in place on the property. The site is surrounded by urban area and would not cause the conversion of farmland to a non-agricultural use.

5. INCREASED DEMAND FOR LONG-TERM WATER SUPPLIES

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on long-term water supplies expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant direct impacts have been disclosed in the Master EIR.

Cumulative Impacts

Effect: Operational yields of the Modesto and Turlock subbasins, both of which underlie the City of Modesto, are unknown, although the City is participating in a study with the United States Geological Survey in order to quantify the operational yields of both subbasins. Groundwater withdrawals from both basins by the City, when combined with other users' withdrawals, may result in overdrafting both subbasins.

Effect: Despite available options, during drought years, significant water shortages are forecast for the San Joaquin River basin, which includes both the Modesto and Turlock subbasins, by 2020. Modesto would make a cumulatively considerable contribution to the cumulative impact on water supply under drought conditions.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Water supply mitigation measures pertinent to the proposed project are found on pages V-5-6 through V-5-12 of the Master EIR. All mitigation measures appropriate to the project to be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Measures Applied to Project.

Discussion:

No mitigation measures regarding water supply from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-5.B of the Master EIR discloses impacts on long-term water supplies resulting from implementation of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
5. INCREASED DEMAND FOR LONG-TERM WATER SUPPLIES				
1) The proposed project is inconsistent with water supply policies in the Urban Area General Plan.	☐	☐	☐	☒
2) Water demand for the proposed project will exceed estimates for similar projects or for development on the project site anticipated in the Urban Area General Plan or sufficient water supplies are not otherwise available to serve the project from existing entitlements and resources.	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
3) The proposed project would deplete groundwater supplies to a greater degree than anticipated in the Urban Area General Plan or would interfere with groundwater recharge.	☐	☐	☐	☒

Discussion:

(1) The project is consistent with the water supply policies in the General Plan.

(2) The project was referred to Land Development Engineering Staff who indicated no concerns with water supply to the project. The proposed development will not exceed estimates or water supplies needed to serve other entitlements and resources.

(3) The proposed project is consistent with the ground water demands assumed in the General Plan. The project would not have a significant effect on ground water recharge or depletion of long-term water supplies.

6. INCREASED DEMAND FOR SANITARY SEWER SERVICES

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on sanitary sewer services after application of mitigations/policies:

Direct Impacts

Effect: Development resulting from implementation of the Urban Area General Plan will require substantial new sewage treatment and disposal capacity, treatment plant improvements, sewer mains and collection lines, and pump stations. The Wastewater Master Plan anticipates the need for these facilities and its EIR evaluates the impact of developing those facilities. Potential impacts include degradation of water quality through erosion and chemical releases; localized flooding; construction noise; exposure of construction workers and the public to hazardous materials; and on the habitat of the elderberry longhorn beetle, burrowing owl, and Swainson's hawk, as well as certain other regulated habitats. All of these impacts are mitigated to a less-than-significant level.

Additional impacts that are not mitigated to a less-than-significant level include loss of farmland cause by construction of the Phase IA tertiary treatment facility at the Jennings Road Secondary Treatment Facility, an increase in pollutant loads from increased wastewater flows to the San Joaquin River, and an increase in noise and criteria air pollutants due to construction activities, including traffic.

Cumulative Impacts

Effect: No additional cumulative impacts were identified in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Sewer service mitigation measures pertinent to the proposed project are found on pages V-6-3 through V-6-8 of the Master EIR. All mitigation measures appropriate to the project to be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Measures Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-6.B of the Master EIR discloses impacts on the Increased Demand for Sanitary Sewer Service resulting from implementation of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
6. INCREASED DEMAND FOR SANITARY SEWER SERVICES				
1) The proposed project is inconsistent with wastewater policies in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project will generate sewage flows greater than those anticipated in the Urban Area General Plan for the project site.	☐	☐	☐	☒
3) The proposed project will result in a determination by the wastewater treatment provider which serves or may serve the project that it has inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments.	☐	☐	☐	☒

Discussion:

(1) The project consists of the development of approximately 1.1 acres for senior independent and assisted living housing with a total of sixteen residential units. The project would be consistent with the General Plan's policies relating to wastewater and conform to applicable City Zoning Codes and Standards.

(2-3) The project would not generate sewage flows greater than estimates for a project of similar residential uses. The project was referred to Land Development Engineering, who indicated no concerns with the project.

7. LOSS OF SENSITIVE WILDLIFE AND PLANT HABITAT

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on sensitive wildlife and plant habitat expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant impacts on sensitive wildlife and plan habitat are expected to occur with the application of the policies contained in the Urban Area General Plan.

Cumulative Impacts

Effect: Implementation of the Urban Area General Plan will contribute to the cumulative impact of habitat loss in the San Joaquin Valley. Requiring density development than has occurred in the past or that is expected in the future would minimize the City's contribution to the cumulative loss of habitat. Nonetheless, this is a significant and unavoidable impact.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Wildlife and plant habitat mitigation measures pertinent to the proposed project are found on pages V-7-17 through V-7-24 of the Master EIR. All mitigation measures appropriate to the project to be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Measures Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-7.B of the Master EIR discloses impacts on the Loss of Sensitive Wildlife and Plant Habitat resulting from implementation of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
7. LOSS OF SENSITIVE WILDLIFE AND PLANT HABITAT				
1) The project is inconsistent with the policies pertaining to the loss of sensitive wildlife and plant	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
habitat contained in the Urban Area General Plan.				
2) Consultation with the California Department of Fish and Game or the U.S. Fish and Wildlife Service determines that the project would have a significant effect on a candidate, sensitive, or special status species in excess of the impact disclosed in the Master EIR.	☐	☐	☐	☒
3) The proposed project would have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act through direct removal, filling, hydrological interruption, or other means, in excess of the impact disclosed in the Master EIR.	☐	☐	☐	☒
4) The proposed project would substantially interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.	☐	☐	☐	☒
5) Conflict with local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.	☐	☐	☐	☒
6) The proposed project would conflict with provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan.	☐	☐	☐	☒

Discussion:

(1) The project consists of the development of approximately 1.1 acres for senior independent and assisted living housing with a total of sixteen residential units. The project would not be inconsistent with General Plan policies pertaining to wildlife and plant habitat.

(2-4) The project site is located within the Baseline Developed Area of the City and is completely surrounded by developed urban area consisting of residential uses and the House Church of Modesto. It is not a biologically sensitive site as defined by Figure V-7-1 of the MEIR. The California Department of Fish and Game and the U.S. Fish and Wildlife Service were consulted in the production of the MEIR.

(5-6) The project is not in conflict with any local policies or ordinances protecting biological resources, nor is in conflict with any adopted habitat conservation plan.

8. DISTURBANCE OF ARCHAEOLOGICAL/HISTORICAL SITES

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on archaeological/historical sites expected after application of mitigations/policies:

Direct Impacts

Effect: Modification resulting in a substantial adverse change in the significance of a historic resource or the demolition of a listed or eligible historic resource.

Effect: The modification or demolition of a structure more than 50 years in age may be significant.

Effect: Discovery of archaeological resources in areas outside of the riparian corridors, as a result of construction activities.

Effect: Construction in an area of high archaeological sensitivity.

Cumulative Impacts

Effect: No additional cumulative impacts were disclosed in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Archaeological or historic mitigation measures pertinent to the project being analyzed in this Initial Study are found on page V-8-16 through V-8-20 of the Master EIR. All mitigation measures appropriate to the project to be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Applied to Project:

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-8.B of the MEIR discloses impacts on archaeological/historical resources resulting from implementation of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project -specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
8. DISTURBANCE OF ARCHAEOLOGICAL/				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
HISTORICAL SITES				
1) The proposed project is inconsistent with the archaeological/historical resource policies in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project would demolish a building eligible for listing as a historic resource or remove a landmark from the Modesto inventory.	☐	☐	☐	☒
3) The proposed project would modify or demolish a structure more than 50 years in age.	☐	☐	☐	☒
4) The project would adversely affect a cultural resource that is either listed or eligible for listing in the California Register of Historical Resources.	☐	☐	☐	☒
5) The project would adversely affect a Tribal Cultural Resource identified and/or defined consistent with Public Resources Code section 5024.1(c).	☐	☐	☐	☒

Discussion:

(1) The project would not be inconsistent with General Plan policies pertaining to archaeological or historic resources.

(2-4) The project site is vacant infill land surrounded by urban uses. The site is not classified as being of state or federal historic status nor is eligible for listing for such status.

(5) The project does not conflict with local policies affecting biological resources.

9. INCREASED DEMAND FOR STORM DRAINAGE

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on storm drainage expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant direct impacts were disclosed in the Master EIR.

Cumulative Impacts

Effect: The population of Stanislaus County is projected to increase in a fashion similar to that of Modesto, resulting in additional urban development and associated increases in impervious surface area and associated increases in storm water runoff. Cumulative hydrologic impacts of storm water

flows from Modesto urban areas and other areas of the County could occur due to the fixed capacity of MID and TID irrigation canals to convey drainage west to the San Joaquin River. If drainage channels in some areas prove insufficient to handle the increased drainage discharges, existing storm water runoff from urban and agricultural areas during large storm events would have to be interrupted until water levels receded to a point allowing the resumption of discharges to the channel. Ceasing discharges to drainage channels could cause inundation in and around the drainage conveyance pipeline systems, surface drainage channels, detention basins, and other urban areas. This cumulative impact is considered significant and unavoidable.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Storm Drainage mitigation measures pertinent to the project being analyzed in this Initial Study are found on pages V-9-4 through V-9-9. All mitigation measures appropriate to the project to be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Measures Applied to Project:

Discussion:

The appropriate mitigation to be applied to this project includes SD-9 from the MEIR. City Engineering staff has reviewed the project and required conditions of approval to implement General Plan Policies for development including compliance with the Strom Drain Management Plan and the utilization of low impact strategies and meet the standards contained in the "Guidance Manual for New Development-Storm Water Quality Control Measures." No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-9.B of the MEIR discloses impacts on the demand for storm drainage resulting from development of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
9. INCREASED DEMAND FOR STORM DRAINAGE				
1) The proposed project is inconsistent with the storm drainage policies in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project would substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or offsite, as compared to impacts anticipated to result from the Urban Area General Plan or create substantial unanticipated sources of polluted runoff.	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
3) The proposed project does not utilize Low Impact Development strategies to reduce runoff from the site and increase infiltration, resulting in no net increase in runoff before and after development.	☐	☐	☐	☒

Discussion:

(1) Construction activities will comply with the requirements of the City's Storm Water Management Plan under its municipal NPDES stormwater permit, and the State Water Resources Control Board's General Permit for Discharges of Storm Water Associated with Construction Activity (MIER Policy SD-9). In addition, the City will ensure that new development complies with the City of Modesto's Stormwater Management Program: Guidance Manual for New Development Stormwater Quality Control Measures (MIER Policy SD-11). These policies will be implemented as conditions of project approval.

(2) The project is not located in an area that has a positive storm drainage system. The project will be required to manage storm water impacts on-site as required in accordance to current City Standards and its amendments, as a condition of approval.

(3) The project will utilize low impact strategies and meet the standards contained in the "Guidance Manual for New Development-Storm Water Quality Control Measures." This requirement will be implemented as a condition of project approval.

10. FLOODING AND WATER QUALITY

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on flooding and water quality expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant direct impacts were disclosed in the Master EIR.

Cumulative Impacts

Effect: No residual significant cumulative impacts were disclosed in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Flooding and Water Quality mitigation measures pertinent to the project being analyzed in this Initial Study are found on pages V-10-6 through V-10-9 of the Master EIR. All mitigation measures appropriate to the project will be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Applied to Project:

Discussion:

The appropriate mitigation to be applied to this project includes: FWQ-13 from the Master EIR. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-10.B of the Master EIR provides analysis of Flooding and Water Quality impacts of development of the General Plan, the following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not previously analyzed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
10. FLOODING AND WATER QUALITY				
1) The proposed project is inconsistent with the flooding and water quality policies in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project does not comply with the regulatory requirements of the federal Clean Water Act or the State Porter-Cologne Act.	☐	☐	☐	☒
3) The proposed project would place more housing within a 100-year flood hazard zone than assumed in the Urban Area General Plan.	☐	☐	☐	☒
4) The proposed project would place structure within a 100-year flood hazard area so that they would impede or redirect floodwater or would substantially alter the existing on-site drainage pattern or a watercourse, in such a way as to cause flooding on- or offsite.	☐	☐	☐	☒
5) The proposed project does not comply with Modesto's Guidance Manual for New Development Storm Water Quality Control Measures.	☐	☐	☐	☒
6) The proposed project would violate water quality standards or waste discharge requirements.	☐	☐	☐	☒
7) The proposed project would substantially alter the existing drainage pattern of the site or area or a watercourse in a manner that would result in substantial erosion or siltation on- or offsite in excess of the assumptions of the Urban Area General Plan.	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
8) The proposed project would create or contribute runoff, which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff, not expected as part of Urban Area General Plan implementation.	☐	☐	☐	☒

Discussion:

(1) The proposed project is consistent with the flooding and water quality policies in the Urban Area General Plan.

(2) The project would comply with the Federal Clean Water Act and the Porter Cologne Act requirements.

(3) The project site is not within a 100-year flood hazard zone as established by the Federal Emergency Management Agency (FEMA) Flood Rate Insurance Map 06099C0340E dated September 26, 2008.

(4) The project will comply with the Guidance Manual for New Development Storm Water Quality Control Measures (MIER Policy SD-11). This will be implemented as a condition of project approval.

(5) The project will comply with the Guidance Manual for New Development Storm Water Quality Control Measures (MIER Policy SD-11). This will be implemented as a condition of project approval.

(6) The project will not violate water quality standards or waste discharge requirements.

(7) The project would not substantially alter the existing drainage pattern of the site, area or a watercourse in a manner that would result in erosion or siltation.

(8) The project is not located in an area that has a positive storm drainage system. The project will be required to manage storm water impacts on-site as required in accordance to current City Standards and its amendments, as a condition of approval.

11. INCREASED DEMAND FOR PARKS AND OPEN SPACE

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on parks and open space expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant direct impacts were disclosed in the Master EIR.

Cumulative Impacts

Effect: No residual significant cumulative impacts were disclosed in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Parks and open space mitigation measures pertinent to the proposed project are found on pages V-11-3 through V-11-9 of the Master EIR. All mitigation measures appropriate to the project to be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Applied to Project:

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-11.B of the MEIR discloses impacts of the Urban Area General Plan on parks and open space. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. Project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
11. INCREASED DEMAND FOR PARKS AND OPEN SPACE				
1) The proposed project is inconsistent with the parks and open space policies in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project would eliminate parks or open space.	☐	☐	☐	☒
3) The proposed project would cause an increase in the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility in question would occur or be accelerated or the proposed project would include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.	☐	☐	☐	☒

Discussion:

(1) The project is consistent with the parks and open space policies in the General Plan.

(2) The project would not eliminate an existing park or designated open space. The project is on a vacant site that was previously developed with a radio broadcasting station, since demolished.

(3) The project would not cause an increase in use of existing local and regional parks.

12. INCREASED DEMAND FOR SCHOOLS

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on school facilities expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant direct impacts were disclosed in the Master EIR. By statute, the impact of new students is considered to be mitigated below a level of significance by payment of school impact fees and the exercise of any or all of the financing options set out in Government Code Section 65997.

Cumulative Impacts

Effect: Similar to direct impacts of implementation of the Urban Area General Plan, no residual significant direct impacts were disclosed in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Mitigation relies upon the implementation of the policies in place under the Modesto Urban Area General Plan. As long these policies are applied to all subsequent projects, no new mitigation is necessary. Further, payment of school impact fees and compliance with SB 50 is statutorily deemed to be full mitigation of school impacts (Government Code Section 65995).

The following schools mitigation measures on pages V-12-5 through V-12-7 of the Master EIR are pertinent to the proposed project. All mitigation measures appropriate to the project will be incorporated into or made conditions of approval of this project. Those measures are listed in Section V, Mitigation Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-12.B of the Master EIR discloses impacts resulting from implementation of the Urban Area General Plan associated with increased demand for schools. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
12. INCREASED DEMAND FOR SCHOOLS				
1) The proposed project is inconsistent with the policies relating to schools in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project does not comply with SB 50/Proposition 1A funding provisions, or succeeding measures which state that compliance results in less-than-significant impacts on schools.	☐	☐	☐	☒

Discussion:

(1) The project is consistent with the policies relating to schools in the General Plan.

(2) The project was referred to Modesto City Schools who indicated no concerns with the project.

13. INCREASED DEMAND FOR POLICE SERVICES

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on police services expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant direct impacts were disclosed in the Master EIR.

Cumulative Impacts

Effect: No residual significant cumulative impacts were disclosed in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Police services mitigation measures pertinent to the proposed project are found on pages V-13-2 through V-13-5 of the Master EIR. All mitigation measures appropriate to the project to be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Measures Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-13.B of the Master EIR discloses impacts on police services resulting from implementation of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
13. INCREASED DEMAND FOR POLICE SERVICES				
1) The proposed project is inconsistent with policies relating to police services in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project would result in the need for new or significantly altered facilities not considered as part of the Urban Area General Plan or Master EIR which could cause new significant environmental impacts in order to maintain acceptable service ratios, response times, or other performance objectives.	☐	☐	☐	☒

Discussion:

(1) The project is consistent with the policies relating to police services in the General Plan.

(2) The project would not result in the need for construction of new or significantly altered facilities which could cause new significant environmental impacts in order to maintain acceptable service ratios, response times or other performance objectives. The project meets City Standards for emergency services access.

14. INCREASED DEMAND FOR FIRE SERVICES

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on fire services expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant direct impacts were disclosed in the Master EIR.

Cumulative Impacts

Effect: No residual significant cumulative impacts were disclosed in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Fire Services mitigation measure(s) pertinent to the project being analyzed in this Initial Study are found on pages V-14-4 through V-14-7 of the Master EIR. All mitigation measures appropriate to the project to be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Measures Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-14.B of the Master EIR discloses impacts on fire services resulting from implementation of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
14. INCREASED DEMAND FOR FIRE SERVICES				
1) The proposed project is inconsistent with the fire service policies in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project would result in the need for new or significantly altered facilities not considered as part of the Urban Area General Plan or Master EIR which could cause new significant environmental impacts in order to maintain acceptable service ratios, response times, or other performance objectives.	☐	☐	☐	☒
3) The proposed project, based upon substantial evidence, would cause the erosion or elimination of fire protection services in adjoining fire protection districts.	☐	☐	☐	☒

Discussion:

(1) The project is consistent with the fire service policies in the General Plan.

(2) The project would not result in the need for construction of new or significantly altered facilities which could cause new significant environmental impacts in order to maintain acceptable service ratios, response times or other performance objectives.

(3) The project would not significantly impact adjacent fire districts or result in the elimination of fire protection services.

15. GENERATION OF SOLID WASTE

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on solid waste expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant direct impacts were disclosed in the Master EIR.

Cumulative Impacts

Effect: No residual significant cumulative impacts were disclosed in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Solid waste mitigation measures pertinent to the proposed project are found on pages V-15-4 through V-15-7 of the Master EIR. All mitigation measures appropriate to the project to be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-15.B of the Master EIR discloses solid waste impacts resulting from implementation of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. Project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
15. GENERATION OF SOLID WASTE				
1) The project is inconsistent with the solid waste policies in the Urban Area General Plan.	☐	☐	☐	☒
2) The County is unable to expand its solid waste disposal capacity, as expected, causing all new	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
development to result in cumulative impacts on the County's disposal capacity.				

Discussion:

(1) The project is consistent with the solid waste policies in the General Plan.

(2) This project was referred to the Solid Waste Division for review, who indicated no concerns over service to the project area.

16. GENERATION OF HAZARDOUS MATERIALS

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts regarding hazardous materials expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant direct impacts were disclosed in the Master EIR.

Cumulative Impacts

Effect: No residual significant cumulative impacts were disclosed in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Hazardous materials mitigation measures pertinent to the proposed project are found on pages V-16-8 through V-16-13 of the Master EIR. All mitigation measures appropriate to the project to be incorporated into or made conditions of approval of this project are listed in Section V, Mitigation Measures Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-16.B of the Master EIR discloses impacts on hazardous materials resulting from implementation of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
16. GENERATION OF HAZARDOUS MATERIALS				
1) The project is inconsistent with the hazardous materials policies in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project would emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.	☐	☐	☐	☒
3) The proposed project would be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and as a result, would create a significant hazard to the public or the environment.	☐	☐	☐	☒
4) The proposed project would be constructed on a contaminated site not known to the State of California as of March 2008.	☐	☐	☐	☒

Discussion:

(1) The project is consistent with the hazardous materials policies in the General Plan.

(2) No hazardous materials will be involved with this project.

(3) The project would not be located on a site, which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and as a result, would not create a significant hazard to the public or the environment.

(4) The project site is not known to contain any contaminants.

17. GEOLOGY, SOILS, AND MINERAL RESOURCES

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts related to geology, soils, and mineral resources expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant direct impacts were disclosed in the Master EIR.

Cumulative Impacts

Effect: No residual significant direct impacts were disclosed in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

Geology, soils, and mineral resource mitigation measures pertinent to the proposed project are found on pages V-17-9 and V-17-10 of the Master EIR. All mitigation measures appropriate to the project to be incorporated into or made conditions of approval of the proposed project are listed in Section V, Mitigation Measures Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-17.B of the Master EIR discloses geology, soils, and mineral resource impacts resulting from implementation of the Urban Area General Plan. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. Project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
17. GEOLOGY, SOILS, AND MINERAL RESOURCES				
1) The project is inconsistent with policies relating to geology, soils, and mineral resources contained in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project would expose people or structures to potential substantial adverse effects including the risk off loss, injury, or death involving fault rupture, strong seismic activity; location on an expansive soil; result in the loss of topsoil; location on soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems in areas where sewers are not available for the disposal of wastewater; result in the loss of known mineral resources that would be of value to the region and the state; or result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan.	☐	☐	☐	☒

Discussion:

(1) The project is consistent with policies relating to geology, soils, and mineral resources in the General Plan.

(2) The project would not be located on soil that is unstable, or that would become unstable as a result of the project. There are no known mineral resources of value to the region and the state on the property.

18. ENERGY

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts pertaining to energy expected after application of mitigations/policies:

Direct Impacts

Effect: Continued development in the Planned Urbanizing Area would have an impact on available energy supplies. Energy consumption likely would increase substantially by 2025 as a result of implementation of the Urban Area General Plan.

Cumulative Impacts

Effect: Implementation of the Urban Area General Plan will have a cumulatively considerable impact on energy consumption.

b. Master EIR and/or New Mitigation Measures Applied to the Project

The following energy mitigation measures pertinent to the proposed project are found on pages V-18-2 through V-18-8 in the Master EIR. All mitigation measures appropriate to the project will be incorporated into or made conditions of approval of this project. Those measures will be listed in Section V, Mitigation Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-18.B of the Master EIR discloses impacts of implementing the Urban Area General Plan on energy resources. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
18. ENERGY				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
1) The proposed project is inconsistent with policies relating to energy in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project would result in energy consumption during construction, operation, maintenance, or removal that is more wasteful, inefficient, and unnecessary than assumed in the Urban Area General Plan.	☐	☐	☐	☒

Discussion:

(1) The project is consistent with the energy policies in the General Plan.

(2) The project would not result in energy consumption during construction, operation, maintenance or removal that is more wasteful, inefficient and unnecessary than assumed in the General Plan.

19. EFFECTS ON VISUAL RESOURCES

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts on visual resources expected after application of mitigations/policies:

Direct Impacts

Effect: New development in the Planned Urbanizing Area will occur in areas that are in agricultural production or are otherwise lightly developed, which could lead to the introduction of light and glare in areas that have little nighttime illumination.

Cumulative Impacts

Effect: No additional cumulative impacts were disclosed in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

The following visual resources mitigation measures pertinent to the proposed project are found on pages V-19-3 and V-19-4 in the Master EIR. All mitigation measures appropriate to the proposed project will be incorporated into or made conditions of approval of this project. Those measures will be listed in Section V, Mitigation Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-18.B of the Master EIR discloses impacts of implementing the Urban Area General Plan on energy resources. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
19. EFFECTS ON VISUAL RESOURCES				
1) The proposed project is inconsistent with policies relating to visual resources in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project would degrade views from riverside areas and parks to a greater degree than assumed in the Urban Area General Plan.	☐	☐	☐	☒
3) The proposed project would degrade views of riverside areas from public roadways and nearby properties to a greater degree than assumed in the Urban Area General Plan.	☐	☐	☐	☒

Discussion:

(1) The project is consistent with the policies relating the visual resources in the General Plan.

(2) The project would not impact views from riverside areas and parks.

(3) The project would not impact views of riverside areas from roadways or nearby properties.

20. LAND USE AND PLANNING

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts pertaining to land use and planning expected after application of mitigations/policies:

Direct Impacts

Effect: No residual significant direct impacts were disclosed in the Master EIR.

Cumulative Impacts

Effect: No residual significant cumulative impacts were disclosed in the Master EIR.

b. Master EIR and/or New Mitigation Measures Applied to the Project

The following land use and planning mitigation measures pertinent to the proposed project are found on pages V-20-6 through V-20-17 in the Master EIR. All mitigation measures appropriate to the project will be incorporated into or made conditions of approval of this project. Those measures will be listed in Section V, Mitigation Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-20.B of the Master EIR discloses impacts of implementing the Urban Area General Plan on land use and planning. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
20. LAND USE AND PLANNING				
1) The proposed project is inconsistent with land use and planning policies in the Urban Area General Plan.	☐	☐	☐	☒
2) The proposed project contains elements that would physically divide an established community in a way not assumed in the Urban Area General Plan.	☐	☐	☐	☒
3) The proposed project conflicts with a land use plan, policy or regulation established for the purpose of avoiding or mitigating an environmental impact by an agency that has jurisdiction over the proposed project.	☐	☐	☐	☒
4) The proposed project conflicts with an applicable habitat conservation plan or natural community conservation plan.	☐	☐	☐	☒

Discussion:

(1) The project is designated as Mixed Use (MU) in the General Plan, which allows for residential uses. The project is consistent with the current General Plan Land Use Designation, and therefore is consistent with land use and planning policies in the General Plan.

(2) The project would not divide an established community. The surrounding area is developed with residential uses including the House Church of Modesto to the south and east. The proposed subdivision is consistent with the surrounding uses and would not divide existing neighborhood.

(3) The project does not conflict with the land use plan, policies and regulations of the City of Modesto designed to mitigate project impacts.

(4) The project does not conflict with applicable habitat conservation plans or natural community conservation plans.

21. CLIMATE CHANGE

a. Significant Effects Identified in the Master EIR

The Master EIR discloses the following residual significant and unavoidable impacts pertaining to climate change expected after application of mitigations/policies:

Direct Impacts

Effect: Impacts resulting from implementation of the Urban Area General Plan are not substantial enough to result in a significant direct impact on climate change, as disclosed in the Master EIR.

Cumulative Impacts

Effect: Implementation of the Urban Area General Plan will have a cumulatively considerable impact on climate change.

b. Master EIR and/or New Mitigation Measures Applied to the Project

The following climate change mitigation measures pertinent to the proposed project are found on pages V-21-7 through V-21-10 in the Master EIR. All mitigation measures appropriate to the project will be incorporated into or made conditions of approval of this project. Those measures will be listed in Section V, Mitigation Applied to Project.

Discussion:

No mitigation measures from the Master EIR are required. No new or additional mitigation measures or alternatives are required to reduce project impacts to a less-than-significant level.

c. Project-Specific Effects

Section V-18.B of the Master EIR discloses impacts of implementing the Urban Area General Plan on climate change. The following is an analysis of whether the proposed project would result in a new, significant, project-specific effect not disclosed in the Master EIR.

Significance Criteria: Determination of project effects will be based on the following thresholds. The project-specific effects will be less than significant unless:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
21. CLIMATE CHANGE				
1) The proposed project is inconsistent with policies relating to climate change in the Urban Area General Plan.	☐	☐	☒	☐
2) The proposed project would result in average automobile trip lengths or CO_2 emissions higher than those assumed in the Master EIR.	☐	☐	☒	☐
3) The proposed project would conflict with the Sustainable Communities Strategy or Alternative Planning Strategy that the Air Resources Board has agreed will achieve the goals of AB 32.	☐	☐	☒	☐

Discussion:

(1) The City of Modesto General Plan Master EIR addressed potential climate change impacts due to development and other activities associated with the Urban Area General Plan (UAGP). The Urban Area General Plan Master EIR (MEIR) determined that buildout of the UAGP would make a cumulatively considerable contribution to global climate change. The UAGP nonetheless authorizes development that will contribute to global climate change by virtue of the production of greenhouse gases. The MEIR states the projected rate of growth of vehicle miles traveled (VMT) will increase the City's contribution to global climate change as the City develops. Development under the UAGP is expected to generate approximately 1,096,226.4 metric tons per year above 2005 emissions. The City Council adopted a Statement of Overriding Considerations in 2008, finding that the benefits of the UAGP outweighed the City's increased contribution to global climate change.

The MEIR identifies policies CL-3 through CL-26 as policies in effect that have been determined to reduce, avoid or mitigate air quality environmental impacts within the existing City limits and within the Planned Urbanizing Areas as they annex and develop. These policies include but are not limited to, the use of shade trees to reduce the heat island effect, current energy efficient building standards to reduce energy consumption, and the inclusion of facilities for alternative transportation. The proposed project is required to develop in accordance with climate change policies included in the UAGP and the MIER.

(2) Climate change is an inherently cumulative impact because no single project can produce enough greenhouse gases to substantially alter the global climate. No thresholds have been set for individual or cumulative greenhouse gases. Nonetheless, the proposed project would result in greenhouse gas emissions due primarily to automobile travel and energy use for lighting, heating, cooling and other activities. The primary source of CO_2 emissions generated from the project would be related to automobile trips. As identified under the traffic and circulation discussion, traffic engineering staff has determined that the project will be in substantial conformance with the GP MEIR assumptions for traffic generation, the CO_2 emissions generated from the project would also be in substantial conformance with that which was assumed under the GP MEIR analysis.

(3) A Sustainable Communities Strategy has not yet been implemented by the Air Resources Board. Future development will be required to comply with the provisions of the Sustainable Communities Strategy once it is established.

V. MITIGATION MEASURES APPLIED TO THE PROPOSED PROJECT

If the Initial Study results in the determination that a Finding of Conformance can be adopted for the proposed project Section A below applies. If the Initial Study results in the determination that a Finding of Conformance cannot be adopted and a Mitigated Negative Declaration/EIR must be prepared for the project then Section B, below applies.

A. Master EIR Mitigation Measures Applied to the Project

Pursuant to Public Resources Code Section 21157.1(c), in order for a Finding of Conformance to be made, all appropriate mitigation measures from the Master EIR shall be incorporated into the proposed project. Urban Area General Plan Policies/Master EIR mitigation measures shall be made part of the proposed project prior to approval by means of conditions of project approval or incorporation into the appropriate document or plan.

All applicable and appropriate mitigation measures have been applied to the project (see mitigation measures listed below).

B. New or Additional Mitigation Measures or Alternatives Required

Where the project's effects would exceed the significance criteria for each environmental impact category, a mitigated negative declaration or Focused EIR must be prepared. Staff has reviewed the project against the significance criteria thresholds established in the Master EIR for all impact categories in this Initial Study.

A Mitigated Negative Declaration or Focused EIR shall be prepared for the project. The following additional project-specific mitigation measures listed below are necessary to reduce the identified new significant effect: none.

Traffic and Circulation:

N/A

Degradation of Air Quality:

AQ-42: All disturbed areas, including storage piles, which are not being actively utilized for construction purposes, shall be effectively stabilized of dust emissions using water, chemical stabilizer/suppressant, covered with a tarp or other suitable cover or vegetative ground cover.

AQ-43: All on-site unpaved roads and off-site unpaved access roads shall be effectively stabilized of dust emissions using water or chemical stabilizer/suppressant.

AQ-44: All land clearing, grubbing, scraping, excavation, land leveling, grading, cut & fill, and demolition activities shall be effectively controlled of fugitive dust emissions utilizing application of water or by presoaking.

AQ-45: With the demolition of buildings up to six stories in height, all exterior surfaces of the building shall be wetted during demolition.

AQ-46: When materials are transported off-site, all material shall be covered, or effectively wetted to limit visible dust emissions, and at least six inches of freeboard space from the top of the container shall be maintained.

AQ-47: All operations shall limit or expeditiously remove the accumulation of mud or dirt from adjacent public streets at the end of each workday. (The use of dry rotary brushes is expressly prohibited except where preceded or accompanied by sufficient wetting to limit the visible dust emissions.) (Use of blower devices is expressly forbidden.)

AQ-48: Following the addition of materials to, or the removal of materials from, the surface of outdoor storage piles, said piles shall be effectively stabilized of fugitive dust emissions utilizing sufficient water or chemical stabilizer/suppressant.

AQ-49: Within urban areas, track out shall be immediately removed when it extends 50 or more feet from the site and at the end of each workday.

AQ-50: Any site with 150 or more vehicle trips per day shall prevent carryout and track out.

Generation of Noise:

N-1: The City has also established a noise ordinance to control noise within the City. The City's noise ordinance (Modesto Municipal Code Section 4-9.101) prohibits the "loud and raucous discharge into the open air of the steam of any steam equipment or exhaust from any stationary internal-combustion engine."

N-2: Additionally, the noise ordinance prohibits the loud and raucous operation or use of any of the following before 7:00 a.m. or after 9:00 p.m. daily (except Saturday and Sunday and state or federal holidays, when the prohibited time shall be before 9:00 a.m. and after 9:00 p.m.):

1. A hammer, or any other device or implement used to pound or strike an object.
2. An impact wrench, or other tool or equipment powered by compressed air.
3. A hand-powered saw.
4. Any tool or piece of equipment powered by an internal-combustion engine such as, but not limited to, chain saw, backpack blower, and lawn mower.
5. Any electrically powered (whether by alternating current electricity or by direct current electricity) tool or piece of equipment used for cutting, drilling, or shaping wood, plastic, metal, or other materials or objects, such as, but not limited to, a saw, drill, lathe, or router.
6. Any of the following: heavy equipment (such as but not limited to bulldozer, steam shovel, road grader, back hoe), ground drilling and boring equipment (such as but not limited to derrick or dredge), hydraulic crane and boom equipment, portable power generator or pump, pavement equipment (such as but not limited to pneumatic hammer, pavement breaker, tamper, compacting equipment), piledriving equipment, vibrating roller, sand blaster, gunite machine, trencher, concrete truck, and hot kettle pump.
7. Any construction, demolition, excavation, erection, alteration, or repair activity. In the case of urgent necessity and in the interest of public health and safety, the Chief Building Official may issue a permit for exemption from these. Such period shall not exceed three (3) working days in length while the emergency continues but may be renewed for successive periods of three (3) days or less while the emergency continues. The Chief Building Official may limit such permit as to time of use and/or permitted action, depending upon the nature of the emergency and the type of action requested.

N-3: The City of Modesto shall require construction activities to comply with the City's noise ordinance (Title 4, Chapter 9), and noise-reducing construction practices to be implemented as conditions of approval for development projects where substantial construction-related noise impacts would be likely to occur (e.g., where construction would include extended periods of pile driving, where construction would occur over an unusually long period, or where noise-sensitive uses like homes and schools would be in the immediate vicinity, etc.). The city should consider potential mitigation measures, including, but not limited to, the following: Construction equipment and vehicles should be equipped with properly operating mufflers according to the manufacturers' recommendations. Air compressors and pneumatic equipment should be equipped with mufflers, and impact tools should be equipped with shrouds or shields. Equipment that is quieter than standard equipment should be utilized. Haul routes that affect the fewest number of people should be selected.

Effects on Agricultural Lands:

N/A

Increased Demand for Long-Term Water Supplies:

N/A

Increased Demand for Sanitary Sewer Services:

N/A

Loss of Sensitive Wildlife and Plant Habitat:

N/A

Disturbance of Archaeological/Historic Sites:

N/A

Increased Demand for Storm Drainage:

SD-9: Construction activities shall comply with the requirements of the City's Storm Water Management Plan under its municipal NPDES stormwater permit, and the State Water Resources Control Board's General Permit for Discharges of Storm Water Associated with Construction Activity.

Flooding and Water Quality:

FWQ-13: Construction activities shall comply with the requirements of the City's Storm Water Management Plan under its municipal NPDES Stormwater permit, and the State Water Resources Control Board's General Permit for Discharges of Storm Water Associated with Construction Activity.

Increased Demand for Parks and Open Space:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-331

RESOLUTION APPOINTING MARK FREITAS AND JANE MANLEY TO THE CITY OF MODESTO MEASURE L CITIZENS' TRANSPORTATION SALES TAX COMMISSION

WHEREAS, in November of 2016, Stanislaus County voters approved a county-wide, 25-year, half-cent sales tax increase known as Measure L which went into effect on April 1, 2017, and

WHEREAS, on October 4, 2016, Council approved Ordinance No. 3656-C.S. adding Chapter 10 to Title 8 of the Modesto Municipal Code to establish a Citizens' Transportation Sales Tax Commission, and

WHEREAS, the Commission will consist of eleven (11) members appointed by Council to represent the City's citizens, and

WHEREAS, the purpose of the City's Citizens' Transportation Sales Tax Commission will be to:

- Ensure all transportation revenue collected by the City from Measure L is spent in accordance with the Measure L Ordinance and Expenditure Plan;
- Hold public meetings as necessary regarding the expenditure and status of funds generated by Measure L;
- Review independent audits of the expenditure of tax funds and implementation of the programs and projects in the Expenditure Plan; and
- Issue an annual report on its findings regarding compliance with the requirements of the Expenditure Plan and the Ordinance to Council, and

WHEREAS, on August 2, 2017 by Resolution No. 2017-291, Council appointed 9 members to the City's Citizens' Transpiration Sales Tax Commission, and

WHEREAS, at that time, 2 positions remained vacant as the City had not received applications meeting the requirements of those seats, and

WHEREAS, the City received 2 applications that were presented to the Appointments Committee for consideration on August 8, 2017 and the Committee recommends appointing the following to the City's Citizens' Transportation Sales Tax Commission:

Representing	Appointee
Member from labor union with members residing in the City of Modesto	Mark Freitas
1 member from any local nonpartisan political organization with tax-exempt status	Jane Manley

NOW, THEREFORE, BE IT HEREBY RESOLVED by the Council of the City of Modesto as follows:

1. Mark Freitas and Jane Manley are hereby appointed to the City of Modesto Measure L Citizens' Transportation Sales Tax Commission effective July 1, 2017, and
2. The City Clerk is hereby directed to transmit a copy of this resolution to the Secretary of the Commission, thereof.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Madrigal, who moved its adoption, which motion being duly seconded by Councilmember Kenoyer, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold
NOES:	Councilmembers:	None
ABSENT:	Councilmembers:	None

ATTEST: _____
STEPHANIE LOPEZ, City Clerk

(SEAL)

APPROVED AS TO FORM:

By: _____
ADAM U. LINDGREN, City Attorney

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-332

RESOLUTION APPOINTING JOSEPH SANCHEZ TO THE CITY OF MODESTO CULTURE COMMISSION AS A CITY OF MODESTO RESIDENT AND REBECCA HARRINGTON AS A STANISLUAS COUNTY RESIDENT WHO DOES NOT LIVE IN THE CITY OF MODESTO, WITH A TERM EXPIRATION OF JANUARY 1, 2021

WHEREAS, Section 1102 of the Charter of the City of Modesto authorizes the City Council to appoint members to various Boards and Commissions, and

WHEREAS, the Appointments Committee met on August 8, 2017 and recommended appointment of Joseph Sanchez and Rebecca Harrington to the Modesto Culture Commission.

NOW, THEREFORE, BE IT HEREBY RESOLVED by the Council of the City of Modesto as follows:

1. Joseph Sanchez is hereby appointed to the Modesto Culture Commission as a City of Modesto resident with a term expiration of January 1, 2021.

2. Rebecca Harrington is hereby appointed to the Modesto Culture Commission as a Stanislaus County Resident who does not reside in the City of Modesto with a term expiration of January 1, 2021.

3. The City Clerk is hereby directed to transmit a copy of this resolution to the appointed member of the Modesto Culture Commission, and the Secretary thereof.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Madrigal, who moved its adoption, which motion being duly seconded by Councilmember Kenoyer, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-335

RESOLUTION APPROVING A SIXTH AMENDMENT TO THE MASTER AGREEMENT FOR AUDITING SERVICES BETWEEN THE CITY OF MODESTO AND MOSS-ADAMS, LLP IN AN AMOUNT NOT TO EXCEED $100,000; AND AUTHORIZING THE MAYOR, OR HIS DESIGNEE, TO EXECUTE THE AMENDMENT TO THE AGREEMENT

WHEREAS, Section 900 of the Modesto City Charter provides that the City Auditor shall be appointed by and serve at the pleasure of the City Council of the City of Modesto, and

WHEREAS, the City Council desires to amend the Master Agreement for auditing services with the firm of Moss-Adams, LLP extending the term of the Agreement from July 1, 2017 to June 30, 2018, and

WHEREAS, the compensation amount needs to be amended to include an additional amount not to exceed $100,000, and

WHEREAS, The Audit Committee at its June 20, 2017 meeting established priorities for Moss Adams's work in FY2017-18 as: (i) Accounts Receivable Internal Controls Testing; (ii) Financial Policy Development; and (iii) Ongoing Internal Auditor Services. If funds are available the next priorities would be: (i) Permitting Efficiency Study and (ii) Fleet Utilization Study.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an Amendment to the Master Agreement for auditing services with Moss-Adams, LLP.

BE IT FURTHER RESOLVED that the Mayor, or his designee, is hereby authorized to execute the Amendment to the Master Agreement.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-336

RESOLUTION APPROVING ANNEXATION MAP RELATED TO ANNEXATION NO. 1 TO COMMUNITY FACILITIES DISTRICT NO. 2016-1 (KIERNAN BUSINESS PARK EAST #2), AUTHORIZING AND DIRECTING RECORDING THEREOF AND LEVYING SPECIAL TAX

WHEREAS, reference is made to (a) the Resolution of Formation, Resolution No. 2016-20 (the "Resolution of Formation"), adopted by this City Council (this "City Council") on January 26, 2016 approving the formation of the City of Modesto Community Facilities District No. 2016-1 (Kiernan Business Park East #2) ("CFD No. 2016-1") pursuant to the Mello-Roos Community Facilities Act of 1982 (Sections 53311 and following, California Government Code; hereafter in this resolution, the "Mello-Roos Act"), and (b) the Amended Boundary Map for CFD No. 2016-1 (the "Boundary Map"), recorded on August 11, 2017, in Book 5 of Maps of Assessment and Community Facilities Districts, at Page 65, official records of the County Recorder of the County of Stanislaus (the "County Recorder"), for the identification of (1) the boundary of CFD No. 2016-1, and (2) the area designated as future annexation area (the "Future Annexation Area") as provided by the Mello-Roos Act, and

WHEREAS, the properties identified as Assessor's Parcel No. 078-015-007 ("Parcel #1") and Assessor's Parcel No. 078-015-025 ("Parcel #2") are situated within the Future Annexation Area (collectively, the "Subject Property"); and

WHEREAS, in accordance with the provisions of Sections 53339 through 53339.9, inclusive, of the Mello-Roos Act (the "Annexation Provisions"), pertaining to annexation of property to a community facilities district, Plaza Road Development Group, LLC, owner of Parcel #1 and Dale Road Development Group, LLC, owner of

Parcel #2, have submitted to the City Manager of the City (the "City Manager") executed forms entitled "Request and Unanimous Approval for Annexation and Landowner-Voter Ballot" (together, the "Unanimous Approval Forms"), each requesting the annexation of the parcel owned by said landowner to CFD No. 2016-01 and voting in favor of authorizing the levy of the special tax on the Subject Property, and

WHEREAS, a map entitled "Boundary of Proposed Annexation #1 to the City of Modesto Community Facilities District No. 2016-1, City of Modesto, County of Stanislaus, State of California" ("Annexation Map No. 1"), showing the boundary of the Subject Property, has been filed with the City Clerk of the City (the "City Clerk") and a copy thereof presented to Council at the September 5, 2017 meeting, and

WHEREAS, pursuant to Section 53339.8 of the Mello-Roos Act ("Section 53339.8"), the Unanimous Approval Forms request that the City execute and record a notice of special tax lien pertaining to the Subject Property (the "Notice") in the official records of the County Recorder, and

WHEREAS, this City Council wishes by this resolution to approve and direct the recordation of Annexation Map No.1; and to direct, as soon as practicable following the recordation of Annexation Map No. 1, the preparation, execution and recordation of the Notice, with provisions to cross-reference the recorded Annexation Map No. 1.

NOW, THEREFORE, BE IT RESOLVED THAT the City Council of the City of Modesto hereby finds, determines and resolves as follows:

1. The foregoing recitals are true and correct, and this City Council hereby expressly so finds and determines.

2. This City Council hereby approves Annexation Map No. 1 and authorizes

and directs the City Clerk to cause the execution and recordation thereof in the official records of the County Recorder in accordance with the provisions of Section 3113 of the California Streets and Highways Code.

3. This City Council hereby levies the Special Tax on the property located within Annexation Map No. 1 and directs the City Clerk, following the recordation of Annexation Map No. 1, to cause the preparation, execution and recordation of the Notice in the official records of the County Recorder in accordance with the provisions of Section 53339.8 and Streets and Highways Code section 3114.5(b). Upon recordation of the Notice, the Subject Property shall be subject to the levy of the special tax of CFD No. 2016-1 in accordance with the rate and method of apportionment of special tax for said CFD No. 2016-1, as approved by the Resolution of Formation and **attached** thereto as **Exhibit B** thereof.

4. This resolution shall take effect immediately upon its adoption.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

AYES: Councilmembers: Ah You, Kenoyer, Madrigal, Ridenour, Zoslocki,

CITY OF MODESTO
COMMUNITY FACILITIES DISTRICT NO. 2016-1
(KIERNAN BUSINESS PARK EAST)

RATE AND METHOD OF APPORTIONMENT OF SPECIAL TAX

Special Taxes applicable to each Assessor's Parcel in the City of Modesto Community Facilities District No. 2016-1 (Kiernan Business Park East) shall be levied and collected according to the tax liability determined by the Administrator through the application of the appropriate amount or rate for Taxable Property, as described below. All of the property in CFD No. 2016-1, unless exempted by law or by the provisions of Section F below, shall be taxed for the purposes, to the extent, and in the manner herein provided, including property subsequently annexed to the CFD, unless a separate Rate and Method of Apportionment of Special Tax is adopted for the annexation area.

A. DEFINITIONS

The terms hereinafter set forth have the following meanings:

"Acre" or **"Acreage"** means the land area of an Assessor's Parcel as shown on an Assessor's Parcel Map, or if the land area is not shown on an Assessor's Parcel Map, the land area shown on the applicable Final Map or other recorded County parcel map.

"Act" means the Mello-Roos Community Facilities Act of 1982, as amended, being Chapter 2.5 (commencing with Section 53311), Division 2, of Title 5 of the Government Code of the State of California.

"Administrative Expenses" means any or all of the following: expenses incurred by the City in carrying out its duties with respect to CFD No. 2016-1, including, but not limited to, levying and collecting the Special Taxes; the fees and expenses of legal counsel; charges levied by the County Auditor's Office, Tax Collector's Office, and/or Treasurer's Office; costs related to annexing property into the CFD; costs related to property owner inquiries regarding the Special Taxes; and all other costs and expenses of the City in any way related to the establishment or administration of the CFD.

"Administrator" means the person or firm designated by the City to administer the Special Taxes according to this RMA.

"Annual Maintenance Special Tax" means a special tax levied in any Fiscal Year to pay the Annual Maintenance Special Tax Requirement, as defined below.

"Annual Maintenance Special Tax Requirement" means the amount of revenue needed in any Fiscal Year to pay for: (i) Authorized Services, (ii) establishment of reserves, (iii) Administrative Expenses, and (iv) amounts needed to cure any delinquencies in the payment of Annual Maintenance Special Taxes which have occurred in prior Fiscal Years.

"Assessor's Parcel" or **"Parcel"** means a lot or parcel shown on an Assessor's Parcel Map with an assigned Assessor's Parcel Number.

"Assessor's Parcel Map" means an official map of the County Assessor designating parcels by Assessor's Parcel Number.

"Assessor's Parcel Number" or **"APN"** means a unique number assigned to an Assessor's Parcel by the County Assessor for purposes of identifying a property.

"Authorized Services" means the public services authorized to be funded by the CFD as set forth in the documents adopted by the City Council when the CFD was formed.

"CFD" or **"CFD No. 2016-1"** means the City of Modesto Community Facilities District No. 2016-1 (Kiernan Business Park East).

"CFD Formation" means the date on which the Resolution of Formation to form CFD No. 2016-1 was adopted by the City Council.

"City" means the City of Modesto.

"City Council" means the City Council of the City of Modesto, acting as the legislative body of CFD No. 2016-1.

"County" means the County of Stanislaus.

"Escalation Factor" means, in any Fiscal Year, the greater of (i) the percentage increase, if any, in the construction cost index for the San Francisco region for the prior twelve (12) month period as published in the Engineering News Record or other comparable source if the Engineering News Record is discontinued or otherwise not available, or (ii) four percent (4.0%).

"Final Map" means a final map approved by the City pursuant to the Subdivision Map Act (California Government Code Section 66410, *et seq.*) that creates individual lots on which a building permit can be issued for construction of residential units without further subdivision of the lots.

"Fiscal Year" means the period starting on July 1 and ending on the following June 30.

"Maximum Annual Maintenance Special Tax" means the Maximum Annual Maintenance Special Tax, determined in accordance with Section C, that can be levied in any Fiscal Year.

"Maximum One-Time Facilities Special Tax" means the greatest amount of One-Time Facilities Special Tax that can be levied on an Assessor's Parcel in any Fiscal Year determined in accordance with Section C below.

"Maximum Special Taxes" means, collectively, the Maximum One-Time Facilities Special Tax and the Maximum Annual Maintenance Special Tax.

"One-Time Facilities Special Tax" means a special tax levied and collected in full by the City prior to a structural building permit being issued for new construction on a Parcel of Taxable Property.

"Proportionately" means the ratio of the actual Annual Maintenance Special Tax levied in any Fiscal Year to the Maximum Annual Maintenance Special Tax authorized to be levied in that Fiscal Year is equal for all Assessor's Parcels of Taxable Property.

"Public Property" means, in any Fiscal Year: (i) all Parcels within the boundaries of the CFD that are owned by or irrevocably offered for dedication to the federal government, the State of California, the City or any other public agency; provided, however, that any property leased by a public agency to a private entity and subject to taxation under Section 53340.1 of the Act (as such section may be amended or replaced) shall be taxed and classified in accordance with its use; or (ii) all Parcels within the boundaries of the CFD that are encumbered by an unmanned utility easement making impractical its utilization for other than the purpose set forth in the easement.

"RMA" means this Rate and Method of Apportionment of Special Tax.

"Special Taxes" means, collectively, the One-Time Facilities Special Tax and the Annual Maintenance Special Tax.

"Taxable Property" means all Assessor's Parcels within the boundaries of the CFD that are not exempt from the Special Taxes pursuant to law or Section F below.

"Taxable Public Property" means, in any Fiscal Year, all Parcels of Public Property within the CFD that, (i) based on a tentative map or other development plan, were expected to be Taxable Property and, (ii) based on this expectation, Maximum Annual Maintenance Special Taxes were assigned to the Parcels in prior Fiscal Years.

"Tax Zone" means a mutually exclusive geographic area within which the Special Taxes may be levied pursuant to this RMA. ***All of the property within CFD No. 2016-1 at the time of CFD Formation is within Tax Zone 1.*** Additional Tax Zones may be created when property is annexed to the CFD, and separate Maximum Special Taxes shall be identified for property within the new Tax Zone at the time of such annexation. The Assessor's Parcels included within a new Tax Zone established when such Parcels are annexed to the CFD shall be identified by Assessor's Parcel Number in the Unanimous Approval Form that is signed by the owner(s) of the Parcels at the time of annexation.

"Unanimous Approval Form" means that form executed by the record owner of fee title to a Parcel or Parcels annexed into the CFD that constitutes the property owner's approval and unanimous vote in favor of annexing into the CFD and the levy of Special Taxes against his/her Parcel or Parcels pursuant to this RMA.

B. DATA FOR ANNUAL TAX LEVY

Each Fiscal Year, the Administrator shall identify the current Assessor's Parcel Numbers for all Parcels of Taxable Property within the CFD. The Administrator shall also determine: (i) in which Tax Zone each Parcel of Taxable Property is located, (ii) the Acreage for each Parcel of Taxable Property, and (iii) the Annual Maintenance Special Tax Requirement for the then-current Fiscal Year.

In any Fiscal Year, if it is determined that (i) a Final Map or parcel map for a portion of property in the CFD was recorded after the last date upon which the Assessor will incorporate the newly-created Parcels into the then current tax roll, (ii) because of the date the Final Map or parcel map was recorded, the Assessor does not yet recognize the new Parcels created by the Final Map or parcel map, and (iii) one or more of the newly-created Parcels meets the definition of Taxable Property, the Administrator shall calculate the Special Tax for the property affected by recordation of the Final Map or parcel map by determining the Special Taxes that apply separately to each newly-created Parcel, then applying the sum of the individual Special Taxes to the Parcel that was subdivided by recordation of the Final Map or parcel map.

C. MAXIMUM SPECIAL TAXES

1. Tax Zone 1

Table 1 below identifies the Maximum One-Time Facilities Special Tax and Maximum Annual Maintenance Special Tax assigned to all Parcels of Taxable Property in Tax Zone 1 at CFD Formation and all Parcels that annex into Tax Zone 1 after CFD Formation.

TABLE 1
MAXIMUM SPECIAL TAXES FOR TAX ZONE 1
FISCAL YEAR 2015-16

Fiscal Year 2015-16 Assessor's Parcel Number (s)	*Fiscal Year 2015-16 Maximum One-Time Facilities Special Tax**	*Fiscal Year 2015-16 Maximum Annual Maintenance Special Tax**
078-015-029 078-015-030	$0	$2,872 per Acre

** On January 1, 2016 and each January thereafter, the Maximum One-Time Facilities Special Tax and Maximum Annual Maintenance Special Tax rates shall be adjusted by the Escalation Factor. Each annual adjustment of the Maximum One-Time Facilities Special Tax and the Maximum Annual Maintenance Special Tax shall become effective on the subsequent July 1.*

2. Additional Tax Zones

If property is annexed into the CFD and a separate Tax Zone is established for such property, a Maximum One-Time Facilities Special Tax and a Maximum Annual Maintenance Special Tax will be identified for Taxable Property in the new Tax Zone in the Unanimous Approval Form signed by the annexing property owner.

D. METHOD OF LEVY OF SPECIAL TAXES

1. One-Time Facilities Special Tax

The Maximum One-Time Facilities Special Tax determined pursuant to Section C above shall be levied on all Taxable Property in CFD No. 2016-1 and shall be collected as set forth in Section E below.

2. Annual Maintenance Special Tax

Each Fiscal Year, the Administrator shall determine the Annual Maintenance Special Tax Requirement for that Fiscal Year. The Annual Maintenance Special Tax shall be levied on all Parcels of Taxable Property as follows:

Step 1: The Annual Maintenance Special Tax shall be levied Proportionately on each Parcel of Taxable Property that is not Taxable Public Property up to 100% of the Maximum Annual Maintenance Special Tax for each Parcel for such Fiscal Year;

Step 2: If additional revenue is needed after Step 1, the Annual Maintenance Special Tax shall be levied Proportionately on each Parcel of Taxable Public Property up to 100% of the Maximum Annual Maintenance Special Tax for each Parcel for such Fiscal Year.

E. COLLECTION OF SPECIAL TAXES

The Maximum One-Time Facilities Special Tax shall be collected prior to a building permit being issued for new construction of a structure on a Parcel of Taxable Property within CFD No. 2016-1, and shall be immediately delinquent if not so paid.

The Annual Maintenance Special Tax for CFD No. 2016-1 shall be collected in the same manner and at the same time as ordinary ad valorem property taxes, provided, however, that the City may directly bill, collect at a different time or in a different manner, and/or collect delinquent Annual Maintenance Special Taxes through foreclosure or other available methods. The Annual Maintenance Special Tax shall be levied and collected in perpetuity unless and until the City determines that the Annual Maintenance Special Tax no longer needs to be levied to pay for Authorized Services and Administrative Expenses.

F. EXEMPTIONS

Notwithstanding any other provision of this RMA, no Special Tax shall be levied on Parcels of Public Property except Taxable Public Property, as defined herein.

G. INTERPRETATION OF SPECIAL TAX FORMULA

The City reserves the right to make minor administrative and technical changes to this document that do not materially affect the rate and method of apportioning Special Taxes. In addition, the interpretation and application of any section of this document shall be left to the City's discretion. Interpretations may be made by the City by resolution of the City Council for purposes of clarifying any vagueness or ambiguity in this RMA.

H. ENFORCEMENT

All delinquent One-Time Facilities Special Taxes, and delinquent Annual Maintenance Special Taxes billed off the County tax roll, shall be subject to an immediate 10% penalty plus interest charges of 1.5 % as of the first day of the month after the delinquency date and on the first day of each month thereafter. Any such delinquent Special Taxes shall, at the City's discretion, be placed on the next secured property tax roll. The amount placed on the roll shall include the 10% penalty and the interest charges through the following January 1. This shall not prevent the City from simultaneously pursing the delinquency by an action on a contract of guarantee against a third party who promised to pay the taxes, or from assigning such right of action to the property owner or other appropriate party.

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-337

RESOLUTION ACCEPTING THE 2016 GENERAL PLAN ANNUAL REPORT FOR SUBMISSION TO THE GOVERNOR'S OFFICE OF PLANNING AND RESEARCH AND TO THE CALIFORNIA DEPARTMENT OF HOUSING AND COMMUNITY DEVELOPMENT

WHEREAS, California Government Code Section 65400(a)(2) requires that local governments prepare an annual progress report regarding General Plan implementation, including matters related to meeting the applicable share of regional housing needs (California Government Code Section 65584), and

WHEREAS, on July 17, 2017, the City of Modesto Planning Commission voted to recommend that the Council of the City of Modesto accept the 2016 General Plan Annual Report for submission to the Governor's Office of Planning and Research and to the California Department of Housing and Community Development.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the 2016 General Plan Annual Report

BE IT FURTHER RESOLVED that the Clerk is hereby directed to submit the 2016 General Plan Annual Report to the Governor's Office of Planning and Research and to the California Department of Housing and Community Development.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-338

RESOLUTION AMENDING THE FISCAL YEAR 2016-2017 AND FISCAL YEAR 2017-2018 ANNUAL OPERATING AND CAPITAL IMPROVEMENT BUDGETS

WHEREAS, a financial analysis has been completed and it has been determined that a budget adjustment is required to the Annual and Capital Improvement Budgets of the City of Modesto for Fiscal Year 2016-17 and Fiscal Year 2017-18,

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves amending the Fiscal Year 2016-17 and Fiscal Year 2017-18 Annual Operating and Capital Improvement budgets as shown in **Exhibit A**, which is **attached** hereto and incorporated by reference herein.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to take the necessary steps to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following votes:

EXHIBIT A

FISCAL YEAR 2016-17

COMMUNITY & ECONOMIC DEVELOPMENT

A budget adjustment is necessary to recognize $963,723 of unbudgeted Special Assessment revenue in various Capital Facilities District Funds; North Beyer #2 CFD Fund-Capital, Coffee Claratina CFD Fund and Village One #2 CFD Fund.

A budget adjustment is necessary to recognize $512,000 of unbudgeted revenue from the State Department of Transportation in the Air Quality Facility Fees Fund, Fund 3430; and reduce the Construction account in the Capital Improvement Project #100882, Connect Modesto Junior College Bike Path to Virginia Corridor, in the amount of $100,000 based on an updated E-76 report.

HUMAN RESOURCES

A budget adjustment is necessary to appropriate $504,933 from the Worker's Compensation Fund, 5320, fund balance, to their discretionary expense budget for costs associated with claim payments in the amount of $489,807, and increase the Salary and Benefits budget for cost associated with payment of annual physical examinations in the amount of $15,126.

POLICE DEPARTMENT

On December 8, 2015 the Council of the City of Modesto adopted by Resolution #2015-461 a transfer in the amount of $1,455,316 from General Fund Reserves to the Special Fund-Capital Outlay Fund, Fund 3120, to establish Capital Improvement Project #100919, Radio Purchase for Modesto Police Department. A budget adjustment is necessary to close the radio project for the Police Department, and establish a transfer from the General Fund to the Special Fund for Capital Outlay, in the amount of $148,520, as this fund does not have reserves and all expenses surrounding this project have been incurred/encumbered.

PUBLIC WORKS

A budget adjustment is necessary to increase the FY 2016-17 10th Street JPA Allocation from various City funds for the assessment that was approved by the 10th Street JPA Board on June 6, 2016. At that time, the assessment included a $125,000 credit related to the board chambers upgrade and security enhancements. However, work on the board chambers project did not begin during the fiscal year and the credit will not be included. Once the chambers project begins, the total costs will be reviewed and a credit to the FY 17-18 assessment will be applied. Additionally, the City confirmed they will not be charged for secured roll tax this fiscal year which was previously included in the budget for $2,797. The increase of $122,201 has been split amongst a number of funds of which the breakdown can be seen below:

Fund Name	Fund	Increase
General Fund	0100	$ 68,283
Grants - CDBG Direct Program	1130	$ 2,573
Capital Improvement Support	1300	$ 10,811
Surface Transportation Fund	1700	$ 3,838
Infrastructure Financing Program Administration	3220	$ 3,602
Water Fund	4100	$ 15,118
Sewer Operations Fund	4210	$ 2,035

Bus Fixed Route Max Operations Fund	4540	$ 3,673
Solid Waste Fund	4891	$ 3,181
Mail Services ISF	5120	$ 313
Information Technology Fund	5230	$ 7,704
Insurance - Administration Fund	5310	$ 609
Employee Benefits Management Fund	5510	$ 461
	Total	**$ 122,201**

This adjustment will also increase/(decrease) the revenue and expenses in the 10th Street JPA Fund by the amounts below in the following accounts:

Account	Amount
5810-52310-42405 (City of Modesto Contribution)	$122,201
5810-52310-53505 (Intergovernmental Services – Other)	$ 24,998
5810-52310-54300 (Taxes and Assessments)	($ 2,797)

A budget adjustment is necessary to transfer $92,000 from Building Services Reserves to Cost Center 52120, Building Maintenance, for unanticipated legal expenses, a significant upsurge in electrical repairs and to balance the budget for Fiscal Year 2016-17.

A budget adjustment is necessary to establish a transfer in the amount of $16,110 from CDBG Direct Program Fleet Replacement Fund 1139 to Fleet Replacement Fund 5409 for purchases made in FY16/17: (1) Mid-size Sedan.

A budget adjustment is necessary to establish a transfer in the amount of $18,298 from Surface Transportation Fleet Replacement Fund 1709 to Fleet Replacement Fund 5409 for purchases made in FY16/17: (2) Concrete Grinder, (2) Concrete Push Truck Grinder.

A budget adjustment is necessary to establish a transfer in the amount of $42,172 from Water Fleet Replacement Fund 4109 to Fleet Replacement Fund 5409 for purchases made in FY16/17: (1) Trailer for Chlorine, (1) 3/4 Ton Utility Truck.

A budget adjustment is necessary to establish a transfer in the amount of $6,648 from Wastewater Fleet Replacement Fund 4219 to Fleet Replacement Fund 5409 for purchases made in FY16/17: (1) Loader with Claw Attachment.

A budget adjustment is necessary to establish a transfer in the amount of $14,218 from Solid Waste Fleet Replacement Fund 4899 to Fleet Replacement Fund 5409 for purchases made in FY16/17: (1) Mid-size Sedan.

A budget adjustment is necessary to establish a transfer in the amount of $14,974 from Mail Services ISF Fleet Replacement Fund 5129 to Fleet Replacement Fund 5409 for purchases made in FY16/17: (1) Sedan Compact Wagon.

A budget adjustment is necessary to establish a transfer in the amount of $198,543 from Fleet Equipment Replacement Fund 5410 to Fleet Replacement Fund 5409 for purchases made in FY16/17: (10) Investigation Sedan Vehicles, (2) Investigation SUV.

UTILITIES

A budget adjustment is necessary to appropriate $218,732 from the Wastewater PCE Mitigation Fund, 4212, fund balance, to their discretionary expense budget for Professional Services costs associated with the mitigation of Capital Improvement Project #100668, Waste Water PCE Mitigation.

FISCAL YEAR 2017-18

COMMUNITY & ECONOMIC DEVELOPMENT

A budget adjustment is necessary to recognize $254,000 of unbudgeted revenue from the State Department of Transportation in the Capital Grants – Streets CIP Fund, Fund 3160, and reallocate to Capital Improvement Project #100728, Right Turn Lane West Bound D Street, Construction, Contingency, Construction Administration and Engineering Design/Administration accounts.

A budget adjustment is necessary to recognize $260,000 of unbudgeted revenue from the State Department of Transportation in the Capital Grants – Streets CIP Fund, Fund 3160, and reallocate to Capital Improvement Project #100633, Right Turn Lane – Prescott & Plaza Parkway, Construction, Contingency, Construction Administration and Engineering Design/Administration accounts.

A budget adjustment is necessary to increase an existing transfer in the amount of $345,000 from the Bus Fixed Route Fund, Fund 4150, to the Capital Grants-CIP Fund, Fund 3160, due to an increase in construction costs associated with the South Bound Dale Road Bus Turnout Capital Improvement Project, #100727.

FIRE

A budget adjustment is necessary to clean-up the non-capital budget for Project 100960 (MFD-AMR Contract Revenue & Ot6her Misc EMS Revenue) to properly account for revenues that have been received since the establishment of this project. An increase in the revenue budget in the amount of $192,092 ($187,265 in account 43335 – American Medical Response Contract and $4,827 in account 47005 – Miscellaneous Revenue) is required to account for the additional revenue that has been received. In addition, expenditures in the amount of $192,092 need to be appropriated to give the department the ability to spend the funds received on future planned EMS-system radio communication systems, field equipment and training. The adjustment essentially accounts for the revenue received and then appropriates that revenue for expenditure in the amount of $192,092 in project 100960.

HUMAN RESOURCES

A budget adjustment is necessary to recognize savings achieved by paying the PERS Unfunded Accrued Liability (UAL) in a lump sum payment rather than monthly payments. As a result, the City of Modesto will save $491,262 across all funds. Below is a breakdown of how the savings will be recognized in each fund. Also, included in the figures is an increase to Building Services (Fund 5800) due to the TSP JPA (Fund 5810) budget which was adopted with half of the amount of PERS UAL since one of the two allocated positions was absorbed by the County.

Fund Name	Fund	Budget Increase/(Decrease)
General Fund	0100	$ (361,505)
Grants - CDGB Direct Program	1130	$ (1,647)
Capital Improvement Support	1300	$ (3,381)
Traffic Offender Fund	1610	$ (671)
Surface Transportation Fund	1700	$ (11,067)
Infrastructure Financing Program Administration	3220	$ (1,440)
Parking Fund	4000	$ (1,064)
Water Fund	4100	$ (30,092)
Sewer Operations Fund	4210	$ (35,630)
Airport Operating Fund	4310	$ (1,270)
Storm Drainage Fund	4480	$ (1,736)
Bus Fixed Route Max Operations Fund	4540	$ (5,045)
Community Center Operations Fund	4700	$ (1,279)
Compost Fund	4890	$ (1,918)
Solid Waste Fund	4891	$ (2,097)
Green Waste Fund	4892	$ (9,179)
Mail Services ISF Fund	5120	$ (240)
Information Technology Fund	5230	$ (9,085)
Insurance - Administration Fund	5310	$ (1,053)
Fleet Management Fund	5400	$ (5,390)
Employee Benefits Administration Fund	5520	$ (655)
P/R Building Services Fund	5800	$ 3,487
10th Street Place Building Services	5810	$ (4,971)
JPA Stanislaus Drug Enforcement Agency	6600	$ (4,334)
Grand Total		$ (491,262)

POLICE DEPARTMENT

A budget adjustment is necessary to recognize $231,173 in unbudgeted revenue in the Police Grants Fund, Fund 1342, and reallocate to discretionary accounts within Project #100901, 2016-17 Supplemental Law Enforcement Services Fund (SLESF).

PUBLIC WORKS

Effective July 1, 2017, the fleet maintenance operations within the Compost and Fleet Divisions merged into one division. Due to the merger, the Equipment Mechanic housed in Compost, Fund 4890, has moved to Fleet, Fund 5400. Moving this allocation from the Compost Division to the Fleet Division will result in cost savings to the Compost Division, and provide oversight and guidance to the Equipment Mechanic working on the Compost equipment. A budget adjustment is necessary to move the salary and benefits totaling $81,037 from the Compost Fund to the Fleet Fund.

A budget adjustment is necessary to appropriate $304,439 from Surface Transportation Reserves, Fund 1700, to Cost Center 53130, Streets Maintenance, and Cost Center 53142,

Curbs, Gutters and Sidewalks, discretionary accounts which were inadvertently not entered into the CGI budgeting software system.

A budget adjustment is necessary to recognize unbudgeted revenue in the amount of $517,500 for Capital Improvement Project #100884, Emergency Vehicle Pre-Emption, within Fund 3160, Capital Grants-Streets CIP Projects, as additional funding was recently awarded by the Department of Transportation (Caltrans), and reallocate to discretionary accounts within the project.

A budget adjustment is necessary to establish the revenue budget for aircraft taxes in the County Aircraft Tax Fund - 4330. The anticipated revenue for FY 2018 is $180,000 and will be budgeted in account #42301 – Intergov-County Contribution/Reimbursement.

A budget adjustment is necessary to increase the FY 2017-18 10th Street JPA Allocation from various City funds for the assessment that was approved by the 10th Street JPA Board on May 18, 2017, of which, the additional City's portion is $152,236. This assessment of $152,236 has been split amongst a number of funds of which the breakdown can be seen below:

Fund Name	**Fund**	**Increase**
General Fund	0100	$ 90,434
Grants - CDBG Direct Program	1130	$ 1,182
Capital Improvement Support	1300	$ 2,025
Surface Transportation Fund	1700	$ 4,781
Water Fund	4100	$ 21,575
Sewer Operations Fund	4210	$ 12,378
Bus Fixed Route Max Operations Fund	4540	$ 4,575
Solid Waste Fund	4891	$ 3,962
Mail Services ISF	5120	$ 390
Information Technology Fund	5230	$ 9,600
Insurance - Administration Fund	5310	$ 759
Employee Benefits Management Fund	5510	$ 575
	Total	**$ 152,236**

This adjustment will also increase the revenue and expenses in the 10th Street JPA Fund by the amounts below in the following accounts:

Account	Amount
5810-52310-42405 (City of Modesto Contribution)	$152,236
5810-52310-53505 (Intergovernmental Services – Other)	$152,236

A budget adjustment is necessary to recognize unbudgeted revenue in the amount of $159,000 for Capital Improvement Project #100720 – Traffic Signals 13 (Pres/Mt. Vrn) within Fund 3160, Capital Grants-Streets CIP Projects as additional funding was recently awarded by the Department of Transportation (Caltrans). And reallocate to discretionary accounts within the project.

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-339

RESOLUTION ACCEPTING DONATION OF 1919 SEAGRAVE PUMPER FROM MR. AND MRS. BILL SPIDELL AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE TO EXECUTE THE DONATION AGREEMENT

WHEREAS, in August of 1919, the City purchased a 1919 Seagrave pumper and placed it into service in downtown Modesto, and

WHEREAS, in 2001, Bill Spidell and his wife Alma found and purchased the pumper from a private party in Northern California to restore, and

WHEREAS, Mr. and Mrs. Spidell recognize the historical relevance to the City of Modesto and wish to donate the pumper to the Modesto Fire Department, and

WHEREAS, by accepting the donation of the 1919 Seagrave Pumper (Truck), the City agrees to following; a) store or display the Truck within the City, b) maintain the Truck in similar condition to the condition it was received and c) to not sell, donate or convey the Truck to any other individual or entity, and

WHEREAS, the pumper will be on display for public viewing at Fire Station 1, and

WHEREAS, the donation of the 1919 Seagrave Pumper will be used solely for the purposes of historical education and preservation by the City of Modesto and the Modesto Fire Department, and

WHEREAS, the estimated fair market value of the pumper is $128,500, and

WHEREAS, annual maintenance and repair costs are estimated at less than $2,500 and will be absorbed within existing operation budgets.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the donation of the 1919 Seagrave Pumper from Mr. and Mrs. Bill Spidell.

BE IT FURTHER RESOLVED, that the Interim City Manager, or his designee is hereby authorized to execute the donation agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-340

RESOLUTION AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO ISSUE PAYMENT TO PACIFIC GAS AND ELECTRIC (PG&E), SACRAMENTO, CA FOR EMERGENCY WORK PERFORMED ON THE STATE ROUTE 99 / PELANDALE AVENUE INTERCHANGE RECONSTRUCTION PROJECT, CONTRACT ID #1207145, FOR AN AMOUNT OF $56,179

WHEREAS, the State Route 99 / Pelandale Avenue Interchange Reconstruction Project is a project to increase safety, relieve congestion, and enhance traffic operations within the Interchange and along the adjacent streets, and

WHEREAS, State Route 99/Pelandale Avenue Intersection Reconstruction Project funds were programmed in accordance with California Department of Transportation's (Caltrans) Project Development Procedures Manual, and

WHEREAS, on March 4, 2016, the State Route 99/Pelandale Avenue Intersection Reconstruction Project encountered a break to the City's existing water main causing Pacific Gas & Electric (PG&E) to perform emergency work to repair an existing gas line, and

WHEREAS, on February 25, 2014, by Resolution No. 2014-72, City Council, authorized the City Engineer to issue changes in the construction contract with Teichert/MCM, a Joint Venture, Fowler, California via written change orders for the State Route 99 / Pelandale Avenue Interchange Reconstruction Project for an amount of all such change orders do not exceed 6% of the original contract, and

WHEREAS, on July 14, 2015, by Resolution No. 2015-249, City Council approved transferring authority from City Engineer to the Director of Public Works to issue changes in the construction contract via written change orders for the State Route

99/Pelandale Avenue Interchange Reconstruction Project, and

WHEREAS, on August 3, 2016, City Council, by Resolution 2016-322, increased the Public Works Director's authority to issue change orders to the construction contract with Teichert/MCM (a joint venture) only, and

WHEREAS, on April 25, 2017, City Council, by Resolution 2017-154, accepted the State Route 99 / Pelandale Avenue Interchange Reconstruction Project improvements as complete, and

WHEREAS, per Municipal Code 8-3.102 "Contracting Authority," the Public Works Director is unable to authorize payment to PG&E.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the Interim City Manager, or his designee, to issue payment to PG&E, Sacramento, CA for emergency work performed on the State Route 99 / Pelandale Avenue Interchange Reconstruction Project, contract ID #1207145, for an amount of $56,179.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-341

RESOLUTION APPROVING A FOURTH AMENDMENT TO THE AGREEMENT WITH SCS ENGINEERS, INC. FOR MITIGATION SITE WORK, MONITORING, AND REPORTING FOR THE CARPENTER ROAD LANDFILL IN ACCORDANCE WITH THE CENTRAL VALLEY REGIONAL WATER QUALITY CONTROL BOARD (CVRWQCB) COMPLIANCE ABATEMENT ORDER R5-2015-0700, IN AN AMOUNT NOT TO EXCEED $92,349 THROUGH DECEMBER 31, 2018, AND FOR A TOTAL AGREEMENT AMOUNT OF $924,349 FROM JUNE 2007 THROUGH DECEMBER 2018, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Modesto owned and operated the Carpenter Road Landfill from 1956 to 1968, and the landfill includes fill sites on both the east and west sides of Carpenter Road, along the Tuolumne River, and

WHEREAS, the City is required by State law to perform post closure landfill maintenance, monitoring, and reporting for the landfill site, and

WHEREAS, in December 2005, it appeared that methane gas levels at the landfill's Northern boundary exceeded the maximum limits, and the California Integrated Waste Management Board (CIWMB) required the City to determine the cause and develop a Mitigation and Monitoring Plan, and

WHEREAS, the Central Valley Regional Water Quality Control Board (CVRWQCB) subsequently required the City to assess the potential for groundwater impacts, and

WHEREAS, in June 2007 by Resolution No. 2007-341, the Council authorized a Professional Services Agreement with SCS Engineers, Inc. in an amount not to exceed $299,500 to assess the landfill and recommend corrective action, and

WHEREAS, after the initial site assessment, Resolution No. 2007-728 authorized a no-cost Letter Amendment to shift the focus of the work to installation of gas probes, design and installation of groundwater monitoring wells, and ongoing monitoring and reporting of methane gas and groundwater, and

WHEREAS, the assessment determined that migration of methane gas past the boundaries of the landfill was not a problem, but that a groundwater monitoring event determined that the landfill had experienced a "release" that could potentially have affected groundwater, and

WHEREAS, an engineering feasibility study had to be completed and the CVRWQCB required the City to submit a Corrective Action Plan (CAP), and

WHEREAS, in May 2009 by Resolution 2009-199, the Council approved a Second Amendment to the Agreement with SCS Engineers, Inc. to further evaluate the site, develop the CAP, and provide ongoing monitoring and reporting services in an amount not to exceed $242,000, and

WHEREAS, in November 2010, after conducting 12 hydro punch borings to sample groundwater and analyzing them for Volatile Organic Compounds (VOC's), SCS submitted the CAP to the CVRWQCB proposing to use an injection of a hydrogen releasing compound to remediate any groundwater impacts, and

WHEREAS, subsequently , the VOC concentrations began to consistently decline, and City staff and SCS Engineers, Inc. determined that the proposed CAP needed to be re-evaluated, and

WHEREAS, in August 2013 by Resolution No. 2013-277, the Council approved a Third Amendment to the Agreement with SCS Engineers, Inc. for ongoing monitoring,

lab analysis, compliance reports, corrective action monitoring and maintenance, and re-evaluating and implementing the CAP in a cost not to exceed $290,500, and

WHEREAS, in October 2014, a revised CAP and post closure maintenance plan was submitted to the CVRWQCB and in March 2015, the CVRWQCB issued the City a Cleanup and Abatement Order (CAO R5-2015-0700) requiring the City to clean close the Eastern Fill, move all the waste to the Western Fill, install a final cover atop the Western Fill, and construct a storm water retention basin, and

WHEREAS, in April 2015, SCS Engineers, Inc. submitted the plans and drawings to address the CAO and it was conditionally approved by the CVRWQCB in July 2016, with mitigation to be completed by October 2017, and

WHEREAS, the Central Valley experienced a significant wet winter at the end of 2016 and into the beginning of 2017, with the Tuolumne River above flood stage and not expected to completely recede until September or mid-October 2017, and

WHEREAS, the City petitioned the CVRWQCB in June 2017 for an extension to the CAO due to the groundwater elevation being higher than that of the waste to be excavated, and

WHEREAS, in mid-July the CVRWQCB approved the City's request to postpone the execution of the Clean Closure Work Plan with the condition that the approved background soil assessment would be completed and submitted to the water board by October 20, 2017 and the Final Construction and Completion Report for the CAO would be submitted no later than October 31, 2018, and

WHEREAS, the requested Fourth Amendment will complete these tasks and carry the project through December 31, 2018, and

WHEREAS, funds are collected in the garbage rate for the mitigation project, estimated to cost $2.6 million, and to date the Carpenter Road Landfill Fund (Fund 4893-56016) has $1.7 million.

NOW THEREFORE BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Fourth Amendment to the Agreement with SCS Engineers, Inc. for mitigation site work, monitoring, and reporting for the Carpenter Road Landfill in accordance with the Central Valley Regional Water Quality Control Board Compliance Abatement Order R5-2015-0700, in an amount not to exceed $92,349 through December 31, 2018, and for a total Agreement amount of $924,349 from June 2007 through December 2018.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the Fourth Amendment to the Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-342

RESOLUTION APPROVING THE AWARD OF BID FOR BIO-SOLIDS REMOVAL AND LAND APPLICATION SERVICES TO JIM BRISCO ENTERPRISES, INC., ATWATER, CA, FOR A TWO-YEAR AGREEMENT WITH THREE ONE-YEAR EXTENSION OPTIONS, FOR AN ESTIMATED ANNUAL COST OF $145,600, OR A TOTAL OF UP TO $728,000 OVER FIVE YEARS, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO ISSUE A PURCHASE AGREEMENT

WHEREAS, during the primary treatment process at the City's Sutter Wastewater Treatment Plant, solids are removed from the wastewater, and

WHEREAS, the solids are separated at the clarifier by removing Fats, Oil and Grease from the top and sludge from the bottom and sent to the digester where it is biologically broken down; the digested sludge is then pumped to the drying beds to be dried out, and

WHEREAS, the City uses an outside bidder to remove the dried sludge (bio-solids) from the drying beds which are then transported to the City's Jennings Wastewater Treatment Plant for land application to the City's ranch, and

WHEREAS, this process is regulated by the City's National Pollutant Discharge Elimination System Permit, and

WHEREAS, the City Manager's Office authorized the Purchasing Division to issue a Request for Bids (RFB) for Bio-Solids Removal and Land Application on May 11, 2017, and

WHEREAS, on July 25, 2017, the Purchasing Division issued RFB No. 1718-01 for the purchase of Bio-Solids Removal and Land Application on the City's website, and

WHEREAS, prospective bidders were notified online of the bid opportunity and eleven companies choose to download the RFB document, none of which was local companies, and

WHEREAS, five companies were present at the mandatory site visit, and

WHEREAS, on August 15, 2017, bids were formally opened in the City Clerk's Office with two companies choosing to respond and all provided responsive and responsible bids, and

WHEREAS, based on providing the overall lowest responsive and responsible bid, staff recommends the award of bid for Bio-Solids Removal and Land Application to Jim Brisco Enterprises, Inc., Atwater, CA, at an annual cost of $145,600, or a total of up to $728,000 over five years, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid therefore the award of bid for the furnishing of Bio-Solids Removal and Land Application conforms to Modesto Municipal Code Section 8-3.203.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the award of bid for the furnishing of Bio-Solids Removal and Land Application to Jim Brisco Enterprises, Inc., Atwater, CA, for a two-year agreement with three one-year extension options for an estimated annual cost of $145,600, or a total of up to $728,000 over five years.

BE IT FURTHER RESOLVED, that the Interim City Manager or his designee is hereby authorized to execute the agreement in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-343

RESOLUTION APPROVING THE AWARD OF BID FOR THE PURCHASE OF SODIUM HYPOCHLORITE – LIQUID CHLORINE TO OLIN ALKALI, TRACY, CA, FOR A TWO-YEAR AGREEMENT WITH THREE ONE-YEAR EXTENSION OPTIONS AT THE SOLE DISCRETION OF THE CITY, FOR AN INITIAL ANNUAL COST OF $39,397, OR A TOTAL OF UP TO $225,000 OVER FIVE YEARS, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO ISSUE A PURCHASING AGREEMENT

WHEREAS, the Interim City Manager authorizes the Purchasing Manager to issue formal Request for Bids (RFB) for the purchase of sodium hypochlorite – liquid chlorine, and

WHEREAS, on February 21, 2017, the Purchasing Division issued RFB No. 1617-38 for the purchase of Sodium Hypochlorite-Liquid Chlorine on the City's website under the commodity codes for chemicals and solvents commercial (in bulk), and water and wastewater treatment chemicals, and

WHEREAS, on May 9, 2017, bids were formally opened in the City Clerk's Office. Three (3) companies chose to respond, and only one was a local vendor. All companies provided responsive and responsible bids, and

WHEREAS, based on the bids received, City staff recommends the award of bid for sodium hypochlorite – liquid chlorine to Olin Alkali, Tracy, CA, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid. The award of bid for the purchase of sodium hypochlorite – liquid chlorine to Olin Alkali, Tracy, CA, conforms to the Modesto Municipal Code, and

WHEREAS, the cost for these services will be covered by the Water funds through existing budget in the following cost center and project: 4100-45050-52190 Chemical and Lab Supplies

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the award of bid for Sodium Hypochlorite – Liquid Chlorine to Olin Alkali, Tracy, CA.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to issue a purchasing agreement for an initial annual cost of $39,397, or a total of up to $225,000 over five years.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-344

RESOLUTION APPROVING THE PLANS AND SPECIFICATIONS FOR THE AIRPORT HANGAR 1S ROOF REPLACMENET PROJECT, ACCEPTING THE BID, AND AWARDING A CONSTRUCTION CONTRACT TO BEST CONTRACTING SERVICES, INC. OF GARDENA, CA, IN THE AMOUNT OF $353,631, AND AUTHORIZING THE INTERIM CITY MANAGER, OR DESIGNEE, TO EXECUTE THE CONTRACT

WHEREAS, Contract Documents have been prepared for the Airport Hangar 1-S Roof Replacement Project, and the Interim City Manager authorized City staff to solicit the Project for bids, and

WHEREAS, City staff solicited the Project in conformance of Section 1307 and MMC 8-3.403 of the City's Charter, and

WHEREAS, the bids received for the Airport Hangar 1-S Roof Replacement Project were publicly opened at 11:00 a.m. on August 15, 2017, and

WHEREAS, the Interim City Manager recommends the bid of $353,631.00 received from Best Contracting Services, Inc., of Gardena, CA, be accepted as the lowest responsible bidder and responsive bid and the contract be awarded to Best Contracting Services, Inc.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Plans and Specifications for the Airport Hangar 1-S Roof Replacement Project, accepts the bid and awards the construction contract to Best Contracting Services, Inc., of Gardena, Ca, in the amount of $353,631.00.

BE IT FURTHER RESOLVED that the Interim City Manager, or designee, is hereby authorized to execute the contract in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold
NOES:	Councilmembers:	None

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-345

RESOLUTION AMENDING THE FISCAL YEAR 2017-18 CAPITAL IMPROVEMENT PROGRAM BUDGET IN THE AMOUNT OF $454,955 OF WHICH $92,557 WILL BE FROM THE EXISTING ENCUMBRANCE AND THE REMAINING FROM COUNTY AIRCRAFT TAX FUND RESERVES TO FULLY FUND THE CONSTRUCTION, CONTINGENCY, CONSTRUCTION ADMINISTRATION, AND DESIGN SUPPORT DURING CONSTRUCTION FOR THE AIRPORT HANGAR 1S ROOF REPLACEMENT PROJECT #100985

WHEREAS, certain budgetary transactions are necessary in the amount of **$454,955**, in order to fund construction, contingency, construction administration, design support during construction for the Airport Hangar 1-S Roof Replacement Project, and

WHEREAS, the Fiscal Year 2017-2018 Capital Improvement Program Budget must be amended as shown in **Exhibit A**, which is incorporated by reference herein and **attached** hereto.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the amendment of the Fiscal Year 2017-2018 Capital Improvement Program Budget as shown in **Exhibit A**, **attached** hereto.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

Exhibit A

Due to construction costs being higher than initially budgeted for the project, line item increases/decreases are necessary for CIP Account #100985 "Airport Hangar 1S Roof Replacement", and the total project costs need to be increased by $431,430. This would be done by adjusting Construction by $353,631, Construction Administration by $35,363, Contingency by $35,363, and Eng/Design/Admin by $7,073.

To fund the above account, $454,955 will be transferred from County Aircraft Tax Fund Reserves into CIP Project 100985 for the Airport Hangar 1S Roof Replacement Project.

RESOLUTION AWARDING NON-EXCLUSIVE NON-CONSENSUAL FRANCHISE TOWING SERVICE CONTRACTS TO TEN (10) TOWING COMPANIES PURSUANT TO MODESTO MUNICIPAL CODE SECTIONS 11-2.01 ET SEQ, AND AUTHORIZING THE INTERIM CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE CONTRACTS

WHEREAS, in April 2014, City Council awarded Non-Exclusive Non-Consensual Franchise Towing Services contracts to sixteen (16) applicants, and

WHEREAS, this contract was due to expire on April 13, 2017, and

WHEREAS, on April 4, 2017, City Council approved a 6-month extension of the Non-Exclusive Non-Consensual Franchise Towing Services contract to allow staff time to complete a new Request for Application process, and

WHEREAS, on May 23, 2017, the Purchasing Manager solicited Request for Applications (RFA) No. 1617-37, for City generated Non-Exclusive Non-Consensual Franchise Towing Services, and

WHEREAS, on June 22, 2017, applications were opened in the City Clerk's office, and

WHEREAS, a total of eleven (11) applications were received, and eight (8) met the requirements of the application process with three (3) pending completion of the required background and/or Department of Justice fingerprint process, and

WHEREAS, on August 8, 2017, City Council, by motion, unanimously approved staff's recommendation for award of City of Modesto Non-Exclusive Non-Consensual Franchise Towing Services to the eleven (11) applicants listed in **Attachment A**, pending completion of the required background and/or Department of Justice fingerprint process,

as noted on the Applicant List with an asterisk, and referring staff's recommendation for award of contracts to the City Manager for recommendation and report, and

WHEREAS, on August 8, 2017, City Council, by Resolution No. 2017-320, accepted the Interim City Manager's recommendation to award Non-Exclusive Non-Consensual Franchise Towing Services contracts and schedule a public hearing in accordance with Modesto Municipal Code Section 11-2.01 et seq., and

WHEREAS, prior to the public hearing, one applicant did not complete the background/DOJ fingerprinting process and were removed from the recommendation award list, leaving ten (10) applicants on the approved tow list who had passed all required background/DOJ fingerprint requirements, and

WHEREAS, the anticipated start date of the towing contracts is September 6, 2017.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby awards Non-Exclusive Non-Consensual Franchise Towing Services contracts to the ten (10) towing companies listed in **Attachment B** to this Resolution.

BE IT FURTHER RESOLVED that the Interim City Manager, or his designee, is hereby authorized to execute the contracts, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2017-347

Print

RESOLUTION CERTIFYING THE ENVIRONMENTAL IMPACT REPORT FOR THE DEL RIO TANK AND WELLS PROJECT (SCH # 2015072055) IN ACCORDANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; ALONG WITH MAKING CERTAIN FINDINGS REGARDING SIGNIFICANT IMPACTS, FINDINGS SUPPORTING REJECTION OF ALTERNATIVES, ADOPTING A STATEMENT OF OVERRIDING CONSIDERATIONS, AND ADOPTING A MITIGATION MONITORING AND REPORTING PROGRAM, AND APPROVING THE DEL RIO TANK AND WELLS PROJECT

WHEREAS, the City's Utilities Department ("City") on July 21, 2015, published a Notice of Preparation for the Del Rio Tank and Wells Project, which identified potentially significant environmental impacts attributable to the improvements included in the proposed project, on which the City determined that an Environmental Impact Report ("EIR") was required, and

WHEREAS. the Del Rio Tank and Wells Project is fully described in the Project Description Chapter of the EIR and includes the construction and operation of a new storage tank, pump station, new well, a replacement well, and associated distribution facilities at two sites, Site A (southeast of the intersection of Ladd Road and St. John Road on APNs 004-077-018 and 004-077-019) and Site B (the northwest corner of McHenry Avenue and Stewart Road on the southeastern-most portion of APN 004-102-003). The Proposed Project would develop a total of approximately 4.4 acres (approximately 190,000 square feet). The City intends to decommission one of its Del Rio water system wells (Well 271) when the new replacement well is brought online. These activities are collectively referred to herein as the "Proposed Project" or "Project", and;

WHEREAS, the City published and distributed a Draft EIR dated November, 2016 for the Del Rio Tank and Wells Project (SCH#2015072055) for public comment on November 7, 2016, in accordance with Section 15087 of the California Environmental Quality Act ("CEQA Guidelines"), and

WHEREAS, the Draft EIR was available for public comment for a period of 45 days as required by Section 21091 of CEQA, the close of the public comment period being December 22, 2016, and

WHEREAS, during the 45-day public comment period the City received ten letters commenting on the Draft EIR, and

WHEREAS, the City prepared written responses to all written comments received on the Draft EIR, said responses being contained in a Final EIR for the Del Rio Tank and Wells Project (SCH#2015072055) ("Final EIR") prepared pursuant to Section 15088 of the CEQA Guidelines. The Draft and Final EIR are collectively referred to herein as the "EIR", and

WHEREAS, the Final EIR was published and distributed on July 12, 2017, and consists of the Draft EIR, a list of commenter's, copies of written comments received, and responses to those comments that raise environmental issues, revisions to the text of the Draft EIR, as required by Section 15132 of the CEQA Guidelines, and

WHEREAS, CEQA requires that, in connection with the approval of a project for which an EIR has been prepared which identifies one or more significant environmental effects the lead agency make certain findings regarding those effects, and

WHEREAS, the City Council has received and considered the EIR that analyzed the potential environmental effects of the proposed Project.

NOW, THEREFORE BE IT RESOLVED by the City Council that it hereby has reviewed and analyzed the EIR and other information in the record, and has taken such other actions as are necessary and appropriate to make the following findings in respect to the EIR, and makes said findings:

1. That the EIR has been completed in compliance with CEQA; that the City Council has reviewed and analyzed the EIR and other information in the record and has considered the information contained therein, including the written and oral comments received at the public hearings on the EIR and the Project, prior to acting upon or approving the Project; and that the EIR represents the independent judgment of the City of Modesto; and

2. That the Findings and recommendations set forth in **Exhibit A, attached** hereto and incorporated herein by reference, are made by the City Council as the City's findings under the California Environmental Quality Act ("CEQA") (Pub. Resources Code § 21000 et seq.) and the CEQA Guidelines (Cal. Code Regs., title 14 § 15000 et seq.) relating to the Project. The Findings provide the written analysis and conclusions of the City Council regarding the Project's environmental impacts and mitigation measures to the Project; and

3. That pursuant to Public Resources Code Section 21081 and CEQA Guidelines Section 15093, the City Council of Modesto adopts and makes the following statement of overriding considerations regarding the remaining unavoidable impacts of the Project and the anticipated economic, social and other benefits of the Project.

   a. Significant Unavoidable Impacts

      With respect to the foregoing findings, as set forth in **Exhibit A**, and in recognition of those facts which are included in the record, the City has determined the following:

      i. that the Project will contribute to significant and unavoidable cumulative impacts to Air Quality, Climate Change, and Groundwater, as described in **Exhibit B, attached** hereto and incorporated herein by reference.

   These impacts cannot be avoided or substantially reduced by feasible changes, alterations or mitigations to the Project, other than the changes, alterations or mitigations already adopted.

b. Overriding Considerations

The City Council specifically adopts and makes this Statement of Overriding Considerations that this Project includes all feasible measures that would eliminate or substantially lessen the significant impacts of the Project on the environment, and that the remaining significant, unavoidable impacts of the Project are acceptable in light of the environmental, economic, social, and other considerations set forth herein because the benefits of the Project outweigh the significant and adverse impacts of the Project. The City Council finds that each of the overriding considerations set forth below, and each of the overriding considerations set forth in **Exhibit B**, constitutes a separate and independent ground for finding that the benefits of the Project outweigh its significant adverse environmental impacts and sets forth an overriding consideration warranting approval of the Project. These matters are supported by evidence in the record.

c. Benefits of the Proposed Project

The City Council has considered the EIR, the public record of proceedings on the proposed Project and other written materials presented to the City as well as oral and written testimony at all public hearings related to the Project, and does hereby determine that implementation of the Project as specifically provided in the Project documents would result in the substantial public benefits set forth below and in **Exhibit B**.

i. The Proposed Project will correct existing deficiencies in the Del Rio water system to meet design pressure and volume storage requirements identified in the City of Modesto 2010 Water System Engineer's Report;

ii. Ensure sufficient system pressure to provide firefighting flow capacity; and

iii. Improve water system operational flexibility and reliability

The City Council has weighed the benefits of the proposed Project against its unavoidable environmental risks and adverse environmental effects identified in the EIR and hereby determines that any one of those benefits outweigh the risks and adverse environmental effects and, therefore, further determines that these risks and adverse environmental effects are acceptable.

4. That the City Council finds that the EIR describes a range of reasonable alternatives to the project. However, the City Council declines to adopt any of the alternatives identified in the EIR for the reasons set forth in **Exhibit B** because the alternatives are infeasible based on specific economic, legal, social, technological,

or other considerations, fail to meet the Project objectives and/or would not avoid or substantially lessen the significant impacts of the project. The City Council finds and determines that these significant and unavoidable adverse impacts are acceptable and that the Project may be approved despite these impacts for the reasons specified in the Statement of Overriding Considerations. The City Council further finds that there are no additional feasible alternatives that the City Council could adopt at this time that would reduce the impacts summarized in **Exhibit B** to a less than significant level.

5. The City Council does hereby designate the Director of Utilities Department of the City of Modesto, at his office at 1010 Tenth Street, Modesto, California 95354, as the custodian of documents and the record of proceedings on which the decision is based; and

6. The City Council does hereby make the foregoing findings with respect to the significant effects on the environment of such Project, as identified in the EIR, with the stipulations that all information in these findings is intended as a summary of the full administrative record supporting the EIR, which full administrative record should be consulted for the full details supporting these findings, and that any mitigation measures and/or alternatives that were suggested by commenter's to the Draft EIR and were not adopted as part of the EIR are hereby expressly rejected for the reasons stated in the findings and elsewhere in the record, including the EIR.

7. In compliance with the California Environmental Quality Act (CEQA Guidelines Section 15097), if the City Council has made findings required under paragraph (1) of subdivision (a) of Section 15091 as set forth in **Exhibit B**, where mitigation measures are required to avoid, substantially lessen, or reduce to a less-than-significant level the environmental effects of certain elements of the Project, as identified in the EIR, the lead agency must adopt a Mitigation Monitoring and Reporting Program to ensure that the Project mitigation measures identified in the EIR are implemented and the party responsible for their implementation is identified.

BE IT FURTHER RESOLVED, by the City Council that it hereby certifies the Environmental Impact Report for the Del Rio Tank and Wells Project (SCH#2015072055), **attached** hereto as **Exhibit C1, C2 & C3;** adopts the associated Mitigation Monitoring and Reporting Program, **attached** hereto as **Exhibit D;**

BE IT FURTHER RESOLVED by the City Council that it hereby approves the Del Rio Tank and Wells Project and directs staff to file a Notice of Determination.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of September, 2017, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold
NOES:	Councilmembers:	None

EXHIBIT "A"

STATEMENT OF FINDINGS OF SIGNIFICANT IMPACTS

STATEMENT OF FINDINGS OF SIGNIFICANT IMPACTS AND REJECTION OF ALTERNATIVES

Pursuant to Public Resources Code Section 21081 and Section 15091 of the State CEQA Guidelines (14 California Code of Regulations 15000, et seq.), the City of Modesto cannot approve a project for which an Environmental Impact Report (EIR) has been certified which identifies significant effects on the environment unless it adopts findings with respect to each significant effect. Prior to approving the project, the City of Modesto (City) must also find that there are specific considerations that make infeasible the project alternatives identified in the EIR.

In Section A below, the City will make the one or more of the following finding for each of the significant effects identified in the EIR, pursuant to Section 15091 of the State CEQA Guidelines:

1. Changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.
2. Such changes or alterations are within the responsibility of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.
3. Specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures identified in the EIR.

In Section B below, the City will make the following finding regarding each of the alternatives identified in the EIR:

> The City will specify one or more of the following grounds for rejecting an alternative: (1) specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make the alternative infeasible; (2) the alternative does not meet the project objectives; and/or (3) the alternative will not avoid or substantially lessen the significant environmental effects of the Project.

SECTION A. FINDINGS REGARDING SIGNIFICANT IMPACTS

AESTHETICS

Impact AES-1: Substantial Degradation of the Visual Character or Quality of the Site and its Surroundings from Project Construction

Finding:

Overall construction is expected to last approximately 15 months. Throughout this period, construction activities at Sites A and B, pipeline installation work along St. John Road, and materials and equipment in staging areas would be visible from St. John Road, Ladd Road, and McHenry Avenue. Nearby residents and any pedestrians or bicyclists using these public roads would have views of the work areas throughout the 15-month construction period. While these views would be primarily limited to adjacent residents and recreationists and would not affect any designated scenic resources, the visual character of the two sites and the surrounding areas would be substantially degraded during the construction period. While CEQA does not consider impacts on private views to be significant, given that publicly accessible views from nearby roads would be temporarily degraded, this impact is considered potentially significant.

Implementation of **Mitigation Measures AES-1 (Locate Staging Areas Away from Public Areas) and AES-2 (Screen Staging and Construction Areas),** which have been modified from mitigation measures identified in the Program EIR, would reduce this impact to a **less-than-significant** level.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

The potentially significant effects listed above can be reduced to a less-than-significant level by incorporating the following mitigation measures identified in the EIR:

Mitigation Measure AES-1: Locate Staging Areas Away from Public Areas

Construction staging areas for equipment, personal vehicle parking, and material storage shall be sited as far as possible from residences, major roadways, and public areas. The City contract specifications shall require that staging areas be identified in the documents prepared by construction contractors and subject to approval by the City. The City shall not approve staging areas that are not sited as described above.

Mitigation Measure AES-2: Screen Staging and Construction Areas

The construction contract shall specify that staging areas be located where opportunities for screening with existing topography and vegetation will be maximized. Security fencing placed around staging and construction areas shall include slats or other screening sufficient to hide the area from the passing public. Screens used for this purpose shall be of an earth tone or other appropriate neutral color.

AIR QUALITY

Impact AIR-7: Cumulative Impact on Air Quality

Finding:

The SJVAB is currently designated as a nonattainment area for federal and state ozone and PM2.5 standards, and state PM10 standards. Past, present, and probable future projects would have a significant cumulative impact on air quality in the project area. No single project would be sufficient in size, by itself, to result in nonattainment of the regional air quality standards. Construction of the Proposed Project would result in emissions of ozone precursors (ROG and NOX), PM2.5, and PM10 below the significance thresholds for project-level impacts established by SJVAPCD. The Program EIR acknowledged that cumulative impacts of construction-related emissions of PM10 and ozone precursors would be significant and unavoidable, and the Proposed Project would contribute to this impact, albeit minimally. Although, given the low emissions, short duration, and intermittent operation during construction, SJVAPCD thresholds indicate that the level of air pollutants emitted by the Proposed Project would not cause any new violations, the Proposed Project could contribute to an existing violation when combined with other projects in the area. Therefore, the Proposed Project's contribution to construction-related emissions would be cumulatively considerable and this impact would be **significant and unavoidable.**

Operation of the Proposed Project's standby emergency generators and maintenance-related vehicle trips would result in a net increase in emissions of ROG, NOX, and PM10. Given that these emissions are estimated to be substantially lower than SJVAPCD's thresholds of significance, and would be consistent with existing growth plans and new source review permits, the emissions are unlikely to contribute to any new violations or contribute substantially to any air quality violation. The standby emergency generators would be used for a limited amount of time (up to 1 hour a day for 20 days per year), and health impacts associated with TACs would be below the thresholds of significance as required during permitting. Because impacts from TACs are localized, the thresholds of significance for TACs have been established at such a conservative level, and the risks would be below this level, they are not considered to be cumulatively significant. Sources permitted consistent with requirements of SJVAPCD's New Source Review (e.g., emergency generators) are considered to not be individually significant and are not cumulatively significant. While the non-permitted operational emissions are minimal from occasional maintenance vehicle trips, the vehicle trips may combine with other increased trips in the area and other Program activities to result in an increase in pollutants and was concluded as such in the Program EIR. Given the low emissions and intermittent operation of the generators and maintenance trips, SJVAPCD thresholds indicate that the level of air pollutants emitted by the Proposed Project would not cause any new violations. In addition, the Project will be subject to Mitigation Measures AIR-1, AIR-2 and AIR-3 in the Program EIR which will reduce Project emissions. The Proposed Project could, however, contribute to an existing violation when combined with other projects in the area. Therefore, the incremental contribution of the Proposed Project would be cumulatively considerable, and this impact would be **significant and unavoidable.**

Because some level of air emissions associated with the project are unavoidable, the City finds that due to specific technological and financial considerations, no feasible additional mitigation measures beyond those included for the Project, exist which could avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

The project sites are located in the SJVAB, where air quality conditions are regulated by SJVAPCD. The SJVAPCD assumes air emissions to be cumulatively significant if, with mitigation,

there remains any increase in a pollutant for which the SJVAB is classified as a non-attainment area. The SJVAB is in non-attainment for ozone and PM_{10}.

Operation of the equipment at proposed improvements is not anticipated to result in an increase in ozone precursor (NO_x) emissions above the SJVAPCD thresholds of 10 tons per year, as the majority of the equipment is powered by electric engines. Operation of emergency generators would result in a net increase in emissions of ROG, NO_x and PM_{10}. Emissions of PM_{10}, ROG, and NO_x associated with operations will be reduced by the use of electric engines and emission control devices for back-up generators and Mitigation Measure AIR-3 (see above). Back-up generators must, by their nature, provide sufficient power to operate the wells and other components of the water system independent of the power grid at times when electric power is not available. It is infeasible to design a system without back-up generators because the system would not operate when electrical power is interrupted. This would lead to insufficient supply to meet customer needs and insufficient supply and pressure to serve fire fighting needs.

BIOLOGICAL RESOURCES

Impact BIO-1: Construction-related Loss of Occupied Burrowing Owl Habitat

Finding:

Annual grasslands in the study area provide potentially suitable habitat for Burrowing Owl. Although some burrows were observed at Site A, no evidence of use by Burrowing Owls (e.g., whitewash, feathers) was observed; however, there is the potential for this species to occupy the site or for individuals to occur as transients. No burrows were identified at Site B, so this site is not anticipated to support Burrowing Owls. If Burrowing Owls are present at or within 250 feet of Site A, construction during the breeding season could result in the incidental loss of eggs or nestlings, or otherwise lead to nest abandonment. Raptors, including owls and their nests, are protected under both federal and state laws and regulations, including the MBTA and Fish and Game Code Section 3503.5. The loss, directly or indirectly through nest abandonment or reproductive suppression, of occupied Burrowing Owl habitat (or habitat known to have been occupied by owls during the nesting season within the past 3 years) or reductions in the number of this rare species within Stanislaus County would constitute a significant impact.

The Program EIR identified impacts on Burrowing Owl as potentially significant and identified Mitigation Measure BIO-8: *Avoid and Protect Burrowing Owls* and Mitigation Measure BIO-9: *Compensate for Loss of Burrowing Owl Habitat* to reduce impacts to Burrowing Owls to less than significant. These mitigation measures have been modified to reflect site conditions for the Proposed Project. With implementation of **Mitigation Measures BIO-1 (Avoid and Protect Burrowing Owls at Site A)** and **BIO-2 (Compensate for Loss of Burrowing Owl Habitat at Site A),** the potential for loss of Burrowing Owls would be **less than significant.**

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating the following mitigation measures, identified in the Project EIR, will reduce these potentially significant effects to less-than significant levels:

Mitigation Measure BIO-1: Avoid and Protect Burrowing Owls at Site A

Because some burrows that could be used by Burrowing Owls were noted during field surveys at Site A, and in conformance with federal and state regulations regarding the protection of raptors, the City shall hire a qualified biologist to conduct a preconstruction survey(s) for Burrowing Owls within a 250-foot buffer around the project site, in conformance with accordance with protocols established in the Staff Report on Burrowing Owl Mitigation (CDFG 2012 or current version), and prior to the start of construction. If no Burrowing Owls are located during these surveys, no additional action is warranted. However, if breeding or resident owls are located on or within 250 feet of Site A, the following measures shall be implemented.

- No Burrowing Owls will be evicted from burrows during the nesting season (February 1 through August 31). Eviction outside the nesting season may be permitted following evaluation of eviction plans and receipt of formal written approval from CDFW authorizing the eviction.

- A 250-foot buffer, within which no new activity is permissible, shall be maintained between project activities and nesting Burrowing Owls. This protected area will remain in effect until August 31 or, at CDFW's discretion (based upon monitoring evidence), until the young owls are foraging independently.

Mitigation Measure BIO-2: Compensate for Loss of Burrowing Owl Habitat at Site A

If a preconstruction survey finds that Burrowing Owls occupy Site A, and avoiding construction in occupied areas is not feasible, then the City shall implement habitat compensation on off-site mitigation lands, or shall purchase mitigation bank credits from a mitigation bank approved by CDFW. If mitigation credits are not purchased, habitat management lands comprising existing Burrowing Owl foraging and breeding habitat will be acquired and preserved. An area of 6.5 acres (the amount of land found to be necessary to sustain a pair or an individual owl) will be secured for each pair of owls or for an individual, in the case of an odd number of birds. Relocation of owls shall only be implemented during the non-breeding season. As part of an agreement with CDFW, the City shall provide CDFW with security for the performance of its mitigation duties in the form of funds that will:

- allow for the acquisition and preservation of 6.5 acres of habitat management lands for each pair of owls or unpaired resident single owl;

- provide initial protection and enhancement activities on the habitat management lands, potentially including such measures as fencing, trash cleanup, artificial burrow creation, grazing or mowing, and any habitat restoration deemed necessary by CDFW;

- establish an endowment for the long-term management of the habitat management lands; and

- reimburse CDFW for reasonable expenses incurred as a result of the approval and implementation of this agreement.

Impact BIO-2: Construction-Related Loss of Swainson's Hawk Foraging Habitat

Finding:

Swainson's Hawks are known to nest within 1.1 miles of Site B (within 1.8 miles of Site A) (CDFW 2016). The fallow field at Site A and the grassland at Site B provide potentially suitable foraging habitat for Swainson's Hawks. Project-related construction would result in the loss of up to 1.3 acres of potentially suitable foraging habitat at Site A and 0.1 acre of potentially suitable foraging habitat at Site B, resulting in a significant adverse effect on this state-designated threatened species through habitat modification.

The Program EIR identified loss of Swainson's Hawk foraging habitat as potentially significant and identified Mitigation Measure BIO-10: *Compensate for Loss of Swainson's Hawk Foraging Habitat* to reduce impacts to less than significant. This mitigation measure has been modified to reflect site condition for the Proposed Project. Implementation of **Mitigation Measure BIO-3 (Compensate for Loss of Swainson's Hawk Foraging Habitat)** would reduce this impact to a level that is **less than significant**.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating the following mitigation measure identified in the EIR:

Mitigation Measure BIO-3: Compensate for Loss of Swainson's Hawk Foraging Habitat
To mitigate for the loss of potential Swainson's Hawk foraging habitat, the City shall provide off-site habitat management lands, as described in the CDFW protocol for the mitigation of impacts on Swainson's hawks in the Central Valley (CDFG 1994), or by purchasing credits at a CDFW-approved Swainson's Hawk foraging habitat mitigation bank that covers the Proposed Project area, such as the Dutchman Creek Conservation Bank.

The City shall determine the final acreage of off-site management lands or mitigation bank credits to be provided based on the distance between the project area and the nearest active nest site, as stated in the CDFW protocol (CDFG 1994). Mitigation credits would follow the same ratio guidelines as off-site management lands. Prior to the grading of any site with potential foraging habitat, the City shall hire a qualified biologist to conduct protocol-level surveys to determine the location of the nearest active nest. Based on these surveys, the City shall compensate for losses in compliance with the protocol for the mitigation of impacts on Swainson's hawks in the Central Valley (CDFG 1994), as follows:

Projects within one mile of an active nest tree shall provide:

- One acre of Habitat Management land (at least 10% of the Habitat Management land requirements shall be met by fee title acquisition or a conservation easement allowing for the active management of the habitat, with the remaining 90% of the Habitat Management lands protected by a conservation easement [acceptable to the DFG] on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's Hawk) for each acre of development authorized (1:1 ratio); or

- One-half acre of Habitat Management land (all of the Habitat Management land requirements shall be met by fee title acquisition or a conservation easement [acceptable to the DFG] which allows for the active management of the habitat for prey production on the Habitat Management lands) for each acre of development authorized (0.5:1 ratio).

Projects within 5 miles of an active nest tree but greater than 1 mile from the nest tree shall provide 0.75 acres of Habitat Management land for each acre of urban development authorized (0.75:1 ratio). All Habitat Management lands protected under this requirement may be protected through fee title acquisition or conservation easement on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's Hawks.

Projects within 10 miles of an active nest tree but greater than 5 miles from an active nest tree shall provide 0.5 acres of Habitat Management land for each acre of urban development authorized (0.5:1 ratio). All Habitat Management lands protected under this requirement may be protected through fee title acquisition or conservation easement (acceptable to the DFG) on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's Hawks.

Management Authorization holders/project sponsors shall provide for the long-term management of the habitat management lands by funding a management endowment (the interest on which shall be used for managing the habitat management lands). If mitigation credits are purchased, long term management would be the responsibility of the mitigation bank.

Impact BIO-3: Construction-Related Impacts on Nesting Swainson's Hawks

Finding:

Two CNDDB occurrences of Swainson's Hawk are known within 5 miles of the study area (CDFW 2016). Mature trees within 0.5 mile of the study area provide potentially suitable nesting habitat for Swainson's Hawk. Construction activities occurring within 1 mile of an active nest could result in sufficient disturbance to cause Swainson's hawk breeding pairs to abandon their nest or could otherwise harm eggs or nestlings. Because Swainson's Hawk is a state-listed threatened species, disturbance that causes Swainson's hawks to abandon their nest or results in the loss of reproductive effort would constitute a significant impact.

The Program EIR identified impacts to Swainson's Hawk as potentially significant and identified Mitigation Measure BIO-11: *Conduct Preconstruction Surveys for Swainson's Hawk Nests* to reduce impacts to less than significant. This mitigation measure has been modified to reflect site condition for the Proposed Project. Implementation of **Mitigation Measure BIO-4 (Conduct Preconstruction Surveys for Swainson's Hawk Nests)** would reduce this impact to a level that is **less than significant**.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect listed above can be reduced to a less-than-significant level by incorporating the following mitigation measure identified in the Project EIR:

Mitigation Measure BIO-4: Conduct Preconstruction Surveys for Swainson's Hawk Nests

To ensure that nesting Swainson's Hawks will not be disturbed by construction activities, the City will hire a qualified ornithologist to conduct preconstruction surveys of the Proposed Project sites and adjacent areas within 1 mile of Sites A and B. No fewer than three surveys will be completed in at least each of the two survey periods immediately prior to project initiation, according to this schedule, based on *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley* (Swainson's Hawk Technical Advisory Committee 2000):

- Survey Period I occurs from January 1 to March 20;
- Period II from March 20 to April 5;
- Period III from April 5 to April 20;
- Period IV from April 21 to June 10 (surveys are not recommended during this period because identification is difficult, as the adults tend to remain within the nest for longer periods of time); and
- Period V from June 10 to July 30.

If a nest site is found, no construction work shall commence until after the City engages in consultation with CDFW and CDFW-approved measures are implemented. As a performance standard, the measures implemented shall ensure that project initiation will not result in nest disturbance.

Impact BIO-4: Construction Disturbance of Bald Eagle, Tricolored Blackbird, and Other Migratory Birds, Including Raptors

Finding:

Table 6-2 of the Project EIR lists the special-status bird species known to occur in the vicinity of the study area, and Figure 6-1 of the Project EIR shows the CNDDB occurrences of special-status wildlife species within a 5-mile radius of the study area. The study area is unlikely to support nesting of special-status passerines because suitable habitat is lacking for special-status passerine species known to occur near the study area, although Tricolored Blackbirds may potentially nest near Site A (Table 6-2 of the Project EIR).

Many other migratory birds, including raptors, have the potential to nest in the vicinity of the Proposed Project sites. Raptors (e.g., kites, hawks, and owls) and other migratory birds and their nests are protected under both California Fish and Game Code Section 3503 (active bird nests) and the MBTA. Construction disturbance during the breeding season could result in the incidental loss of fertile eggs or nestlings, or could otherwise lead to nest abandonment. Trees in the study area, including those proposed for removal at Site A, could provide nesting habitat for birds protected under the MBTA. Loss of raptor and other migratory birds' eggs or nests, or any activities resulting in nest abandonment, would constitute a significant impact.

The Program EIR identified impacts to nesting birds as potentially significant and identified Mitigation Measure BIO-12: *Conduct Preconstruction Surveys for Nesting Birds* and Mitigation Measure BIO-13: *Avoid and Minimize Impacts on Nesting Raptors and Other Migratory Birds* to reduce impacts to less than significant. These mitigation measures have been modified adjusted

to reflect site condition for the Proposed Project. Implementation of **Mitigation Measures BIO-5 (Conduct Preconstruction Surveys for Nesting Birds)** and **BIO-6 (Avoid and Minimize Impacts on Nesting Raptors and Other Migratory Birds)** would reduce this impact to a level of **less than significant.**

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating the following mitigation measures identified in the Project EIR:

Mitigation Measure BIO-5: Conduct Preconstruction Surveys for Nesting Birds

The City shall require that construction will be avoided during the nesting season (generally between February 1 and August 31), where practical. If construction activities cannot be avoided during the nesting season, a qualified biologist will conduct a preconstruction survey within 500 feet of the construction area to determine whether active nests are present on the site. The survey will be conducted no more than 30 days prior to construction. If the biologist determines that the area surveyed does not contain any active nests, then construction activities can commence without any further mitigation. If active nests are found, CDFW and USFWS will be notified and Mitigation Measure BIO-6 will be implemented.

Mitigation Measure BIO-6: Avoid and Minimize Impacts on Nesting Raptors and Other Migratory Birds

To avoid disturbing any active migratory bird nests, the City shall require that construction activities will be conducted during the non-breeding season for these species (generally between September 1 and January 31). If active nests are present on or adjacent to either of the Proposed Project sites, CDFW and USFWS will be notified. If active migratory bird nests are present and construction cannot be avoided during the breeding season, construction will not occur within 500 feet of an active nest until the young have fledged, as determined by a qualified biologist, or until the project applicant receives written authorization from CDFW and USFWS to proceed.

Impact BIO-5: Disturbance of Roosting Areas for Bats, including Special-status Bat Species

Finding:

The four largest existing trees at Site A would be retained for the Proposed Project. Existing trees to be removed through construction of the Proposed Project provide marginally suitable roosting habitat for western red bat (California Species of Special Concern) and hoary bats (Lasiurus cinereus) (no listing status). The western red bat is strongly associated with mature riparian forests, although it has been detected roosting in orchards (Pierson et al. 2006). The hoary bat generally roosts in medium to large trees (Harris 1990), and only smaller trees would be removed at Site A. Due to the lack of their preferred habitat, western red bat and hoary bat are not expected to roost in trees at Site A. No trees would be removed from Site B.

Proposed construction activities would remove buildings at Site A that provide possible day and/or night roosts for non-special-status bats such as Brazilian free-tailed bat (Tadarida brasiliensis) and Yuma myotis (Myotis yumanensis). Townsend's big-eared bat is not expected to roost in the buildings, as this species is very sensitive to human disturbance and may

abandon roost sites after a single human visit (Pierson and Rainey 1998) and the buildings at Site A have not been vacant for an extended period of time. No extensive survey of bat activity in the buildings at Site A was conducted; however, if bats are present, impacts from the removal of structures occupied by bats would be potentially significant.

Implementation of **Mitigation Measure BIO-7 (Protect Bat Colonies)**, which requires seasonal work periods in active bat habitat and avoidance and minimization of disturbance, would reduce this impact to a level that is **less than significant with mitigation**.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating the following mitigation measures identified in the Project EIR:

Mitigation Measure BIO-7: Protect Bat Colonies.

The following measures shall be implemented to avoid and minimize impacts on bats:

- Prior to removal of structures, the City shall hire a qualified bat biologist familiar with bat biology and ecology to assess structures to be removed for potential, active bat habitat. If the biologist determines that bats are not actively occupying the structures based on professional opinion following appropriate survey protocols, then the structures may be removed.

- For structures identified by the qualified biologist to be actively occupied by bats, removal of the structures shall not occur between April 15 and August 31 to avoid the bat maternity season,

- Demolition of structures shall be preceded by either humane eviction, phased dismantling, and/or deterrent methods to prevent direct mortality.

Impact BIO-7: Interfere with Wildlife Movement, Established Wildlife Corridors, or the Use of Native Wildlife Nursery Sites

Finding:

The Proposed Project would be constructed primarily on disturbed and developed lands that do not function as important wildlife movement corridors. Disruption of nesting or breeding of special-status species would be minimized by conducting appropriate pre-construction surveys (as described in Impacts BIO-1 through BIO-5 and Mitigation Measures BIO-1 and BIO-4 through BIO-7). Therefore, impacts on wildlife movement would be **less than significant**.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Impact BIO-8: Conflict with Local Policies or Ordinances Protecting Biological Resources

Finding:

The *Stanislaus County General Plan 2015* Conservation/Open Space Element (Stanislaus County 2016) establishes several policies (notably Goal One, Policies Three and Four, and Goal Ten, Policy Twenty-nine) to protect sensitive species, along with habitats such as vernal pools, riparian habitats, and oak woodlands. The Proposed Project does not conflict with any local policies protecting biological resources because no vernal pools, riparian habitats, or oak woodlands are present in the study area, based on field surveys conducted by a qualified biologist on May 4, 2016. Impacts of the Proposed Project on sensitive (i.e., special-status) species are discussed in Impacts BIO-1 through BIO-5 above. With implementation of Mitigation Measures BIO-1 through BIO-7, impacts on sensitive species would be **less than significant**.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Impact BIO-9: Cumulative Biological Resource Impacts

Finding:

Native plant and wildlife species in the Central Valley are at risk from competition with non-native species, ongoing loss of habitat, and other human activities. Habitat in the Central Valley has largely been converted to agriculture or other human uses, resulting in the local extirpation of several species that rely on sensitive habitats no longer present. Species that persist in this altered landscape (e.g., Swainson's Hawk, Tricolored Blackbird, and Burrowing Owl) are still at risk from cumulative impacts. The collective implementation of projects in the vicinity of the Proposed Project could degrade habitat and species viability from consequences such as disruption of wildlife migration corridors, displacement and fragmentation of habitats and species populations, and the introduction or promotion of non-native predators and competitors. This is a significant cumulative impact.

As described in Impacts BIO-1 through BIO-5, construction of the Proposed Project has the potential to adversely affect special-status wildlife species and/or their habitat. The Proposed Project's impacts on special-status wildlife would be reduced with implementation of Mitigation Measures BIO-1 and BIO-4 through BIO-7. These measures would require preconstruction surveys, avoidance and minimization measures, and other protective measures that would reduce construction-related disturbances on special-status species. Impacts due to loss of Burrowing Owl and Swainson's Hawk foraging habitat would be reduced with implementation of Mitigation Measures BIO-2 and BIO-3. Implementation of these measures would ensure that the Proposed Project's contribution to cumulative impacts on special-status species would not be considerable. With implementation of Mitigation Measures BIO-1 through BIO-7, the Proposed Project's contribution to this cumulative impact on biological resources would be reduced to a level that is **less than significant**.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

CULTURAL

Impact CUL-2: Potential for a Substantial Adverse Impact on Archaeological Resources from Construction

Finding:

An archaeological survey was conducted of the Proposed Project site, and no archaeological resources were found; however, archaeological remains could be buried with no surface manifestation. Drilling of the production and monitoring wells, installation of water pipelines, construction of structures to house the wells and pumps at Sites A and B, or excavation of the stormwater detention basin at Site A could uncover buried archaeological deposits. Should a previously undiscovered resource be found during construction and be determined eligible for inclusion in the CRHR, and should Proposed Project activities have the potential to render the resource ineligible for inclusion in the CRHR, the impact would be potentially significant. Implementation of **Mitigation Measure CR-1 (Suspend Construction Immediately if Cultural Resources Are Discovered, Evaluate All Identified Cultural Resources for CRHR Eligibility, and Implement Appropriate Mitigation Measures for Eligible Resources)** would reduce any impacts on CRHR-eligible archaeological sites accidentally uncovered during construction to a level that is less than significant.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating the following mitigation measures identified in the Project EIR:

Mitigation Measure CR-1: Suspend Construction Immediately if Cultural Resources Are Discovered, Evaluate All Identified Cultural Resources for CRHR Eligibility, and Implement Appropriate Mitigation Measures for Eligible Resources.

Not all cultural resources are visible on the ground surface. As a result, before initiation of ground-disturbing activities, the City or its designee shall arrange for construction crews to receive training about the kinds of archaeological materials that could be present at the Proposed Project site and the protocols to be followed should any such materials be uncovered during construction. Training shall be conducted by an archaeologist who meets the U.S. Secretary of the Interior's professional standards. Training shall be required during each phase of construction to educate new construction personnel.

If any cultural resources, including structural features, unusual amounts of bone or shell, flaked or ground stone artifacts, historic-era artifacts, human remains, or architectural remains, are encountered during Proposed Project construction activities, work shall be suspended immediately at the location of the find and within a radius of at least 50 feet and the City will be contacted.

All cultural resources uncovered during construction within the Proposed Project site shall be evaluated for eligibility for inclusion in CRHR. Resource evaluations shall be conducted by individuals who meet the U.S. Secretary of the Interior's professional standards in archaeology, history, or architectural history, as appropriate. If any of the resources meet the eligibility criteria identified in PRC Section 5024.1 or CEQA Guidelines Section 21083.2(g), mitigation

measures will be developed and implemented in accordance with CEQA Guidelines Section 15126.4(b) before construction resumes.

For a TCR or any resources eligible for listing in the CRHR that would be significantly adversely affected by the Proposed Project construction, additional mitigation measures shall be implemented. Mitigation measures for archaeological resources may include (but are not limited to) avoidance; incorporation of sites within parks, greenspace, or other open space; capping the site; deeding the site into a permanent conservation easement; or data recovery excavation. Mitigation measures for archaeological resources shall be developed in consultation with responsible agencies and, as appropriate, interested parties such as Native American tribes. Native American consultation is required if an archaeological site is determined to be a TCR. Implementation of the approved mitigation is required before resuming any construction activities with the potential to affect identified eligible resources at the site.

Impact CUL-3: Potential to Directly or Indirectly Destroy a Unique Paleontological Resource or Site, or Unique Geological Feature (Less than Significant with Mitigation)

Finding:

Production and monitoring wells excavated for the Proposed Project would reach depths of up to 600 feet deep. Research indicates that the alluvial soils that underlie the site have the potential to contain terrestrial and marine fossils; the deeper Mehrten Formation could also contain fossils. As a result, it is possible that fossils could be encountered during construction. Should fossils be discovered during construction and be determined to be a unique paleontological resource or site, and should Proposed Project activities have the potential to destroy the resource, the impact would be potentially significant. Implementation of **Mitigation Measure CR-2 (Suspend Construction Immediately if Paleontological Resources Are Discovered, Evaluate the Significance of the Resources, and Implement Appropriate Mitigation Measures as Necessary)** would reduce any impacts on unique paleontological resources or sites accidentally uncovered during construction to a level that is **less than significant**.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating the following mitigation measures identified in the Project EIR:

Mitigation Measure CR-2: Suspend Construction Immediately if Paleontological Resources Are Discovered, Evaluate the Significance of the Resources, and Implement Appropriate Mitigation Measures as Necessary.

Paleontological resources are not necessarily visible on the ground surface. As a result, before initiation of ground-disturbing activities, construction crews shall receive training about the kinds of paleontological materials that could be present at the Proposed Project site and the protocols to be followed should such materials be uncovered during construction. Training shall be conducted by a professional paleontologist. Training shall be required during each phase of construction to educate new construction personnel.

If any items of paleontological interest are discovered during construction, work shall be suspended immediately within 50 feet of the discovery site, or to the extent needed to protect the site, and the City shall be notified.

Any discovery of paleontological resources during construction shall be evaluated by the qualified paleontologist. If it is determined that the Proposed Project could damage a unique paleontological resource, mitigation shall be implemented in accordance with PRC Section 21083.2 and CEQA Guidelines Section 15126.4. If avoidance is not feasible, the paleontologist shall develop a treatment plan in consultation with the City. Work shall not be resumed until authorization is received from the City and any recommendations received from the qualified paleontologist are implemented.

Impact CUL-4: Potential for Disturbance of Human Remains, including Those Interred Outside of Dedicated Cemeteries (Less than Significant with Mitigation)

Finding:

No human remains were identified at the Proposed Project site as a result of background research or the field survey. The potential for human remains to be identified on the site during construction is considered low, although their presence cannot be entirely discounted. Implementation of **Mitigation Measure CR-3 (Halt Construction Immediately if Human Remains Are Discovered and Implement Applicable Provisions of the California Health and Safety Code)** would reduce impacts on any human remains discovered during construction to a level that is **less than significant**.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating the following mitigation measures identified in the Project EIR:

Mitigation Measure CR-3: Halt Construction Immediately if Human Remains Are Discovered and Implement Applicable Provisions of the California Health and Safety Code.

If human remains are discovered during construction activities, the requirements of Section 7050.5 of the California Health and Safety Code shall be followed. Potentially damaging excavation shall halt on the Proposed Project site within a minimum radius of 100 feet of the remains and the County Coroner shall be notified. The Coroner is required to examine all discoveries of human remains within 48 hours of receiving notice of a discovery on private or state lands (Health and Safety Code Section 7050.5[b]). If the Coroner determines that the remains are those of a Native American, he or she must contact the NAHC by phone within 24 hours of making that determination (Health and Safety Code Section 7050[c]). In accordance with the provisions of PRC Section 5097.98, the NAHC shall identify a Most Likely Descendent (MLD). The MLD designated by the NAHC shall have at least 48 hours to inspect the site and propose treatment and disposition of the remains and any associated grave goods. The City or its designee shall work with the MLD to ensure that the remains are removed to a protected location and treated with dignity and respect.

Impact CUL-5: Potential to Cause a Substantial Adverse Change in the Significance of a Tribal Cultural Resource (Less than Significant with Mitigation)

Finding:

No TCRs have been identified in the Proposed Project study area to date. However, archaeological sites that are buried and discovered during construction have the potential to be TCRs. Should an archaeological site be discovered that is determined to be a TCR, Mitigation Measure CR-1 would be implemented and would result in a less-than-significant impact.

Although no Native American tribes responded to the City's project notification letter within the 30-day period prescribed under PRC Section 21080.3.1(b)(2), tribes will have the opportunity to comment on this DEIR through the public comment period. As a result, it is possible that TCRs may yet be identified. If TCRs are identified, the City will work with the tribe(s) to avoid or mitigate any impacts that might affect TCRs. If TCRs are identified within the Proposed Project study area, implementation of Mitigation Measure CR-1 and **Mitigation Measure CR-4 (Prepare and Implement Treatment Plans for any TRCs Identified in the Proposed Project Study Area)** would reduce any potential impacts to a level that is **less than significant**.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating the following mitigation measures identified in the Project EIR:

Mitigation Measure CR-4: Prepare and Implement Treatment Plans for any TCRs Identified in the Proposed Project Study Area.

If TCRs are identified in the Proposed Project study area, the City shall consult and work with tribes with a traditional and cultural affiliation to the resource to develop feasible alternatives that will avoid impacts or develop and implement treatment plans that will substantially lessen the impacts on identified TCRs, in accordance with PRC Sections 21083(b)(2) or 21084.3.

Impact CUL-6: Potential to Eliminate Important Examples of the Major Periods of California History or Prehistory (Less than Significant with Mitigation)

Finding:

The 2010 Water System Engineer's Report Program EIR (City of Modesto 2010) concluded that there would be no cumulative impacts regarding cultural resources. Since publication of that document, no other projects are planned in the immediate vicinity of Sites A or B that could create a significant cumulative impact in combination with the Proposed Project. As such, with implementation of Mitigation Measures CUL-1, CUL-2, CUL-3, and CUL-4, described above, all impacts would be reduced to a less-than-significant level and there would be no cumulative impact to which the Proposed Project could contribute related to cultural resources.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

CLIMATE CHANGE

Impact GHG-1: Generate Substantial GHG Emissions, Either Directly or Indirectly, from Project Construction, Land Use Changes, and Operation (Significant and Unavoidable)

Finding:

Construction of the Proposed Project would involve activities that would result in one-time emissions of GHGs. Changes in carbon sequestration due to land use change and tree planting would also result in one-time emissions of GHGs. As shown in Table 8-1 of the Project EIR, combined one-time GHG emissions associated with the Proposed Project's construction and change in carbon sequestration from land use changes would be approximately 536 MT CO2e annually. These emissions are one-time emissions and would not continue to occur once the construction is complete. Amortized over the project life (approximately 30 years), construction and sequestration GHG emissions would be approximately 18 MT CO2e per year.

Operation of the Proposed Project would generate GHG emissions from annual maintenance of emergency generators, worker vehicle trips, and, primarily, from the pumps' electricity use at the Proposed Project sites. Approximately one worker vehicle trip would occur daily during the week. The Proposed Project's operation would generate approximately 374 MT CO2e per year in 2019. Electricity use makes up 363 MT CO2e per year of these emissions. Combining the operation emissions with the amortized one-time emissions, the total annualized emissions are 392 MT CO2e per year.

SJVAPCD, the local air district with jurisdiction over the Proposed Project, has determined that GHG emissions are best controlled through implementation of BPS or demonstration of a 29-percent reduction from 2002-2004 conditions. The renewable portfolio standard requires Modesto Irrigation District, the Proposed Project's electricity provider, to increase its renewable electricity portfolio to 33 percent by 2020, as mandated by Senate Bill X1-2 (adopted in 2011). Under BAU conditions in the 2002-2004 timeframe, Modesto Irrigation District had essentially zero renewable energy sources according to the 2013 Renewable Portfolio Standard report (Modesto Irrigation District 2013). By 2012, Modesto Irrigation District was meeting approximately 25 percent of its retail energy sales from eligible renewable energy resources (Modesto Irrigation District 2013). Applying the renewable portfolio standard's mandatory 33-percent reduction in carbon intensity to the Proposed Project's 363 MT CO2e per year from electricity results in a projected reduction of 120 MT CO2e per year. This results in a 30-percent reduction to the total annualized emissions compared to BAU conditions. This is greater than the SJVAPCD's required 29-percent energy reduction from BAU conditions. This reduction is also consistent with the most recent AB 32 Scoping Plan's level of reductions for 2020, which estimate a 15-percent reduction from BAU projections.

In addition to the GHG emission reductions related to using renewable energy to meet the project's electricity demands, the proposed project would include drought-tolerant landscaping to reduce water use, which is also consistent with the AB 32 Scoping Plan's water use reduction measures. Even though this analysis could support a less-than-significant impact conclusion, the City has determined to find the impact significant and unavoidable for the following reasons: The main reductions in GHG emissions are outside the control of the City and depend on changes to operations by electricity providers. In addition, the Program EIR analysis for GHG emissions found the impact for the entire program significant and unavoidable even with implementation of Mitigation Measure CUM-1. Although this EIR contains **Mitigation Measure GHG-1 (Implement Greenhouse Gas Emissions Reduction Measures for Operation)** to implement Mitigation Measure CUM-1, the feasibility of some measures is unknown. Therefore,

to be conservative in its analysis, the Proposed Project's GHG emissions would be **significant and unavoidable.**

As such, the City finds that specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, **potentially** make infeasible the mitigation measures identified in the EIR. Therefore, to be conservative in its analysis, the Proposed Project's GHG emissions would be significant and unavoidable.

Supporting Evidence:

Mitigation Measure GHG-1: Implement Greenhouse Gas Emissions Reduction Measures for Operation.

The City of Modesto or its contractor(s) shall implement the following measures to the extent feasible and prepare a report that analyzes the feasibility of mitigation measures, details the extent of GHG emission reductions, and determines the basis for feasibility, with a goal of net zero emissions:

- Implement energy efficiency improvements of pumps through design, construction, and refurbishment methods.
- Investigate and implement, if feasible, opportunities for renewable energy development at the facilities subject to safety, emergency, and environmental considerations.
- Participate in local utility green energy and/or carbon offset programs to the extent feasible.
- Implement BMPs for vegetation management activities at Site A, which include using fuel-efficient landscaping equipment; shutting down equipment when not in use after 5 minutes; using spot application of herbicides; controlling nonnative weed species as soon as populations are found; planning and scheduling vegetation maintenance activities to minimize driving time and return trips to the site; using native or drought-resistant landscaping around facilities; and encouraging landscaping contractors to use manual techniques to the extent possible to reduce use of gas-powered equipment.
- Utilize electrically powered landscape equipment and outdoor electrical outlets.
- Utilize alternatively fueled construction equipment to the extent feasible. This could include equipment that uses electricity, hybrid, propane, or biodiesel fuels.
- Require shutting down of construction equipment when not in use after 5 minutes.
- Implement a construction worker commute strategy to minimize GHG emissions from workers commuting to the site. This may include encouraging use of carpools, vanpools, and public transportation.

Impact GHG-2: Potential to Conflict with Applicable Plans, Policies, or Regulations Adopted for the Purpose of Reducing Emissions of GHGs (Significant and Unavoidable)

Finding:

SJVAPCD, the local air district with jurisdiction over the Proposed Project, has determined that GHG emissions are best controlled through implementation of BPS or demonstration of a 29-percent reduction from 2002-2004 conditions. The Renewable Portfolio Standard would reduce GHG emissions compared to BAU and would result in the Proposed Project having more than a 29-percent reduction. This is consistent with the goal of AB 32, as well as the policies/actions described in CARB's Scoping Plan and SJVAPCD's *Climate Change Action Plan*. Although the project is not subject to any other action measures that are outlined in Scoping Plan, the project would include drought-tolerant landscaping that is generally consistent with water reduction goals identified in the Scoping Plan.

In addition, the Proposed Project would comply with the RST's regional CAP goals, strategies, and policies, as well as the County's applicable general plan policies related to reduced energy use for water supply/distribution activities and conserving water. Specifically, the Proposed Project would have an energy-efficient design, utilize Modesto Irrigation District's increased renewable energy sources, and have an efficient irrigation system and drought-tolerant landscaping to minimize on-site water consumption at Site A.

The Proposed Project would achieve GHG emission reductions in its design, as discussed above, and, with implementation of Mitigation Measure GHG-1, would minimize GHG emissions to the maximum extent economically feasible. Therefore, the Proposed Project would comply with all applicable plans, policies, and regulations, including AB 32, and as well as the policies/actions described in CARB's Scoping Plan and SJVAPCD's *Climate Change Action Plan*. However, as discussed above, the main reductions in GHG emissions are outside the control of the City and depend on changes to operations by electricity providers. In addition, the Program EIR analysis for GHG emissions found the impact for the entire program significant and unavoidable even with the implementation of Mitigation Measure CUM-1 from the Program EIR. Although this EIR contains Mitigation Measure GHG-1 to implement Mitigation Measure CUM-1, the feasibility of some measures is unknown. Therefore, to be conservative in its analysis, the Proposed Project impact would be **significant and unavoidable**.

As such, the City finds that specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, **potentially** make infeasible the mitigation measures identified in the EIR. Therefore, to be conservative in its analysis, the Proposed Project's GHG emissions would be significant and unavoidable.

Impact GHG-3: Cumulative GHG Impact (Significant and Unavoidable)

Finding:

It is widely recognized that no single project could generate enough GHG emissions to noticeably change the global climate. However, the combination of GHG emissions from the Proposed Project in combination with past, present, and future projects could contribute substantially to global climate change. Thus, the Proposed Project's GHG emissions should be evaluated in terms of whether or not they would result in a considerable contribution to global climate change. The analysis in this chapter is essentially a cumulative impacts analysis. Based on the analysis provided above, even with implementation of Mitigation Measure GHG-1, the Proposed Project would result in a cumulatively considerable contribution to a significant cumulative impact.

As such, the City finds that specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, potentially make infeasible the mitigation measures identified in the EIR. Therefore, even with implementation of Mitigation Measure GHG-1, the Proposed Project would result in a cumulatively considerable contribution to a significant cumulative impact.

The City finds that due to specific technological, financial and other considerations, no feasible additional mitigation measures beyond those included for the Project, exist which could avoid or substantially lessen the Project's cumulatively considerable contribution to a significant cumulative impact due to GHG emission.

GROUNDWATER

Impact GRW-4: Cumulative Contribution to Chronic Overdraft of Groundwater Subbasin (Significant and Unavoidable)

Finding:

The Proposed Project is not anticipated to substantially reduce local groundwater levels in a way that would have a significant adverse impact on nearby shallow wells. However, operation of the proposed wells could cumulatively contribute to overdraft conditions in the Modesto Subbasin.

Supporting Evidence:

DWR has estimated that more groundwater is withdrawn from the subbasin than is recharged on an average annual basis. While the 2014 DWR Final Basin Prioritization results did not specifically note the Modesto Subbasin as being in overdraft (DWR 2014), overpumping in the Modesto Subbasin has historically led to declines in groundwater levels (DWR 2004).

The City estimated the total operational yield within its service area to be 53,500 AFY, with 48,286 AFY of that occurring in the Modesto Subbasin. Given that the proposed wells were

designed to be operated within the City's operational yield, they would not be anticipated to substantially reduce groundwater levels within the City's service area. The expected total annual average production of the proposed wells is 350 million gallons, or approximately 1,701 AF; however, because the City would decommission its existing Well 271 (which currently produces approximately 323 AFY), the proposed wells would only increase groundwater production by approximately 1,378 AFY beyond existing conditions. The most readily available data indicate that the City extracts an average of 38,145 AFY of groundwater from the Modesto Subbasin (City of Modesto 2010a). Adding the Proposed Project's total estimated additional production of 1,378 AFY to the average Modesto Subbasin production of 38,145 AFY would equal 39,523 AFY. This amount would be below the City's preliminary operational yield for the Modesto Subbasin of 48,286 AFY, and therefore is not anticipated to reduce groundwater elevations within the City's service area below 40 feet above msl.

With respect to groundwater use and drawdown in the Modesto Subbasin as a whole, in light of other groundwater users in the subbasin, the proposed wells would represent a relatively small but potentially considerable contribution to overall groundwater extractions. A number of entities operate public water supply wells in the Modesto Subbasin, in addition to many private wells. Recent data were not available at the time of publication on overall groundwater extractions in the subbasin, but DWR has estimated urban and agricultural extractions at 81,000 and 145,000 AFY, respectively (DWR 2004). By contrast, DWR estimated natural and applied irrigation water recharge at 86,000 AFY and 92,000 AFY, respectively. Relative to total urban and agricultural extractions in the subbasin (226,000 AFY), the Proposed Project's contribution of 1,378 AFY would represent 0.6 percent of the total extractions in the subbasin. This would seem to be a small contribution, but given that the basin is already in a relatively chronic state of overdraft, as indicated by the deficit in recharge estimated by DWR and by historically declining water levels, each additional large capacity well could exacerbate the overdraft situation.

While the SGMA requires that all high- and medium-priority basins have sustainable groundwater management plans in place by 2022, and that overdrafted basins have plans in place by 2020, it does not impose limitations on groundwater resource development prior to those dates. Stanislaus County has enacted a Groundwater Ordinance, which requires entities applying for a Well Construction Permit after November 25, 2014, to demonstrate, based on substantial evidence, that extraction of groundwater from the proposed well will not constitute unsustainable extraction of groundwater. This ordinance is expected to limit future unsustainable groundwater extractions, but nevertheless, may not reverse the effects of past overpumping or completely prevent cumulative drawdown.

Climate change could also exacerbate the cumulative effects of groundwater pumping in the Modesto Subbasin. Under typical annual hydrological fluctuations, groundwater storage may be replenished in wet years. However, the added prospect of altered long-term precipitation patterns and hydrology in California due to climate change could reduce the potential for groundwater recharge.

In light of all of the above factors, the overdraft of the Modesto Subbasin is considered to be a significant cumulative impact, and the Proposed Project's contribution would be considerable. The City is already implementing all available measures to ensure that its groundwater extraction does not exacerbate this situation, and is an active participant in regional groundwater management with a goal of ensuring sustainable management of the subbasin. Additional measures may exist that others could take to reduce pumping in the basin (e.g.,

water conservation), but such measures would be outside of the City's jurisdiction to implement or require. As such, no additional feasible measures exist and this impact is considered **significant and unavoidable**.

As such, the City finds that additional potentially feasible changes, alterations or mitigation measures beyond those actions already implemented by the City to address groundwater overdraft are within the responsibility of another public agency and not the City which is the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency to address the significant cumulative impact due to overdraft conditions in the Modesto Subbasin.

NOISE

Impact NOISE-1: Substantial Temporary or Periodic Increase in Ambient Noise Levels (Less than Significant with Mitigation)

Finding:

Construction and maintenance activities for the Proposed Project would generate short-term, temporary, and intermittent noise at adjacent noise-sensitive receptors. Noise levels generated during construction and maintenance would fluctuate depending on the particular type, number, and duration of use of various pieces of equipment. Noise from construction and maintenance activities is typically considered point-source noise. Noise levels drop off at a rate of 6 dBA per doubling of distance over hard site surfaces such as streets and parking lots, and at approximately 7.5 dBA per doubling of distance over soft site surfaces such as grass fields and open terrain with vegetation (FTA 2006).

Equipment required for construction and maintenance activities for the Proposed Project would likely consist of a paver, backhoe, bulldozer, tractor, well drilling equipment, and various trucks. The maximum noise levels produced by one of these types of equipment, at a distance of 50 feet and without noise controls, could range from 80 to 85 dBA Lmax. Noise levels vary for individual pieces of equipment because equipment comes in different sizes and with different engines. Noise levels also vary as a function of the activity level or duty cycle. Typical construction projects, with equipment moving from one point to another, including work breaks and idle time, have long-term noise averages that are lower than many short-term noise events. In addition, because of the dynamic nature of a construction site, noise levels are calculated from the center of the activity. Using these parameters, project-related construction noise was estimated using the FHWA Roadway Construction Noise Model (FHWA 2006), including simultaneous operation of multiple pieces of equipment, with the results shown in Table 11-11 of the Project EIR.

Construction equipment noise levels at 50 feet would be as high as 87 dBA Leq during the varying construction phase activities. Assuming standard spherical spreading loss (a reduction of 6 dB per doubling of distance) and the highest unmitigated construction noise level of 87 dBA Leq at 50 feet, the Proposed Project construction noise levels are estimated to range between 67 and 87 dBA Leq at the nearest noise-sensitive uses, as shown in Table 11-12 of the Project EIR. These results represent the worst-case, conservative noise exposure because they do not consider noise attenuation associated with intervening structures and atmospheric absorption. Therefore, actual construction equipment noise levels at the nearest residences could be lower.

Construction activities are not expected to occur on weekends or legal holidays, nor would nighttime work be conducted.

Table 11-12 of the Project EIR shows that the resulting predicted interior noise levels at the closest noise-sensitive receptor could be as high as 62 dBA at residential uses west of Site B, specifically the residence at 117 Stewart Road. Stanislaus County Municipal Code Specific Noise Source Standards Subsection E (Section 10.46.060, "Construction Equipment") and the City of Modesto Code Ordinances (Section 4-9.103, "Enumeration") were used for this analysis. Project-related construction noise at exterior uses of residential properties (buildings) in the project vicinity would be considered significant if it would exceed 75 dBA during weekday nighttime hours of 7 p.m. to 7 a.m. These are the most restrictive criteria established by the County and City and provide the most conservative assessment of noise impacts at existing noise-sensitive uses in the project vicinity.

Construction noise associated with the Proposed Project is predicted to dominate the existing noise environment at adjacent receptors during all construction phases. Construction activities would be exempt from noise standards when operating during allowable daytime hours outlined above. However, because noise levels would increase by 3 dB or more, there is the potential for noise impacts at the residential uses adjacent to the Proposed Project due to projected-related construction noise.

The Program EIR identified construction noise as less than significant if no nighttime work is proposed, and identified Mitigation Measures NOISE-1: Employ Noise-reducing Construction Practices and NOISE-2: Limit Nighttime Construction Noise to reduce project-related construction impacts to a less-than-significant level. Mitigation Measure NOISE-2: Limit Nighttime Construction Noise was identified in the Program EIR but is not applicable to the Proposed Project because nighttime work is not proposed. Mitigation Measure NOISE-1 has been modified to ensure that construction activities associated with the Proposed Project would comply with the County's Municipal Code and the City's Code of Ordinances noise standards. Furthermore, the measure has been modified because nighttime construction work is not anticipated for this project, eliminating the potential for sleep disturbances, and noise level standards do not apply to construction noise that occurs between the daytime hours of 7 a.m. and 7 p.m. Therefore, with implementation of **Mitigation Measure NOISE-1 (Employ Noise-Reducing Construction Practices)** as modified below from the Program EIR, temporary, short-term project-generated construction noise would be considered less than significant.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating the following mitigation measures identified in the Program EIR:

Mitigation Measure NOISE-1: Employ Noise-reducing Construction Practices.
The following measures shall be implemented by the City or its contractor to reduce adverse effects from construction noise:

- At least two weeks prior to the start of construction, provide written notification to the potentially affected property owners and residents within 500 feet of the project site,

identifying the type, duration, and frequency of construction activities to residences directly exposed to the project noise. Notification of heavy construction activities shall include anticipated dates and hours during which construction activities are anticipated to occur. Notification materials shall also identify a mechanism for residents to register complaints with the City through contact information, including a daytime telephone number, for the project representative to be contacted in the event that construction noise levels are deemed excessive, overly intrusive or construction occurs outside the permitted hours. Recommendations to assist noise-sensitive land uses in reducing interior noise levels (e.g., closing windows and doors) shall be included in the notification.

- Designate a disturbance coordinator and conspicuously post this person's number around the project sites, in adjacent public spaces, and in construction notifications. The disturbance coordinator shall be responsible for responding to any complaints about construction activities. The disturbance coordinator shall receive all public complaints about construction disturbances and be responsible for determining the cause of the complaint and implementation of feasible measures to be taken to alleviate the problem.

- Locate stationary or fixed construction equipment (e.g., compressors and generators), construction staging and stockpiling areas, and construction vehicle routes as far as feasible from noise-sensitive receptors.

- Prohibit the start-up of machines or equipment before 7 a.m. and after 7 p.m. Monday through Saturday and before 9 a.m. and after 5 p.m. on Sunday.

- Prohibit use of materials and equipment deliveries before 7 a.m. and after 7 p.m., Monday through Saturday and before 9 a.m. and after 5 p.m. on Sunday.

- Restrict the use of bells, whistles, alarms, and horns to safety-warning purposes.

- Equip all construction equipment with noise-reduction devices such as mufflers to minimize construction noise and operate all internal combustion engines with exhaust and intake silencers.

- Use noise-reducing enclosures around stationary noise generating equipment.

- To the extent feasible, the simultaneous operation of multiple construction equipment shall be limited.

- Install temporary barrier between noise sources and noise sensitive receptors, or the use of intervening structures (i.e.; on-site construction trailer, stockpiles).

Impact NOISE-3: Substantial Permanent Increase in Ambient Noise Levels (Less than Significant with Mitigation)

Finding:

Long-term operation of the Proposed Project would result in the operation of new noise-generating stationary equipment. The Proposed Project would include the long-term operation

of water wells and pumps, standby generators, and booster pump stations at Site A and Site B. Pumping frequency and duration would vary throughout the year depending upon need and based upon system pressure or tank level, ranging from as much as 20 hours per day during the summer months to as few as 2 hours per day in the winter. Pumping is expected to occur for an annual average of 8 hours per day.

Site A: Ladd Road

Site A would consist of an aboveground groundwater storage tank, water well and pump, standby generator, and booster pump station. The pump station building would be a masonry block building housing the production well, booster pumps, disinfection equipment, ancillary valves and flow meters, and electrical equipment.

The pump station building would have various sound attenuation features, including wall panels, fans, and louvers to reduce noise related to removing heat generated within the pump and electrical rooms. Metal wall panels would achieve a noise reduction coefficient of approximately 0.90. The pump station building would be ventilated by one side-wall-mounted exhaust fan with a capacity of 4,500 cubic feet per minute. Exhaust fans would have the lowest possible noise measurement unit. Ducting in the building would be designed to minimize noise. The intake and exhaust pump station louvers would be sized to minimize air flow noise.

Production well pumping would vary as previously described. The Proposed Project includes up to four 60-hp electric pumps. Two pumps would be on-duty, one would be for standby, and the fourth pump is intended for future buildout. The well and booster pumps would be housed inside the pump station building.

A standby diesel generator and an aboveground diesel storage tank would be installed on a concrete pad. The generator would be equipped with critical grade mufflers for the exhaust system and level 2 sound housing to achieve an approximate sound level of 75 dB within 30 feet of the unit.

Operational noise generated at Site A is assumed to be similar to operational noise at Well 315 (AEC 2012). Therefore, operational noise at Site A, including future use of a fourth pump, would be reduced through site design, specifically building materials of the fully enclosed pump station building, surface treatments, and acoustically designed louvers, which would reduce noise levels from 71 dBA at 23 feet to 46 dBA at 30 feet, which would achieve and not exceed the City's noise thresholds. Project-related operational noise at Site A would be considered exempt from Stanislaus County noise regulations because the Proposed Project is a public utility. However, with the incorporated site design features, operational noise would comply with the County's Municipal Code and the City's Code of Ordinances noise standards. Thus, the project would not result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project. As a result, project-generated operational noise levels for Site A would be **less than significant**.

Site B: McHenry Avenue

Site B would encompass approximately 0.4 acre. The facilities at this site would consist of a production well and pump, standby generator, disinfection facilities, connecting lines to the City's existing distribution system down McHenry Avenue, and space for a future treatment unit and treatment filters. These facilities would be fully enclosed by a 12-foot-tall concrete block

wall with a 24-foot-wide gate; there would be no roof over these facilities. Equipment at the site would consist of an aboveground pump motor, engine generator, controls, chlorinator, and associated plumbing and equipment.

The production well pump and standby generator are the two main sources of operational noise associated with the well. The analysis assumed an aboveground pump. To evaluate potential effects of the Proposed Project, noise levels from an existing City well (Well 62 at Freedom Park) with similar equipment were evaluated (AEC 2012). Well 62 uses a Goulds (ITT Corporation) pump with a 200-hp Emerson motor and a 300-kW standby diesel generator inside a Quiet Site Level II enclosure by Cummins. Noise levels from the Cummins generator measured 71 dBA at a distance of 23 feet diagonally from the air intake of the unit. The pump noise measured 72 dBA at a distance of 18 feet from the motor (70 dBA at 23 feet), with a sound spectrum in the higher frequencies. The generator at Well 62 dominated the existing background noise levels, while the pump-only operational noise was much less noticeable, raising noise levels by 1 dBA. Subjectively, pump "whine" noise was barely audible over background noise levels (AEC 2012). Similar noise levels were assumed to be generated by the Proposed Project at Site B.

Based on the proposed site plan for Site B, the nearest adjacent residential property, at 117 Stewart Road, is approximately 30 feet west of the proposed location of the pump motor. The topography of the site is such that the pump, generator, and 12-foot-tall block wall would be at ground level, 7 feet below the grade of the house pad for the residence at 117 Stewart Road. It was assumed that the ground level of the residential property is 7 feet above the pump grade at a distance of approximately 70 feet from the property line.

Evaluation of the proposed facilities at Site B was conducted using an identical generator set and enclosure to those at Well 62 (300-kW standby diesel generator inside a Quiet Site Level II enclosure by Cummins). Noise levels are predicted to reach 48 dBA during daytime and nighttime at the property line of 117 Stewart Road, based on data from the 200-hp well pump described above (AEC 2012) and in consideration of the proposed 12-foot-tall block wall around the well facility. Noise levels are expected to be reduced to 39 dBA at the nearest residential building façade, an additional 70 feet from the property line, and therefore would not disturb sleep patterns within the sleeping areas of the residence. The results indicate that sound levels could reach 58 dBA within the residential property line of 117 Stewart Road, adjacent to Site B, if unmitigated.

These noise sources would be considered exempt from Stanislaus County noise regulations because the Proposed Project is a public utility. However, local noise regulations were evaluated as well to determine the significance of potential noise impacts generated by the Proposed Project.

When the pump operates during nighttime hours, it is expected to exceed the County's noise standard of 45 dBA at the property line of 117 Stewart Road. Daytime operation of the pump is predicted to be less than the County's 55 dBA noise standards. Subjectively, the pump would be barely audible over background sources (ambient 58 dBA Leq) during daytime hours, with the source becoming more audible as background levels drop during nighttime hours (ambient 55 dBA Leq).

Routine testing of the generator set would occur one to two times per month. During these tests, sound levels would exceed the local noise regulations. However, the generator is exempt

from noise regulations when providing emergency power to the pump station and during short-term testing periods.

Operational noise associated with the Proposed Project (58 dBA unmitigated) is predicted to dominate the existing noise environment when background levels are low (nighttime) at the residential property at 117 Stewart Road. Operational activities are considered exempt from noise standards when operating a public utility or under emergency circumstances. However, the increase in noise would be noticeable (3 dBA) and would create the potential for nighttime noise impacts (ambient 55 dBA Leq nighttime) at the 117 Stewart Road residence west of the Proposed Project site. Thus, the project would result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project and would exceed nighttime stationary noise level standards. As a result, project-generated operational noise levels for Site B would be significant.

The Program EIR prescribed Mitigation Measure NOISE-3: *Employ Noise-reducing Methods during Operations* to reduce impacts to a less-than-significant level. This mitigation measure has been modified to ensure that operational impacts associated with the Proposed Project would comply with the County's Municipal Code and the City's Code of Ordinances noise standards, reducing unmitigated noise levels from 71 dBA at 23 feet to 48 dBA at 30 feet. Therefore, with implementation of **Mitigation Measure NOISE-2 (Employ Noise-reducing Methods during Operations at Site B),** this impact would be **less than significant**. This measure would not apply to Site A, where project impacts would be less than significant.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating the following mitigation measures identified in the Program EIR:

Mitigation Measure NOISE-2: Employ Noise-reducing Methods during Operations at Site B.
The City shall implement noise-reducing methods so that noise from well operations at Site B, located at the corner of McHenry Avenue and Stewart Road, does not exceed County noise-level standards at adjacent residences. Measures to be implemented shall include the following:

Generator

1. Project specifications shall include generator sound level limits of 73 dBA at 23 feet, similar to those at the City's Well 62 facility.

2. Noise control specifications for the generator set shall include a sound-attenuated enclosure for the pump and a sound wall within the facility wall. Specifications for the pump enclosure and sound wall are prescribed in item 5 below.

3. Routine testing of the generator shall be performed during daytime hours, between 10 a.m. and 5 p.m., when background sound levels are highest, to minimize potential noise impacts.

4. Obtain the services of a qualified acoustical consultant to conduct project-related operational noise measurements at sensitive receptor locations adjacent to the Proposed Project site to ensure that noise-reducing measures comply with applicable codes. If noise

measurements do not comply with applicable codes, additional noise reduction measures should be designed and incorporated.

With these measures, no additional sound reduction would be required to reduce sound levels due to the generator set.

Pump Enclosure and Sound Wall

5. The pump enclosure shall be designed to the following specifications to ensure operational sound levels are reduced below County standards:

    a. Install a modular sound wall with an optional removable roof adjacent to the pump. The sound-absorptive modular barrier system shall be installed along the west edge of the pump base to a height of at least 10 feet above grade. The barrier system will wrap around the north and south sides of the pump to create a three-walled system with integrated sound absorption. In general, acoustical barriers perform best when close to the noise source. Acceptable products include the following or an approved equivalent: Kinetics Noiseblock Barrier Panel System, Noise Barriers LLC QuietLine Barrier Walls, Sound Fighter Systems LSE.

    b. Include an insulated sheet metal shroud around the pump motor and shaft. Construct the sheet metal shroud to block the line of sight to the motor ventilation openings. Construction materials shall include exterior-grade sheet metal used for heating, ventilation, and air conditioning (HVAC) ducts and acoustical duct liner.

    c. If the above measures cannot be employed for the pump, one of the following measures will be implemented to meet the County's nighttime noise threshold of 45 dBA:

        i. Install a submersible pump that would place the motor under water and virtually eliminate the sound source.

        ii. Increase the height of the equipment yard sound wall above 12 feet. Based on the noise analysis, increasing the equipment yard wall height to 13 feet would result in an additional 2 dBA of attenuation and a predicted sound level of 45 dBA. A 14-foot-tall wall could reduce sound levels by an additional 1 dBA.

        iii. Construct a barrier adjacent to the motor with a removable roof barrier directly over the motor. This secondary barrier directly adjacent to the pump motor on the west side would effectively reduce sound levels below the nighttime noise threshold. The detachable roof would still provide access to the motor for servicing and removal.

            The barrier adjacent to the motor shall be designed to the following specifications to ensure operational sound levels would be reduced below County standards:

            - The barrier shall be constructed around the equipment within the wall surrounding the facility.

- The barrier shall weigh a minimum of 4 pounds per square foot. Painted and sealed concrete block easily meets this weight requirement.

- The barrier shall be continuous along its length and width with no gaps in the construction, including at the ground. The equipment yard pad shall be sloped such that weeping holes are only needed on the north and east sides of the facility.

iv. Construct an insulated sheet metal shroud around the motor and shaft. This metal shroud would accommodate air circulation requirements for the motor, but would divert sound energy away from the motor openings and base near the shaft. Sound energy would be attenuated by sound-absorbing material within the metal shroud.

B. FINDINGS SUPPORING REJECTION OF ALTERNATIVES

The final Project EIR discussed and evaluated a range of alternatives as required by CEQA Guidelines section 15126.6. In order to reject an alternative, the City must find one or more of the following. Only one grounds is needed to support rejection of each alternative. This is a summary of the grounds for rejecting the alternatives. The evidence supporting these findings is found in the record as a whole:

> (1) specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make the alternative infeasible; (2) the alternative does not meet the project objectives; and/or (3) the alternative will not avoid or substantially lessen the significant environmental effects of the Project.

Following are the findings supporting rejection of each of the alternatives.

No Program Alternative.
CEQA requires analysis of the No Project Alternative. Under this alternative, no new water supply infrastructure would be constructed.

Finding for rejection:

> This alternative fails to meet the basic objectives of the proposed Project.

Supporting Evidence:

> Under this alternative, existing system deficiencies would continue to exist, and new development would be constrained by lack of water supply infrastructure. This alternative would not meet the basic objectives of the Proposed Project, namely, to correct existing deficiencies in the Del Rio water system to meet design pressure and volume storage requirements identified in the 2010 Water System Engineer's Report; ensure sufficient system pressure to provide firefighting flow capacity; and improve water system operational flexibility and reliability in the Del Rio service area. For these reasons, this alternative is rejected.

Alternative 1 – Construct at Existing City Well Locations.
The City currently owns property and operates groundwater wells at three locations in the Del Rio service area:

- Well 289 located on Beltis Drive on the east side of Del Rio,
- Well 271 located on Country Club Drive and Del Rio Avenue on the southwest side of Del Rio, and
- Well 282 on Hillcrest Drive on the west side of Del Rio.

Under this alternative, in lieu of purchasing new property for the proposed wells and tank, the City would design the proposed new facilities to fit within their existing well properties.

Finding for rejection:

> Specific economic, legal, social, technological, or other considerations make infeasible this alternative. Specifically, size and location of existing well sites are not large enough to safely and reliably accommodate a replacement well and tank of a size sufficient to meet Project objectives. This alternative would not meet the objectives of the Project. In addition, this alternative would result in greater aesthetics, noise and air quality impacts because more residential sensitive receptors are located adjacent to the existing well sites compared to the sites in the Proposed Project. For these reasons, this alternative is rejected.

Supporting Evidence:

The alternative would not accommodate system pressure demands and supply reliability needs for firefighting and operational reliability. Existing Well 271 is located on a parcel that is not large enough to install a replacement well.

The Del Rio water system has limited water supply, so Well 271 needs to remain operational until its replacement is constructed and permitted. This alternative requires Well 271 to be non-operational for a period of time which would create unacceptable deficiencies in providing needed water supply by exacerbate existing deficiencies. The City has considered relocating the well to a nearby parcel, but no land was available for sale in that area. Well 289 is on a small, irregularly shaped parcel, which would limit the diameter of the proposed tank and the resulting tank would be too small to meet the project objectives of reliability and flexibility of water supply. Alternative 1 would also expose more residential sensitive receptors to aesthetic, air quality and noise-related impacts than the Proposed Project.

Alternative 3. Connect to the City's Supply System

Under this alternative, the City would construct a 3-mile pipeline to directly connect the Del Rio community to the City's water supply system. The pipeline would extend along the existing railroad track easement from the northern border of the City's limits north to St. John Road and Ladd Road, where the pipeline would connect to existing transmission pipes that serve the Del Rio community. The pipeline would cross two Modesto Irrigation District canals and two streets. Booster pump stations may be needed to transfer water from the City's system north to Del Rio.

Finding for rejection:

Specific economic, legal, social, technological, or other considerations make infeasible this alternative. This alternative would not meet project objectives. This alternative could also result in greater environmental impacts than the proposed Project. Specifically, more residential sensitive receptors would be exposed to construction-related noise impacts, biological resources, water supply and cultural resources impacts could be greater than the Proposed Project. This alternative would also not meet the basic project objectives to correct existing water system deficiencies, which could be significantly delayed during the approvals, permitting and property/easement acquisition process. For these reasons, this alternative is rejected.

Supporting Evidence:

The ability of the City to obtain the necessary approvals, including approval the Modesto Irrigation District and Stanislaus County, and acquire the necessary encroachment agreements and/or property and/or right-of-way is central to the feasibility of this alternative. The economic, legal and other constraints on obtaining these approvals and agreements make this alternative infeasible. The lengthy timeframe and uncertainty of obtaining the approvals from other agencies required for this alternative creates an unacceptable delay in addressing existing deficiencies and creates a very high likelihood that the project objectives will not be successfully accomplished. The costs of this alternative are substantially more expensive than the proposed Project and, therefore, it is economically infeasible.

This alternative also would not meet project objectives because it would not reduce water supply impacts and deficiencies, but rather would displace them elsewhere within the service area. The alternative also would not substantially reduce some of the significant impacts associated with the project. Similar amounts of GHG emissions would be generated compared

to the Proposed Project, more residential sensitive receptors near the pipeline alignment would be exposed to construction-related noise impacts, and other environmental impacts, such as biological resources, water supply, and cultural resources could be greater than the Proposed Project.

Furthermore, obtaining the necessary property/easements and agreements and permits to implement this alternative would potentially delay the improvements described in the project. Such delay is unacceptable when the specific legal considerations and existing system deficiencies are considered. For all these reasons, this alternative is rejected.

EXHIBIT "B"

STATEMENT OF OVERRIDING CONSIDERATIONS

STATEMENT OF OVERRIDING CONSIDERATIONS

Pursuant to Public Resources Code Section 21081 and Section 15093 of the State CEQA Guidelines (14 California Code of Regulations 15000, et seq.), the City of Modesto cannot approve a project for which an Environmental Impact Report (EIR) has been certified which identifies significant effects on the environment unless it adopts a statement of overriding considerations that finds that specific overriding economic, legal, social, technological, or other benefits of the project outweigh its significant effects on the environment. The City finds that any one of the benefits identified below are sufficient to outweigh the significant environmental effects of the Project.

A. SIGNIFICANT AND UNAVOIDABLE IMPACTS

The following significant impacts have been identified for which no mitigation is available that would reduce the impact to a less-than-significant level:

- Impact AIR-7: Cumulative Impact on Air Quality
- Impact GHG-1: Generate Substantial GHG Emissions, Either Directly or Indirectly, from Project Construction, Land Use Changes, and Operation
- Impact GHG-2: Potential for Conflict with Applicable Plans, Policies or Regulations Adopted for the Purpose of Reducing Emissions of GHGs
- Impact GHG-3: Cumulative GHG Impact
- Impact GRW-4: Cumulative Contribution to Chronic Overdraft of Groundwater Subbasin

The following impacts relevant to the Del Rio Tank and Wells Project were previously identified as significant and unavoidable in the Program EIR (City of Modesto 2010):

- Impact CUM-3: Emissions of Greenhouse Gases
- Impact CUM-4: Result in a Cumulatively Considerable Net Increase of Any Criteria Pollutant for which the Program Region is in Nonattainment under an Applicable Federal or State Ambient Air Quality Standard

B. STATEMENT OF OVERRIDING CONSIDERATIONS

The City Council has determined that the Del Rio Tank and Wells Project EIR should be approved and that any remaining unmitigated environmental impacts attributable to the Proposed Project are outweighed by the following specific benefits:

i. The Proposed Project will correct existing deficiencies in the Del Rio water system to meet design pressure and volume storage requirements identified in the City of Modesto 2010 Water System Engineer's Report;

ii. Ensure sufficient system pressure to provide firefighting flow capacity;

iii. Improve water system operational flexibility and reliability; and

iv. The Project accomplishes the benefits identified in Items i, ii and iii above at a cost which is within budgetary constraints and acceptable to the City.

EXECUTIVE SUMMARY

Introduction

This Proposed Project was previously identified in the City's Water System Engineer's Report (WSER) Program EIR (State Clearinghouse No. 2008092095) (City of Modesto 2010). The WSER Program EIR is incorporated into this document by reference and is available for review at the City's Public Works Department Office located at 1010 Tenth Street #4600, Modesto, CA 95354. This DEIR is tiered from the Program EIR, pursuant to California Environmental Quality Act (CEQA) Guidelines Sections 15168 and 15152, as described further in Section 1.1.1, below. This document was prepared pursuant to the requirements of CEQA (Public Resources Code [PRC] Section 21000 et seq., as amended) and the CEQA Guidelines (Title 14 California Code of Regulations [CCR] Section 15000 et seq.).

Proposed Project Purpose and Objectives

The City of Modesto provides water service to the community of Del Rio. The Del Rio water system currently requires a new storage tank (and associated pump station), well, replacement well, backup generators, and pipelines to correct existing supply deficiencies. The existing Del Rio water system does not meet certain design pressure and storage volume requirements identified in the 2010 Water System Engineer's Report for water supply and fire-flow demand. The existing Del Rio water system also is not sufficient to supply anticipated future growth in the Del Rio area. The City intends to decommission one of its Del Rio water system wells (Well 271) when the new replacement well is brought online. The future Del Rio service area will include additional acreage to the north, east, and southwest. According to the Del Rio Community Plan, "future planned development land use" is proposed for the northwestern and eastern portions of the service area, while development in the southwestern area will be residential (Stanislaus County 1992). Full buildout of the service area will require additional pipelines and pumping capacity, as identified for the Proposed Project, to provide adequate water service to meet the anticipated demand.

The objectives of the Proposed Project are as follows:

- Correct existing deficiencies in the Del Rio water system to meet design pressure and volume storage requirements identified in the 2010 Water System Engineer's Report;
- Ensure sufficient system pressure to provide firefighting flow capacity;
- Improve water system operational flexibility and reliability; and
- Allow for additional water supply and storage volume to accommodate anticipated future growth in the Del Rio area.

Proposed Project Location

The Proposed Project is located in the census-designated place of Del Rio in Stanislaus County. Del Rio is located approximately 2 miles north of the City's sphere-of-influence boundary. The Proposed Project would involve activities at two separate sites within Del Rio: (1) Site A, southeast of the intersection of Ladd Road and St. John Road on APNs 004-077-018 and 004-077-019, and (2) Site B, at the northwest corner of McHenry Avenue and Stewart Road on the southeastern-most portion of APN 004-102-003. **Figure ES 1** shows the locations of the Proposed Project sites.

Site A consists of two parcels owned by the City of Modesto, totaling approximately 4.0 acres. The site is bounded by a Modesto Irrigation District canal on the south, agricultural and residential sites on the east, and Union Pacific railroad tracks on the west. The northern portion of the site fronts Ladd Road. The site is currently occupied by a single-family residence, garage, and out-buildings. The remainder of the site consists of mostly open land with a few trees, weeds, and grass. The residence has a water well and septic system. All structures on the site, as well as the well and septic system, are to be abandoned and removed. Four existing trees would be retained on site. **Figure ES-2** shows the proposed facilities at Site A.

Site B encompasses 0.4 acre on APN 004-102-003, currently owned by a private landowner (Arnold W. Setliff et al. Trust). The City is in the process of acquiring approximately 0.52 acre of the much larger 82.4-acre parcel, and would dedicate 0.12 acre to Stanislaus County as right-of-way for McHenry Avenue. The surrounding land uses adjacent to this parcel include single-family residences and outbuildings to the west and south, agricultural parcels to the north and east, and a fruit stand to the southeast. The site is currently vacant and undeveloped except for a few power and communication poles, a large oak tree, and a few shrubs. The oak tree would be retained on site. **Figure ES-3** shows the proposed facilities at Site B.

Proposed Project

The Proposed Project involves the construction and operation of water wells, a storage tank, and associated distribution facilities. The Proposed Project would develop a total of approximately 4.4 acres (approximately 190,000 square feet).

Site A – Ladd Road Tank and Well

The 2010 Program EIR included evaluation of a proposed tank and pump station on a large parcel of land north of McHenry Avenue and Stewart Road. As the project developed, no land was available for sale in that area. The City then considered alternate locations, one of which was 6520 Carver Road, but was unable to complete the purchase of land in those alternate locations. On March 13, 2012, by Resolution 2012-101, City Council approved the purchase of two parcels at 718 Ladd Road.

Site A, located at 718 Ladd Road, would encompass approximately 4 acres. The project facilities at Site A would consist of an above-ground water storage tank, production water well and pump, monitoring well, standby generator, and booster pump station. Site improvements would include a small parking and access area, fencing (1-inch chain-link fencing), a retention basin, and low-maintenance landscaping. In addition, a 2,500foot-long, 16-inch-diameter transmission main would be installed to connect the proposed well to the City's existing water distribution system. Figure ES-2 provides a site plan of the Site A facilities.

Water Storage Tank: As proposed, the water tank would store approximately 250,000 gallons (0.25 million gallons) of water. The purpose of the tank is to store sufficient water to meet peak hour and fire flow demands. The tank would stand a maximum of 20 feet above grade and would be approximately 55 feet in diameter. The footprint area of the tank would be approximately 173 square feet. The welded steel water tank would have a non-reflective, painted, earth-tone exterior and a sloped roof. The tank would be constructed on a circular concrete pad. The tank would be constructed in accordance with the current California Building Code and American Water Works Association standards.

Pump Station Building: The pump station building would house the production well, booster pumps, disinfection equipment, ancillary valves and flow meters, and electrical equipment. The building would include three separate rooms: a pump station room, an electrical room, and a calcium hypochlorite room. The building would be constructed of masonry blocks and would be approximately 40 feet wide by 50.5 feet long and 21 feet tall. The pump station building would have stucco finish and an earth-tone exterior.

The building would have various sound attenuation features, including wall panels, fans, and louvers to reduce noise related to the operation of equipment removing heat generated within the pump and electrical rooms. Metal wall panels would achieve a noise reduction coefficient of approximately 0.90. The pump station building would be ventilated by one side-wall-mounted exhaust fan with a capacity of 4,500 cubic feet per minute. Exhaust fans would have the lowest possible exhaust fan noise measurement unit (called a sone). Ducting in the building would also be designed to minimize noise. Sound caused by an operating louver is proportional to the air velocity through the louver; the intake and exhaust pump station louvers would be sized to minimize air flow noise.

Production Well: The production groundwater well would be drilled to a minimum depth of 300 feet and a maximum depth of 600 feet deep, and would have a maximum yield of 1,000 gallons per minute (gpm). The well is expected to operate during off-peak demand periods to fill the proposed adjacent storage tank and during maximum demand conditions (typically a 1- to 2-hour diurnal pattern). While the theoretical annual maximum yield of the new well would be 525.6 million gallons (based on operations of 1,000 gpm, 24 hours per day, 365 days per year), this theoretical maximum exceeds the annual production for the entire Del Rio service area of approximately 207 million gallons for the previous 5 years. The well pump would be sized to meet peak demand conditions; however, pumping is expected to occur for an annual average of 8 hours per day (not 24 hours per day), with an anticipated maximum annual yield of about 175 million gallons, which is substantially less than the theoretical annual maximum yield of the new well. The well would be housed inside the pump station building.

Monitoring Well: A monitoring well would be installed on site to monitor groundwater levels in relation to operation of the production well and to calibrate the City's groundwater flow model. The monitoring well would be installed within a 50-foot radius of the production well and would be drilled to a similar depth (i.e., 600 feet deep). The monitoring well would include three separate "nested" wells installed to different depths within the same borehole. Each nested well would be equipped with a pressure transducer to monitor the groundwater level. The three nested wells would be installed to measure groundwater levels in the shallow (100-265 feet deep), intermediate (265-360 feet deep), and deep (360-600 feet deep) zones of the aquifer. The monitoring well would not produce any water and would only be used to collect data on groundwater levels.

Booster Pumps: The Proposed Project includes up to four 60-horsepower (hp) electric booster pumps. Two booster pumps would be on duty, one would be on standby, and the fourth would be available to serve future buildout demand. The pump capacity for each of these booster pumps would be 850 gpm, with firm capacity of 1,700 gpm. The booster pumps would be housed inside the pump station building.

During normal operation, the well pump would fill the storage tank at a maximum rate of 1,000 gpm, controlled by a variable-frequency drive and sensors in the tank. The booster pumps would be separate from the well pump and would be designed to provide a maximum flow from the storage tank to the distribution system of 1,700 gpm. The booster pumps would deliver supply to the distribution system to meet peak-hour and fire-flow demands. The booster pumps would be designed and operated to discharge water from the tank at a much faster rate than the well can fill the tank to meet peak and fire-flow demands, as needed. When the booster pumps are running at maximum flow, water from the production well may simultaneously fill the storage tank. The tank, when full, would drain in less than 6 hours (357 minutes) under maximum flow conditions.

An additional booster pump would be installed in the pump station at full buildout. This fourth booster pump would deliver an additional 700 gpm of flow from the storage tank to the transmission pipelines. The additional booster pump would increase the total delivery of stored water from the tank to the distribution lines to 2,400 gpm in order to meet the estimated peak-hour rate and fire-flow demands for Del Rio's buildout condition. This fourth pump would not result in increased groundwater extraction, only increased flow from the

storage tank to the transmission pipelines. The impact analysis presented in this EIR includes evaluation of all four booster pumps operating under the full buildout condition.

Transmission Main: A 16-inch-diameter transmission main would be constructed from the pump station building on Ladd Road, north along St. John Road, and terminating at the intersection of St. John Road and Country Club Drive. The transmission main would extend for approximately 2,500 linear feet and would be installed in accordance with Stanislaus County Department of Public Works trenching requirements, which would include a 36-inch-wide trench and a 60-inch-wide trench patch. A portion of the transmission main (approximately 65 feet) would be installed by jack and bore underneath an existing rail crossing on Ladd Road, just east of St. John Road.

Stormwater Retention Basin: Site runoff would be captured in an on-site retention basin that would be designed to contain the 50-year storm event and the full capacity of the storage tank, in the event of a tank rupture. The retention basin would be located on the southern portion of the parcel and would encompass approximately 1.3 acres with a 1.4-acre-foot holding capacity. The basin would be designed to hold water for a maximum of 48 hours based on the assumed percolation rate of 0.6 gallon/square foot per hour.

Surface runoff north to Ladd Road would be limited to the entrance driveway. Rock-lined drainage swales with shallow rock wells at one end would be installed within the Ladd Road right-of-way to collect runoff from the northern portion of Site A. A drainage swale with periodic inlets would be installed down the center of the site to convey surface runoff to the retention basin. The site would be graded to slope toward the swale and retention basin. The stormwater collection system would also convey tank overflow, drain water, and well wastewater to the retention basin. Slopes would be stabilized with hydroseeding or planted with drought-tolerant plants.

Site Security and Access: The entire site (i.e., within the parcel boundary) would be enclosed within an 8-foot-tall concrete masonry wall or wrought-iron fence topped with no-climb points and three strands of barbed wire along the Ladd Road frontage. Ladd Road frontage would include 9-foot-tall vehicular and pedestrian access gates. The rest of the site would be enclosed by 8-foot-tall, 1-inch chain-link fence with security wire. The wrought-iron fencing would be placed approximately 65 feet from the right-of-way line.

A new 25-foot-wide driveway on Ladd Road would provide site access. The driveway would have a 20-foot-wide, motorized sliding gate with an electronic key card reader or keypad for access. A 3-foot-wide metal pedestrian gate would be provided alongside the sliding vehicular gate.

Vehicular access (driveway) and parking areas within the site would be paved with Portland cement concrete or asphaltic concrete. Other portions of the site would be covered with low-maintenance landscaping or gravel.

Security lighting would be installed throughout the site. Exterior lighting would be elevated on poles using light-emitting diodes (LEDs) and would be directed toward the interior of the site rather than off site, to the extent feasible, to reduce light or glare. Lights on the poles would be equipped with motion sensors and would turn on only if motion were detected in

the vicinity of the building and tank. Security cameras and building alarms would also be installed on site.

Landscaping: Landscaping at Site A would include vegetation to screen the fence, tank, and other facilities from views from adjacent properties and from Ladd Road. The plant selections would be arranged in a tiered format with low, ground-hugging shrubs in the foreground, smaller shrubs in the middle tier, and taller screening trees for the backdrop. Plant selections would be chosen based on their proven drought tolerance, survivability, hardiness, and ease of maintenance. The trees would be a mixture of screening conifers, evergreen broadleaf, and smaller flowering deciduous broadleaf. Approximately 70 trees would be planted within an approximately 0.24-acre irrigated area. A vegetated, undulating soil berm on the east side of the site would contribute to a natural aesthetic appeal. An automatic irrigation system for the landscaping would be designed and would adhere to applicable water conserving ordinances. A rain/freeze/thaw shut-off switch for the irrigation system would be installed. The slopes surrounding the stormwater retention basin would also be hydroseeded or planted with drought-tolerant plants to prevent erosion.

Electricity: Site A has immediate access to nearby electrical lines served by the local utility provider, Modesto Irrigation District. The total new electrical connected load for the proposed facilities would be approximately 502 kilovolt-amperes (kVA) when all equipment is running (or approximately 755 amperes at 480 volts, 3 phase). However, the average electrical demand load would vary with the number of pumps running and related output with a maximum anticipated connected load of approximately 566 kVA. The project site would include an underground electrical utility extension to connect to the existing Modesto Irrigation District infrastructure.

Standby Generator: A standby diesel generator and an above-ground diesel storage tank would be installed on a 10-foot by 20-foot concrete pad within the site. The standby generator would be used as an alternate power source for the Proposed Project facilities as necessary. The estimated capacity of the generator would be approximately 450 kilowatts (kW). The generator would be equipped with critical grade mufflers for the exhaust system and level 2 sound housing to achieve an approximate sound level attenuation to 75 decibels within 30 feet of the unit.

The generator would include a belly tank (an above-ground diesel fuel tank built into the frame of the generator support as part of a packaged unit) that would hold approximately 24 hours of generator fuel supply, which equates to approximately 775 gallons. The diesel storage tank would be housed in accordance with City of Modesto Fire Prevention Department requirements and would comply with Stanislaus County standards, including Spill Prevention, Control and Countermeasures (SPCC), the Uniform Fire Code (UFC), and Occupational Safety and Health Administration (OSHA) requirements, including secondary containment requirements.

Site B – McHenry Avenue Well

Site B, located on McHenry Avenue, would encompass approximately 0.4 acre. The facilities at this site would consist of a production well and pump, standby generator, disinfection facilities, monitoring well, transmission pipelines connecting to the City's existing distribution system down McHenry Avenue, and space for a future treatment unit and

treatment filters. These facilities would be fully enclosed by a 12-foot-tall concrete block wall with a 24-foot-wide vehicular access gate. The site would be accessed from a new driveway off McHenry Avenue; no site access would be provided from Stewart Road. Site improvements would include a concrete pad and paved driveway, well and associated piping, controls, treatment facilities, generator, and appurtenances. Runoff from new impervious surfaces at Site B would be retained on site. Figure 2-3 provides a site plan of the Site B facilities.

Well and Pump: The Site B groundwater well would replace the City's existing Well 271 located on the west side of the Del Rio service area. This well is past its operational life and would be decommissioned upon completion of the Site B well. The new Site B well would be drilled to a minimum depth of 300 feet and a maximum depth of 600 feet, with a maximum yield of 1,000 gpm. Similar to the Site A production well, the Site B well would have a theoretical annual maximum yield of 525.6 million gallons (based on operations of 1,000 gpm, 24 hours per day, 365 days per year); however, the well would not be operated to its full capacity. The well pump would be sized to meet peak demand conditions, with pumping expected to vary throughout the year depending upon system pressure needs. While pumping may vary from as much as 20 hours per day during the summer to as little as 2 hours per day in the winter, pumping is expected to occur for an annual average of 10.8 hours per day, with an anticipated maximum annual yield of approximately 237 million gallons, which is substantially less than the theoretical annual maximum yield of the new well. The well pump would be approximately 200 hp or less and powered by electricity. The pump would require a 300-kW backup generator with a sound-attenuating enclosure. No booster pumps are expected to be needed at Site B. A geotechnical investigation of the site would be completed during the design process.

Monitoring Well: Similar to Site A, a monitoring well would be installed at Site B to measure changes in groundwater levels that could occur from operation of the production well. The monitoring well would be installed within a 50-foot radius of the production well and would be drilled to a similar depth (i.e., 600 feet deep). The monitoring well would include three separate "nested" wells installed to different depths within the same borehole. Each nested well would be equipped with a pressure transducer to monitor the groundwater level. The three nested wells would be installed to measure groundwater levels in the shallow (100-265 feet deep), intermediate (265-360 feet deep), and deep (360-600 feet deep) zones of the aquifer. The monitoring well would not produce any water and would only be used to monitor groundwater levels.

Stormwater Retention Basin: Site runoff would be captured in a 50-foot by 40-foot temporary retention basin that would be designed to contain the 100-year, 24-hour storm event. The retention basin would be located north of the proposed well site on an adjacent parcel that is currently in private ownership. The basin would encompass approximately 0.15 acre with an 0.08-acre-foot holding capacity. It would be designed to hold water for a maximum of 48 hours, based on the assumed percolation rate of 0.3 gallon/square foot per hour.

Surface runoff east to McHenry Avenue would be limited to the area within the right-of-way. Grading within the right-of-way would include drainage to an existing storm drain inlet. The site would be graded to slope toward the north and the retention basin. The stormwater collection system would also convey well wastewater to the retention basin. Slopes would be stabilized with hydroseeding or planted with drought-tolerant plants.

Transmission Pipeline: A 12-inch-diameter transmission pipeline would be constructed from the well along McHenry Road to connect with existing City distribution pipelines along Stewart Road. The transmission pipeline would run from the well site south for approximately 190 feet under McHenry Road, then west for approximately 760 feet along Stewart Road, terminating at the intersection of Stewart Road and Grove Pointe Way. The pipeline would be installed beneath the road, within the road right-of-way, and in accordance with Stanislaus County Department of Public Works trenching requirements, which would include a 32-inch-wide trench and a 56-inch-wide trench patch.

Standby Generator: A standby diesel generator with a belly tank (an above-ground diesel fuel tank built into the frame of the generator support as part of a packaged unit) would be installed on a 10-foot by 20-foot concrete pad within Site B. The standby generator would be used as an alternate power source for the Proposed Project facilities as necessary. The estimated capacity of the generator would be approximately 450kW. The generator would be equipped with critical grade mufflers for the exhaust system and level 2 sound housing to achieve an approximate sound level attenuation to 75 dB within 30 feet of the unit. The belly tank would hold approximately 24 hours of generator fuel supply, which equates to approximately 775 gallons. The diesel storage tank would be housed in accordance with City of Modesto Fire Prevention Department requirements. Similar to Site A, the generator would include a fuel tank with secondary containment.

Site Security: Security lighting would be installed throughout the site. Exterior lighting would be on poles using LEDs and directed toward the interior of the site, to the extent feasible, to reduce light or glare. Lights on the poles would be equipped with motion sensors and would turn on only if motion were detected in the vicinity of the building and tank. Security cameras and alarms would also be installed on site.

Existing trees, electrical, and communication poles at Site B would remain on site and undisturbed.

Project Construction

Construction Methods

Construction activities for the Proposed Project would include several construction phases, shown in Chapter 2. Additional descriptions of these phases and pieces of equipment are provided below and in Appendix C, Air Quality and Global Climate Change Impacts Evaluation Supporting Documentation. All other phases are assumed not to overlap.

The Proposed Project would be constructed in accordance with standard protocols of the Clean Water Act Section 402 General Construction Permit (State Water Resource Control Board Order No. 2009-0009-DWQ).

Site Preparation and Earthwork: Site preparation activities would include clearing and grubbing; demolition of existing buildings and associated features at Site A; excavation, import, and placement of fill; and compaction. Clearing and grubbing would be conducted using standard excavators, bulldozers, and hand labor.

Demolition activities would be performed at Site A to abandon and remove the existing house, garage, shed, out-buildings, well, and septic system. Abatement of asbestos-containing materials and lead-based materials, if needed, during demolition of existing buildings would be supervised by a contractor certified by the California Occupational Safety and Health Administration and would be conducted in a manner compliant with federal, state, and local regulations. Removal or abandonment of the septic system would be conducted in accordance with local and state regulations to prevent any potential release of or worker exposure to waste material or contaminated soils. The estimated demolition area would be approximately 3,460 square feet. All demolished material and debris, including any hazardous waste, would be disposed of off site at an appropriate location selected by the construction contractor. For the purposes of this analysis, the disposal site is assumed to be located within 20 miles (maximum 1 hour of travel time) from Site A.

To the extent feasible, excavated soil would be reused on site. If required, fill would be delivered to the project sites by conventional haul trucks with a capacity of up to 20 cubic yards per load. Fill material would be placed with an excavator and compacted with a compactor/roller. Site preparation activities at Sites A and B are divided into three phases in Chapter 2 (demolition, site preparation, and grading) for the purpose of estimating worker trips and construction-related trips.

Pipelines: New pipelines would be installed beneath existing streets and within the project sites. The general process for pipeline installation involves digging a trench, installing the pipe, and backfilling the trench ("cut and cover"). In existing streets, the cut-and-cover method involves removing the asphalt, roadway base, and underlying soil; all materials are replaced at the completion of the process. The depth and width of the trenches would vary depending on the size of the pipe and in consideration of other existing utility lines; however, it is anticipated that the minimum depth for the transmission main would be 42 inches. Construction crews may close one lane of traffic temporarily during pipeline installation. In general, the maximum length of an open trench would be the distance necessary to accommodate the amount of pipe that can be laid in one day, typically 200-400 feet. The approximate width of the construction area for installation of the pipeline would be 20 feet and would be within the road right-of-way boundaries.

In addition to the cut-and-cover method, approximately 65 feet of the Site A transmission main would be installed by the jack-and-bore method. The jack–and-bore method involves directional drilling to reduce disturbance to the ground surface and disruption to other facilities or surface features. The jack-and-bore method involves use of cutting heads or hydraulic jacks to install pipe from a launch (bore) pit to a receiving pit. Slurry, typically bentonite (inert clay) and water, is used as a lubricant for tunneling and pipe installation.

Buildings and Structures: Construction of buildings and structures would generally include the following activities:

- concrete delivery, forming, and placement and rebar placement;
- structural steel work (assembly and welding);
- installation of electrical/instrumentation equipment;
- masonry concrete wall construction; and

- installation of mechanical equipment and accessories.

Following construction of the buildings, architectural coating of the building/structures, and final site restoration (shown as paving in Table 2-1) would be performed. The final step in the construction process is to restore the ground surface, which generally involves paving, installing landscaping, or installing erosion controls, as necessary.

Staging Areas: Staging areas would be needed to store pipe, construction equipment, and other construction-related materials. Staging areas would likely be established at Sites A and B or along the pipeline routes where space is available within the road right-of-way or in vacant lots. Staging areas would avoid areas of sensitive biological habitat. The City would reserve the authority to approve the locations of the staging areas as part of the contracts for construction of the facilities.

Construction Schedule

Construction of the Proposed Project is anticipated to last for up to approximately 15 months, beginning in 2016 and completing in 2017. Within this timeframe, the majority of construction work that involves use of operating equipment would occur within a 10-month period. Construction activities would generally occur Monday through Friday between 7:00 a.m. and 5:00 p.m., excluding City-observed holidays.

Project Operations

Operation of the Proposed Project would primarily involve the operation, inspection, and maintenance of the facilities. The pump stations, storage tank, and wells would be controlled remotely through a Supervisory Control and Data Acquisition (SCADA) system. The facilities would be inspected at least once a week to verify instrument readings, check on the condition of the sites, and maintain equipment.

The City would inspect the water system on an annual basis to determine whether maintenance was needed. Maintenance activities for the storage tank would include periodic cleaning of the tank's interior (with the use of a vacuum system) to maintain capacity and function and occasional recoating of the tank, as needed. Maintenance activities for the wells would include various mechanical tests and meter calibration (with equipment specific to those activities) and general maintenance of treatment systems (e.g., treatment system flushing or regeneration). The City would inspect the wells and pump stations on a regular basis (numerous times during the wet months and less frequently during the remainder of the year) to ensure optimal performance. Maintenance of the pump stations and pipelines would be performed on an as-needed basis.

Public Involvement Process

Scoping Comment Period

Scoping refers to the process to determine the scope, focus, content, and extent of an EIR. The scoping comment period offers an important opportunity for the public and agencies to review and comment during the early phases of the environmental compliance process. Scoping is initiated when the lead agency issues a Notice of Preparation of an EIR (NOP) announcing the beginning of the EIR process.

A Notice of Preparation (NOP) for the Proposed Project was prepared pursuant to CEQA Guidelines Section 15082 and circulated to the Governor's Office of Planning and Research State Clearinghouse on July 28, 2015. The scoping period continued for 30 days and concluded on August 28, 2015. The NOP presented general background information on the Proposed Project, the scoping process, and the environmental issues to be addressed in the EIR. Approximately 120 copies of the NOP were mailed to a broad range of stakeholders, including state, federal, and local regulatory agencies, jurisdictions, and nonprofit organizations. The NOP is included in this DEIR in Appendix A, *Scoping Summary Report.*

The City accepted written comments during the 30-day scoping period, July 28 to August 28, 2015. During the scoping period, 11 comment letters were received. These comments were considered in the environmental impact evaluation. Copies of comment letters received during the scoping period are included in Appendix A, Scoping Summary.

Draft EIR Public Comment Period

The City has prepared this DEIR, as informed by public and agency input received during the scoping period, to disclose potentially significant environmental impacts associated with the Proposed Project. Where any such impacts are significant, feasible mitigation measures and potentially feasible alternatives that would substantially lessen or avoid such effects are identified and discussed. The public review period provides the public an opportunity to provide input to the lead agency on the DEIR.

The DEIR is currently undergoing public review for a 45-day period. The dates of this period are specified in the Notice of Availability (NOA) of the DEIR. The City will hold a public meeting during the review period; the date, time, and location are also provided in the NOA.

Submittal of Written Comments

The City is circulating this DEIR for public review and comment for the period specified in the NOA. As discussed above, the City will host a public meeting during this period. The purpose of public circulation is to provide agencies and interested individuals with opportunities to comment on or express concerns regarding the contents of this DEIR. The date, time, and location for the meeting is provided in the NOA.

Written comments concerning this DEIR can be submitted at the public meeting described above or at any time during the DEIR public review period. All comments must be received by 5:00 p.m. on the final date of public review as identified in the NOA, and directed to the name and address listed below:

Tamorah Bryant, Senior Civil Engineer
City of Modesto Utilities Department
P.O. Box 642 (1010 Tenth Street)
Modesto, CA 95353
tbryant@modestogov.com

Submittal of written comments via e-mail (Microsoft Word or Adobe PDF format) is preferred. Written comments received in response to this DEIR during the public review period will be addressed in a Response to Comments section of the Final EIR.

Areas of Known Controversy and Issues to Be Resolved

State CEQA Guidelines Section 15123(b) requires that an Executive Summary identify "areas of controversy known to a lead agency including issues raised by agencies and the public." To date, the following issues have been raised regarding the Proposed Project that may be considered controversial:

- Construction-related impacts on the oak tree at Stewart Road and McHenry Avenue;
- Potential for conflicts with existing irrigation facilities at Sites A and B;
- Concerns about aesthetic impacts on surrounding land uses;
- Impacts on groundwater and existing domestic water wells; and
- Potential growth inducement.

Significant Impacts

This section presents the significant impacts that were identified in the DEIR. This is not a comprehensive discussion of impacts of the Proposed Project; the reader is directed to Table ES-1, Summary of Impacts and Mitigation Measures, at the end of this chapter for additional information. Environmental resource topics with the potential for significant environmental impacts (i.e., those that require mitigation) and that are evaluated in detail in this DEIR are as follows:

- Aesthetics
- Air Quality
- Biological Resources
- Cultural Resources
- Global Climate Change
- Groundwater
- Land Use
- Noise

Chapters 4 through 11 of this DEIR address each of these environmental resource topics and the impacts of the Proposed Project in more detail.

Significant and Unavoidable Impacts

The following significant impacts have been identified for which no mitigation is available that would reduce the impact to a less-than-significant level:

- Impact AIR-7: Cumulative Impact on Air Quality
- Impact GHG-2: Potential for Conflict with Applicable Plans, Policies or Regulations Adopted for the Purpose of Reducing Emissions of GHGs
- Impact GRW-4: Cumulative Contribution to Chronic Overdraft of Groundwater Subbasin

The following impacts relevant to the Del Rio Tank and Wells Project were previously identified as significant and unavoidable in the Program EIR (City of Modesto 2010):

- Impact CUM-3: Emissions of Greenhouse Gases
- Impact CUM-4: Result in a Cumulatively Considerable Net Increase of Any Criteria Pollutant for which the Program Region is in Nonattainment under an Applicable Federal or State Ambient Air Quality Standard

Alternatives Considered

The purpose of the alternatives analysis in an EIR is to describe a range of reasonable alternatives to the Proposed Project that could attain most of the objectives of the Proposed Project while reducing or eliminating one or more of the Proposed Project's significant effects. The alternatives considered must be feasible, meaning that they could be accomplished in a successful manner considering economic, environmental, social, technological, and legal factors.

The following alternatives were considered for the Proposed Project:

- No Project Alternative
- Alternative 1 – Construct at Existing City Well Locations
- Alternative 2 – Connect to the City's Supply System

In addition, additional alternatives were considered but ultimately dismissed from further analysis for one or more of the following reasons: (1) they would not sufficiently meet the Proposed Project objectives; (2) they were determined to be infeasible; or (3) they would not avoid or substantially reduce one or more significant impacts of the Proposed Project. Refer to Section 12.4, *Alternatives Considered and Dismissed,* in Chapter 12, *Alternatives,* for a description of these alternatives.

No Project Alternative

CEQA requires analysis of the No Project Alternative. Under this alternative, no new water supply infrastructure would be constructed. Existing system deficiencies would continue to exist, and new development would be constrained by lack of water supply infrastructure. Where alternative sources of potable water are available, new development might still occur. This alternative would not meet the basic objective of the Proposed Project, namely, to construct capital improvements needed to provide and maintain reliable water service to existing and future customers in the Del Rio service area.

Alternative 1 – Construct at Existing City Well Locations

The City currently owns property and operates groundwater wells at three locations in the Del Rio service area:

- Well 289 located on Beltis Drive on the east side of Del Rio,
- Well 271 on Country Club Drive and Del Rio Avenue on the southwest side of Del Rio, and
- Well 282 on Hillcrest Drive on the west side of Del Rio.

Under this alternative, in lieu of purchasing new property for the proposed wells and tank, the City would design the proposed new facilities to fit within their existing well properties.

Well 271 is located near the country club golf course in a residential area, but the property adjacent to Well 271 is vacant, and additional land could be secured to accommodate a new well and storage tank. Well 271 is currently operating at 50 percent capacity due to the well's old age. Under this alternative, this well would be replaced onsite with a new well.

Well 289 is located in a residential neighborhood and adjacent to railroad tracks. If additional property could not be secured adjacent to Well 271, the property at Well 289 could accommodate a 0.25-million-gallon storage tank, and the existing well on site could be expanded to meet the City's pumping needs. The proposed storage tank at this site would likely be smaller in diameter and taller than the tank in the Proposed Project.

Well 282 is located in a residential neighborhood.

This alternative would not require transmission pipelines, because the well sites would already be connected to the existing water distribution system. This alternative would meet all of the project objectives.

Alternative 2 – Connect to the City's Supply System

Under this alternative, the City would construct a 3-mile pipeline to directly connect the Del Rio community to the City's water supply system. The pipeline would extend along the existing railroad track easement from the northern border of the City's limits north to St. John Road and Ladd Road, where the pipeline would connect to existing transmission pipes that serve the Del Rio community. The pipeline would cross two Modesto Irrigation District canals and two streets. Booster pump stations may be needed to transfer water from the City's system north to Del Rio.

Together with the City's existing groundwater wells, the new pipeline connection would meet the Proposed Project objectives related to water system pressure and operational flexibility, and would improve water supply reliability particularly during prolonged drought years when groundwater is less reliable. This alternative would utilize the City's existing water supply sources, including surface water supplies purchased from other water right holders, such as Modesto Irrigation District.

Environmentally Superior Alternative

Because each of the alternatives has fundamentally different characteristics, comparison of their environmental impacts and benefits is not simple. Considering all aspects on balance, the No Project Alternative is considered the environmentally superior alternative as it would avoid all of the environmental impacts associated with implementing the Proposed Project. The CEQA Guidelines require that, if the No Project Alternative is the environmentally superior alternative, the EIR must also identify an environmentally superior alternative among the other alternatives.

Among the other alternatives considered, Alternative 1: Construct at Existing City Well Locations is considered the environmentally superior alternative. This alternative would achieve all the project objectives to a similar degree as the Proposed Project. As described above, more sensitive receptors (residents) are located near the existing City well sites; therefore, this alternative would result in increased impacts on aesthetics, operation-related noise, and air quality because of the greater number of sensitive receptors near the well sites. However, less GHG emissions and construction-related noise impacts would occur because no pipelines would be constructed under this alternative. In summary, Alternative 1 would result in the most reductions in environmental impacts among the alternatives considered.

Summary of Impacts and Levels of Significance

The impacts of the Proposed Project, proposed mitigation, and significance conclusions before and after mitigation are discussed in detail in Chapters 4 through 11 of this DEIR. **Table ES-1** summarizes the impacts, mitigation measures, and levels of significance identified in this document.

This page intentionally left blank

Table ES-1. Summary of Potential Impacts and Mitigation Measures

Impact	Level of Significance	Mitigation Measures
Aesthetics		
Impact AES-1: Substantial Degradation of the Visual Character or Quality of the Site and its Surroundings from Project Construction	Less than Significant with Mitigation	▪ Mitigation Measure AES-1: Locate Staging Areas Away from Public Areas. ▪ Mitigation Measure AES-2: Screen Staging and Construction Areas.
Impact AES-2: Long-term Adverse Effects on the Visual Character or Quality of the Site and its Surroundings during Operation	Less than Significant	None required
Impact AES-3: Permanent Sources of Substantial Light or Glare	Less than Significant	None required
Impact AES-4: Cumulative Aesthetic Impacts	Less than Significant	None required
Air Quality		
Impact AIR-1: Construction Emissions of Criteria Pollutants and Precursors	Less than Significant	None required
Impact AIR-2: Local Community Risks and Hazards During Construction	Less than Significant	None required
Impact AIR-3: Operational Emissions of Criteria Pollutants and Precursors	Less than Significant	None required
Impact AIR-4: Local Community Risks and Hazards During Operation	Less than Significant	None required
Impact AIR-5: Odor Emission Generation	Less than Significant	None required
Impact AIR-6: Consistency with Applicable Air Quality Plans	Less than Significant	None required
Impact AIR-7: Cumulative Impact on Air Quality	Significant and Unavoidable	None available
Biological Resources		
Impact BIO-1: Construction-related Loss of Occupied Burrowing Owl Habitat	Less than Significant with Mitigation	▪ Mitigation Measure BIO-1: Avoid and Protect Burrowing Owls at Site A. ▪ Mitigation Measure BIO-2: Compensate for Loss of Burrowing Owl Habitat at Site A.

Impact	Level of Significance	Mitigation Measures
Impact BIO-2: Construction-related Loss of Swainson's Hawk Foraging Habitat	Less than Significant with Mitigation	▪ Mitigation Measure BIO-3: Compensate for Loss of Swainson's Hawk Foraging Habitat.
Impact BIO-3: Construction-related Impacts on Nesting Swainson's Hawks	Less than Significant with Mitigation	▪ Mitigation Measure BIO-4: Conduct Preconstruction Surveys for Swainson's Hawk Nests.
Impact BIO-4: Construction Disturbance of Tricolored Blackbird and Other Migratory Birds, Including Raptors	Less than Significant with Mitigation	▪ Mitigation Measure BIO-5: Conduct Preconstruction Surveys for Nesting Birds. ▪ Mitigation Measure BIO-6: Avoid and Minimize Impacts on Nesting Raptors and Other Migratory Birds.
Impact BIO-5: Disturbance of Roosting Areas for Bats, including Special-status Bat Species	Less than Significant with Mitigation	▪ Mitigation Measure BIO-7: Protect Bat Colonies.
Impact BIO-6: Disturbance to or Displacement of Wildlife from Site Operations	Less than Significant	None required
Impact BIO-7: Interference with Wildlife Movement, Established Wildlife Corridors, or the Use of Native Wildlife Nursery Sites	Less than Significant with Mitigation	▪ Mitigation Measure BIO-1: Avoid and Protect Burrowing Owls at Site A. ▪ Mitigation Measure BIO-4: Conduct Preconstruction Surveys for Swainson's Hawk Nests. ▪ Mitigation Measure BIO-5: Conduct Preconstruction Surveys for Nesting Birds. ▪ Mitigation Measure BIO-6: Avoid and Minimize Impacts on Nesting Raptors and Other Migratory Birds. ▪ Mitigation Measure BIO-7: Protect Bat Colonies.
Impact BIO-8: Conflict with Local Policies or Ordinances Protecting Biological Resources	Less than Significant with Mitigation	▪ Mitigation Measure BIO-1: Avoid and Protect Burrowing Owls at Site A. ▪ Mitigation Measure BIO-2: Compensate for Loss of Burrowing Owl Habitat at Site A. ▪ Mitigation Measure BIO-3: Compensate for Loss of Swainson's Hawk Foraging Habitat. ▪ Mitigation Measure BIO-4: Conduct Preconstruction Surveys for Swainson's Hawk Nests.

Impact	Level of Significance	Mitigation Measures
		▪ Mitigation Measure BIO-5: Conduct Preconstruction Surveys for Nesting Birds. ▪ Mitigation Measure BIO-6: Avoid and Minimize Impacts on Nesting Raptors and Other Migratory Birds. ▪ Mitigation Measure BIO-7: Protect Bat Colonies.
Impact BIO-9: Cumulative Biological Resource Impacts	Less than Significant with Mitigation	▪ Mitigation Measure BIO-1 ▪ Mitigation Measure BIO-2 ▪ Mitigation Measure BIO-3 ▪ Mitigation Measure BIO-4 ▪ Mitigation Measure BIO-5 ▪ Mitigation Measure BIO-6 ▪ Mitigation Measure BIO-7
Cultural Resources		
Impact CUL-1: Potential for a Substantial Adverse Impact on Historical Resources	No Impact	None required
Impact CUL-2: Potential for a Substantial Adverse Impact on Archaeological Resources from Construction	Less than Significant with Mitigation	▪ Mitigation Measure CR-1: Suspend Construction Immediately if Cultural Resources Are Discovered, Evaluate All Identified Cultural Resources for CRHR Eligibility, and Implement Appropriate Mitigation Measures for Eligible Resources.
Impact CUL-3: Potential to Directly or Indirectly Destroy a Unique Paleontological Resource or Site, or Unique Geological Feature	Less than Significant with Mitigation	▪ Mitigation Measure CR-2: Suspend Construction Immediately if Paleontological Resources Are Discovered, Evaluate the Significance of the Resources, and Implement Appropriate Mitigation Measures as Necessary.
Impact CUL-4: Potential for Disturbance of Human Remains, including Those Interred Outside of Dedicated Cemeteries	Less than Significant with Mitigation	▪ Mitigation Measure CR-3: Halt Construction Immediately if Human Remains Are Discovered and Implement Applicable Provisions of the California Health and Safety Code.

Impact	Level of Significance	Mitigation Measures
Impact CUL-5: Potential to Cause a Substantial Adverse Change in the Significance of a Tribal Cultural Resource	Less than Significant with Mitigation	▪ Mitigation Measure CR-4: Prepare and Implement Treatment Plans for any TCRs Identified in the Proposed Project Study Area.
Impact CUL-6: Potential to Eliminate Important Examples of the Major Periods of California History or Prehistory	Less than Significant with Mitigation	▪ Mitigation Measure CR-1 ▪ Mitigation Measure CR-2 ▪ Mitigation Measure CR-3 ▪ Mitigation Measure CR-4
Geology, Soils and Seismicity		
Environmental Checklist Section VI.a.iii: Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction	Less than Significant	▪ Mitigation Measure P-GEO-1: Conduct project-specific geotechnical investigation prior to construction.
Environmental Checklist Section VI.a.iv: Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides	No Impact	▪ Mitigation Measure P-GEO-1: Conduct project-specific geotechnical investigation prior to construction.
Environmental Checklist Section VI.d: Location on expansive soil, creating substantial risks to life or property	No Impact	▪ Mitigation Measure P-GEO-1: Conduct project-specific geotechnical investigation prior to construction.
Global Climate Change		
Impact GHG-1: Generate Substantial GHG Emissions, Either Directly or Indirectly, from Project Construction, Land Use Changes, and Operation	Significant and Unavoidable	▪ Mitigation Measure GHG-1: Implement greenhouse gas emissions reduction measures for operation.
Impact GHG-2: Potential to Conflict with Applicable Plans, Policies, or Regulations Adopted for the Purpose of Reducing Emissions of GHGs	Significant and Unavoidable	▪ Mitigation Measure GHG-1: Implement greenhouse gas emissions reduction measures for operation.
Impact GHG-3: Cumulative GHG Impact	Significant and Unavoidable	▪ Mitigation Measure GHG-1: Implement greenhouse gas emissions reduction measures for operation.
Groundwater		
Impact GRW-1: Potential to Lower the Groundwater Table and Adversely Affect Nearby Existing Wells	Less than Significant	None required

Impact	Level of Significance	Mitigation Measures
Impact GRW-2: Potential to Reduce or Interfere with Groundwater Recharge	Less than Significant	None required
Impact GRW- 3: Potential to Result in Land Subsidence	Less than Significant	None required
Impact GRW-4: Cumulative Contribution to Chronic Overdraft of Groundwater Subbasin	Significant and Unavoidable	None available
Hazards and Hazardous Materials		
Environmental Checklist Section VIII.d: Located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, create a significant hazard to the public or the environment	Less than Significant	▪ Program EIR Mitigation Measure HAZ-1: Prepare a risk assessment prior to construction activity. ▪ Program EIR Mitigation Measure HAZ-2: Control contamination resulting from previously unidentified hazardous waste materials.
Land Use and Planning		
Impact LU-1: Physically Divide a Community	Less than Significant	None required
Impact LU-2: Conflict with Land Use Plans, Policies, or Regulations	Less than Significant	None required
Impact LU-3: Conflict with Habitat Conservation Plans or Other Land Conservation Plans	No Impact	None required
Impact LU-4: Cumulative Land Use Impacts	Less than Significant	None required
Noise		
Impact NOISE-1: Substantial Temporary or Periodic Increase in Ambient Noise Levels	Less than Significant with Mitigation	▪ Mitigation Measure NOISE-1: Employ Noise-reducing Construction Practices.
Impact NOISE-2: Exposure of Persons to, or Generation of, Excessive Groundborne Vibration or Groundborne Noise Levels during Project Construction	Less than Significant	None required
Impact NOISE-3: Substantial Permanent Increase in Ambient Noise Levels	Less than Significant with Mitigation	▪ Mitigation Measure NOISE-2: Employ Noise-reducing Methods during Operations at Site B.
Impact NOISE-4: Substantial Permanent Increase in Ambient Traffic Noise Levels	Less than Significant	None required
Impact NOISE-5: Cumulative Noise Impacts	Less than Significant	None required

Chapter 1
Introduction

The City of Modesto (City) has prepared this Draft Environmental Impact Report (DEIR) to provide the public, responsible agencies, and trustee agencies with information about the potential environmental effects of implementation of the proposed Del Rio Tank and Wells Project (Proposed Project). This Proposed Project was previously identified in the City's Water System Engineer's Report (WSER) Program EIR (State Clearinghouse No. 2008092095) (City of Modesto 2010). The WSER Program EIR is incorporated into this document by reference and is available for review at the City's Public Works Department Office located at 1010 Tenth Street #4600, Modesto, CA 95354. This DEIR is tiered from the Program EIR, pursuant to California Environmental Quality Act (CEQA) Guidelines Sections 15168 and 15152, as described further in Section 1.1.1, below. This document was prepared pursuant to the requirements of CEQA (Public Resources Code [PRC] Section 21000 et seq., as amended) and the CEQA Guidelines (Title 14 California Code of Regulations [CCR] Section 15000 et seq.).

1.1 Overview of CEQA Requirements

CEQA's basic purposes are to:

- Inform governmental decision-makers and the public about the potential, significant environmental effects of proposed activities.
- Identify the ways that environmental damage can be avoided or significantly reduced.
- Prevent significant, avoidable damage to the environment by requiring implementation of feasible mitigation measures or project alternatives that would substantially lessen any significant effects that a project would have on the environment.
- Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved.

With certain strictly limited exceptions, CEQA requires all state and local government agencies to consider the environmental consequences of projects over which they have discretionary authority before approving or carrying out projects. CEQA establishes both procedural and substantive requirements that agencies must satisfy to meet CEQA's objectives. For example, the agency with principal responsibility for approving or carrying out a project (the lead agency) must first assess whether a proposed project would result in significant environmental impacts. If there is substantial evidence that the project would result in significant environmental impacts, CEQA requires that the agency prepare an EIR, analyzing both the proposed project and a reasonable range of potentially feasible alternatives.

As described in CEQA Guidelines Section 15121(a), an EIR is an informational document that assesses potential environmental effects of a proposed project, and identifies mitigation measures and alternatives to the project that could reduce or avoid potentially significant environmental impacts. Other key CEQA requirements include developing a plan for implementing and monitoring the success of the identified mitigation measures and carrying out specific public notice and distribution steps to facilitate public involvement in the environmental review process. As an informational document used in the planning and decision-making process, an EIR's purpose is not to recommend either approval or denial of a project. Note that an EIR does not expand or otherwise provide independent authority of the lead agency to impose mitigation measures or avoid project-related significant environmental impacts beyond the authority already within the lead agency's jurisdiction.

1.1.1 Intent and Scope of this Document

Agencies are encouraged to tier the environmental analyses that they prepare for separate but related projects to eliminate repetitive discussions of the same issues and focus the later EIR on the actual issues ripe for decision at each level of environmental review (CEQA Guidelines Section 15152). In proposing to conduct the various activities identified in Chapter 2 of this DEIR, the City of Modesto is proposing to carry out and approve a discretionary project subject to CEQA that was previously identified in the City's WSER Program EIR (CEQA Guidelines Section 15168). Accordingly, this DEIR is tiered from the WSER Program EIR, in accordance with CEQA Guidelines Sections 15168 and 15152.

Section 15168(c) of the CEQA Guidelines states that a program EIR may be used with later activities:

> **Use with Later Activities:** Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared.
>
> 1. If a later activity would have effects that were not examined in the program EIR, a new initial study would need to be prepared leading to either an EIR or a negative declaration.
>
> 2. If the agency finds that pursuant to Section 15162, no new effects could occur or no new mitigation measures would be required, the agency can approve the activity as being within the scope of the project covered by the program EIR, and no new environmental document would be required.
>
> 3. An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into subsequent actions in the program.
>
> 4. Where the subsequent activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR.
>
> 5. A program EIR will be most helpful in dealing with subsequent activities if it deals with the effects of the program as specifically and comprehensively as possible. With a good and detailed analysis of the program, many subsequent

activities could be found to be within the scope of the project described in the program EIR, and no further environmental documents would be required.

Section 15168(d) of the CEQA Guidelines states that a program EIR may be used with Subsequent EIRS and Negative Declarations:

> A program EIR can be used to simplify the task of preparing environmental documents on later parts of the program. The program EIR can:
>
> 1. Provide the basis in an initial study for determining whether the later activity may have any significant effects.
>
> 2. Be incorporated by reference to deal with regional influences, secondary effects, cumulative impacts, broad alternatives, and other factors that apply to the program as a whole.
>
> 3. Focus an EIR on a subsequent project to permit discussion solely on new effects which had not been considered before.

Section 15152 of the CEQA Guidelines allows an EIR to tier from the environmental analysis of an earlier EIR. Section 15152(a) of the CEQA Guidelines explains the concept of tiering:

> 'Tiering' refers to using the analysis of general matters contained in a broader EIR (such as one prepared for a general plan or policy statement) with later EIRs and negative declarations on narrower projects; incorporating by reference the general discussions from the broader EIR; and concentrating the later EIR or negative declaration solely on the issues specific to the later project.

Section 15152(d) of the CEQA Guidelines states that the lead agency for a later project pursuant to or consistent with the program should limit the subsequent EIR as follows:

> Where an EIR has been prepared and certified for a program, plan, policy, or ordinance consistent with the requirements of this section, any lead agency for a later project pursuant to or consistent with the program, plan, policy, or ordinance should limit the EIR or negative declaration on the later project to effects which:
>
> 1. Were not examined as significant effects on the environment in the prior EIR; or
>
> 2. Are susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means.

This EIR was prepared to disclose further details and changes to the Proposed Project, as well as the potentially significant effects of the proposed project on the environment which were not examined in the prior Program EIR. This EIR is tiered from the WSER Program EIR and incorporates the Program EIR by reference, and all applicable mitigation measures from the Program EIR (as described in Chapter 3, *Introduction to the Environmental Analysis*) are incorporated into this EIR. The City will use the analyses presented in the Program EIR, this DEIR, public comments on the DEIR, and the whole of the administrative record, to evaluate the Proposed Project's environmental impacts and to further modify, approve, or deny approval of the Proposed Project.

1.2 CEQA Process

1.2.1 Notice of Preparation

A Notice of Preparation (NOP) for the Proposed Project was prepared pursuant to CEQA Guidelines Section 15082 and circulated to the Governor's Office of Planning and Research State Clearinghouse on July 28, 2015. The scoping period continued for 30 days and concluded on August 28, 2015. The NOP presented general background information on the Proposed Project, the scoping process, and the environmental issues to be addressed in the EIR. Approximately 120 copies of the NOP were mailed to a broad range of stakeholders, including state, federal, and local regulatory agencies, jurisdictions, and nonprofit organizations. The NOP is included in this DEIR in Appendix A, *Scoping Summary.*

1.2.2 Scoping Comments and Meetings

The City accepted written comments during the 30-day scoping period, July 28 to August 28, 2015. During the scoping period, 11 comment letters were received. These comments were considered in the environmental impact evaluation. Copies of comment letters received during the scoping period are included in Appendix A, *Scoping Summary.*

1.2.3 Draft EIR

The City has prepared this DEIR, as informed by public and agency input received during the scoping period, to disclose potentially significant environmental impacts associated with the Proposed Project. Where any such impacts are significant, feasible mitigation measures and potentially feasible alternatives that would substantially lessen or avoid such effects are identified and discussed. The public review period provides the public an opportunity to provide input to the lead agency on the DEIR.

1.2.4 Public Review and Meetings

The DEIR is currently undergoing public review for a 45-day period. The dates of this period are specified in the Notice of Availability (NOA) of the DEIR. The City will hold a public meeting during the review period; the date, time, and location are also provided in the NOA.

1.2.5 Final EIR

Written and oral comments received in response to the DEIR will be addressed in a Response to Comments document which, together with the DEIR and any related changes to the substantive discussion in the DEIR, will constitute the Final EIR. The Final EIR, in turn, will inform the City's exercise of its discretion as a lead agency under CEQA in deciding whether or how to approve the Proposed Project.

1.3 Organization of this DEIR

This DEIR contains the following components:

Executive Summary. A summary of the Proposed Project, a description of the issues of concern, Project alternatives, and a summary of environmental impacts and mitigation measures are provided in this chapter.

Chapter 1, *Introduction.* This chapter describes the purpose and organization of the EIR and its preparation, review, and certification process.

Chapter 2, *Project Description.* This chapter summarizes the Proposed Project, including a description of the Project purpose and objectives, a brief description of the Project area, and proposed actions that would be taken under the Proposed Project.

Chapter 3, *Introduction to the Environmental Analysis.* This chapter is an introduction to the impact analysis conducted in this DEIR. This chapter also identifies resource topic areas determined not to be affected by the Proposed Project, or resource topics for which the Proposed Project is consistent with the Program EIR, and which therefore have been dismissed from further analysis in this DEIR. All applicable mitigation measures from the Program EIR are identified in this chapter.

Chapters 4-11 describe the environmental resources and potential environmental impacts of the Proposed Project. Each chapter describes the existing setting and background information for the resource topic area under consideration to aid the reader in understanding the conditions that could be affected by the Proposed Project. In addition, each chapter includes a discussion of the criteria used in determining the significance levels of the Proposed Project's environmental impacts. Each chapter also provides mitigation measures to reduce, where possible, the adverse effects of potentially significant impacts.

Chapter 12, *Alternatives Analysis.* This chapter describes the process by which alternatives to the Proposed Project were developed and screened, evaluates their likely environmental impacts, and identifies the environmentally superior alternative.

Chapter 13, *Report Preparation,* lists the individuals involved in preparing this DEIR.

Chapter 14, *References,* provides a bibliography of printed references, websites, and personal communications used in preparing this DEIR.

Appendix A, *Scoping Summary.* This appendix contains the NOP issued by the City, materials from the scoping process, a summary of comments received during the scoping period, and copies of all comments submitted.

Appendix B, *Environmental Checklist.* This appendix contains the City's Initial Study CEQA checklist document prepared for the Proposed Project.

Appendix C contains supporting documentation for the air quality and greenhouse gas emissions impacts evaluation.

Appendix D contains supporting documentation for the biological resource impacts evaluation.

Appendix E contains supporting documentation for the cultural resource impacts evaluation.

Appendix F contains supporting documentation for the groundwater impacts evaluation.

Appendix G contains supporting documentation for the noise and vibrations impacts evaluations.

Appendix H contains the Mitigation Monitoring and Reporting Program.

1.4 Impact Terminology and Use of Language in CEQA

This DEIR uses the following terminology to describe environmental effects of the Proposed Project:

- A finding of *no impact* is made when the analysis concludes that the Proposed project would not affect the particular environmental resource or issue.
- An impact is considered *less than significant* if the analysis concludes that there would be no substantial adverse change in the environment and that no mitigation is needed.
- An impact is considered *significant* or *potentially significant* if the analysis concludes that there could be a substantial adverse effect on the environment.
- An impact is considered *less than significant with mitigation* if the analysis concludes that there would be no substantial adverse change in the environment with the inclusion of the mitigation measures described.
- An impact is considered *significant and unavoidable* if the analysis concludes that there could be a substantial adverse effect on the environment and no feasible mitigation measures are available to reduce the impact to a less than significant level.
- *Mitigation* refers to specific measures or activities adopted to avoid, minimize, rectify, reduce, eliminate, or compensate for an impact.
- A *cumulative impact* can result when a change in the environment results from the incremental impact of a project when added to other related past, present, or reasonably foreseeable future projects. Significant cumulative impacts may result from individually minor but collectively significant projects. The cumulative impacts analysis in this DEIR focuses on whether the Proposed Project's incremental contribution to other significant cumulative impacts caused by past, present, or probable future projects is cumulatively considerable (i.e., significant).
- Because the term "significant" has a specific usage in evaluating impacts under CEQA, it is used only to describe the significance of impacts and is not used in other contexts

within this document. Synonyms such as "substantial" have been used when not discussing the significance of an environmental impact.

1.5 Submittal of Comments

The City is circulating this DEIR for public review and comment for the period specified in the NOA. As discussed above, the City will host a public meeting during this period. The purpose of public circulation is to provide agencies and interested individuals with opportunities to comment on or express concerns regarding the contents of this DEIR. The date, time, and location for the meeting is provided in the NOA.

Written comments concerning this DEIR can be submitted at the public meeting described above or at any time during the DEIR public review period. All comments must be received by 5:00 p.m. on the final date of public review as identified in the NOA, and directed to the name and address listed below:

Tamorah Bryant, Senior Civil Engineer
City of Modesto Utilities Department
P.O. Box 642 (1010 Tenth Street)
Modesto, CA 95353
tbryant@modestogov.com

Submittal of written comments via e-mail (Microsoft Word or Adobe PDF format) is preferred. Written comments received in response to this DEIR during the public review period will be addressed in a Response to Comments section of the Final EIR.

Chapter 2
Project Description

2.1 Overview

This chapter describes the Proposed Project and discusses its purpose and objectives, location, proposed actions, and necessary permits and approvals.

2.2 Proposed Project Purpose and Objectives

The City of Modesto provides water service to the community of Del Rio. The Del Rio water system currently requires a new storage tank (and associated pump station), well, replacement well, backup generators, and pipelines to correct existing supply deficiencies. The existing Del Rio water system does not meet certain design pressure and storage volume requirements identified in the 2010 Water System Engineer's Report for water supply and fire-flow demand. The existing Del Rio water system also is not sufficient to supply anticipated future growth in the Del Rio area. The City intends to decommission one of its Del Rio water system wells (Well 271) when the new replacement well is brought online. The future Del Rio service area will include additional acreage to the north, east, and southwest. According to the Del Rio Community Plan, "future planned development land use" is proposed for the northwestern and eastern portions of the service area, while development in the southwestern area will be residential (Stanislaus County 1992). Full buildout of the service area will require additional pipelines and pumping capacity, as identified for the Proposed Project, to provide adequate water service to meet the anticipated demand.

The objectives of the Proposed Project are as follows:

- Correct existing deficiencies in the Del Rio water system to meet design pressure and volume storage requirements identified in the 2010 Water System Engineer's Report;
- Ensure sufficient system pressure to provide firefighting flow capacity;
- Improve water system operational flexibility and reliability; and
- Allow for additional water supply and storage volume to accommodate anticipated future growth in the Del Rio area.

2.3 Proposed Project Location and Setting

The Proposed Project is located in the census-designated place of Del Rio in Stanislaus County. Del Rio is located approximately 2 miles north of the City's sphere-of-influence boundary. The Proposed Project would involve activities at two separate sites within Del Rio: (1) Site A, southeast of the intersection of Ladd Road and St. John Road on APNs 004-077-018 and 004-077-019, and (2) Site B, at the northwest corner of McHenry Avenue and Stewart

Road on the southeastern-most portion of APN 004-102-003. **Figure 2-1** shows the locations of the Proposed Project sites.

Site A consists of two parcels owned by the City of Modesto, totaling approximately 4.0 acres. The site is bounded by a Modesto Irrigation District canal on the south, agricultural and residential sites on the east, and Union Pacific railroad tracks on the west. The northern portion of the site fronts Ladd Road. The site is currently occupied by a single-family residence, garage, and out-buildings. The remainder of the site consists of mostly open land with a few trees, weeds, and grass. The residence has a water well and septic system. All structures on the site, as well as the well and septic system, are to be abandoned and removed. Four existing trees would be retained on site. **Figure 2-2** shows the proposed facilities at Site A.

Site B encompasses 0.4 acre on APN 004-102-003, currently owned by a private landowner (Arnold W. Setliff et al. Trust). The City is in the process of acquiring approximately 0.52 acre of the much larger 82.4-acre parcel, and would dedicate 0.12 acre to Stanislaus County as right-of-way for McHenry Avenue. The surrounding land uses adjacent to this parcel include single-family residences and outbuildings to the west and south, agricultural parcels to the north and east, and a fruit stand to the southeast. The site is currently vacant and undeveloped except for a few power and communication poles, a large oak tree, and a few shrubs. The oak tree would be retained on site. **Figure 2-3** shows the proposed facilities at Site B.

Water transmission pipelines would be installed at Site A and Site B to connect the wells to the City's existing distribution system. An approximately 2,500-linear-foot, 16-inch-diameter transmission main would be constructed at Site A from the well at Ladd Road, north under St. John Road to the intersection of St. John Road and Country Club Drive. At Site B, a 12-inch-diameter transmission main would be constructed from the well at McHenry Road south for 190 feet under McHenry Road, then west for 760 feet along Stewart Road, terminating at the intersection of Stewart Road and Grove Pointe Way. These transmission pipelines would be installed under the road, within the road right-of-way. The transmission pipeline alignments are shown in Figures 2-1, 2-2, and 2-3.

2.4 Proposed Project Characteristics

The Proposed Project involves the construction and operation of water wells, a storage tank, and associated distribution facilities. This section provides a discussion of the Proposed Project facilities at each site (Section 2.4.1), construction methods (Section 2.4.2), and facility operations (Section 2.4.3). Figures 2-2 and 2-3 show the conceptual locations of proposed structures on the two sites. The Proposed Project would develop a total of approximately 4.4 acres (approximately 190,000 square feet).

2.4.1 Proposed Project Facilities

Site A – Ladd Road Tank and Well

The 2010 Program EIR included evaluation of a proposed tank and pump station on a large parcel of land north of McHenry Avenue and Stewart Road. As the project developed, no land was available for sale in that area. The City then considered alternate locations, one of which was 6520 Carver Road, but was unable to complete the purchase of land in those alternate locations. On March 13, 2012, by Resolution 2012-101, City Council approved the purchase of two parcels at 718 Ladd Road.

Site A, located at 718 Ladd Road, would encompass approximately 4 acres. The project facilities at Site A would consist of an above-ground water storage tank, production water well and pump, monitoring well, standby generator, and booster pump station. Site improvements would include a small parking and access area, fencing (1-inch chain-link fencing), a retention basin, and low-maintenance landscaping. In addition, a 2,500foot-long, 16-inch-diameter transmission main would be installed to connect the proposed well to the City's existing water distribution system. Figure 2-2 provides a site plan of the Site A facilities.

Water Storage Tank: As proposed, the water tank would store approximately 250,000 gallons (0.25 million gallons) of water. The purpose of the tank is to store sufficient water to meet peak hour and fire flow demands. The tank would stand a maximum of 20 feet above grade and would be approximately 55 feet in diameter. The footprint area of the tank would be approximately 173 square feet. The welded steel water tank would have a non-reflective, painted, earth-tone exterior and a sloped roof. The tank would be constructed on a circular concrete pad. The tank would be constructed in accordance with the current California Building Code and American Water Works Association (AWWA) standards.

Pump Station Building: The pump station building would house the production well, booster pumps, disinfection equipment, ancillary valves and flow meters, and electrical equipment. The building would include three separate rooms: a pump station room, an electrical room, and a calcium hypochlorite room. The building would be constructed of masonry blocks and would be approximately 40 feet wide by 50.5 feet long and 21 feet tall. The pump station building would have stucco finish and an earth-tone exterior.

The building would have various sound attenuation features, including wall panels, fans, and louvers to reduce noise related to the operation of equipment removing heat generated within the pump and electrical rooms. Metal wall panels would achieve a noise reduction coefficient of approximately 0.90. The pump station building would be ventilated by one side-wall-mounted exhaust fan with a capacity of 4,500 cubic feet per minute. Exhaust fans would

have the lowest possible exhaust fan noise measurement unit (called a sone). Ducting in the building would also be designed to minimize noise. Sound caused by an operating louver is proportional to the air velocity through the louver; the intake and exhaust pump station louvers would be sized to minimize air flow noise.

Production Well: The production groundwater well would be drilled to a minimum depth of 300 feet and a maximum depth of 600 feet deep, and would have a maximum yield of 1,000 gallons per minute (gpm). The well is expected to operate during off-peak demand periods to fill the proposed adjacent storage tank and during maximum demand conditions (typically a 1- to 2-hour diurnal pattern). While the theoretical annual maximum yield of the new well would be 525.6 million gallons (based on operations of 1,000 gpm, 24 hours per day, 365 days per year), this theoretical maximum exceeds the annual production for the entire Del Rio service area of approximately 207 million gallons for the previous 5 years. The well pump would be sized to meet peak demand conditions; however, pumping is expected to occur for an annual average of 8 hours per day (not 24 hours per day), with an anticipated maximum annual yield of about 175 million gallons, which is substantially less than the theoretical annual maximum yield of the new well. The well would be housed inside the pump station building.

Monitoring Well: A monitoring well would be installed on site to monitor groundwater levels in relation to operation of the production well and to calibrate the City's groundwater flow model. The monitoring well would be installed within a 50-foot radius of the production well and would be drilled to a similar depth (i.e., 600 feet deep). The monitoring well would include three separate "nested" wells installed to different depths within the same borehole. Each nested well would be equipped with a pressure transducer to monitor the groundwater level. The three nested wells would be installed to measure groundwater levels in the shallow (100-265 feet deep), intermediate (265-360 feet deep), and deep (360-600 feet deep) zones of the aquifer. The monitoring well would not produce any water and would only be used to collect data on groundwater levels.

Booster Pumps: The Proposed Project includes up to four 60-horsepower (hp) electric booster pumps. Two booster pumps would be on duty, one would be on standby, and the fourth would be available to serve future buildout demand. The pump capacity for each of these booster pumps would be 850 gpm, with firm capacity of 1,700 gpm. The booster pumps would be housed inside the pump station building.

During normal operation, the well pump would fill the storage tank at a maximum rate of 1,000 gpm, controlled by a variable-frequency drive and sensors in the tank. The booster pumps would be separate from the well pump and would be designed to provide a maximum flow from the storage tank to the distribution system of 1,700 gpm. The booster pumps would deliver supply to the distribution system to meet peak-hour and fire-flow demands. The booster pumps would be designed and operated to discharge water from the tank at a much faster rate than the well can fill the tank to meet peak and fire-flow demands, as needed. When the booster pumps are running at maximum flow, water from the production well may simultaneously fill the storage tank. The tank, when full, would drain in less than 6 hours (357 minutes) under maximum flow conditions.

An additional booster pump would be installed in the pump station at full buildout. This fourth booster pump would deliver an additional 700 gpm of flow from the storage tank to

the transmission pipelines. The additional booster pump would increase the total delivery of stored water from the tank to the distribution lines to 2,400 gpm in order to meet the estimated peak-hour rate and fire-flow demands for Del Rio's buildout condition. This fourth pump would not result in increased groundwater extraction, only increased flow from the storage tank to the transmission pipelines. The impact analysis presented in this EIR includes evaluation of all four booster pumps operating under the full buildout condition.

Transmission Main: A 16-inch-diameter transmission main would be constructed from the pump station building on Ladd Road, north along St. John Road, and terminating at the intersection of St. John Road and Country Club Drive. The transmission main would extend for approximately 2,500 linear feet and would be installed in accordance with Stanislaus County Department of Public Works trenching requirements, which would include a 36-inch-wide trench and a 60-inch-wide trench patch. A portion of the transmission main (approximately 65 feet) would be installed by jack and bore underneath an existing rail crossing on Ladd Road, just east of St. John Road.

Stormwater Retention Basin: Site runoff would be captured in an on-site retention basin that would be designed to contain the 50-year storm event and the full capacity of the storage tank, in the event of a tank rupture. The retention basin would be located on the southern portion of the parcel and would encompass approximately 1.3 acres with a 1.4-acre-foot holding capacity. The basin would be designed to hold water for a maximum of 48 hours based on the assumed percolation rate of 0.6 gallon/square foot per hour.

Surface runoff north to Ladd Road would be limited to the entrance driveway. Rock-lined drainage swales with shallow rock wells at one end would be installed within the Ladd Road right-of-way to collect runoff from the northern portion of Site A. A drainage swale with periodic inlets would be installed down the center of the site to convey surface runoff to the retention basin. The site would be graded to slope toward the swale and retention basin. The stormwater collection system would also convey tank overflow, drain water, and well wastewater to the retention basin. Slopes would be stabilized with hydroseeding or planted with drought-tolerant plants.

Site Security and Access: The entire site (i.e., within the parcel boundary) would be enclosed within an 8-foot-tall concrete masonry wall or wrought-iron fence topped with no-climb points and three strands of barbed wire along the Ladd Road frontage. Ladd Road frontage would include 9-foot-tall vehicular and pedestrian access gates. The rest of the site would be enclosed by 8-foot-tall, 1-inch chain-link fence with security wire. The wrought-iron fencing would be placed approximately 65 feet from the right-of-way line.

A new 25-foot-wide driveway on Ladd Road would provide site access. The driveway would have a 20-foot-wide, motorized sliding gate with an electronic key card reader or keypad for access. A 3-foot-wide metal pedestrian gate would be provided alongside the sliding vehicular gate.

Vehicular access (driveway) and parking areas within the site would be paved with Portland cement concrete or asphaltic concrete. Other portions of the site would be covered with low-maintenance landscaping or gravel.

Security lighting would be installed throughout the site. Exterior lighting would be elevated on poles using light-emitting diodes (LEDs) and would be directed toward the interior of the

site rather than off site, to the extent feasible, to reduce light or glare. Lights on the poles would be equipped with motion sensors and would turn on only if motion were detected in the vicinity of the building and tank. Security cameras and building alarms would also be installed on site.

Landscaping: Landscaping at Site A would include vegetation to screen the fence, tank, and other facilities from views from adjacent properties and from Ladd Road. The plant selections would be arranged in a tiered format with low, ground-hugging shrubs in the foreground, smaller shrubs in the middle tier, and taller screening trees for the backdrop. Plant selections would be chosen based on their proven drought tolerance, survivability, hardiness, and ease of maintenance. The trees would be a mixture of screening conifers, evergreen broadleaf, and smaller flowering deciduous broadleaf. Approximately 70 trees would be planted within an approximately 0.24-acre irrigated area. A vegetated, undulating soil berm on the east side of the site would contribute to a natural aesthetic appeal. An automatic irrigation system for the landscaping would be designed and would adhere to applicable water conserving ordinances. A rain/freeze/thaw shut-off switch for the irrigation system would be installed. The slopes surrounding the stormwater retention basin would also be hydroseeded or planted with drought-tolerant plants to prevent erosion.

Electricity: Site A has immediate access to nearby electrical lines served by the local utility provider, Modesto Irrigation District. The total new electrical connected load for the proposed facilities would be approximately 502 kilovolt-amperes (kVA) when all equipment is running (or approximately 755 amperes at 480 volts, 3 phase). However, the average electrical demand load would vary with the number of pumps running and related output with a maximum anticipated connected load of approximately 566 kVA. The project site would include an underground electrical utility extension to connect to the existing Modesto Irrigation District infrastructure.

Standby Generator: A standby diesel generator and an above-ground diesel storage tank would be installed on a 10-foot by 20-foot concrete pad within the site. The standby generator would be used as an alternate power source for the Proposed Project facilities as necessary. The estimated capacity of the generator would be approximately 450 kilowatts (kW). The generator would be equipped with critical grade mufflers for the exhaust system and level 2 sound housing to achieve an approximate sound level attenuation to 75 decibels within 30 feet of the unit.

The generator would include a belly tank (an above-ground diesel fuel tank built into the frame of the generator support as part of a packaged unit) that would hold approximately 24 hours of generator fuel supply, which equates to approximately 775 gallons. The diesel storage tank would be housed in accordance with City of Modesto Fire Prevention Department requirements and would comply with Stanislaus County standards, including Spill Prevention, Control and Countermeasures (SPCC), the Uniform Fire Code (UFC), and Occupational Safety and Health Administration (OSHA) requirements, including secondary containment requirements.

Site B – McHenry Avenue Well

Site B, located on McHenry Avenue, would encompass approximately 0.4 acre. The facilities at this site would consist of a production well and pump, standby generator, disinfection

facilities, monitoring well, transmission pipelines connecting to the City's existing distribution system down McHenry Avenue, and space for a future treatment unit and treatment filters. These facilities would be fully enclosed by a 12-foot-tall concrete block wall with a 24-foot-wide vehicular access gate. The site would be accessed from a new driveway off McHenry Avenue; no site access would be provided from Stewart Road. Site improvements would include a concrete pad and paved driveway, well and associated piping, controls, treatment facilities, generator, and appurtenances. Runoff from new impervious surfaces at Site B would be retained on site. Figure 2-3 provides a site plan of the Site B facilities.

Well and Pump: The Site B groundwater well would replace the City's existing Well 271 located on the west side of the Del Rio service area. This well is past its operational life and would be decommissioned upon completion of the Site B well. The new Site B well would be drilled to a minimum depth of 300 feet and a maximum depth of 600 feet, with a maximum yield of 1,000 gpm. Similar to the Site A production well, the Site B well would have a theoretical annual maximum yield of 525.6 million gallons (based on operations of 1,000 gpm, 24 hours per day, 365 days per year); however, the well would not be operated to its full capacity. The well pump would be sized to meet peak demand conditions, with pumping expected to vary throughout the year depending upon system pressure needs. While pumping may vary from as much as 20 hours per day during the summer to as little as 2 hours per day in the winter, pumping is expected to occur for an annual average of 10.8 hours per day, with an anticipated maximum annual yield of approximately 237 million gallons, which is substantially less than the theoretical annual maximum yield of the new well. The well pump would be approximately 200 hp or less and powered by electricity. The pump would require a 300-kW backup generator with a sound-attenuating enclosure. No booster pumps are expected to be needed at Site B. A geotechnical investigation of the site would be completed during the design process.

Monitoring Well: Similar to Site A, a monitoring well would be installed at Site B to measure changes in groundwater levels that could occur from operation of the production well. The monitoring well would be installed within a 50-foot radius of the production well and would be drilled to a similar depth (i.e., 600 feet deep). The monitoring well would include three separate "nested" wells installed to different depths within the same borehole. Each nested well would be equipped with a pressure transducer to monitor the groundwater level. The three nested wells would be installed to measure groundwater levels in the shallow (100-265 feet deep), intermediate (265-360 feet deep), and deep (360-600 feet deep) zones of the aquifer. The monitoring well would not produce any water and would only be used to monitor groundwater levels.

Stormwater Retention Basin: Site runoff would be captured in a 50-foot by 40-foot temporary retention basin that would be designed to contain the 100-year, 24-hour storm event. The retention basin would be located north of the proposed well site on an adjacent parcel that is currently in private ownership. The basin would encompass approximately 0.15 acre with an 0.08-acre-foot holding capacity. It would be designed to hold water for a maximum of 48 hours, based on the assumed percolation rate of 0.3 gallon/square foot per hour.

Surface runoff east to McHenry Avenue would be limited to the area within the right-of-way. Grading within the right-of-way would include drainage to an existing storm drain inlet. The site would be graded to slope toward the north and the retention basin. The stormwater

collection system would also convey well wastewater to the retention basin. Slopes would be stabilized with hydroseeding or planted with drought-tolerant plants.

Transmission Pipeline: A 12-inch-diameter transmission pipeline would be constructed from the well along McHenry Road to connect with existing City distribution pipelines along Stewart Road. The transmission pipeline would run from the well site south for approximately 190 feet under McHenry Road, then west for approximately 760 feet along Stewart Road, terminating at the intersection of Stewart Road and Grove Pointe Way. The pipeline would be installed beneath the road, within the road right-of-way, and in accordance with Stanislaus County Department of Public Works trenching requirements, which would include a 32-inch-wide trench and a 56-inch-wide trench patch.

Standby Generator: A standby diesel generator with a belly tank (an above-ground diesel fuel tank built into the frame of the generator support as part of a packaged unit) would be installed on a 10-foot by 20-foot concrete pad within Site B. The standby generator would be used as an alternate power source for the Proposed Project facilities as necessary. The estimated capacity of the generator would be approximately 450kW. The generator would be equipped with critical grade mufflers for the exhaust system and level 2 sound housing to achieve an approximate sound level attenuation to 75 dB within 30 feet of the unit. The belly tank would hold approximately 24 hours of generator fuel supply, which equates to approximately 775 gallons. The diesel storage tank would be housed in accordance with City of Modesto Fire Prevention Department requirements. Similar to Site A, the generator would include a fuel tank with secondary containment.

Site Security: Security lighting would be installed throughout the site. Exterior lighting would be on poles using LEDs and directed toward the interior of the site, to the extent feasible, to reduce light or glare. Lights on the poles would be equipped with motion sensors and would turn on only if motion were detected in the vicinity of the building and tank. Security cameras and alarms would also be installed on site.

Existing trees, electrical, and communication poles at Site B would remain on site and undisturbed.

2.4.2 Construction

Construction Methods

Construction activities for the Proposed Project would include the construction phases and approximate durations shown in **Table 2-1**. Additional descriptions of these phases and pieces of equipment are provided below and in **Appendix C**, *Air Quality and Global Climate Change Impacts Evaluation Supporting Documentation*. In addition, Table 2-1 indicates the anticipated number of potential worker trips and construction-related trips for the various construction phases. Pipeline construction activities (for both trenching and jack/bore) might overlap with building construction activities. All other phases are assumed not to overlap.

Table 2-1. Construction Activity Summary

Construction Phase	Approximate Duration (days)	Worker Trips	Vendor Trips	Hauling Trips	Total Trips by Construction Phase
Demolition	20	15	0	16	31
Site Preparation	5	18	0	11	29
Grading	8	15	0	33	48
Well Construction (Drilling)	20	13	1	0	14
Pipeline Construction (Jack/Bore)*	20	15	1	2	18
Pipeline Construction (Trenching)*	20	30	0	4	34
Building Construction	230	25	2	0	27
Paving	18	20	0	0	20
Architectural Coating	18	5	0	0	5
*Trenching and jack/bore construction phases might overlap to some degree.					

The Proposed Project would be constructed in accordance with standard protocols of the Clean Water Act Section 402 General Construction Permit (State Water Resource Control Board Order No. 2009-0009-DWQ).

Site Preparation and Earthwork: Site preparation activities would include clearing and grubbing; demolition of existing buildings and associated features at Site A; excavation, import, and placement of fill; and compaction. Clearing and grubbing would be conducted using standard excavators, bulldozers, and hand labor.

Demolition activities would be performed at Site A to abandon and remove the existing house, garage, shed, out-buildings, well, and septic system. Abatement of asbestos-containing materials and lead-based materials, if needed, during demolition of existing buildings would be supervised by a contractor certified by the California Occupational Safety and Health Administration and would be conducted in a manner compliant with federal, state, and local regulations. Removal or abandonment of the septic system would be conducted in accordance with local and state regulations to prevent any potential release of or worker exposure to waste material or contaminated soils. The estimated demolition area would be approximately 3,460 square feet. All demolished material and debris, including any hazardous waste, would be disposed of off site at an appropriate location selected by the construction contractor. For the purposes of this analysis, the disposal site is assumed to be located within 20 miles (maximum 1 hour of travel time) from Site A.

To the extent feasible, excavated soil would be reused on site. If required, fill would be delivered to the project sites by conventional haul trucks with a capacity of up to 20 cubic yards per load. Fill material would be placed with an excavator and compacted with a compactor/roller. Site preparation activities at Sites A and B are divided into three phases in Table 2-1 (demolition, site preparation, and grading) for the purpose of estimating worker trips and construction-related trips.

Pipelines: New pipelines would be installed beneath existing streets and within the project sites. The general process for pipeline installation involves digging a trench, installing the pipe, and backfilling the trench ("cut and cover"). In existing streets, the cut-and-cover method involves removing the asphalt, roadway base, and underlying soil; all materials are replaced at the completion of the process. The depth and width of the trenches would vary depending on the size of the pipe and in consideration of other existing utility lines; however, it is anticipated that the minimum depth for the transmission main would be 42 inches. Construction crews may close one lane of traffic temporarily during pipeline installation. In general, the maximum length of an open trench would be the distance necessary to accommodate the amount of pipe that can be laid in one day, typically 200-400 feet. The approximate width of the construction area for installation of the pipeline would be 20 feet and would be within the road right-of-way boundaries.

In addition to the cut-and-cover method, approximately 65 feet of the Site A transmission main would be installed by the jack-and-bore method. The jack–and-bore method involves directional drilling to reduce disturbance to the ground surface and disruption to other facilities or surface features. The jack-and-bore method involves use of cutting heads or hydraulic jacks to install pipe from a launch (bore) pit to a receiving pit. Slurry, typically bentonite (inert clay) and water, is used as a lubricant for tunneling and pipe installation.

Buildings and Structures: Construction of buildings and structures would generally include the following activities:

- concrete delivery, forming, and placement and rebar placement;
- structural steel work (assembly and welding);
- installation of electrical/instrumentation equipment;
- masonry concrete wall construction; and
- installation of mechanical equipment and accessories.

Following construction of the buildings, architectural coating of the building/structures, and final site restoration (shown as paving in Table 2-1) would be performed. The final step in the construction process is to restore the ground surface, which generally involves paving, installing landscaping, or installing erosion controls, as necessary.

Staging Areas: Staging areas would be needed to store pipe, construction equipment, and other construction-related materials. Staging areas would likely be established at Sites A and B or along the pipeline routes where space is available within the road right-of-way or in vacant lots. Staging areas would avoid areas of sensitive biological habitat. The City would reserve the authority to approve the locations of the staging areas as part of the contracts for construction of the facilities.

Construction Equipment

In general, the main pieces of equipment that may be used during construction activities are:

- well drilling equipment
- rollers
- pavers
- bulldozer
- backhoe
- welders
- track-mounted excavator
- front-end loader
- crane
- compactor
- end dump truck
- forklift
- ten-wheel dump truck
- compressors/jack hammers
- paving equipment
- water truck
- flat-bed delivery truck
- boom truck
- concrete truck
- cement and mortar mixers
- grader
- mowing equipment (e.g., weed eaters, commercial lawnmowers)
- generator sets

Specific construction equipment assumptions are provided in Appendix C, *Air Quality and Global Climate Change Impacts Evaluation Supporting Documentation*.

Construction Schedule

Construction of the Proposed Project is anticipated to last for up to approximately 15 months, beginning in 2016 and completing in 2017. Within this timeframe, the majority of construction work that involves use of operating equipment would occur within a 10-month period. Construction activities would generally occur Monday through Friday between 7:00 a.m. and 5:00 p.m., excluding City-observed holidays.

2.4.3 Project Operations

Operation of the Proposed Project would primarily involve the operation, inspection, and maintenance of the facilities. The pump stations, storage tank, and wells would be controlled remotely through a Supervisory Control and Data Acquisition (SCADA) system. The facilities would be inspected at least once a week to verify instrument readings, check on the condition of the sites, and maintain equipment.

The City would inspect the water system on an annual basis to determine whether maintenance was needed. Maintenance activities for the storage tank would include periodic cleaning of the tank's interior (with the use of a vacuum system) to maintain capacity and function and occasional recoating of the tank, as needed. Maintenance activities for the wells would include various mechanical tests and meter calibration (with equipment specific to those activities) and general maintenance of treatment systems (e.g., treatment system flushing or regeneration). The City would inspect the wells and pump stations on a regular basis (numerous times during the wet months and less frequently during the remainder of the year) to ensure optimal performance. Maintenance of the pump stations and pipelines would be performed on an as-needed basis.

2.5 Permits and Approvals

The permits and regulatory compliance requirements for the Proposed Project are described by permitting agency in **Table 2-2**.

Table 2-2. Applicable Permit and Regulatory Requirements

Regulatory Agency	Law/Regulation	Purpose	Permit/Authorization Type
Central Valley Regional Water Quality Control Board	Clean Water Act (CWA) Section 402	National Pollutant Discharge Elimination System (NPDES) program regulates discharges of pollutants	NPDES General Permit Construction Permit Notification
	California Health and Safety Code (Chapter 7)	Approval of County well permit	Permit Approval
Stanislaus County Department of Environmental Resources	County Municipal Code (Title 9 Health and Safety, Section 9.36)	Well construction approval	Well Construction Permit
Stanislaus County	County policies and requirements	Compliance with County right-of-way policies	Encroachment Permit
Stanislaus County Planning Commission	Stanislaus County Zoning Ordinance (Chapters 21.20.030 and 21.96.050)	Approval of proposed facilities at Site B	Use Permit
	Stanislaus County Zoning Ordinance (Chapter 21.40.040)	Approval of proposed facilities at Site B	Development Plan Approval
California Department of Public Health	Safe Drinking Water Act, California Health and Safety Code (Title 17, Title 22)	Compliance with public health water quality requirements	Use Permit for Well Water
San Joaquin Valley Air Pollution Control District	Rule 2010 permits required	District permitting for any constructed or operated source that emits or may emit air pollutants	Authority to Construct, Permit to Operate
Modesto Irrigation District	District policies and requirements	Compliance with utility district policies	Construction Permit

Chapter 3
Introduction to the Environmental Analysis

3.1 Overview

Chapters 4 through 11 of this DEIR describe the environmental resources and potential environmental impacts of the Proposed Project. Each chapter describes the existing setting and background information for the particular resource topic to help the reader understand the conditions that could be affected by the Proposed Project. In addition, each chapter includes a discussion of the criteria used in determining the significance levels of the Proposed Project's environmental impacts. Finally, each chapter recommends mitigation measures to reduce, where possible, the adverse effects of significant impacts, including applicable mitigation measures from the Program EIR.

3.2 Significance of Environmental Impacts

According to CEQA, an EIR should define the thresholds of significance and explain the criteria used to determine whether an impact is above or below that threshold. Significance criteria are identified for each environmental resource topic to determine whether implementation of the project would result in a significant environmental impact when evaluated against the baseline conditions as described in the environmental setting. The significance criteria vary depending on the environmental resource topic. In general, effects can be either significant (above threshold) or less than significant (below threshold). In some cases, a significant impact will be identified as significant and unavoidable if no feasible mitigation measure(s) is/are available to reduce the impact to a less-than-significant level. If a project is subsequently adopted despite identified significant impacts that would result from the project, CEQA requires the lead agency to prepare and adopt a statement of overriding considerations describing the social, economic, and other reasons for moving forward with the project despite its significant impact(s).

3.3 Baseline Conditions

Under CEQA, the environmental setting or "baseline" serves as a gauge to assess changes to existing physical conditions that would occur as a result of a proposed project. In accordance with CEQA Guidelines Section 15125, for purposes of this DEIR, the environmental setting is the existing physical conditions at the time the NOP was published (July 28, 2015).

3.4 Tiering from the WSER Program DEIR

As described in Section 1.1.1, this DEIR is tiered from the City's 2010 Water Service Engineer's Report (WSER) Program EIR (Program EIR) (City of Modesto 2010), in accordance with CEQA Guidelines Sections 15168 and 15152. CEQA Guidelines Section 15168(d) states: "A program EIR can be used to simplify the task of preparing environmental documents on

later parts of the program. The program EIR can: ... [f]ocus an EIR on a subsequent project to permit discussion solely on new effects which had not been considered before."

CEQA Guidelines Section 15152(d) states:

> [A]ny lead agency for a later project pursuant to or consistent with the program, plan, policy, or ordinance should limit the EIR or negative declaration on the later project to effects which:
>
> 1. Were not examined as significant effects on the environment in the prior EIR; or
>
> 2. Are susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means.

CEQA Guidelines Section 15168(c)(4) states that a program EIR may be used with later activities. Section 15168(c)(4) states:

> Where the subsequent activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR.

Accordingly, the City prepared an Environmental Checklist (**Appendix B**) to identify environmental issues that fall within the scope of the Program EIR and need not be reevaluated in this EIR. Eight resource issues were not analyzed further in this EIR because they either were fully within the scope of the Program EIR or had no potentially significant impacts. The rationale for eliminating these issues from further analysis is provided in Section 3.5. As a result, this EIR analyzes environmental issues that were found to have the potential for significant impacts on the environment and were not fully considered in the Program EIR.

3.5 Sections Eliminated from Further Analysis

Eight CEQA checklist resource topics have been eliminated from further analysis based on the nature and scope of the Proposed Project activities, either because of the absence of any potentially significant environmental impacts or because the Proposed Project would be consistent with previous evaluations under the Program EIR. Where appropriate, the Environmental Checklist identifies applicable mitigation measures from the Program EIR that would apply to the various environmental topics; these mitigation measures are also listed in Section 3.6 of this DEIR.

Based on the Environmental Checklist prepared for the Proposed Project (Appendix B) and supporting environmental analysis, and in accordance with Section 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that the Proposed Project is consistent with the project described and analyzed in the Program EIR. With implementation of the mitigation measures identified in this DEIR, no new or additional significant impacts related to these environmental resources would occur, compared to impacts disclosed in the Program EIR.

The Environmental Checklist is included in Appendix B. A brief summary and description of the resource topics dismissed from further evaluation is provided below.

3.5.1 Agriculture and Forestry Resources

There are no Williamson Act contracts on the Proposed Project sites.

According to the California Department of Conservation's map, "Stanislaus County Important Farmland 2010," the Site A property is designated Rural Residential and the Site B property is designated as Urban and Built-Up (California Department of Conservation 2015). Therefore, no Prime Farmland, Unique Farmland, or Farmland of Statewide Importance would be converted to nonagricultural use for this project.

Site A is zoned as A-2-40 (General Agriculture District), which permits various uses, including (but not limited to) agricultural uses, single-family dwellings, mobile homes, buildings and appurtenances that are incidental or related to farming purposes, garage sales, and temporary agricultural service airports. According to Section 21.20.030 of the Stanislaus County Code, the A-2 district allows "Tier Three" uses that are not directly related to agriculture but may be necessary to serve the A-2 district. Specifically, public buildings and facilities for public utilities may be permitted on parcels zoned A-2, subject to permit approval by the Stanislaus County Planning Commission. The proposed facilities would likely meet the "Tier Three" criteria of a permitted use. As required by County Code, the City would apply for a use permit from Stanislaus County.

Site B is zoned as P-D (Planned Development) and therefore would not conflict with zoning for agricultural use. The Site A and Site B pipelines would be installed within road rights-of-way and therefore would not conflict with zoning for agricultural uses.

Therefore, the Proposed Project would not result in farmland conversion.

3.5.2 Geology, Soils, and Mineral Resources

As described in Section VI of the Environmental Checklist, the Proposed Project sites are underlain with soils suitable for the proposed tank and wells. The sites have sandy loam and loamy sand soils and a relatively low water table; thus, seismic-induced differential settlement, ground failure, or liquefaction would not be expected. There are no known faults in the project area. The project area lies within the central portion of Stanislaus County and is considered to be at "Moderate" risk for earthquake shaking potential. The Proposed Project would be required to comply with the most recent California Building Code seismic standards for construction.

Site A is underlain by soils with moderate susceptibility to erosion. Soils at site B have low to moderate susceptibility to erosion. The Proposed Project would reduce erosion and sedimentation potential to a less-than-significant level with the implementation of construction best management practices required as part of the permitting process for the National Pollutant Discharge Elimination System.

The proposed infrastructure would have no significant impact on the recoverability of any mineral deposits in the vicinity of the project sites.

The Proposed Project sites are located in an area that is relatively flat with only minor changes in topography; landslides and lateral spreading are not likely to occur on either of the proposed sites. Construction-related ground-disturbing or excavation activities could alter the soil stability at the construction locations. Excavation and trenching for the transmission pipelines may create unstable slopes during construction. The City would implement **Mitigation Measure GEO-1** from the Program EIR to reduce these impacts to a less-than-significant level.

The Proposed Project includes the installation of production wells and extraction of groundwater resources. Groundwater withdrawal has the potential to result in subsidence and/or collapse during a seismic event and may be potentially significant. Analysis of groundwater resources and the Proposed Project's potential risk of land subsidence or collapse are addressed in detail in Chapter 9, *Groundwater*, of the DEIR.

3.5.3 Hazards and Hazardous Materials

At Sites A and B, most of the equipment to be installed would be electrical, but may contain small amounts of oils, lubricants, or other hazardous substances. Backup generators on site would use diesel fuel, which would be transported to the site, stored on site, and disposed of from time to time. On-site containment is required for the chlorinator and in case of diesel fuel spills and would be implemented as part of project design.

Phase I Environmental Site Assessments were conducted at Site A and Site B in 2012 (ATC Associates 2012a, 2012b). Three underground storage tank (UST) sites were reported in the vicinity of Site A, none of which are reported as having impacts on Site A. Other potential sources of hazardous materials at Site A include asbestos-containing materials and lead-based paint within the residential buildings. Abatement of asbestos-containing materials and lead-based materials during any demolition of existing buildings would be supervised by a contractor certified by the California Occupational Safety and Health Administration and would be conducted in a manner compliant with federal, state, and local regulations. The homestead is served by an existing septic tank and leach lines located just south of the main residence. Removal or abandonment of the treatment system would be conducted in accordance with local and state regulations to prevent any potential release of or worker exposure to waste material or contaminated soils.

At Site B, a database query reported one 1,000-gallon gasoline UST and one 500-gallon gasoline UST at the property for agricultural uses. No files, reports of releases, or violations were identified at the property or addresses near Site B. There are no records of hazardous materials sites or hazardous cleanup sites along St. John Road and the proposed pipeline alignment.

In summary, Phase I Environmental Site Assessments conducted at Sites A and B did not identify any documented hazardous materials storage areas, hazardous materials cleanup sites, or leaking USTs that may affect the project sites. Demolition of existing buildings and wastewater treatment systems would be conducted in accordance with local and state regulations. However, the Proposed Project could result in direct and indirect impacts from a release of hazardous materials at a known contaminated site.

There are no public or public-use airports near the project sites. Additionally, there are no wildlands near the site. Therefore, there is no impact on wildfires.

Installation of distribution pipelines may require temporary lane closures in the vicinity of the sites. Implementation of a traffic management plan would be included as part of the City's Standard Construction Procedures.

In conclusion, the Proposed Project could result in direct and indirect impacts from a release of hazardous materials at a known contaminated site. The City would implement **Mitigation Measures HAZ-1 and HAZ-2** from the Program EIR to reduce this impact to a less-than-significant level.

3.5.4 Hydrology and Water Quality

Several topics in Section IX of the Environmental Checklist were dismissed, as summarized below; however, the Proposed Project's potential impacts on groundwater are fully evaluated in the EIR.

Water quality could be affected by construction of the tank, pipelines, and water wells or by a possible accident involving fuel spills, but secondary containment and the location of the site away from the Stanislaus River and other water bodies would reduce the potential for water quality impacts, as compared to the impacts analyzed in the Program EIR.

The Proposed Project would not alter the course of any stream or river, but would change the existing drainage patterns at the project sites. Proposed facilities at Site A would result in an increase of impervious surfaces and could, therefore, increase the amount of runoff or otherwise change patterns of drainage and infiltration. Site A includes construction of a stormwater retention basin to capture and infiltrate stormwater runoff from the project site. The basin would be designed with the appropriate capacity to receive rainfall runoff and water from the water storage tank, if it were to fail. Runoff from new impervious surfaces proposed at Site B would be retained on site.

The Proposed Project would involve grading, excavation, trenching, and other construction-related activities that leave soils exposed to erosion. During construction, runoff at the sites would be controlled through implementation of a stormwater pollution prevention plan as required under the National Pollutant Discharge Elimination System; after construction, the project sites would be flat, and loss of topsoil and soil erosion would not be substantial. At Site A, the proposed stormwater retention basin and berm slopes may be susceptible to erosion; however, the Proposed Project includes planting vegetation on the berms and stabilizing the slopes of the retention basin with hydroseeding or planted with drought-tolerant plants.

The Proposed Project does not involve the construction of housing and the site does not lie within the 100-year floodplain.

The Proposed Project would occur outside the 100-year floodplain, so risk of flood damage to the proposed infrastructure is consistent with the degree of risk assumed in the Program EIR. Furthermore, there would be no change in the risk of flooding from dam failure as compared to the risk throughout the area. Finally, the Proposed Project would not substantially alter any existing drainage pattern or change a watercourse such that flood hazards are increased, and is consistent with the degree of risk analyzed in the Program EIR.

3.5.5 Population and Housing

At Sites A and B, the proposed wells and tank in the Del Rio area would increase the local water supply and water pressure, which would, in turn, allow greater development in the Del Rio plan area, which has not yet been fully built out. The new facilities are proposed to address existing deficiencies in the water delivery system; the amount of water that would be produced by these wells is not expected to facilitate growth greater than that anticipated to occur with the development of the Del Rio planning area. This impact was disclosed in the Program EIR and no mitigation was proposed to reduce the impact; the impact of this specific project is consistent with the impact disclosed in the Program EIR. Because population growth induced by the Proposed Project would occur only within the bounds of planned growth, the Proposed Project would not contribute to unplanned growth. All growth would be consistent with that contemplated in the Program EIR, and therefore this issue is considered less than significant.

No people or housing would be displaced as a result of construction or operation of the proposed well and tank.

3.5.6 Public Services

The Proposed Project would have no significant impacts on public services. The Program EIR did not identify an impact and thus did not identify mitigation measures. No new or additional significant impacts have been identified for the Proposed Project relative to this topic.

Construction of the Proposed Project would employ construction workers at the project sites, who would likely come from the regional labor force. While some construction workers could temporarily relocate from other areas, the project would not result in a substantial increase in the local population. During construction, potential incidents could require the involvement of local law enforcement, fire protection, or emergency services. However, such increases in incidents are not anticipated to be of a magnitude that would adversely affect response times or other performance objectives of these public services. No need for additional schools or public facilities or physical modifications to schools or other public facilities would result from the Proposed Project.

Furthermore, during the EIR scoping period, the Stanislaus Union School District submitted a comment letter stating that the school district had no comments or concerns with the Proposed Project (Stanislaus Union School District 2015). The Pacific Gas and Electric Company submitted a comment letter during the scoping period stating that the agency had no comments or concerns regarding the Proposed Project (Pacific Gas and Electric Company 2015). Therefore, the Proposed Project is anticipated to have a less-than-significant impact on public services.

3.5.7 Recreation

No significant impacts on recreation were identified in the Program EIR; therefore, it contained no mitigation measures.

Construction and operation of the proposed wells and tank are not expected to have any impact on the use or quality of parks. Furthermore, this project would create no demand for new or expanded parks or other recreational facilities.

3.5.8 Transportation and Traffic

At Sites A and B, a maximum of 31 daily one-way vehicle trips (worker commute trips, haul trips, and vendor trips) would occur during trenching, the most traffic-intensive phase of construction on the individual projects (see Table 2-1 in Chapter 2, *Project Description*). If trenching and jack/bore activities take place simultaneously, a total of 48 daily, one-way vehicle trips could result for that 20-day period. During operation of the wells and tank, City staff would visit the facilities once each week-day (i.e., five round trips each week) for inspection and maintenance.

At Site A, construction activities would temporarily increase emergency response times due to lane narrowing or lane closures to allow the installation of approximately 2,500 linear feet of water transmission pipeline in St. John Road from the site to the intersection with Country Club Drive. At Site B, construction activities would temporarily increase emergency response times due to lane narrowing or lane closures to allow the installation of approximately 500 linear feet of water transmission pipeline in McHenry Avenue and Stewart Road to the intersection with Grove Pointe Drive. However, these impacts were disclosed in the Program EIR and no greater impacts would be expected to occur as a result of the Proposed Project. The City's Standard Construction Procedures would be implemented during construction; these include preparing a traffic control plan, public notification, and preconstruction meetings. Adherence to the City's Standard Construction Procedures would ensure a less-than-significant impact, consistent with the Program EIR.

At Sites A and B, there would be no continuous demand for parking for maintenance staff. Any needed parking would be accommodated on site.

Neither Site A nor Site B is located near any airport or airstrip or the infrastructure that would have an effect on air traffic due to any of its features. This is consistent with the analysis in the Program EIR. Furthermore, the construction of the tank, wells, and associated infrastructure would result in no significant changes to the affected roadways or traffic on them after construction is complete. The project does not conflict with plans or policies for non-automobile transportation.

The Program EIR did not identify an impact and thus did not identify mitigation measures. No new or additional significant impacts have been identified for the Proposed Project relative to this topic.

3.5.9 Utilities and Service Systems

The purpose of the Proposed Project is to extract groundwater supplies. Both Sites A and B would help diversify water supply and improve reliability, consistent with the Program EIR. The Proposed Project would not directly affect surface water supplies or surface water rights. The potential impact of the Proposed Project on groundwater supplies is fully evaluated in Chapter 9, *Groundwater,* of this DEIR. Aside from the issue of groundwater supply, other topics in Section XVII of the Environmental Checklist are less than significant, as described below.

The proposed new water supply infrastructure at Sites A and B would not directly result in a substantial increase in the demand for stormwater drainage or wastewater treatment facilities. Surface runoff is expected to be minimal, as noted in the discussion of hydrology

and water quality. Impacts from this project are expected to be consistent with those disclosed in the Program EIR.

Any solid waste resulting from construction and maintenance of the proposed well and tank would be disposed of at the Fink Road Landfill, if it cannot be recycled, as disclosed in the Program EIR. The Fink Road Landfill is expected to have adequate capacity to serve the very limited need expected to result from this project and no significant impact is anticipated.

All relevant federal, state, and local statutes and regulations would be complied with and no impact is expected to occur.

No new or additional significant impacts have been identified for the Proposed Project relative to this topic.

3.6 Program EIR Mitigation Measures Applied to the Project

CEQA Guidelines Section15168(c)(3) states that "[a]n agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into subsequent actions in the program." In compliance with this requirement, all appropriate mitigation measures from the Program EIR shall be incorporated into the Proposed Project. Urban Area General Plan policies and Master EIR mitigation measures shall be made part of the Proposed Project prior to approval by means of conditions of project approval or incorporation into the appropriate document or plan. Applicable mitigation measures are listed below for those topics not evaluated in detail in this DEIR, as referenced above, and for topics receiving detailed evaluation in this DEIR; applicable mitigation measures from the Program EIR are also included in the relevant topical chapter of this DEIR. These mitigation measures are also listed in the Mitigation Monitoring and Reporting Program (MMRP) included with this DEIR (**Appendix H**).

3.6.1 Agriculture and Forestry Resources

None.

3.6.2 Geology, Soils, and Mineral Resources

Sites A and B

Mitigation Measure GEO-1: Conduct project-specific geotechnical investigation prior to construction.

During project design, project-specific geotechnical investigations and reports will be prepared by registered engineers to detect site conditions that could result in liquefaction, construction on expansive soils, or other potential hazards and to identify appropriate design requirements that would prevent damage to structures. Site-specific geological data and recommendations by a registered engineer will be incorporated into project design, thereby reducing any impacts due to liquefaction.

3.6.3 Hazards and Hazardous Materials

Sites A and B

Mitigation Measure HAZ-1: Prepare a risk assessment prior to construction activity.

Prior to the commencement of construction activities, the City or its contractor will prepare a risk assessment and establish procedures to address the identification, excavation, handling, and disposal of hazardous materials in accordance with ASTM Standard 1527-05, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" and the EPA "All Appropriate Inquiries" standards and practices (40 CFR 312). An environmental database search of regulatory-listed hazardous materials sites contained in local, regional, state, and federal databases for the program site and within a 0.5-mile radius of the site will be performed by a qualified professional as part of this assessment. If contaminated soil or groundwater is encountered, the City will notify the appropriate local environmental management agencies and local fire departments. The City will ensure that any identified environmental site conditions that may represent a risk to public health and safety will be remediated in accordance with federal, state, and local environmental laws and regulations. All recommendations in the risk assessment will be implemented by the City and all its representatives, including contractors and earthwork construction workers, such that people are not exposed to adverse conditions on the program site as a result of discovering existing sources of contamination.

Mitigation Measure HAZ-2: Control contamination resulting from previously unidentified hazardous waste materials.

Prior to the onset of construction, all construction workers will be trained in the identification of potentially contaminated soil and water, including the characteristics of potential contamination, such as discolored soil, oils or sheens on water, and unusual odors. In the event that hazardous materials are encountered during construction, all construction activities in the area of the discovery will stop, and the City or its contractors will conduct hazardous materials investigations to identify the nature and extent of contamination and evaluate potential impacts on program construction. If necessary, the City or its contractors will implement remediation measures consistent with all applicable local, state, and federal codes and regulations. Construction will not resume until remediation is complete. If waste disposal is necessary, the City will ensure that all hazardous materials removed during construction are handled and disposed of by a licensed waste-disposal contractor and are transported by a licensed hauler to an appropriately-licensed and permitted disposal or recycling facility, in accordance with local, state, and federal requirements.

3.6.4 Hydrology and Water Quality

None.

3.6.5 Population and Housing

None.

3.6.6 Public Services

None.

3.6.7 Recreation

None.

3.6.8 Transportation and Traffic

None.

3.6.9 Utilities and Service Systems

None.

Chapter 4
Aesthetics

4.1 Overview

This chapter describes the existing visual and aesthetic resources within the potentially affected area and pertinent local, state, and federal plans and policies regarding the protection of visual and scenic resources. The potential impacts on scenic resources, public views of scenic vistas, visual character of the potentially affected area, and light and glare effects from construction and operation of the Proposed Project are evaluated. Mitigation measures are proposed to address the impacts found to be significant.

Visual character, visual quality, and visual sensitivity are three terms used throughout this chapter. Visual character is the unique set of landscape features that combines to make a view, including native landforms, water, and vegetation patterns, as well as built features such as buildings, roads, and other structures. Visual quality is the intrinsic appeal of a landscape or scene due to the combination of natural and built features in the landscape. Natural and built features combine to form unique perspectives with varying degrees of visual quality, which is rated in this analysis as high, moderate, or low. Visual sensitivity reflects the level of interest or concern that viewers have for a particular visual resource with visual quality taken into account. Visual sensitivity is a measure of how noticeable proposed changes might be in a particular setting and is determined based on the distance from a viewer, the contrast of the proposed changes, and the duration that a particular view would be available to viewers. For example, areas such as scenic vistas, parks, trails, and scenic roadways typically have a high visual quality and visual sensitivity because these locales are publicly protected and appear natural, view durations are typically long, and close-up views are more commonly available.

4.2 Regulatory Setting

No federal regulations are applicable to aesthetics in relation to the Proposed Project.

4.2.1 State Laws, Regulations, and Policies

California Scenic Highway Program

In 1963, the California State Legislature established the California Scenic Highway Program, a provision of the Streets and Highways Code, to preserve and enhance the natural beauty of California (California Department of Transportation [Caltrans] 2015). The state highway system includes designated scenic highways and those that are eligible for designation as scenic highways. There are no state-designated scenic highways near the Proposed Project site.

4.2.2 Local Laws, Regulations, and Policies

Stanislaus County General Plan 2015

The *Stanislaus County General Plan 2015* Conservation/Open Space Element (2016) acknowledges the scenic value of the county's open space lands and need for preserving these lands for scenic purposes. The general plan includes the following goal, policy, and implementation measure concerning protection of scenic views or aesthetic resources:

Goal One: Encourage the protection and preservation of natural and scenic areas throughout the County.

Policy Two: Assure compatibility between natural areas and development.

Del Rio Community Plan

The *Del Rio Community Plan* (Stanislaus County 1992), which was incorporated in the *Stanislaus County General Plan*, does not identify specific policies or regulations related to preservation of scenic views or aesthetic resources.

4.3 Environmental Setting

4.3.1 Regional Setting

The community of Del Rio is characterized by agricultural uses, open space, residential development, the Del Rio Golf and Country Club, and the Stanislaus River, which borders the community to the north. The Stanislaus River is the primary body of water in Del Rio. Numerous riparian trees and shrubs line the river corridor. The overhead electrical power lines and poles located along roads in Del Rio also contribute to the region's visual character. The topography of Del Rio, including the Proposed Project site, is relatively flat.

4.3.2 Project Vicinity

Visual Character and Quality of the Proposed Project Site

Site A is situated in the southern part of Del Rio and Site B is located in the eastern part of the community. The visual character and quality of both sites are described in the following paragraphs. **Figure 4-1** provides a key to photographs of Sites A and B and the project vicinity from several vantage points. Photographs presented in **Figures 4-2 and 4-3** show the agricultural and residential character of the sites and surrounding areas. Photographs of the existing sites are also presented in the top images of **Figures 4-4, 4-5, and 4-6.**

Site A is located immediately southeast of the Ladd Road/St. John Road intersection. The approximately 4-acre site is bounded by a Modesto Irrigation District canal to the south, Union Pacific Railroad tracks to the west, and agricultural uses and residential uses to the north and east (see Figure 4-2, Photo 3). The northeastern portion of Site A that fronts Ladd Road is currently occupied by a single-family residence, which consists of a house, garage, and outbuildings (see Figure 4-2, Photos 1 and 2; Figure 4-4, Photo 7). Approximately 22 trees are present on the site. The remaining portion of the site is undeveloped land covered with

grasses and ruderal vegetation. Mature trees border the western side of the site and overhead electrical transmission lines and wooden utility poles are located along the northern side of Site A and Ladd Road. Site A is largely characterized by the surrounding fallow fields and orchards and single-family homes. Aside from the trees present on the northeastern corner of the site, there are no features of special visual concern. However, given that most of the site is undeveloped and given the openness of surrounding land uses, the visual quality is considered moderate.

Site B is located at the northwest corner of the McHenry Avenue/Stewart Road intersection. The site encompasses approximately 0.4 acre. Land uses surrounding Site B include single-family residences and outbuildings to the west and south, agricultural lands used to grow grains and orchards to the north and east, and a fruit stand to the southeast. The site is currently vacant and undeveloped, with the exception of a few overhead power lines and utility poles (see Figure 4-3, Photos 4 and 5; Figure 4-5, Photo 8). Similar to Site A, Site B is largely characterized by the nearby agricultural fields and residential development to the west. As shown in Figure 4-3 (Photos 5 and 6) and Figure 4-6, mature trees (including an oak tree) are situated to the south and west of Site B. While there are no particular features of visual interest present on the site, because of the site's undeveloped condition and openness, and the agricultural nature of the surrounding lands to the east, the visual quality of Site B is considered moderate.

Light and Glare

Nighttime lighting is sometimes necessary to provide and maintain safe, secure, and attractive environments. Light that falls beyond the intended area of illumination is referred to as "light trespass." The most common cause of light trespass is spillover light, which occurs when a lighting source illuminates surfaces beyond the intended area, such as when building security lighting or parking lot lights shine onto neighboring properties. During nighttime hours, spillover light can adversely affect light-sensitive uses such as residences. Both light intensity and fixtures can affect the amount of any light spillover. Modern, energy-efficient fixtures that face downward, such as shielded light fixtures, are typically less obtrusive than older, upward-facing light fixtures.

Glare is caused by light reflections from pavement, vehicles, and building materials such as reflective glass, polished surfaces, or metallic architectural features. During daylight hours, the amount of glare depends on the intensity and direction of sunlight.

Existing lighting is sparse on and around Sites A and B. The sparse lighting on the two sites is largely due to the fact that both sites are mostly undeveloped and surrounded by agricultural and residential land uses. The most notable lighting source nearby is from the subdivisions north of Site A and the subdivision west of Site B. There are no significant sources of glare in the vicinity of Sites A and B.

Scenic Vistas, Highways, and Corridors

A scenic vista is generally defined as a viewpoint that provides expansive views of a highly valued landscape for the benefit of the general public. There are no scenic vistas or state-designated scenic highways or scenic corridors in the vicinity of Sites A and B.

Viewer Sensitivity

Viewer sensitivity is another consideration in assessing the effects of visual change. Sensitivity is a function of factors such as the visibility of resources in the landscape, proximity of viewers to the visual resource, elevation of viewers relative to the visual resource, frequency and duration of views, number of viewers, and types and expectations of individuals and viewer groups.

Viewer Groups

Viewer groups in the vicinity of the project site and their sensitivity to visual changes are described below. Viewer groups with visual access to the project site include residents and recreationists.

Residents

In general, as a viewer group, residents have a heightened sensitivity to the surrounding viewshed because their views are of high frequency and long duration. Residents also have an expectation of a consistent setting around their properties.

Site A is immediately visible from several residences bordering the site to the west, northeast and east on Ladd Road. Photo 7 in Figure 4-4 is a representative view of Site A from the residence northeast of the site. As previously described, existing views of Site A from the residences adjacent to Site A include the single-family home, outbuildings, trees, and grass-covered land north of the buildings.

Site B is partially visible from the adjacent property on Stewart Road south of the site. The residence at this property may have partial views of Site B from the backyard, although the mature trees and fencing likely screen views of the site.

Recreationists

Other viewers of the Proposed Project site include pedestrians and bicyclists, who typically have a heightened sensitivity to the surrounding viewshed. Although these roads are not expected to be highly used by pedestrians and bicyclists, this viewer group cannot be discounted entirely. Views from the perspective of recreationists would be moderately short. This viewer group is likely accustomed to the working agricultural landscape, residential uses, and open space that are present throughout the Del Rio area. For these reasons, this viewer group is expected to have a moderate visual sensitivity to views in the vicinity of Sites A and B.

4.4 Impact Analysis

4.4.1 Methodology

This section evaluates potential impacts on visual resources that could occur during construction and operation of the Proposed Project. The visual analysis is based on review of maps and evaluations of aerial and ground-level photographs of the Proposed Project sites.

Visual effects of the Proposed Project were assessed based on the Proposed Project's potential to substantially alter scenic resources or to degrade the visual character of the sites. The evaluation of temporary or short-term visual impacts considers whether construction activities could substantially degrade the existing visual character or quality of the sites or surrounding areas, as well as the duration over which any such changes would occur. Because of their short-term nature, construction activities occurring in an area for less than 1 year are typically considered to have a less-than-significant effect on visual quality. However, activities occurring in an area for more than 1 year have been evaluated for potentially significant visual impacts.

Because construction activities would be limited to daytime hours (between 7:00 a.m. and 5:00 p.m.), no nighttime construction or associated lighting would be required. As such, no effects related to nighttime construction lighting would occur. The impact analysis below focuses instead on evaluating permanent effects associated with new sources of light or glare.

Actions with long-term visual effects, such as constructing new or altered structures, grading roads, removing trees, and introducing new sources of light and glare, could permanently alter the landscape in a manner that could affect the visual character or quality of the area, depending on the perspective of the viewer. To determine impact potential, the assessment considers the visual sensitivity of the Proposed Project sites and surrounding areas.

4.4.2 Criteria for Determining Significance

Based on Appendix G of the CEQA Guidelines and professional expertise, it was determined that the Proposed Project would result in a significant impact on aesthetics if it would:

- Have a substantial adverse effect on a scenic vista;
- Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway;
- Substantially degrade the existing visual character or quality of the site and its surroundings; or
- Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

The Proposed Project would not be visible from any known nearby scenic vistas. Therefore, construction and operation of the Proposed Project would not have a substantial effect on a scenic vista.

As described in Section 4.4.1, the Proposed Project facilities would not be located near any state-designated scenic highway or scenic corridor. Therefore, there would be no impact on scenic resources located along a scenic highway or corridor.

4.4.3 Environmental Impacts

Impact AES-1: Substantial Degradation of the Visual Character or Quality of the Site and its Surroundings from Project Construction (Less than Significant with Mitigation)

Site A Construction Activities

At Site A, construction activities associated with the water storage tank, pump station building housing a production well and booster pumps, pipeline installation, stormwater retention basin, security fencing, landscaping, and other ancillary improvements would be visible from Ladd Road and the Ladd Road/St. John Road intersection. In general, construction activities at this site would include clearing and grubbing, demolition of the existing house and outbuildings, excavation, import and placement of fill, pipeline installation, backfilling, placement of concrete foundation, and tank and building construction. Large equipment such as bulldozers, backhoes, cranes, excavators, graders, pavers and rollers, and well drilling equipment would be required for various project components within the site.

Pipeline installation work would extend from the St. John Road/Country Club Drive intersection to the St. John Road/Ladd Road intersection, totaling approximately 2,500 linear feet. Although the exact location of staging areas has not yet been determined, it is anticipated that staging areas would be accommodated within Site A and within the right-of-way or in vacant lots.

Direct views of construction activities for the water tank, pump station building, and other proposed components at Site A would be available from Ladd Road and the Ladd Road/St. John Road intersection (see Figure 4-2, Photos 1 and 2). Residences located northeast and east of the site on Ladd Road would have views of Site A construction activities throughout the approximately 15-month construction period. These residences would notice the operation of construction equipment and the presence of staging materials, construction vehicles, and construction workers. Any pedestrians and bicyclists using these roads would also have short-duration views of these construction activities.

Site B Construction Activities

At Site B, construction activities associated with the production well and pump, facility walls and gate, and transmission pipeline would be visible from McHenry Avenue. As with Site A, large equipment, including bulldozers, backhoes, cranes, excavators, graders, and pavers, would be used at Site B, and this equipment would be visible from McHenry Avenue. Pipeline installation work would extend from the well to the existing City distribution pipelines along McHenry Avenue (approximately 190 feet), then extend west for 760 feet along Stewart Road, terminating at the intersection of Stewart Road and Grove Pointe Way.

Residences adjacent to Site B may have partial close-up views of construction activity throughout the duration of the construction period; however, the property's existing fence and mature trees would largely screen views of the construction activities.

Conclusion

Overall construction is expected to last approximately 15 months. Throughout this period, construction activities at Sites A and B, pipeline installation work along St. John Road, and materials and equipment in staging areas would be visible from St. John Road, Ladd Road, and McHenry Avenue. Nearby residents and any pedestrians or bicyclists using these public roads would have views of the work areas throughout the 15-month construction period. While these views would be primarily limited to adjacent residents and recreationists and would not affect any designated scenic resources, the visual character of the two sites and the surrounding areas would be substantially degraded during the construction period. While CEQA does not consider impacts on private views to be significant, given that publicly accessible views from nearby roads would be temporarily degraded, this impact is considered potentially significant. Implementation of **Mitigation Measures AES-1 (Locate Staging Areas Away from Public Areas) and AES-2 (Screen Staging and Construction Areas),** which have been modified from mitigation measures identified in the Program EIR, would reduce this impact to a less-than-significant level.

Mitigation Measure AES-1: Locate Staging Areas Away from Public Areas.

Construction staging areas for equipment, personal vehicle parking, and material storage shall be sited as far as possible from residences, major roadways, and public areas. The City contract specifications shall require that staging areas be identified in the documents prepared by construction contractors and subject to approval by the City. The City shall not approve staging areas that are not sited as described above.

Mitigation Measure AES-2: Screen Staging and Construction Areas.

The construction contract shall specify that staging areas be located where opportunities for screening with existing topography and vegetation will be maximized. Security fencing placed around staging and construction areas shall include slats or other screening sufficient to hide the area from the passing public. Screens used for this purpose shall be of an earth tone or other appropriate neutral color.

Impact AES-2: Long-term Adverse Effects on the Visual Character or Quality of the Site and its Surroundings during Operation (Less than Significant)

Once constructed, the Proposed Project pipelines and wells at Sites A and B would be underground and would not be visible. These project components would not be visible and would have no impact on the visual character or quality of the site and surrounding area. However, other structures would be built on the site, such as the proposed water storage tank, pump station building, and other ancillary improvements. The impacts of these structures are described below.

Site A

Figure 4-4 presents an existing image of Site A looking southwest from Ladd Road and a simulated image that depicts the proposed water storage tank, pump station building, and other ancillary improvements shortly after project construction is complete. Figure 4-5

shows the same existing image of Site A as presented in Figure 4-4 and includes a simulated image of the proposed facilities in the long term (approximately 10-12 years after construction is complete).

As shown in the bottom images of Figures 4-4 and 4-5, the water storage tank would be set back from Ladd Road near the central portion of the site, and the pump station building would be located near the northwestern corner of the site but also set back from the roadway edge; the Ladd Road frontage would consist of the paved driveway, fencing, and landscaping. An approximately 2-foot-high undulating berm would be constructed on the west and east sides of the site. Coast redwoods would be planted on top of the berms to help screen views of the site from adjacent residences. Over time, landscaping along the western, eastern, and northern sides of the site would screen views of the tank and building.

Proposed Project components that would be publicly visible include the following:

- **Water storage tank** – The water storage tank would be up to 20 feet tall (above ground) and approximately 55 feet in diameter. The exterior of the tank would consist of non-reflective earth tones and have a sloped roof.

- **Pump station building** – The pump station building would be approximately 40 feet wide by 50.5 feet long and 21 feet tall. The pump station building would have a stucco finish and an earth tone exterior.

- **Other ancillary features** – Site A would have 8-foot-tall concrete masonry or wrought-iron fencing topped with no-climb points and three strands of barbed wire along the Ladd Road frontage. Ladd Road frontage would include 9-foot-tall vehicular and pedestrian access gates. The rest of the site would be enclosed by an 8-foot-tall, 1-inch chain-link fence with security wire.

- **Landscaping** would be installed along the Ladd Road frontage to screen views of the tank from this roadway. Landscaping would be tiered such that the low ground shrubs would be planted in the foreground (closest to Ladd Road), with medium-sized shrubs and taller screening trees in the backdrop in front of the wrought-iron gate. Based on the draft landscaping plan developed for the Proposed Project (North Star Engineering Group 2013), trees that may be planted on the site include Chinese tallow, coast redwoods, and cherry laurel trees. Note that this selection of plants is preliminary; plants would be chosen based on their proven drought tolerance. The groundcover depicted in the bottom image of Figure 4-5 also includes cotoneaster and floral shrubs that would provide low-level screening. Vegetated undulating soil berms would be constructed on the eastern and western sides of the site, and screening trees would be planted along these berms. Slopes of the stormwater retention basin would be hydroseeded or planted with drought-tolerant plants.

Interim Effects

Shortly after project construction is complete, primary views of Proposed facilities at Site A would be available from Ladd Road and the southern end of St. John Road. The Proposed Project would replace an existing house, outbuilding, and approximately 15 trees, introducing quasi-industrial uses to a predominantly agricultural and residential area. More specifically, the proposed water storage tank, pump station building, retention basin, and berms would convert vacant portions of the site to quasi-industrial facilities. Fencing and

landscaping would be installed where the existing house currently resides. As proposed, landscaping trees would take time to grow and mature. Shortly after construction is complete, the water storage tank, pump station building, and fencing would be visible to adjacent residents and any recreationists passing by the site (see bottom image of Figure 4-4). Four existing trees (12- to 18-inch diameter) would remain on site and, as shown in Figure 4-4, would partially screen views of the tank from Ladd Road. The berms on the east and west sides of the property would also partially screen views of the tank from adjacent residences. As such, the proposed tank and building would constitute a substantial visual change in comparison to existing conditions and the surrounding agricultural and residential land uses. Given the site's moderate visual quality and general lack of any prominent scenic resources on site, and because the proposed berms and trees left on site would help screen views of the new facilities, the Proposed Project's interim effects on the site and surrounding area's visual character and visual quality would be less than significant.

Long-term Effects

Over time, the proposed shrubs and trees would grow and mature and the visual conditions at Site A would incrementally improve compared to the site's appearance immediately after construction. The photosimulation shown in Figure 4-5 presents visual conditions approximately 10-12 years after planting of the floral shrubs, cotoneaster, Chinese tallow, coast redwoods, and cherry laurel trees. The tree and plant species selected for the landscaping plan have relatively fast growth rates and require low maintenance. Coast redwood trees, for instance, have relatively fast growth rates with height increases of sometimes more than 24 inches per year (Arbor Day Foundation 2015). As such, within the first 5-6 years after project construction, the coast redwoods planted along the berms on the western and eastern sides of Site A would screen adjacent residential views of the lower portions of the tank and building. Within this same timeframe, other trees and shrubs planted along the site's frontage would also screen the lower portions of the new facilities. In the long term (approximately 10 years after construction), these trees and shrubs would screen the majority of the water storage tank and pump station building from Ladd Road. Given that the existing site is mostly vacant (with the exception of the existing house, garage, and outbuilding) and that the Proposed Project involves establishing many more trees and shrubs than are currently present, the Proposed Project would result in a beneficial effect on the visual character and quality of the site.

Site B

Figure 4-6 shows an existing view and a simulated view of the proposed 12-foot-tall concrete wall and 24-foot-wide gate surrounding the well and pump facilities at Site B from McHenry Avenue. The facility wall would be constructed of concrete blocks painted in an earth-tone tan color. The wall would be approximately 75 feet long and 65 feet wide. LED lighting, security cameras, and alarms would be installed outside of the building. A paved driveway connecting to McHenry Avenue would also be visible from McHenry Avenue. No trees would be removed and no landscaping is proposed at the site, aside from hydroseeding or planting of the retention basin slopes.

Interim Effects

Once construction at Site B is complete, the facility wall and gate would introduce a quasi-industrial facility on the currently vacant site and into a rural and residential setting. Any bicyclists or recreationists traveling on McHenry Avenue would have short-duration views of

the facility. The residence west of the site may have partial views of the new building, but the presence of mature trees south and west of the site would largely screen views of the new facility. Given the site's moderate visual quality and the lack of any prominent scenic resources on or near the site, the proposed building would not result in an adverse effect on the visual character of the site or surrounding area. The interim effect would be less than significant.

Long-term Effects

The long-term effects on the site and the surrounding area's visual character and visual quality would be similar to those described above under "Interim Effects." This impact would be less than significant.

Impact AES-3: Permanent Sources of Substantial Light or Glare (Less than Significant)

As described in Chapter 2, *Project Description*, the buildings at both sites would be constructed of concrete block material with an earth tone exterior and the tank at Site A would have a non-reflective paint on the outside. As such, the Proposed Project would not generate any substantial permanent sources of glare.

Site A

Currently, the house on Site A has an outdoor porch light near the front entrance. Once project construction is complete, outdoor security lighting would be installed throughout the site. Exterior lighting would be on poles using full cut-off LED fixtures and downward and internally directed, to the extent feasible, to reduce excess light or glare. Lights on poles would be equipped with motion sensors and would turn on only if motion is detected in the vicinity of the buildings and water storage tank Outdoor lighting near the tank would have different control settings (e.g., Hi and Low). The lowest light setting would be used most of the time to minimize light trespass on adjacent properties; during periods of nighttime maintenance and repair work, the City may activate the high setting to achieve illumination levels necessary to complete maintenance/repair work safely. When outdoor lighting is active, these lights may be partially visible to nearby residents and from Ladd Road and St. John Road. Over time, landscaping at Site A would help screen views of lighting at the site.

Site B

There is no existing lighting on Site B. Similar to Site A, outdoor security lighting would be installed throughout Site B. Exterior lighting would be on poles using full cut-off LED fixtures and downward and internally directed, to the extent feasible, to reduce excess light or glare. Lights on poles would be equipped with motion sensors and would turn on only if motion is detected in the vicinity of the buildings. When outdoor lighting is active, these lights may be partially and temporarily visible to nearby residents to the south. The mature trees south and west of the site would largely screen views from adjacent residents.

Conclusion

At both sites, trees and vegetation would help screen views of any outdoor lighting when activated. In addition, exterior lighting would be directed downward, would operate only

when motion is detected, and would not generate a substantial source of light. Therefore, visual impacts related to permanent sources of light or glare would be less than significant.

4.4.4 Cumulative Impacts

Impact AES-4: Cumulative Aesthetic Impacts (Less than Significant)

The Program EIR (City of Modesto 2010) concluded that there would be no cumulative impacts regarding aesthetics. Since publication of that document and based on a current review of Stanislaus County Planning Department's website, no other projects are planned in the immediate vicinity of Sites A or B that could create a significant cumulative impact related to aesthetics in combination with the Proposed Project. As such, consistent with the conclusions disclosed in the Program EIR, there would be no cumulative aesthetic impact to which the Proposed Project could contribute.

This page intentionally left blank

Chapter 5
Air Quality

5.1 Overview

This chapter describes the existing setting for air quality emissions in the project area, which is located in the San Joaquin Valley Air Basin (SJVAB). This chapter also describes federal, state, and local laws, regulations, and policies relevant to protection of air quality as they relate to the Proposed Project. The potential impacts on air quality as a result of construction and operation of the Proposed Project are evaluated.

5.2 Regulatory Setting

The Proposed Project is subject to air quality regulations developed and implemented at the federal, state, and local levels. Plans, policies, and regulations that pertain to air quality are discussed in this section.

5.2.1 Federal Laws, Regulations, and Policies

Clean Air Act

At the federal level, the Clean Air Act (CAA) governs air quality in the United States and is implemented by the U.S. Environmental Protection Agency (USEPA). USEPA is responsible for setting and enforcing the National Ambient Air Quality Standards (NAAQS) for atmospheric pollutants. It regulates emission sources that are under the exclusive authority of the federal government, such as aircraft, ships, non-road engines, and certain types of locomotives. USEPA also has jurisdiction over emissions sources outside state waters (outer continental shelf) and establishes various emissions standards for vehicles sold in states other than California; California has received a waiver to establish emission standards lower than the federal standards. As part of its enforcement responsibilities, USEPA requires each state with "nonattainment[1]" areas to prepare and submit a state implementation plan (SIP) that demonstrates the means to attain the NAAQS before the deadline mandated by USEPA. The SIP must integrate federal, state, and local plan components and regulations and identify specific measures to reduce pollution, using a combination of performance standards and market-based programs, within the timeframe identified in the SIP. A maintenance plan must be prepared for each former nonattainment area that subsequently demonstrates compliance with the standards.

The CAA also contains regulations dealing with operating permits for large industrial and commercial sources that release pollutants into the air. Operating permits contain

[1] Nonattainment areas are air basins, counties, or regional areas that have been designated as exceeding federal or state ambient air quality standards.

information on which pollutants are being released, the quantity that may be released, and what kinds of steps the source's owner or operator must take to reduce pollution.

Non-road Emission Regulations

USEPA has adopted emissions standards for different types of non-road engines, equipment, and vehicles. For non-road diesel engines, USEPA has adopted multiple tiers of emission standards.

USEPA signed a final rule on May 11, 2004, introducing the Tier 4 emission standards, to be phased in between 2008 and 2015 (69 CFR 38957–39273, June 29, 2004). The Tier 4 standards require that emissions of particulate matter (PM) and oxides of nitrogen (NO_X) be further reduced by about 90 percent. Such emission reductions can be achieved through the use of control technologies, including advanced exhaust gas after-treatment. To enable sulfur-sensitive control technologies in Tier 4 engines, USEPA also mandated reductions in sulfur content in non-road diesel fuels. In most cases, federal non-road regulations also apply in California, which has only limited authority to set emission standards for new non-road engines. The CAA preempts California's authority to control emissions from new farm and construction equipment less than 175 horsepower (CAA Section 209[e][1][A]) and requires California to receive authorization from USEPA for controls over other off-road sources (CAA Section 209[e][2][A]).

5.2.2 State Laws, Regulations, and Policies

California Clean Air Act

Responsibility for attaining and maintaining air quality standards in California is divided between the California Air Resources Board (CARB) and regional air quality districts. Areas of control for the regional districts are set by CARB, which divides the state into air basins. The California Clean Air Act (CCAA) requires nonattainment areas to achieve and maintain the health-based California Ambient Air Quality Standards (CAAQS) by the earliest practicable date. The act is administered by CARB at the state level and by local air quality management districts at the regional level; the air districts are required to develop plans and control programs for attaining the state standards. Unlike the federal CAA, the CCAA does not set precise attainment deadlines. Instead, the CCAA establishes increasingly stringent requirements for areas that will require more time to achieve the standards.

CARB is responsible for ensuring implementation of the CCAA, meeting state requirements of the federal CAA, and establishing the CAAQS. The state standards are generally more stringent than the federal standards and incorporate additional standards for sulfate (SO_4), hydrogen sulfide (H_2S), vinyl chloride, and visibility-reducing particles. CARB sets emission standards for vehicles sold in California and for other emission sources, such as consumer products and certain off-road equipment. CARB also establishes passenger vehicle fuel specifications.

Statewide Truck and Bus Regulations

On December 12, 2008, CARB approved a new regulation to substantially reduce emissions of diesel particulate matter (DPM), NO_X, and other pollutants from existing on-road diesel vehicles operating in California. The regulation requires affected trucks and buses to meet

performance standards and requirements between 2011 and 2023. Affected vehicles included on-road, heavy-duty, diesel-fueled vehicles with a gross vehicle weight rating greater than 14,000 pounds. The regulation was updated in 2011 and 2014 with revisions that provide more compliance flexibility and reflect the impact of the economic recession on vehicle activity and emissions. Heavy-duty trucks used in Proposed Project activities would be required to comply with this regulation.

In-use, Off-road Diesel Vehicle Regulation

In 2007, CARB adopted a regulation to reduce DPM and NO_X emissions from in-use, off-road, heavy-duty diesel vehicles in California. The regulation imposes limits on vehicle idling and requires fleets to reduce emissions by retiring, replacing, repowering, or installing exhaust retrofits to older engines. In December 2010, major amendments were made to the regulation, including modifications to the compliance dates for performance standards and establishing requirements for compliance with verified diesel emission control strategy technologies that reduce PM and/or NO_X emissions.

Heavy-duty Vehicle Inspection Program

The heavy-duty vehicle inspection program requires heavy-duty trucks and buses to be inspected for excessive smoke and tampering and for compliance with engine certification labels. Any heavy-duty vehicle (i.e., a vehicle with a gross vehicle weight rating greater than 6,000 pounds) traveling in California, including vehicles registered in other states and foreign countries, may be tested. Tests are performed by CARB inspection teams at border crossings, California Highway Patrol weigh stations, fleet facilities, and randomly selected roadside locations. Owners of trucks and buses found to be in violation are subject to penalties starting at $300 per violation. Heavy-duty trucks used for Proposed Project activities would be subject to the inspection program.

Heavy-duty On-board Diagnostic System Regulations

In 2004, CARB adopted regulations requiring on-board diagnostic (OBD) systems on all 2007 and later model year heavy-duty engines and vehicles (i.e., vehicles with a gross vehicle weight rating greater than 14,000 pounds) in California. CARB subsequently adopted a comprehensive OBD regulation for heavy-duty vehicles model years 2010 and beyond. The heavy-duty OBD regulations were updated in 2010, 2013, and 2016 with revisions to enforcement requirements, testing requirements, and implementation schedules. Heavy-duty trucks used for Proposed Project activities would be required to comply with the heavy-duty OBD regulatory requirements.

California Standards for Diesel Fuel Regulations

State regulations require diesel fuel with sulfur content of 15 parts per million (ppm) or less (by weight) to be used for all diesel-fueled vehicles that are operated in California. The standard also applies to non-vehicular diesel fuel, except for diesel fuel used solely in locomotives or marine vessels. The regulations also contain standards for the aromatic hydrocarbon content and lubricity of diesel fuels.

Airborne Toxic Control Measures

CARB regulates toxic air contaminants (TACs) by requiring implementation of various airborne toxic control measures (ATCMs), which are intended to reduce emissions associated with toxic substances.

ATCM to Limit Diesel-fueled Commercial Motor Vehicle Idling

On October 20, 2005, CARB approved an ATCM to limit idling of diesel-fueled commercial motor vehicles. This regulation, which followed previous idling ATCMs, consists of new engine and in-use truck requirements, as well as idling emission performance standards. The regulation requires 2008 and newer model year heavy-duty diesel engines to be equipped with a nonprogrammable engine shutdown system that automatically shuts down the engine after 5 minutes of idling or, optionally, meets a stringent NO_X idling emission standard (30 grams per hour). The regulation also is applicable to the operation of in-use trucks, requiring operators of sleeper berth–equipped trucks with both in-state and out-of-state registration to shut down their engines manually when idling more than 5 minutes at any location within California, beginning in 2008. Vehicles subject to this regulation are diesel-fueled commercial vehicles with a gross vehicle weight rating greater than 10,000 pounds. There are exceptions to this regulation; for example, ready-mix concrete trucks, which require the engine to be on in order to operate, are not required to comply with this regulation. Trucks used for vendor delivery of materials for Proposed Project activities would be required to comply with the commercial vehicle idling regulatory requirements.

Portable Engine ATCM

The California Portable Engine ATCM is designed to reduce the PM emissions from portable diesel-fueled engines rated at 50 brake horsepower or larger. This regulation requires that an owner's fleet of portable engines meet emission standards that reduce the amount of PM emissions over time.

Portable Equipment Registration Program

The statewide Portable Equipment Registration Program (PERP) establishes a system to uniformly regulate portable engines and portable engine–driven equipment units. After being registered in this program, engines and equipment units may operate throughout the state without the need to obtain permits from individual air districts. Owners or operators of portable engines and certain types of equipment can voluntarily register their units under this program. Operation of registered portable engines may still be subject to certain district requirements for reporting and notification. Engines with less than 50 brake horsepower are exempt from this program. Some of the engines used for the Proposed Project may operate under PERP.

TAC Regulations

In addition to ATCMs, TACs are controlled under several different regulations in California, including the Tanner Air Toxics Act, Air Toxics Hot Spots Information Act, and AB 2588: Air Toxics "Hot Spots" Information and Assessment Act. In addition, Proposition 65 (the Safe Water and Toxic Enforcement Act of 1996) requires the state to publish a list of chemicals known to cause cancer or birth defects or other reproductive harm. Proposition 65 requires

businesses to notify Californians about substantial amounts of chemicals in the products they purchase or that are released into the environment.

5.2.3 Local Laws, Regulations, and Policies

At the local level, responsibilities of air quality districts include overseeing stationary-source emissions, approving permits, maintaining emissions inventories, maintaining air quality monitoring stations, overseeing agricultural burning permits, and reviewing air quality–related sections of environmental documents under CEQA. The air quality districts are also responsible for establishing and enforcing local air quality rules and regulations that address the requirements of federal and state air quality laws, as well as for ensuring that the NAAQS and CAAQS are met.

Local governments are essential partners in the effort to reduce air pollutant emissions. The local governments have influence through their planning and permitting processes, local ordinances, outreach and education efforts, and municipal operations.

San Joaquin Valley Air Pollution Control District

SJVAPCD has local air quality jurisdiction over the Proposed Project and in other counties under its jurisdiction. SJVAPCD's recommended CEQA thresholds are outlined in its *Guidance for Assessing and Mitigating Air Quality Impacts* (SJVAPCD 2015a). SJVAPCD has adopted attainment plans to address ozone and PM.

1-Hour Ozone

Although USEPA revoked its 1979 1-hour ozone standard in June 2005, many planning requirements remain in place, and the SJVAB must still attain this standard before CAA Section 185 fees (which are required when attainment is not reached) can be rescinded. SJVAPCD's most recent 1-hour ozone plan, the 2013 Plan for the Revoked 1-hour Ozone Standard (SJVAPCD 2013), demonstrated attainment of the 1-hour ozone standard by 2017. In July 2016, USEPA made a final determination that the SJVAB has attained the 1-hour ozone NAAQS based on the most recent 3-year data period (2012–2014) of sufficient, quality-assured, and certified data (SJVAPCD 2016a). For the SJVAB to be officially designated as an attainment area, SJVAPCD must verify that attainment is due to permanent and enforceable emission reductions and prepare a maintenance plan.

8-Hour Ozone

SJVAPCD's far-reaching 2007 Ozone Plan demonstrates attainment of USEPA's 1997 8-hour ozone standard by 2023. USEPA approved the 2007 Ozone Plan effective April 30, 2012. The district has prepared a 2016 Ozone Plan to address USEPA's 2008 8-hour ozone standard, which the SJVAB must attain by 2032 (SJVAPCD 2016b). This extremely stringent standard is nearing the SJVAB's naturally occurring background concentrations of ozone. The 2016 plan identifies that, without mobile sources transitioning to near-zero emission levels through the implementation of transformative measures such as ultra-low tailpipe emissions standards (which SJVAPCD does not have the authority to implement), attainment of the federal standards is not possible (SJVAPCD 2016b).

PM_{10}

PM is a complex mixture of extremely small particles and liquid droplets, made up of multiple components, including acids, organic chemicals, metals, and soil or dust particles. Particles that are smaller than 10 micrometers in diameter (PM_{10}) are typically found near roadways and around dusty industrial sites. Based on PM_{10} measurements from 2003-2006, USEPA found that the SJVAB has reached attainment of federal PM_{10} standards. On September 21, 2007, the SJVAPCD Governing Board adopted the 2007 *PM_{10} Maintenance Plan and Request for Redesignation*, which demonstrates that the SJVAB will continue to meet the PM_{10} standard. USEPA approved the document and, on September 25, 2008, the SJVAB was redesignated to attainment/maintenance (SJVAPCD 2016c).

$PM_{2.5}$

Fine particles ($PM_{2.5}$) are less than 2.5 micrometers in diameter and are found in smoke and haze. Changes in the federal $PM_{2.5}$ air quality standard (in 1997, 2006, and 2012) and recent drought conditions in California have resulted in the development of multiple $PM_{2.5}$ air quality plans by SJVAPCD. The 2008 and 2015 $PM_{2.5}$ Plans have been prepared to achieve attainment of USEPA's first $PM_{2.5}$ standard, set in 1997. The attainment deadline for the 1997 standard has been delayed to 2020 (SJVAPCD 2015b).

USEPA lowered the $PM_{2.5}$ standard in 2006. Although SJVAPCD's 2012 $PM_{2.5}$ Plan showed attainment of this standard by 2019, USEPA reclassified SJVAPCD to serious nonattainment for the 2006 $PM_{2.5}$ standard in January 2015, and SJVAPCD must prepare a revised plan to address this nonattainment. In addition, SJVAPCD must prepare a separate plan to address another $PM_{2.5}$ standard issued by USEPA in 2012 and USEPA's determination that the SJVAB is a moderate nonattainment area for the 2012 federal $PM_{2.5}$ standard. SJVAPCD continues to work with USEPA on issues surrounding these plans, including USEPA implementation updates (SJVAPCD 2015b).

SJVAPCD Rules

The Proposed Project may be subject to the following district rules. These rules have been adopted by SJVAPCD to reduce emissions throughout the SJVAB:

- **Rule 2201 – New and Modified Stationary-Source Review Rule** applies to all new stationary sources and all modifications to existing stationary sources subject to SJVAPCD permit requirements that, after construction, emit or may emit one or more pollutants regulated by the rule.
- **Rule 3135 – Dust Control Plan Fees** requires the applicant to submit a fee in addition to a dust control plan. The purpose of this rule is to recover SJVAPCD's cost for reviewing these plans and conducting compliance inspections.
- **Rule 4101 – Visible Emissions** prohibits emissions of visible air contaminants into the atmosphere and applies to any source operation that emits or may emit air contaminants.
- **Rule 4102 – Nuisance** applies to any source operation that emits or may emit air contaminants or other materials. In the event that the project or construction of the

project creates a public nuisance, it could be in violation of this rule and subject to SJVAPCD enforcement action.

- **Rule 4641 – Cutback, Slow-Cure, and Emulsified Asphalt, Paving, and Maintenance Operations** applies to the manufacture and use of cutback asphalt, slow-cure asphalt, and emulsified asphalt for paving and maintenance operations.

- **Rule 4701 – Internal Combustion Engines—Phase 1** limits the emissions of NO_X, carbon monoxide (CO), and volatile organic compounds (VOCs) from internal combustion engines. These limits are not applicable to standby engines as long as they are used fewer than 200 hours per year (e.g., for testing during non-emergencies).

- **Rule 4702 – Internal Combustion Engines—Phase 2** limits the emissions of NO_X, CO, and VOCs from spark-ignited internal combustion engines.

- **Regulation VIII – Fugitive PM_{10} Prohibitions** is a series of rules (Rules 8011–8081) designed to reduce PM_{10} emissions (predominantly dust/dirt) generated by human activity, including construction, road construction, bulk materials storage, landfill operations, and other activities.

- **Rule 9510 – Indirect Source Review** is intended to reduce a project's impact from indirect sources such as on-road and off-road vehicles on air quality through project design elements or mitigation by payments of applicable off-site mitigation fees. Compliance with Rule 9510 is designed to reduce construction exhaust NO_X and PM_{10} emissions by 20 percent and 45 percent, respectively. Compliance with Rule 9510 is designed to reduce operational emissions of NO_X and PM_{10} emissions by 33.3 percent and 50 percent, respectively. This rule is only applicable to certain development projects that exceed size requirements at buildout (e.g., 25,000 square feet of light industrial space).

- **Rule 9410 – Employer-Based Trip Reduction** requires large employers to establish an Employer Trip Reduction Implementation Plan, which is a set of measures that encourages employees to use alternative transportation and ridesharing for their commutes.

Fugitive Dust Measures (Regulation VIII)

The Proposed Project would also be required to implement the mandatory control measures listed in Table 2 of the SJVAPCD's Mitigation Measures guidance document (SJVAPCD 2016d) to reduce fugitive dust emissions. These measures are not considered mitigation measures under CEQA because they are required by law.

The Regulation VIII requirements (some of which are not applicable to the Proposed Project) are listed below:

- All disturbed areas, including storage piles, which are not being actively used for construction purposes, will be effectively stabilized for dust emissions using water or a chemical stabilizer/suppressant, or covered with a tarp or other suitable cover or vegetative ground cover.

- All on-site unpaved roads and off-site unpaved access roads will be effectively stabilized for dust emissions using water or a chemical stabilizer/suppressant.
- All land clearing, grubbing, scraping, excavation, land leveling, grading, cut and fill, and demolition activities will be effectively controlled of fugitive dust emissions by utilizing an application of water or by presoaking.
- With the demolition of buildings up to six stories in height, all exterior surfaces of the building will be wetted during demolition.
- All materials transported off site will be covered or effectively wetted to limit visible dust emissions, and at least 6 inches of freeboard space from the top of the container will be maintained.
- All operations will limit or expeditiously remove the accumulation of mud or dirt from adjacent public streets at the end of each workday. The use of dry rotary brushes is expressly prohibited except where preceded or accompanied by sufficient wetting to limit the visible dust emissions. Use of blower devices is expressly forbidden.
- Following the addition of materials to, or the removal of materials from, the surface of outdoor storage piles, piles will be effectively stabilized to prevent fugitive dust emissions utilizing sufficient water or a chemical stabilizer/suppressant.
- Within urban areas, trackout will be immediately removed when it extends 50 or more feet from the site and at the end of each workday.
- Any site with 150 or more vehicle trips per day will prevent carryout and trackout.

Stanislaus County General Plan 2015

The *Stanislaus County General Plan 2015* Conservation/Open Space Element (2016) identifies air quality–related goals and policies. These would contribute to reduced criteria pollutant emissions and improved regional air quality by requiring all development projects to include reasonable air quality mitigation measures, reducing motor vehicle emissions, and increasing public awareness of air quality problems and solutions.

Del Rio Community Plan

The *Del Rio Community Plan* includes goals and policies related to preventing adverse impacts on air quality through development-related policies for the protection of air resources (Stanislaus County 1992). Specifically, Goal 3 of the Community Plan would be relevant to the Proposed Project:

Goal Three: Further development in the Del Rio area should be planned to ensure that adverse impacts on services and utilities, schools, transportation and circulation, agriculture, water, and air quality are appropriately mitigated.

5.3 Environmental Setting

5.3.1 Regional Setting

San Joaquin Valley Air Basin

The SJVAB is the southern half of California's Central Valley and is approximately 250 miles long and averages 35 miles wide. The SJVAB is bounded by the Sierra Nevada to the east, the Coast Ranges to the west, and the Tehachapi Mountains to the south. The SJVAB contains all of San Joaquin, Stanislaus, Merced, Madera, Fresno, Kings, and Tulare Counties, as well as a portion of Kern County.

The area has an inland Mediterranean climate that is characterized by warm, dry summers and cool winters. Summer high temperatures often exceed 100 degrees Fahrenheit (°F), averaging in the low 90s in the northern valley and the high 90s in the southern portion.

Although marine air generally flows into the basin from the Bay-Delta region, the surrounding mountain ranges restrict air movement through and out of the valley. Wind speed and direction influence the dispersion and transportation of pollutants; the greater the wind flow, the lower the accumulation. The vertical dispersion of air pollutants in the SJVAB is limited by the presence of persistent temperature inversion, leading to higher concentrations of emitted pollutants (SJVAPCD 2015a).

Precipitation and fog tend to reduce pollutant concentrations. Ozone (O_3) is formed when chemical compounds such as VOCs and NO_X (collectively known as ozone precursors) react with sunlight. Clouds and fog block the solar radiation for the ozone-forming reaction. Annual precipitation in the San Joaquin Valley decreases from north to south, averaging approximately 20 inches in the north, 10 inches in the central portion, and less than 6 inches in the south (SJVAPCD 2002). In the Del Rio/Modesto area of the SJVAB, the average annual precipitation is approximately 12 inches (Western Regional Climate Center 2016).

5.3.2 Project Vicinity

The project sites are located within the jurisdiction of SJVAPCD. Land uses immediately adjacent to Site A include residential sites and agricultural lands to the east, Union Pacific railroad tracks, a Modesto Irrigation District canal, and Ladd Road. At Site B, adjacent land uses include single-family residences, a fruit stand, and agricultural parcels.

5.3.3 Air Pollutants

Carbon Monoxide

CO is an odorless, colorless gas that is highly toxic. CO is formed by the incomplete combustion of fuels and is emitted directly into the air. Ambient CO concentrations normally are considered a localized effect and typically correspond closely to the spatial and temporal distributions of vehicular traffic, forming pollutant "hot spots." CO concentrations are also influenced by wind speed and atmospheric mixing. Under inversion conditions, CO concentrations may be distributed more uniformly over an area to some distance from vehicular sources. CO binds with hemoglobin, the oxygen-carrying protein in blood, and

reduces the blood's capacity for carrying oxygen to the heart, brain, and other parts of the body. At high concentrations, CO can cause heart difficulties in people with chronic diseases, impair mental abilities, and cause death.

Nitrogen Oxides

NO_X is a family of gaseous nitrogen compounds and are precursors to the formation of ozone and PM. The major component of NO_X, nitrogen dioxide (NO_2), is a reddish-brown gas that is toxic at high concentrations. NO_X results primarily from the combustion of fossil fuels under high temperature and pressure. Fuel combustion, primarily from on-road and off-road motor vehicles and industrial sources, is the major source of this air pollutant.

Volatile Organic Compounds

VOCs are hydrocarbon compounds that exist in the ambient air. VOCs contribute to the formation of smog and/or may themselves be toxic. VOC emissions are a major precursor to the formation of ozone.

Ozone

Ozone is a reactive gas consisting of three oxygen atoms. In the troposphere (the lowest region of the atmosphere), it is produced by a photochemical process involving the sun's energy. It is a secondary pollutant that is formed when NO_X and VOC (known as ozone precursors) react in the presence of sunlight. Ozone at the earth's surface causes numerous adverse health effects and is a pollutant regulated by state and federal air quality agencies. It is a major component of smog. In the stratosphere, however, ozone exists naturally and shields the Earth from harmful incoming ultraviolet radiation. High concentrations of ground-level ozone can adversely affect the human respiratory system and aggravate cardiovascular disease and many respiratory ailments. Ozone also damages natural ecosystems such as forests and foothill communities, agricultural crops, and human-made materials such as rubber and plastics.

Particulate Matter

PM is a complex mixture of extremely small particles and liquid droplets. PM is made up of multiple components, including acids, organic chemicals, metals, and soil or dust particles. The size of particles in PM is directly linked to the particles' potential for causing health problems. PM_{10} is of concern because these particles pass through the throat and nose and are deposited in the thoracic region of the lungs. Once inhaled, these particles can affect the heart and lungs and cause serious health effects. $PM_{2.5}$ penetrates even more deeply into the thoracic and alveolar regions of the lungs.

Sulfur Dioxide

Sulfur dioxide (SO_2) is a colorless, irritating gas with a "rotten egg" smell formed primarily by the combustion of sulfur-containing fossil fuels. Suspended SO_2 particles contribute to the poor visibility that occurs in the SJVAB and are a component of PM_{10}.

Lead

Lead (Pb) is a metal found naturally in the environment as well as in manufactured products. The major sources of lead emissions have historically been mobile and industrial sources. The health effects of lead poisoning include loss of appetite, weakness, apathy, and miscarriage. Lead poisoning can also cause lesions of the neuromuscular system, circulatory system, brain, and gastrointestinal tract.

In the past, gasoline-powered automobile engines were a major source of airborne lead through the use of leaded fuels. Since the use of leaded fuel has been mostly phased out, ambient concentrations of lead have decreased dramatically.

Hydrogen Sulfide

Hydrogen sulfide (H_2S) is associated with geothermal activity, oil and gas production and refining, sewage treatment plants, and confined animal feeding operations. H_2S is extremely hazardous in high concentrations and can cause death.

Sulfates

Sulfates are the fully oxidized, ionic form of sulfur. Sulfates occur in combination with metal and/or hydrogen ions. In California, emissions of sulfur compounds result primarily from the combustion of petroleum-derived fuels (e.g., gasoline and diesel fuel) that contain sulfur. This sulfur is oxidized to SO_2 during the combustion process and subsequently converted to sulfate compounds in the atmosphere. The conversion of SO_2 to sulfates is comparatively rapid and complete in urban areas of California due to regional meteorological features.

CARB's sulfate standard is designed to prevent aggravation of respiratory symptoms. Effects of sulfate exposure at levels that exceed the standard include decreased ventilatory function, aggravation of asthmatic symptoms, and increased risk of cardiopulmonary disease. Sulfates are particularly effective in degrading visibility and, because they are usually acidic, can harm ecosystems and damage materials and property.

Vinyl Chloride

Vinyl chloride is a colorless gas that does not occur naturally; it is formed when substances such as trichloroethane, trichloroethylene, and tetrachloroethylene are broken down. Vinyl chloride is used to make polyvinyl chloride (PVC), which is used in plastic products such as pipes, wire and cable coatings, and packaging materials.

Toxic Air Contaminants

TACs are air pollutants that may lead to serious illness or increased mortality, even when present in relatively low concentrations. Hundreds of different types of TACs exist, with varying degrees of toxicity. Many TACs are confirmed or suspected carcinogens or are known or suspected to cause birth defects or neurological damage. For some chemicals, such as carcinogens, no thresholds exist below which exposure can be considered risk free. Examples of TAC sources associated with the Proposed Project are fossil fuel combustion sources.

Sources of TACs include stationary sources, area-wide sources, and mobile sources. USEPA maintains a list of 187 TACs, also known as hazardous air pollutants. These hazardous air

pollutants are included on CARB's list of TACs along with additional chemicals identified as TACs in California (CARB 2016a). According to the *California Almanac of Emissions and Air Quality* (CARB 2013), many researchers consider diesel PM (DPM) to be a primary contributor to health risk from TACs because particles in the exhaust carry many harmful organics and metals, rather than being a single substance, as are other TACs. Unlike many TACs, outdoor DPM is not monitored by CARB because no routine measurement method exists. Using the CARB emission inventory's PM_{10} database, ambient PM_{10} monitoring data, and results from several studies, CARB has made preliminary estimates of DPM concentrations throughout the state (CARB 2016b).

5.3.4 Existing Air Quality Conditions

Air Monitoring Data

USEPA, CARB, and local air districts operate an extensive air monitoring network to measure progress toward attainment of the NAAQS and CAAQS. The closest air monitoring station to the project area is the Modesto 14th Street station. Data are also provided from the next closest station, the Turlock S. Minaret Street station, for pollutants that were not measured at the Modesto 14th Street station. **Table 5-1** shows the most recent 3 years (2013-2015) of available data.

Table 5-1. Air Monitoring Data for 2013-2015

Monitoring Station	Pollutant	Standard	2013		2014		2015	
			No. Exceed*	Maximum Concentration	No. Exceed*	Maximum Concentration	No. Exceed*	Maximum Concentration
Modesto 14th	Ozone	1-hr	0/0	0.088 ppm	0/1	0.103 ppm	0/5	0.111 ppm
Modesto 14th	Ozone	8-hr	2/13	0.082 ppm	12/24	0.090 ppm	16/24	0.093 ppm
Turlock S. Minaret Street	NO_2	1-hr	0/0	54 ppb	0/0	55 ppb	0/0	42 ppb
Turlock S. Minaret Street	NO_2	Annual		11		NA		9
Modesto 14th	PM_{10}	24-hr	0/57.71	98.8 µg/m³	0/37.6	127.7 µg/m³	0/31.1	90.3 µg/m³
Modesto 14th	PM_{10}	Annual		30.9 µg/m³		29.6 µg/m³		27.7 µg/m³
Modesto 14th	$PM_{2.5}$	24-hr	37.6/-	83.2 µg/m³	17/-	58.2 µg/m³	NA/-	46.4 µg/m³
Modesto 14th	$PM_{2.5}$	Annual		14.3 µg/m³		11.3 µg/m³		NA

Notes: hr = hour; NA = not available (insufficient or no data available); ppb = parts per billion; ppm = parts per million; µg/m³ = micrograms per cubic meter

*The first value represents the number of days on which the federal standard was exceeded. The second number represents the number of days on which the state standard was exceeded. No data were available in Stanislaus County during 2013-2015 for carbon monoxide, sulfur dioxide, and hydrogen sulfide.

Source: CARB 2016c

TACs in the Project Vicinity

In the project vicinity, the primary source of TACs is combustion of fossil fuels, in particular gasoline and diesel fuel, from both on-road and off-road vehicles.

Attainment Status

CARB and USEPA have established the CAAQS and NAAQS, respectively, in an effort to protect human health and welfare. Geographic areas are deemed to be in attainment if these standards are met or in nonattainment if they are not met. "Unclassified" areas are areas that cannot be classified on the basis of available information as meeting or not meeting the primary or secondary NAAQS for the pollutant. Nonattainment status is classified by the severity of the nonattainment problem. For ozone, these classifications are marginal, moderate, serious, severe, and extreme nonattainment. Nonattainment classifications for PM range from marginal to serious. **Table 5-2** shows the current attainment status for the NAAQS and CAAQS. The area is designated as nonattainment for federal and state ozone and $PM_{2.5}$ standards and as nonattainment for the state PM_{10} standard.

Table 5-2. Attainment Status of the State and Federal Ambient Air Quality Standards

Contaminant	Averaging Time	Concentration	State Standards Attainment Status1	Federal Standards Attainment Status2
Ozone (O_3)	1-hour	0.09 ppm	N	See footnote 3
	8-hour	0.070 ppm	N	N, see footnote 3
Carbon Monoxide (CO)	1-hour	20 ppm	A	
		35 ppm		U/A
	8-hour	9.0 ppm	A	U/A
Nitrogen Dioxide (NO_2)	1-hour	0.18 ppm	A	
		0.100 ppm[4]		U/A
	Annual arithmetic mean	0.030 ppm	A	
		0.053 ppm		U/A
Sulfur Dioxide (SO_2)	1-hour	0.25 ppm	A	
		0.075 ppm		U/A
	24-hour	0.04 ppm	A	
		0.14 ppm		U/A
	Annual arithmetic mean	0.030 ppm		U/A
Particulate Matter (PM_{10})	24-hour	50 $\mu g/m^3$	N	
		150 $\mu g/m^3$		A
	Annual arithmetic mean	20 $\mu g/m^3$	N	
	24-hour	35 $\mu g/m^3$		N

Contaminant	Averaging Time	Concentration	State Standards Attainment Status1	Federal Standards Attainment Status2
Fine Particulate Matter ($PM_{2.5}$)	Annual arithmetic mean	12 $\mu g/m^3$	N	N
Sulfates	24-hour	25 $\mu g/m^3$	A	
Lead[5]	30-day average	1.5 $\mu g/m^3$	A	
	Calendar quarter	1.5 $\mu g/m^3$		U/A
	Rolling 3-month average	0.15 $\mu g/m^3$		U/A
Hydrogen Sulfide (H_2S)	1-hour	0.03 ppm	U	
Vinyl Chloride[5] (chloroethene)	24-hour	0.010 ppm	A	
Visibility-reducing Particles	8 hour (10:00 to 18:00 PST)	See footnote 6	U	

A – attainment
N – nonattainment
ppm – parts per million
PST – Pacific Standard Time
U – unclassified
$\mu g/m^3$ – micrograms per cubic meter

Notes:

1. California standards for ozone, carbon monoxide (except Lake Tahoe), sulfur dioxide (1-hour and 24-hour), nitrogen dioxide, suspended particulate matter – PM_{10}, and visibility-reducing particles are values that are not to be exceeded. The standards for sulfates, Lake Tahoe carbon monoxide, lead, hydrogen sulfide, and vinyl chloride are not to be equaled or exceeded. If the standard is for a 1-hour, 8-hour, or 24-hour average (i.e., all standards except for lead and the PM_{10} annual standard), then some measurements may be excluded. In particular, measurements are excluded that CARB determines would occur less than once per year on the average. The Lake Tahoe carbon monoxide standard is 6.0 ppm, one-half the national standard and two-thirds the state standard.
2. National standards shown are the primary standards designed to protect public health. National air quality standards are set by USEPA at levels determined to be protective of public health with an adequate margin of safety. National standards other than for ozone, particulates, and those based on annual averages are not to be exceeded more than once per year. The 1-hour ozone standard is attained if, during the most recent three-year period, the average number of days per year with maximum hourly concentrations above the standard is equal to or less than one. The 8-hour ozone standard is attained when the three-year average of the 4th highest daily concentrations is 0.075 ppm (75 parts per billion) or less. The 24-hour PM_{10} standard is attained when the three-year average of the 99th percentile of monitored concentrations is less than 150 $\mu g/m^3$. The 24-hour $PM_{2.5}$ standard is attained when the three-year average of 98th percentiles is less than 35 $\mu g/m^3$. Except for the national particulate standards, annual standards are met if the annual average falls below the standard at every site. The national annual particulate standard for PM_{10} is met if the three-year average falls below the standard at every site. The annual $PM_{2.5}$ standard is met if the three-year average of annual averages spatially averaged across officially designed clusters of sites falls below the standard.
3. The national 1-hour ozone standard was revoked by USEPA on June 15, 2005. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm. However, the attainment status has not yet been updated based on this revised 8-hour standard. It is likely that the region will remain in nonattainment.
4. To attain this standard, the three-year average of the 98th percentile of the daily maximum 1-hour average at each monitoring station within an area must not exceed 0.100 ppm (effective January 22, 2010).
5. CARB has identified lead and vinyl chloride as toxic air contaminants with no threshold level of exposure below which there are no adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.
6. Statewide Visibility-Reducing Particle Standard (except Lake Tahoe Air Basin): Particles in sufficient amount to produce an extinction coefficient of 0.23 per kilometer when the relative humidity is less than 70 percent. This standard is intended to limit the frequency and severity of visibility impairment due to regional haze and is equivalent to a 10-mile nominal visual range.

5.3.5 Sensitive Receptors

Sensitive receptors are those segments of the population most susceptible to poor air quality: children, the elderly, and individuals with serious pre-existing health problems affected by air quality (e.g., asthma) (CARB 2005). Examples of locations that contain sensitive receptors are residences, schools and school yards, parks and playgrounds, daycare centers, nursing homes, and medical facilities. Residences include houses, apartments, and senior living complexes. Medical facilities can include hospitals, convalescent homes, and health clinics. Playgrounds include play areas associated with parks or community centers.

Sites A and B are generally surrounded by agricultural lands and residences. Apart from residences, other sensitive receptors are located more than a mile from the project sites. The nearest schools to the project sites are Stanislaus Elementary School, 1.9 miles southwest of Site A and 2.75 miles southwest of Site B; and Rio Altura Elementary School, 3.0 miles east of Site A and 2.3 miles southeast of Site B. The nearest medical facilities to Sites A and B include Valley Wound Healing Center Inc. (approximately 1.9 miles south of Site A) and the Riverbank Community Health Center (approximately 2.6 miles southeast of Site B). The daycare and assisted living facilities nearest to the sites are Cia's Day Care (approximately 1.1 miles [Site A] and 2.1 miles [Site B]) and Graceful Living at Riverbank (approximately 2.7 miles [Site A] and 2.6 miles [Site B]). There are no parks in the Del Rio area; Safreno Park, approximately 2.3 and 2.6 miles southeast of Sites A and B, respectively, is the nearest park to the project sites.

5.4 Impact Analysis

5.4.1 Methodology

This section evaluates whether construction and operation of the Proposed Project and its actions would result in significant impacts related to air quality and odors, and if the Proposed Project would comply with applicable air quality plans.

As recommended by SJVAPCD, the California Emission Estimator Model (CalEEMod), version 2013.2.2, was used to quantify criteria pollutant emissions from the Proposed Project's construction and operation activities. CalEEMod incorporates numerous default assumptions and CARB emission factors for on-road and off-road vehicles (EMFAC 2013 and In-Use Off-Road Equipment Inventory Model 2011, respectively). Below is a brief summary of the CalEEMod site-specific inputs used to estimate emissions from the Proposed Project. Further CalEEMod inputs and outputs are available in **Appendix C.** Worker trips were assumed to be the default of 16.8 miles one-way, and material hauling trips were assumed to be 20 miles one way. An exception to the material hauling trip distances was for the pipeline construction activities, which were assumed to only require material hauling of 2 miles one way from staging sites. Material exported was assumed to be 88 cubic yards for the site preparation phase and 264 cubic yards for the grading phase.

The Proposed Project is assumed to take approximately 15 months to construct, beginning in 2017 and completed in 2018. The anticipated duration of each project construction phase and the anticipated number of potential worker and construction-related trips are provided in **Table 2-1** in Chapter 2, *Project Description*. It was assumed that pipeline construction

activities (for both trenching and jack/bore) could overlap with building construction activities. All other phases were assumed to be sequential rather than overlapping.

The equipment anticipated to be used during each construction phase is detailed in Appendix C and summarized in Chapter 2. The equipment was mapped to an appropriate CalEEMod equipment type and default horsepower and load factors were utilized.

Regarding operational emissions, vehicle trips to the site would be limited to those needed for maintenance and inspection of the project facilities. It was assumed that one (round-trip) worker trip would be required per weekday. The pumps would be electricity-driven, and electricity was assumed to be supplied by Modesto Irrigation District. No criteria pollutants are associated with electricity use. Emissions from the two emergency generators were estimated using CalEEMod based on an assumed use of 1 hour per day for 20 days per year.

Odor-related impacts were evaluated qualitatively by considering potential project-related odor sources, potential duration of any odor emissions, and the proximity of odor sources to sensitive receptors.

To determine whether the Proposed Project is consistent with existing air quality plans, the analysis examines whether the Proposed Project is consistent with relevant general or specific plans upon which the air quality plans are based and any specific measures contained in the air quality plans that may relate to the Proposed Project.

5.4.2 Criteria for Determining Significance

Based on Appendix G of the CEQA Guidelines, the Proposed Project would have a significant impact with regard to air quality if it would:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Violate any air quality standard established by USEPA or CARB, or contribute substantially to an existing or projected air quality violation;
- Expose sensitive receptors to substantial air pollutant concentrations; or
- Create objectionable odors affecting a substantial number of people.

SJVAPCD Thresholds of Significance

SJVAPCD has developed thresholds of significance for criteria pollutants based on the mass emissions generated during construction, operation of stationary sources, and operation of non-stationary sources. Those projects with mass emissions less than the thresholds of significance would not create additional violations of pollutants and are considered to be consistent with the applicable air quality plans. **Table 5-3** shows the mass emission thresholds applicable to activities in the SJVAB.

Table 5-3. SJVAPCD CEQA Significance Thresholds

Pollutant	Construction Emissions	Operational Emissions	
		Permitted Equipment and Activities	Non-permitted Equipment and Activities
	Emissions (tons per year)		
CO	100	100	100
NOX	10	10	10
VOC	10	10	10
SOX	27	27	27
PM10	15	15	15
PM2.5	15	15	15

Source: SJVAPCD 2016e.

According to SJVAPCD's guidance, impacts of operational and construction emissions are considered to be less than significant if fugitive dust (PM_{10} and $PM_{2.5}$) emissions are below the significance levels listed above. In addition, SJVAPCD Regulation VIII requires all projects that involve earthmoving or travel on unpaved roads to implement fugitive dust control measures. Implementation of these control measures would be sufficient to reduce PM_{10} and $PM_{2.5}$ impacts to a level considered less than significant.

The following quantitative TAC thresholds of significance are identified in the *Guidance for Assessing and Mitigating Air Quality Impacts* (SJVAPCD 2015a), with implementation of the latest revisions to SJVAPCD's risk management policy (SJVAPCD 2016f) also serving as revisions to the CEQA thresholds:

- Probability of contracting cancer for the Maximally Exposed Individual (MEI) exceeds 20 in 1 million, or
- Ground-level concentrations of non-carcinogenic TACs result in a Hazard Index greater than 1 for the MEI.

Due to the variable nature of construction activity, the generation of TAC emissions in most cases would be temporary, especially considering the short amount of time such equipment is typically operating within an influential distance that would result in the exposure of sensitive receptors to substantial concentrations. Chronic and cancer-related health effects estimated over short periods are uncertain. Cancer potency factors are based on animal lifetime studies or studies of workers with long-term exposure to the carcinogenic agent. There is considerable uncertainty in trying to evaluate the cancer risk from exposure that would last only a small fraction of a lifetime. Some studies indicate that the dose rate may change the potency of a given dose of a carcinogenic chemical. In others words, a dose delivered over a short period may have a different potency than the same dose delivered over a lifetime (Office of Environmental Health Hazard Assessment [OEHHA] 2015). Given that the construction period for the Proposed Project, which is approximately 15 months, would not involve the use of substantial quantities of construction equipment, a qualitative analysis was determined to be the appropriate level of detail required to determine the impact of potential TAC emissions. For operational TAC emissions, the facility is required to be below the health

effects quantitative thresholds in order to obtain the required operating permits consistent with SJVAPCD regulations regarding permitted sources. For construction and operation, health risks from TACs were evaluated by identifying the Proposed Project's potential to generate TAC emissions and determining whether sensitive receptors could be affected by those emissions.

Small Project Analysis Level

SJVAPCD has established screening levels based on project types (land use) and sizes (e.g., square footage, housing units). Projects below these sizes are considered to have emissions below the numeric thresholds of significance for criteria pollutants. The Proposed Project is categorized as General Light Industrial Land Use. Projects that are at or below these criteria would result in less-than-significant impacts:

- Industrial land uses: result in vehicle trips of 1,506 trips/day;
- General light industrial land uses: construct 510,000 square feet.

As stated in Chapter 2, Project Description, the Proposed Project would construct less than 510,000 square feet (or approximately 11.7 acres) of general light industrial land uses, and, therefore, falls within SJVAPCD's screening criteria for a small project. Although not required by SJVAPCD due to the project's small size, estimated construction- and operation-related emissions are provided in this chapter because they were readily available from modeling performed for Chapter 8, *Global Climate Change.*

5.4.3 Environmental Impacts

Impact AIR-1: Construction Emissions of Criteria Pollutants and Precursors (Less than Significant)

The Proposed Project's construction activities would emit criteria pollutants from the combustion of fossil fuels by heavy equipment, worker vehicles, vendor vehicles, and haul trucks. In addition, ground-disturbing activities could potentially emit particulate matter. Construction emissions associated with the Proposed Project were estimated using CalEEMod with the assumptions specified above and in Appendix C. These emissions are compared to the CEQA significance thresholds shown in **Table 5-4.**

Table 5-4. Estimated Project Construction Emissions

	Emissions (tons per year)							
Year	CO	NO_X	VOC	SO_X	Exhaust PM_{10}	Fugitive PM_{10}	Exhaust $PM_{2.5}$	Fugitive $PM_{2.5}$
2017	3.77	5.42	0.59	0.0057	0.32	0.17	0.30	0.083
2018	0.36	0.47	0.068	0.0006	0.03	0.0063	0.028	0.0017
Total	4.13	5.89	0.66	0.0063	0.35	0.18	0.33	0.085
SJVAPCD Significance Threshold	100	10	10	27	15		15	
Exceed Threshold?	No	No	No	No	No		No	

Based on comparison to the significance thresholds, all pollutants are well below the construction emission thresholds. As explained above, those projects with mass emissions less than the thresholds of significance would not create additional violations of pollutants. In addition, the Proposed Project would be required to implement all dust control measures needed to meet SJVAPCD requirements, so fugitive dust emissions of PM_{10} and $PM_{2.5}$ are considered less than significant. Compliance with SJVAPCD's required dust control measures would not be considered a mitigation measure under CEQA because implementation of these measures is required under Regulation VIII. Implementation of these measures, as well as the enhanced control measures, is already required under the Program EIR. Therefore, this impact would be **less than significant**.

Impact AIR-2: Local Community Risks and Hazards During Construction (Less than Significant)

The closest sensitive receptors to the Proposed Project's construction activities consist of several single-family residences located adjacent to the roadways along the pipeline alignments or adjacent to the project sites. The pollutants of concern that would affect sensitive receptors are PM_{10} and $PM_{2.5}$ contained in fugitive dust and DPM from construction equipment. The control of particulates and fugitive dust is discussed above in Impact AIR-1, and SJVAPCD Regulation VIII would be implemented during construction activities to minimize exposure to fugitive dust. The construction period for the Proposed Project, which is approximately 15 months, would not involve the use of substantial quantities of construction equipment and thus would not emit substantial quantities of DPM. Given the uncertainty of estimating chronic health effects over a short period described in the methodology section, health effects from construction were not quantified. Implementation of best management practices would reduce the amount of construction emissions to the extent feasible through a combination of use of late model engines, low-emission diesel products, alternative fuels, engine retrofit technology, after-treatment products, add-on devices such as particulate filters, and/or other options as such become available. These construction practices would ensure that health effects from construction of the Proposed Project are minimized for nearby sensitive receptors. Thus, the Proposed Project would not pose long-term or substantial health risks to nearby residents and workers in the vicinity of

the project sites. The impact on sensitive receptors from fugitive dust and other pollutants would be **less than significant**.

Impact AIR-3: Operational Emissions of Criteria Pollutants and Precursors (Less than Significant)

The Proposed Project would emit criteria pollutants during its operation from inspection- and maintenance-related worker vehicle trips, assumed to be limited to one round-trip per weekday, and the periodic operation of each site's standby emergency generator during maintenance and testing. SJVAPCD's small project analysis level guidance states that general industrial activities generating fewer than 1,506 trips per day are assumed to have a less-than-significant impact on air quality, and criteria pollutant emissions associated with these activities would not need to be quantified. The Proposed Project's activities would result in a fraction of this truck trip significance threshold, and these limited maintenance trips would not be expected to conflict with or obstruct implementation of the local air district's air quality plans or increase criteria pollutant emissions above the significant thresholds. In addition, although not necessary to be quantified, the Proposed Project's emissions were estimated using CalEEMod (**Table 5-5**) and would be substantially less than SJVAPCD's operational significance thresholds. Therefore, this impact would be **less than significant**.

Table 5-5. Estimated Project Operational Emissions

	Emissions (tons per year)							
Year	CO	NO_X	VOC	SO_X	Exhaust PM_{10}	Fugitive PM_{10}	Exhaust $PM_{2.5}$	Fugitive $PM_{2.5}$
Annual Emissions	0.025	0.048	0.014	0.00011	0.0014	0.00065	0.0014	0.00017
SJVAPCD Significance Threshold	100	10	10	27	15		15	
Exceed Threshold?	No	No	No	No	No		No	

Impact AIR-4: Local Community Risks and Hazards During Operation (Less than Significant)

DPM from worker vehicle or truck exhaust and each site's standby emergency generator represents the primary health risk from operation of the Proposed Project. Truck exhaust would only be emitted during maintenance and pipeline inspection activities, which are anticipated to be minimal. Given the small number of operation-related trips and because CARB regulations limit diesel truck idling to 5 minutes or less, the Proposed Project would not expose any nearby residents or other sensitive receptors to substantial health risks from truck exhaust during Proposed Project operation. The standby emergency generators would operate only under emergency situations and for periodic testing (up to an assumed 1 hour, 20 days per year). The emergency generators would be a permitted source under SJVAPCD regulations, which require implementation of Best Available Control Technology (BACT) standards and require that health risks are minimized such that sensitive receptors are not

exposed to substantial health risks. The permit approval process for the standby emergency generators ensures that risk to nearby sensitive receptors is less than the threshold of significance of 20 in a million. Given the minimal number of truck trips and permit requirements for the emergency generators with respect to health risks, the impacts to the health of sensitive receptors would be **less than significant**.

Impact AIR-5: Odor Emission Generation (Less than Significant)

Construction activities for the Proposed Project would not result in the generation of permanent or long-term objectionable odors. Odors associated with the intermittent operation of diesel-powered equipment might be detected by nearby sensitive receptors, but these odors would be of short duration and would not affect a substantial number of people. Soil excavated or brought up from well construction activities may contain organic material that is decaying, which may create an objectionable odor. The intensity of the odor perceived by a receptor depends on the distance of the receptor from the construction activity and the amount and quality of the exposed soil material. The locations of the construction activities would be limited and in a rural area not located near a large number of receptors. Exposed soil would be either quickly reused on-site or hauled and disposed of properly off-site. Thus, any odor that could be produced would be short-term and temporary. Therefore, this impact would be **less than significant**.

Impact AIR-6: Consistency with Applicable Air Quality Plans (Less than Significant)

The Proposed Project is located in the SJVAB, which is currently designated as a nonattainment area for federal and state ozone and $PM_{2.5}$ standards and state PM_{10} standards. SJVAPCD has developed Air Quality Attainment Plans (AQAPs) and prepares associated triennial updates. AQAPs present comprehensive strategies to reduce VOCs, NO_X, PM_{10}, and $PM_{2.5}$ emissions from stationary, area, mobile, and indirect sources. VOC and NO_X are the principal precursor pollutants that cause the formation of ozone, the nonattainment pollutant commonly known as smog. Strategies in the AQAPs include the adoption of rules and regulations; enhancement of CEQA participation; implementation of a new and modified indirect source review program; adoption of local air quality plans; and stationary, mobile, and indirect-source control measures. The Proposed Project is consistent with all strategies outlined in the AQAPs and would not impede implementation of the plans. The Proposed Project would not modify land uses from those anticipated in the *Stanislaus County General Plan* or the SJVAPCD AQAPs for long-range air quality planning and would not directly facilitate further growth. The Proposed Project would result in construction of pipelines, water tanks, groundwater wells, and a pump station building to the extent necessary to meet current growth projections incorporated into the plans. Specific air quality impacts related to criteria pollutants are discussed in impacts AIR-1 and AIR-3. The Proposed Project would comply with SJVAPCD regulations. Therefore, the Proposed Project would not conflict with or obstruct the SJVAPCD AQAPs and the impact would be **less than significant**.

5.5.1 Cumulative Impacts

Impact AIR-7: Cumulative Impact on Air Quality (Significant and Unavoidable)

The SJVAB is currently designated as a nonattainment area for federal and state ozone and $PM_{2.5}$ standards, and state PM_{10} standards. Past, present, and probable future projects would have a significant cumulative impact on air quality in the project area. No single project would be sufficient in size, by itself, to result in nonattainment of the regional air quality standards. Construction of the Proposed Project would result in emissions of ozone precursors (ROG and NO_X), $PM_{2.5}$, and PM_{10} below the significance thresholds for project-level impacts established by SJVAPCD. The Program EIR acknowledged that cumulative impacts of construction-related emissions of PM_{10} and ozone precursors would be significant and unavoidable, and the Proposed Project would contribute to this impact, albeit minimally. Although, given the low emissions, short duration, and intermittent operation during construction, SJVAPCD thresholds indicate that the level of air pollutants emitted by the Proposed Project would not cause any new violations, the Proposed Project could contribute to an existing violation when combined with other projects in the area. Therefore, the Proposed Project's contribution to construction-related emissions would be cumulatively considerable and this impact would be **significant and unavoidable.**

Operation of the Proposed Project's standby emergency generators and maintenance-related vehicle trips would result in a net increase in emissions of ROG, NOX, and PM10. Given that these emissions are estimated to be substantially lower than SJVAPCD's thresholds of significance, and would be consistent with existing growth plans and new source review permits, the emissions are unlikely to contribute to any new violations or contribute substantially to any air quality violation. The standby emergency generators would be used for a limited amount of time (up to 1 hour a day for 20 days per year), and health impacts associated with TACs would be below the thresholds of significance as required during permitting. Because impacts from TACs are localized, the thresholds of significance for TACs have been established at such a conservative level, and the risks would be below this level, they are not considered to be cumulatively significant. Sources permitted consistent with requirements of SJVAPCD's New Source Review (e.g., emergency generators) are considered to not be individually significant and are not cumulatively significant. While the non-permitted operational emissions are minimal from occasional maintenance vehicle trips, the vehicle trips may combine with other increased trips in the area and other Program activities to result in an increase in pollutants and was concluded as such in the Program EIR. Given the low emissions and intermittent operation of the generators and maintenance trips, SJVAPCD thresholds indicate that the level of air pollutants emitted by the Proposed Project would not cause any new violations. The Proposed Project could, however, contribute to an existing violation when combined with other projects in the area. Therefore, the incremental contribution of the Proposed Project would be cumulatively considerable, and this impact would be **significant and unavoidable.**

Chapter 6
Biological Resources

6.1 Overview

This chapter discusses the potential for the Proposed Project to affect biological resources and natural communities, and the special-status plant and wildlife species that may utilize these habitats. Specifically, this section: (1) discusses federal, state, and local regulations relevant to vegetation and wildlife resources that may be affected by the Proposed Project; (2) describes the existing environmental setting in the Proposed Project area; (3) identifies plant and wildlife species potentially affected by the Proposed Project; and (4) proposes avoidance, minimization, and compensation measures to reduce potentially significant impacts to satisfy the requirements of CEQA.

6.2 Regulatory Setting

This section describes laws and regulations at the federal, state, and local level that may apply to the Proposed Project.

6.2.1 Federal Laws, Regulations, and Policies

Clean Water Act Section 404

The Clean Water Act (CWA) is the primary federal law that protects the quality of the nation's aquatic habitats involving surface waters, including lakes, rivers, and coastal wetlands.

CWA Section 404 regulates the discharge of dredged and fill materials into waters of the United States (waters of the U.S.), which include all navigable waters, their tributaries, and some isolated waters, as well as some wetlands adjacent to the aforementioned waters (33 CFR Section 328.3). Areas typically not considered jurisdictional waters include non-tidal drainages, irrigation ditches excavated on dry land, artificially irrigated areas, artificial lakes or ponds used for irrigation or stock watering, small artificial water bodies such as swimming pools, and water-filled depressions (33 CFR Part 328). Activities involving placement of fill into jurisdictional waters of the U.S. are regulated by the U.S. Army Corps of Engineers (USACE) through permit requirements, which also require state water quality certification in compliance with Section 401 of the CWA.

Endangered Species Act

The Endangered Species Act (ESA) of 1973 (16 USC Sections 1531–1544) provides for conservation of species that are endangered or threatened throughout all or a significant portion of their range, as well as the protection of habitats on which they depend. The U.S. Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS) share responsibility for implementing the ESA. In general, USFWS manages land and freshwater species, whereas NMFS manages marine and anadromous species. As defined by Section 3 of

the ESA, "endangered" refers to species that are "in danger of extinction within the foreseeable future throughout all or a significant portion of its range," whereas "threatened" refers to "those animals and plants likely to become endangered within the foreseeable future throughout all or a significant portion of their ranges."

Section 7

ESA Section 7 requires federal agencies to consult with USFWS or NMFS, or both, before performing any action (e.g., funding a program or issuing a permit) to ensure that federal actions do not jeopardize the continued existence of a species or destroy or adversely modify critical habitat (defined below). Authorization to take (also defined below) an endangered or threatened species can be obtained through Section 7 consultation. USFWS and/or NMFS may issue a Biological Opinion (BO) with an incidental take statement to the federal agency issuing a permit or approval for a Proposed Project. The federal consulting agency then incorporates the BO and incidental take statement into any authorization or permits.

Section 10

ESA Section 10 provides a process by which nonfederal entities may obtain an incidental take permit from USFWS or NMFS for otherwise lawful activities that incidentally may result in "take" of endangered or threatened species, subject to specific conditions. A habitat conservation plan must accompany an application for an incidental take permit.

Critical Habitat

When a species is proposed for listing as endangered or threatened under the ESA, USFWS or NMFS must consider whether there are areas of habitat that are essential to the species' conservation. Those areas may be proposed for designation as "critical habitat." Under CWA Section 7, all federal agencies must ensure that any actions they authorize, fund, or carry out are not likely to jeopardize the continued existence of a listed species or destroy or adversely modify its designated critical habitat. These requirements apply only to federal agency actions, and only to habitat that has been designated. Critical habitat requirements do not apply to citizens engaged in activities on private land that do not involve a federal agency. For experimental populations designated pursuant to CWA Section 10(j), critical habitat may be designated for "essential" experimental populations, but may not be designated for "nonessential" experimental populations.

Take

Section 9 of the ESA and its implementing regulations prohibit the "take" of any fish or wildlife species listed under the ESA as endangered or threatened, unless otherwise authorized by federal regulations. The ESA defines the term "take" to mean "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct" (16 USC Section 1532).

Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) of 1918 (16 USC Part 703) enacts the provisions of treaties between the United States, Great Britain, Mexico, Japan, and the Soviet Union (now Russia) and authorizes the U.S. Secretary of the Interior to protect and regulate the taking of migratory birds. It establishes seasons and bag limits for hunted species and protects

migratory birds, their occupied nests, and their eggs (16 USC 703, 50 CFR 21, 50 CFR 10). Most actions that result in taking of, or the permanent or temporary possession of, a protected species constitute violations of the MBTA. The act also prohibits destruction of occupied nests. The Migratory Bird Permit Memorandum, dated April 15, 2003, clarifies that destruction of most unoccupied bird nests (without eggs or nestlings) is permissible under the MBTA; exceptions include nests of federally listed threatened or endangered migratory birds, bald eagles (*Haliaeetus leucocephalus*), and golden eagles (*Aquila chrysaetos*). USFWS is responsible for overseeing compliance with the MBTA.

On December 8, 2004, the U.S. Congress passed the Migratory Bird Treaty Reform Act (Division E, Title I, Section 143 of the Consolidated Appropriations Act, 2005, PL 108–447), which excludes all migratory birds non-native or human-introduced to the U.S. or its territories. It defines a native migratory bird as a species present within the U.S. and its territories as a result of natural biological or ecological processes. USFWS published a list of the bird species excluded from the MBTA on March 15, 2005 (70 FR 12710).

Executive Order 13112: Invasive Species

Executive Order (EO) 13112 directs all federal agencies to prevent and control introductions of invasive non-native species in a cost-effective and environmentally sound manner to minimize their impacts on economics, ecology, and human health. As directed by this EO, a national invasive species management plan guides federal actions to prevent, control, and minimize invasive species and their impacts (National Invasive Species Council 2008). To support implementation of this plan, USACE released a memorandum describing the U.S. Army Corps of Engineers Invasive Species Policy (USACE 2009). This policy includes addressing invasive species effects in the impact analyses for civil works projects.

6.2.2 State Laws, Regulations, and Policies

California Environmental Quality Act and CEQA Guidelines

CEQA (PRC Section 21000 et seq.) and the CEQA Guidelines (PRC Section 15000 et seq.) regulate environmental review in California. CEQA Guidelines Section 15065 requires that a lead agency shall determine whether a project may have a significant effect on the environment and shall require an EIR to be prepared for the project if there is substantial evidence, in light of the whole record, that the project has the potential to substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, and/or substantially reduce the number or restrict the range of an endangered, rare, or threatened species.

CEQA Guidelines Section 15380 defines the terms "species," "endangered," "rare," and "threatened" as they pertain to CEQA. Section 15380 also provides a greater level of consideration for state-listed or federally listed species, and for any species that can be shown to meet the criteria for listing but has not yet been listed. The criteria for considering a species endangered, rare, or threatened under CEQA are as follows:

- When its survival and reproduction in the wild are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, disease, or other factors; or

- Although not presently threatened with extinction, the species is existing in such small numbers throughout all or a significant portion of its range that it may become endangered if its environment worsens; or

- The species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered "threatened" as defined in the ESA.

Species that meet the criteria listed above are often considered Species of Special Concern by the California Department of Fish and Wildlife (CDFW). The designation "Species of Special Concern" is administrative and carries no formal legal status. Generally, Species of Special Concern should be included in an analysis of project impacts if they can be shown to meet the criteria of sensitivity outlined in CEQA Guidelines Section 15380. That said, some older lists of Species of Special Concern were not developed using criteria relevant to CEQA, and the information used in generating those lists is out of date. Therefore, the current circumstances of each unlisted Species of Special Concern must be considered in the context of Section 15380 criteria, and these species should not automatically be assumed to be rare, threatened, or endangered.

California Fish and Game Code

The California Fish and Game Code (Fish & G. Code) establishes CDFW (Fish & G. Code Section 700) and states that the fish and wildlife resources of the state are held in trust for the people of the state by and through CDFW (Fish & G. Code Section 711.7[a]). Fish and Game Code Section 1802 states that CDFW has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and the habitat necessary for biologically sustainable populations of those species. All licenses, permits, tag reservations, and other entitlements for the take of fish and game authorized by the Fish and Game Code are prepared and issued by CDFW (Fish & G. Code Section 1050[a]).

Other sections of the Fish and Game Code describe protection for specific types of wildlife. For example, Fish and Game Code Sections 3503, 3513, and 3800 (and other sections and subsections) protect native birds, including their active or inactive nests and eggs, from all forms of take. Raptors (i.e., eagles, falcons, hawks, and owls) and their nests are specifically protected in California under Fish and Game Code Section 3503.5, which states that it is "unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto." Certain species are designated as fully protected under Fish and Game Code Sections 3511 (birds), 5515 (fish), 4700 (mammals), and 5050 (amphibians), and it is illegal to take these species. Non-game mammals are also protected by Fish and Game Code Section 4150.

Sections 1900-1913 – Native Plant Protection Act

The Native Plant Protection Act (NPPA) of 1977 (Fish & G. Code Sections 1900-1913) directs CDFW to carry out the California State Legislature's intent to "preserve, protect and enhance rare and endangered plants in this state." The NPPA authorizes the California Fish and Game Commission to designate plants as "endangered" or "rare" and prohibits "take" of any such plants, except as authorized in limited circumstances.

CDFW and the California Native Plant Society (CNPS), a non-governmental organization, jointly maintain California Rare Plant Rank (CRPR) lists. These lists include plant species of concern in California. Vascular plants included on these lists are defined as follows:

List 1: Plants considered extinct or extirpated in California

List 1B: Plants that are rare, threatened, or endangered in California and elsewhere

List 2: Plants that are rare, threatened, or endangered in California, but more common elsewhere

List 3: Plants about which more information is needed – review list

List 4: Plants of limited distribution – watch list

Plants appearing on Lists 1 and 2 are, in general, considered to meet the CEQA Guidelines Section 15380(b) criteria, and adverse effects on these species may be considered significant. Impacts on plants that are on Lists 3 and 4 are also considered during CEQA review; however, because these species are typically not as rare as those on Lists 1 and 2, impacts on them are less frequently considered potentially significant.

Sections 2050 -2098 – California Endangered Species Act

The California Endangered Species Act (CESA) (Fish & G. Code Sections 2050–2098) prohibits state agencies from approving a project that would jeopardize the continued existence of a species listed under the CESA as endangered or threatened, or that would result in the destruction or adverse modification of habitat essential to the continued existence of those species, if reasonable and prudent alternatives are available that would avoid a jeopardy finding.

Section 2080 of the Fish and Game Code prohibits the take of any species that is state listed as endangered or threatened, or designated as a candidate for such listing. "Take" is defined by Section 86 of the Fish and Game Code as to "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill" an individual of a listed species. Under the CESA, CDFW may issue an incidental take permit authorizing the take of listed and candidate species when that that activity is incidental to an otherwise lawful activity, subject to specified conditions.

6.2.3 Local Laws, Regulations, and Policies

Stanislaus County General Plan 2015

Stanislaus County has identified the following goals and policies in the Conservation/Open Space Element of the *Stanislaus County General Plan 2015* (2016) that are relevant to the Proposed Project:

Goal One: Encourage the protection and preservation of natural and scenic areas throughout the County.

Policy Three: Areas of sensitive wildlife and plant life (e.g., vernal pools, riparian habitats, flyways and other waterfowl habitats, etc.) including habitats and plant species

listed in the General Plan Support Document or by state or federal agencies shall be protected from development and/or disturbance.

Policy Four: Protect and enhance oak woodlands and other native hardwood habitat.

Goal Ten: Protect fish and wildlife species of the County.

Policy Twenty-nine: Habitats of rare and endangered fish and wildlife species, including special status wildlife and plants, shall be protected.

Stanislaus County does not have a tree protection ordinance, and the Del Rio community plan does not identify any tree protection/replacement requirements.

6.3 Environmental Setting

The following sections describe the environmental setting for biological resources near the Proposed Project sites. For the purposes of this chapter, the study area includes Sites A and B, as well as their respective proposed pipelines (Figure 2-1). Adjacent areas outside of the study area are also described when Proposed Project activities could potentially impact biological resources in these areas. A reconnaissance-level biological survey and investigation for the presence of jurisdictional waters in the study area was conducted by Horizon Water and Environment on May 4, 2016. This survey consisted of walking the entirety of Sites A and B, walking their associated pipeline alignments, and observing adjacent habitats, which could provide potential habitat for sensitive wildlife. The USFWS IPaC Report and CNDDB results are provided in **Appendix D.**

6.3.1 Regional Setting

The study area is situated in the northwestern portion of the San Joaquin Valley, in Stanislaus County, near the community of Del Rio. Terrain in the study area is flat or very gently sloped, with elevations approximately 100–110 feet above mean sea level (msl).

Land uses in the vicinity of the study area are primarily residential, agricultural, transportation, and recreational (e.g., Del Rio Golf and Country Club). The Stanislaus River is approximately 0.75 mile north of Site B and 1.3 miles north of Site A.

6.3.2 Project Vicinity

The following section provides descriptions of biological communities in the study area. Wildlife typically associated with these biological communities is also described below.

Site A and Proposed Pipeline Alignment

Site A consists of a fallow field with a residence, outbuildings clustered on the north end of the property, and a paved driveway (Figure 2-2). Land uses surrounding Site A include residences to the east and north, an abandoned railroad line and residences to the west, and an irrigation canal on the southern border of the property.

The proposed alignment of the Site A pipeline is confined to the existing road right-of-way of Ladd Road and St. John Road (Figure 2-1). Several houses are located in proximity to the pipeline alignment along Ladd Road at the southern end of the alignment. St. John Road is surrounded by almond (*Prunus dulcis*) orchards to the west and an abandoned railroad line and hayfields to the east. Residences are located at the intersection of St. John Road and Country Club Drive, the northern extent of the proposed pipeline, and a hayfield is located to the east of the intersection.

Biological communities present include annual grassland, developed/ruderal, orchard, and hayfields, which are described in the following sections. A Modesto Irrigation District canal runs along the south boundary of the site but is not within Site A.

Annual Grassland

The vast majority of Site A is a fallow field composed of various annual grass and forb species. Non-native grasses present include rip-gut brome (*Bromus diandrus*), Italian rye grass (*Festuca perennis*), foxtail barley (*Hordeum murinum*), and rattail fescue (*Festuca myuros*).

Wildlife that could potentially use this habitat include California vole (*Microtus californicus*), California ground squirrel (*Otospermophilus beecheyi*), pocket gopher (*Thomomys* spp.), western fence lizard (*Sceloporus occidentalis*), common garter snake (*Thamnophis sirtalis*), and Burrowing Owl (*Athene cunicularia*). Raptors may forage in this area. Several small burrows were observed in the field, but no evidence of use by Burrowing Owls (e.g., white-wash, feathers) was observed.

Developed/Ruderal

Developed upland habitat at Site A includes a residence with a garage, outbuildings, and a paved driveway. Some non-native annual grasses, such as rip-gut brome, are present. Forbs present include cudweed (*Pseudognaphalium luteoalbum*). Several fruit trees, as well as an ornamental tree and several ornamental shrubs, are planted around the house and outbuildings. Small fan palms (*Washingtonia* sp.) are sprouting in pavement cracks behind the house. Several trees, including five large sycamores (*Platanus* sp.), overhang the fence from the adjacent property east of Site A. Native oaks are present in several locations on the site. Two interior live oaks (*Quercus wislizeni*) are present between the outbuildings, and smaller saplings are scattered along the fence lines. Two small coast live oaks (*Quercus agrifolia*) are located along the west fence line. Trees in the study area may provide nesting habitat for various passerines and possibly raptors. Although oaks are present on the site, the habitat does not have the landscape character or biological integrity of an oak woodland that would require its protection as a sensitive natural community.

Most of the residential parcels bordering the Proposed Project have trees that may be suitable for bird nesting.

Along the Site A pipeline alignment, immediately to the east of St. John Road, is a planted line of trees and railroad tracks between the road and adjacent hayfields. Planted trees include a mix of native and non-native species, such as coast live oak, valley oak (*Quercus lobata*), coast redwood (*Sequoia sempervirens*), fan palm, Chinese pistachio (*Pistacia chinensis*), maple (*Acer* sp.), and weeping willow (*Salix babylonica*). This planted area has been mulched, and the understory consists of planted African daisy (*Osteospermum* sp.) at the base of some trees, as

well as sparse herbaceous weeds such as prickly lettuce (*Lactuca serriola*) and sow thistle (*Sonchus oleraceus*).

Developed/ruderal habitat in the study area provides relatively limited habitat value for special-status wildlife, with the exception of large trees on adjacent parcels. These trees could provide nesting habitat for raptors. However, urban/suburban–adapted bird species, such as House Finch (*Haemorhous mexicanus*), Dark-eyed Junco (*Junco hyemalis*), and House Sparrow (*Passer domesticus*), could use this habitat. Bats could roost in structures that have exterior openings, such as the garage or shed.

Orchard

St. John Road is bordered by an almond orchard to the west. The understory of the almond orchard is largely devoid of vegetation, except for small patches of Bermuda grass (*Cynodon dactylon*). Species such as American crow (*Corvus brachyrhynchos*) and side-blotched lizard (*Uta stansburiana*) can occur in this habitat type.

Hayfields

Cultivated hayfields are present to the east of St. John Road. Hayfields provide seasonal resources for wildlife such as Red-winged Blackbird (*Agelaius phoeniceus*), gopher, and gopher snake (*Pituophis catenifer*) (California Department of Fish and Game [CDFG] 1988). Raptors may forage in these areas.

Site B and Proposed Pipeline Alignment

Site B is located approximately 0.8 mile northeast of Site A (Figure 2-1). The site is adjacent to residential development and orchards (Figure 2-1). Natural communities present on the Site B property include annual grassland and native and ornamental trees and shrubs.

The proposed alignment of the Site B pipeline is confined to the existing road right-of-way of McHenry Avenue and Stewart Road. Along the proposed pipeline alignment, a developed residential community and ornamental plantings are dominant, with orchards to the east.

Annual Grassland

The eastern portion of Site B is largely flat and consists of a grassland composed of the non-native grasses foxtail barley, Italian rye grass, rattail fescue, and rescue grass (*Bromus catharticus*). The non-native forb broad leaf filaree (*Erodium botrys*) and the native forbs common fiddleneck (*Amsinckia intermedia*) and bedstraw (*Galium aparine*) are also present. Wildlife species that may use this area are similar to those identified for the annual grassland habitat in Site A.

Native and Ornamental Trees and Shrubs

As the land slopes up to the west, the habitat type changes. Loquat trees (*Eriobotrya japonica*) line the fence on the western boundary of the site. The area bordering the fence is fairly disturbed and supports understory species such as English ivy (*Hedera helix*), periwinkle (*Vinca major*), miner's lettuce (*Claytonia perfoliata*), and ornamental poppies (*Papaver somniferum*). A small brush pile in the western portion of the site could provide cover for various passerines and small mammals. A very large live oak is present to the south of the

site, and an incense cedar (*Calocedrus decurrens*) is adjacent to the property. These trees could provide bird nesting habitat.

Orchard

East of the proposed pipeline alignment along McHenry Avenue is an almond orchard, with similar habitat as that described for the almond orchard along the Site A pipeline alignment.

Developed

Developed habitat dominates the Site B proposed pipeline alignment. At the intersection of McHenry Avenue and Stewart Road are a variety of ornamental shrub plantings. Small ornamental trees have been planted along the road. Residential properties are located to the north and south of Stewart Road up to the proposed pipeline's terminus at Grove Point Way, and these properties have a variety of landscape plantings. Many of these properties have large trees, including California sycamore (*Platanus racemosa*), Peruvian pepper tree (*Schinus molle*), several conifers, and various oaks, which could provide nesting habitat for various passerines and possibly urban-adapted raptors.

6.3.3 Special-status Species

Special-status plant and wildlife species refers to those species that meet one or more of the following criteria:

- Species that are listed as threatened or endangered under the ESA (50 CFR Section 17.12 for listed plants, 50 CFR Section 17.11 for listed animals);
- Species that are candidates for possible future listing as threatened or endangered under the ESA (76 FR 66370);
- Species that are listed or proposed for listing by the State of California as threatened or endangered under the CESA (14 CCR Section 670.5);
- Plants listed as rare under the California Native Plant Protection Act of 1977 (Fish & G. Code Section 1900 et seq.);
- CRPR List 1 and 2 species;
- Species that meet the definitions of rare or endangered under CEQA (CEQA Guidelines Section 15380); or
- Animals fully protected in California (Fish & G. Code Sections 3511 [birds], 4700 [mammals], and 5050 [reptiles and amphibians]).

Background information on special-status plant and wildlife species with the potential to occur in the study area was compiled from numerous sources, including, but not limited to, the following:

- USFWS Information for Planning and Conservation (IPaC) report for the study area (USFWS 2016) and

- California Natural Diversity Database (CNDDB) query for the twelve U.S. Geological Survey (USGS) 7.5-minute quadrangles within and adjoining the Proposed Project, including Avena, Brush Lake, Ceres, Denair, Escalon, Manteca, Oakdale, Ripon, Riverbank, Salida, Waterford, and Westley (CDFW 2016).

Tables 6-1 and **6-2** list the special-status plant and wildlife species known to occur in the vicinity of the study area, and **Figure 6-1** shows the CNDDB occurrences of special-status plants and animals and designated critical habitat within a 5-mile radius of the study area.

The potential for special-status species to occur in the vicinity of the study area was evaluated according to the following criteria:

None: The area contains a complete lack of suitable habitat, the local range for the species is restricted, and/or the species is extirpated in this region.

Not expected: Suitable habitat or key habitat elements may be present but may be of poor quality or isolated from the nearest extant occurrences. Habitat suitability refers to factors such as elevation, soil chemistry and type, vegetation communities, microhabitats, and degraded/significantly altered habitats.

Possible: Suitable habitat or key habitat elements that potentially support the species are present.

Present: The species was observed directly or its presence was confirmed by diagnostic signs (e.g., tracks, scat, burrows, carcasses, castings, prey remains) during field investigations or in previous studies in the area.

Special-status Plants

No special-status plants or special-status plant habitat were observed during the reconnaissance survey. Based on site conditions and previous records of occurrences, no special-status plant species are anticipated to occur within the study area (Table 6-1). An extirpated CNDDB occurrence of Greene's tuctoria (*Tuctoria greenei*) is documented within 5 miles of the study area (**Figure 6-1**); however, this species occurs only in vernal pools, and no vernal pool habitat is present in the study area. Thus, this species would not occur in the study area.

Special-status Wildlife

Special-status bird species with the potential to occur at the two Proposed Project sites, are Tricolored Blackbird (*Agelaius tricolor*), Burrowing Owl (*Athene cunicularia*), and Swainson's Hawk (*Buteo swainsoni*). The reconnaissance survey did not observe these species in either the Site A or Site B study areas. These species are not known to occur at the project sites and are not expected to nest at the sites; however, they could potentially nest near the study area.

Table 6-1. Special-status Plant Species

Scientific/Common Name	Status (Federal/ State/CRPR)	Habitat	Potential to Occur in the Project Area
Atriplex cordulata var. cordulata heartscale	-/-/1B.2	Chenopod scrub, valley and foothill grassland, meadows. Alkaline flats and scalds in the Central Valley, sandy soils. 0-560 meters. Blooms April to October.	**None.** The sites lack suitable habitat for this species.
Atriplex minuscula lesser saltscale	-/-/1B.1	Chenopod scrub, playas, valley and foothill grassland. In alkali sink and grassland in sandy, alkaline soils. 20-100 meters. Blooms May to October.	**None.** The sites lack suitable habitat for this species.
Atriplex subtilis subtle orache	-/-/1B.2	Valley and foothill grassland. Alkaline soils. 40-100 meters. Blooms June to October.	**None.** The sites lack suitable habitat for this species.
Blepharizonia plumosa big tarplant	-/-/1B.1	Valley and foothill grassland. Dry hills and plains in annual grassland. Clay to clay-loam soils; usually on slopes and often in burned areas. 30-505 meters. Blooms July to October.	**None.** The sites lack suitable habitat for this species.
California macrophylla round-leaved filaree	-/-/1B.2	Cismontane woodland, valley and foothill grassland. Clay soils. 15-1,200 meters. Blooms March to May.	**None.** The sites lack suitable habitat for this species.
Caulanthus lemmonii Lemmon's jewelflower	-/-/1B.2	Pinyon and juniper woodland, valley and foothill grassland. 75-1,585 meters. Blooms February to May.	**Not expected.** The estimated natural range for this species does not include the Proposed Project area (CNPS 2016).
Clarkia rostrata beaked clarkia	-/-/1B.3	Cismontane woodland, valley and foothill grassland. North-facing slopes; sometimes on sandstone. 60-500 meters. Blooms April to May.	**None.** The sites lack suitable habitat for this species.
Eryngium racemosum Delta button-celery	-/SE/1B.1	Riparian scrub. Seasonally inundated floodplain on clay. 3-75 meters. Blooms June to October.	**None.** The sites lack suitable habitat for this species.
Eschscholzia rhombipetala diamond-petaled California poppy	-/-/1B.1	Valley and foothill grassland. Alkaline, clay slopes and flats. 30-625 meters. Blooms March to April.	**None.** The sites lack suitable habitat for this species.
Legenere limosa legenere	-/-/1B.1	Vernal pools. In beds of vernal pools. 1-880 meters. Blooms April to June.	**None.** The sites lack suitable habitat for this species.

Scientific/Common Name	Status (Federal/ State/CRPR)	Habitat	Potential to Occur in the Project Area
Neostapfia colusana Colusa grass	FT/SE/1B.1	Vernal pools. Usually in the bottoms of large or deep vernal pools; adobe soils. 5-125 meters. Blooms May to August.	**None.** The sites lack suitable habitat for this species.
Orcuttia inaequalis San Joaquin Valley Orcutt grass	FT/SE/1B.1	Vernal pools. 10-755 meters. Blooms April to September.	**None.** The sites lack suitable habitat for this species.
Puccinellia simplex California alkali grass	-/-/1B.2	Meadows and seeps, chenopod scrub, valley and foothill grasslands, vernal pools. Alkaline, vernally mesic. Sinks, flats, and lake margins. 1-915 meters. Blooms March to May	**None.** The sites lack suitable habitat for this species.
Sphenopholis obtusata prairie wedge grass	-/-/2B.2	Cismontane woodland, meadows and seeps. Open moist sites, along rivers and springs, alkaline desert seeps. 300-2,000 meters. Blooms April to July.	**None.** The sites lack suitable habitat for this species.
Tuctoria greenei Greene's tuctoria	FE/SR/1B.1	Vernal pools. Dry bottoms of vernal pools in open grasslands. 30-1,070 meters. Blooms May to September.	**None.** The sites lack suitable habitat for this species.

Status Legend

Federal:

FE = federally listed as endangered

FT = federally listed as threatened

- = no listing status

State:

SE = state listed as endangered

SR = state designated as rare

CRPR (California Rare Plant Rank):

1B = Plants Rare, Threatened, or Endangered in California and Elsewhere

2B = Plants Rare, Threatened, or Endangered in California, But More Common Elsewhere

Threat Ranks =

0.1 = Seriously threatened in California

0.2 = Moderately threatened in California

Table 6-2. Special-status Animal Species

Scientific/Common Name	Status (Federal/ State)	Habitat	Potential to Occur in the Project Area
Invertebrates			
Branchinecta conservatio Conservancy fairy shrimp	FE/-	Endemic to the grasslands of the northern two-thirds of the Central Valley; found in large, turbid pools. Inhabit astatic pools located in swales formed by old, braided alluvium; filled by winter/spring rains, last until June.	**None.** The sites lack suitable habitat for this species.
Branchinecta lynchi vernal pool fairy shrimp	FT/-	Endemic to the grasslands of the Central Valley, Central Coast mountains, and South Coast mountains, in astatic rain-filled pools. Inhabit small, clear-water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression pools.	**None.** The sites lack suitable habitat for this species.
Desmocerus californicus dimorphus valley elderberry longhorn beetle	FT/-	Occurs only in the Central Valley of California, in association with blue elderberry (*Sambucus mexicana*). Prefers to lay eggs in elderberries 2-8 inches in diameter; some preference shown for "stressed" elderberries.	**None.** The sites lack suitable habitat for this species.
Lepidurus packardi vernal pool tadpole shrimp	FE/-	Inhabits vernal pools and swales in the Sacramento Valley containing clear to highly turbid water. Pools commonly found in grass-bottomed swales of unplowed grasslands. Some pools are mud-bottomed and highly turbid.	**None.** The sites lack suitable habitat for this species.
Amphibians and Reptiles			
Ambystoma californiense California tiger salamander	FT/ST, SSC	Central Valley distinct population segment (DPS) federally listed as threatened. Santa Barbara and Sonoma County DPS federally listed as endangered. Need underground refuges, especially ground squirrel burrows, and vernal pools or other seasonal water sources for breeding.	**None.** Site A provides suitable upland habitat. Site B lacks suitable habitat for this species. The closest extant CNDDB occurrence is 15 kilometers (9.3 miles) northeast of Site B and 16.1 kilometers (10 miles) northeast of Site A. Analysis of historical aerial imagery did not identify suitable aquatic habitat

Scientific/Common Name	Status (Federal/ State)	Habitat	Potential to Occur in the Project Area
			for this species within 2.1 kilometers (1.3 miles).
Emys marmorata western pond turtle	-/SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams, and irrigation ditches, usually with aquatic vegetation, below 1,830 meters elevation. Need basking sites and suitable upland habitat (sandy banks or grassy open fields) up to 0.5 kilometer from water for egg-laying.	**None.** Site A lacks suitable habitat for this species. The irrigation canal south of Site A is not anticipated to provide suitable habitat, as it is concrete lined and lacks basking sites. Site B lacks suitable habitat.
Rana draytonii California red-legged frog	FT/SSC	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11-20 weeks of permanent water for larval development. Must have access to estivation habitat.	**None.** Species has been extirpated from Central Valley floor (USFWS 2002).
Thamnophis gigas giant garter snake	FT/ST	Prefers freshwater marsh and low-gradient streams. Has adapted to drainage canals and irrigation ditches. This is the most aquatic of the garter snakes in California.	**None.** The sites lack suitable habitat for this species.
Birds			
Agelaius tricolor Tricolored Blackbird	-/SC, SSC	Highly colonial species, most numerous in Central Valley and vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey within a few kilometers of the colony.	**Possible.** This species may forage in nearby agricultural fields, but is not anticipated to nest in the study area, although it may nest nearby. Colonies have been observed approximately 5.6 kilometers (3.5 miles) north of Site B (6.9 kilometers [4.3 miles] north of Site A) and 10.5 kilometers (6.5 miles) east of Site B (10.9 kilometers [6.8 miles] east of Site A) (UC Davis 2016).

Scientific/Common Name	Status (Federal/ State)	Habitat	Potential to Occur in the Project Area
Athene cunicularia Burrowing Owl	-/SSC	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably the California ground squirrel.	**Possible.** Potentially suitable habitat is present at Site A, and there are two CNDDB occurrences within 8 kilometers (5 miles) of the sites (CDFW 2016). Site B is not anticipated to provide suitable habitat due to the lack of burrows observed at the site.
Buteo swainsoni Swainson's Hawk	-/ST	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands with groves or lines of trees. Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	**Possible.** Potentially suitable foraging habitat is present at both sites, and there is a CNDDB occurrence within 1.8 kilometers (1.1 miles of Site B) (within 2.9 kilometers [1.8 miles] of Site A) (CDFW 2016). This species is not anticipated to nest at the sites, but may nest in the vicinity.
Coccyzus americanus occidentalis Western Yellow-billed Cuckoo	FT/SE	Riparian forest nester along the broad, lower flood-bottoms of larger river systems. Nests in riparian jungles of willow, often mixed with cottonwoods, with lower story of blackberry, nettles, or wild grape.	**None.** The sites lack suitable habitat for this species.
Icteria virens Yellow-breasted Chat	-/SSC	Summer resident; inhabits riparian thickets of willow and other brushy tangles near watercourses. Nests in low, dense riparian, consisting of willow, blackberry, wild grape; forages and nests within 3 meters (10 feet) of ground.	**None.** The sites lack suitable habitat for this species.
Melospiza melodia Song Sparrow ("Modesto" population)	-/SSC	Emergent freshwater marshes, riparian willow thickets, riparian forests, and vegetated irrigation. Inhabits cattails (*Typha* spp.), bulrush (*Schoenoplectus* spp.) and other sedges; also known to frequent tangles bordering sloughs.	**None.** The sites lack suitable habitat for this species.

Scientific/Common Name	Status (Federal/ State)	Habitat	Potential to Occur in the Project Area
Vireo bellii pusillus Least Bell's Vireo	FE/SE	Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 610 meters (2,000 feet). Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, *Baccharis*, mesquite.	**None.** The sites lack suitable habitat for this species.
Fish			
Hypomesus transpacificus Delta smelt	FT/SE	Sacramento–San Joaquin River Delta. Seasonally in Suisun Bay, Carquinez Strait and San Pablo Bay. Seldom found at salinities > 10 parts per thousand; most often at salinities < 2 parts per thousand.	**None.** Study area is out of range of the species.
Mylopharodon conocephalus hardhead	-/SSC	Low to mid-elevation streams in the Sacramento–San Joaquin River drainage. Also present in the Russian River. Clear, deep pools with sand-gravel-boulder bottoms and slow water velocity. Not found where exotic centrarchids predominate.	**None.** The sites lack suitable habitat for this species.
Oncorhynchus mykiss irideus steelhead – Central Valley DPS	FT/-	Populations in the Sacramento and San Joaquin Rivers and their tributaries.	**None.** The sites lack suitable habitat for this species.
Mammals			
Corynorhinus townsendii Townsend's big-eared bat	-/CS, SSC	Throughout California in a wide variety of habitats. Most common in mesic sites. Roosts in the open, hanging from walls and ceilings. This species generally roosts in caves, abandoned mines, and occasionally buildings and is extremely sensitive to human disturbance (Pierson and Rainey 1998).	**Not expected.** Buildings at Site A provide marginally suitable habitat for this species; as this species is so sensitive to human disturbance, it is not anticipated to roost in these buildings. Site B lacks suitable habitat. The closest CNNDDB occurrence is 15 kilometers (9.3 miles) southeast of Site A (15.8 kilometers [9.8 miles] southeast of Site B), in the Tuolumne River riparian corridor.

Scientific/Common Name	Status (Federal/ State)	Habitat	Potential to Occur in the Project Area
Eumops perotis californicus western mastiff bat	-/SSC	Many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, and chaparral. Roosts in crevices in cliff faces, high buildings, trees, and tunnels.	**Not expected.** Marginally suitable habitat is present in the study area.
Lasiurus blossevillii western red bat	-/SSC	Roosts primarily in trees, 0.6-12 meters (2-40 feet) above ground, from sea level up through mixed conifer forests. Prefers habitat edges and mosaics with trees that are protected from above and open below with open areas for foraging.	**Not expected.** Marginally suitable habitat is present in the study area. In the Central Valley, this species is strongly associated with riparian areas, especially with mature cottonwoods (*Populus* spp.) and sycamores (*Platanus racemosa*) (Pierson et al. 2006). The closest riparian areas are 1.9 kilometers (1.2 miles) from Site A and 1.1 kilometers (0.7 mile) from Site B.
Neotoma fuscipes riparia riparian (=San Joaquin Valley) woodrat	FE/SSC	Riparian areas along the San Joaquin, Stanislaus, and Tuolumne Rivers. Needs areas with mix of brush and trees. Needs suitable nesting sites in trees, snags, or logs.	**None.** The sites lack suitable habitat for this species.
Sylvilagus bachmani riparius riparian brush rabbit	FE/SE	Riparian areas on the San Joaquin River in northern Stanislaus County. Dense thickets of wild rose, willows, and blackberries.	**None.** The sites lack suitable habitat for this species.
Vulpes macrotis mutica San Joaquin kit fox	FE/ST	Annual grasslands or grassy open stages with scattered shrubby vegetation. Needs loose-textured sandy soils for burrowing and suitable prey base.	**None.** The sites lack suitable habitat for this species.

6.4 Impact Analysis

6.4.1 Methodology

The Proposed Project may affect biological resources through direct or indirect disturbance, modification, or destruction of habitat that results in death, injury, or harassment of individuals or populations of plant or animal species, or that impedes or prevents the dispersal of individuals or populations of special-status species. Potential impacts on existing biological resources were evaluated by comparing the quantity and quality of habitats present in the study area under baseline conditions to anticipated conditions after implementation of the project activities. Direct and indirect impacts on special-status species were assessed based on the potential for the species or their habitat to be disturbed or enhanced by implementation of the Proposed Project.

In general, once construction is complete, operation and maintenance of the Proposed Project, as described in Chapter 2, would not disturb biological resources. Unless otherwise stated below, impacts associated with operation and maintenance are considered unlikely or less than significant, and are not discussed further.

Impacts on riparian habitat, federally protected wetlands, and wildlife corridors and potential conflicts with local policies or ordinances were evaluated in the Environmental Checklist (Appendix B) and found to be less than significant or to have no impact. These issues are not evaluated further in this EIR.

6.4.2 Criteria for Determining Significance

Based on Appendix G of the CEQA Guidelines, the Proposed Project would result in a significant impact on biological resources if it would:

- Have a substantial or potential adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or USFWS;
- Have a substantial or potential adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by CDFW or USFWS;
- Have a substantial or potential adverse effect on federally protected wetlands as defined by Section 404 of the CWA (including, but not limited to, marsh, vernal pool, and coastal) through direct removal, filling, hydrological interruption, or other means;
- Interfere substantially or potentially with the movement of any wildlife species or with established wildlife corridors, or impede the use of native wildlife nursery sites; or
- Conflict with local policies or ordinances protecting biological resources, or conflict with the provisions of an adopted Habitat Conservation Plan (HCP) or Natural Community Conservation Plan.

The analysis considers both species and their habitats. A *less than significant* impact generally refers to a situation where there is a measurable impact, but the impact is not likely to result

in an adverse outcome for the survival or fitness of a particular species, or a widespread or long-lasting adverse effect on a natural community. Conversely, an impact would be considered *potentially significant* if it may substantially decrease the likelihood of survival or fitness of a particular species (e.g., substantial decrease in a local population size or extirpation), or result in widespread or long-lasting adverse effects on a natural community. For impacts found to be "potentially significant", mitigation measures are proposed. Any impact that remains significant after application of all feasible mitigation is considered *significant and unavoidable.*

6.4.3 Environmental Impacts

Impact BIO-1: Construction-related Loss of Occupied Burrowing Owl Habitat (Less than Significant with Mitigation)

Annual grasslands in the study area provide potentially suitable habitat for Burrowing Owl. Although some burrows were observed at Site A, no evidence of use by Burrowing Owls (e.g., whitewash, feathers) was observed; however, there is the potential for this species to occupy the site or for individuals to occur as transients. No burrows were identified at Site B, so this site is not anticipated to support Burrowing Owls. If Burrowing Owls are present at or within 250 feet of Site A, construction during the breeding season could result in the incidental loss of eggs or nestlings, or otherwise lead to nest abandonment. Raptors, including owls and their nests, are protected under both federal and state laws and regulations, including the MBTA and Fish and Game Code Section 3503.5. The loss, directly or indirectly through nest abandonment or reproductive suppression, of occupied Burrowing Owl habitat (or habitat known to have been occupied by owls during the nesting season within the past 3 years) or reductions in the number of this rare species within Stanislaus County would constitute a significant impact.

The Program EIR identified impacts on Burrowing Owl as potentially significant and identified Mitigation Measure BIO-8: *Avoid and Protect Burrowing Owls* and Mitigation Measure BIO-9: *Compensate for Loss of Burrowing Owl Habitat* to reduce impacts to Burrowing Owls to less than significant. These mitigation measures have been modified to reflect site conditions for the Proposed Project. With implementation of **Mitigation Measures BIO-1 (Avoid and Protect Burrowing Owls at Site A)** and **BIO-2 (Compensate for Loss of Burrowing Owl Habitat at Site A),** the potential for loss of Burrowing Owls would be **less than significant.**

Mitigation Measure BIO-1: Avoid and Protect Burrowing Owls at Site A.

Because some burrows that could be used by Burrowing Owls were noted during field surveys at Site A, and in conformance with federal and state regulations regarding the protection of raptors, the City shall hire a qualified biologist to conduct a preconstruction survey(s) for Burrowing Owls within a 250-foot buffer around the project site, in conformance with accordance with protocols established in the *Staff Report on Burrowing Owl Mitigation* (CDFG 2012 or current version), and prior to the start of construction. If no Burrowing Owls are located during these surveys, no additional action is warranted. However, if breeding or resident owls are located on or within 250 feet of Site A, the following measures shall be implemented.

- No Burrowing Owls will be evicted from burrows during the nesting season (February 1 through August 31). Eviction outside the nesting season may be permitted following evaluation of eviction plans and receipt of formal written approval from CDFW authorizing the eviction.

- A 250-foot buffer, within which no new activity is permissible, shall be maintained between project activities and nesting Burrowing Owls. This protected area will remain in effect until August 31 or, at CDFW's discretion (based upon monitoring evidence), until the young owls are foraging independently.

Mitigation Measure BIO-2: Compensate for Loss of Burrowing Owl Habitat at Site A.

If a preconstruction survey finds that Burrowing Owls occupy Site A, and avoiding construction in occupied areas is not feasible, then the City shall implement habitat compensation on off-site mitigation lands, or shall purchase mitigation bank credits from a mitigation bank approved by CDFW. If mitigation credits are not purchased, habitat management lands comprising existing Burrowing Owl foraging and breeding habitat will be acquired and preserved. An area of 6.5 acres (the amount of land found to be necessary to sustain a pair or an individual owl) will be secured for each pair of owls or for an individual, in the case of an odd number of birds. Relocation of owls shall only be implemented during the non-breeding season. As part of an agreement with CDFW, the City shall provide CDFW with security for the performance of its mitigation duties in the form of funds that will:

- allow for the acquisition and preservation of 6.5 acres of habitat management lands for each pair of owls or unpaired resident single owl;

- provide initial protection and enhancement activities on the habitat management lands, potentially including such measures as fencing, trash cleanup, artificial burrow creation, grazing or mowing, and any habitat restoration deemed necessary by CDFW;

- establish an endowment for the long-term management of the habitat management lands; and

- reimburse CDFW for reasonable expenses incurred as a result of the approval and implementation of this agreement.

Impact BIO-2: Construction-related Loss of Swainson's Hawk Foraging Habitat (Less than Significant with Mitigation)

Swainson's Hawks are known to nest within 1.1 miles of Site B (within 1.8 miles of Site A) (CDFW 2016). The fallow field at Site A and the grassland at Site B provide potentially suitable foraging habitat for Swainson's Hawks. Project-related construction would result in the loss of up to 1.3 acres of potentially suitable foraging habitat at Site A and 0.1 acre of potentially suitable foraging habitat at Site B, resulting in a significant adverse effect on this state-designated threatened species through habitat modification.

The Program EIR identified loss of Swainson's Hawk foraging habitat as potentially significant and identified Mitigation Measure BIO-10: *Compensate for Loss of Swainson's Hawk Foraging Habitat* to reduce impacts to less than significant. This mitigation measure has been modified to reflect site condition for the Proposed Project. Implementation of **Mitigation Measure BIO-3 (Compensate for Loss of Swainson's Hawk Foraging Habitat)** would reduce this impact to a level that is **less than significant**.

Mitigation Measure BIO-3: Compensate for Loss of Swainson's Hawk Foraging Habitat.

To mitigate for the loss of potential Swainson's Hawk foraging habitat, the City shall provide off-site habitat management lands, as described in the CDFW protocol for the mitigation of impacts on Swainson's hawks in the Central Valley (CDFG 1994), or by purchasing credits at a CDFW-approved Swainson's Hawk foraging habitat mitigation bank that covers the Proposed Project area, such as the Dutchman Creek Conservation Bank.

The City shall determine the final acreage of off-site management lands or mitigation bank credits to be provided based on the distance between the project area and the nearest active nest site, as stated in the CDFW protocol (CDFG 1994). Mitigation credits would follow the same ratio guidelines as off-site management lands. Prior to the grading of any site with potential foraging habitat, the City shall hire a qualified biologist to conduct protocol-level surveys to determine the location of the nearest active nest. Based on these surveys, the City shall compensate for losses in compliance with the protocol for the mitigation of impacts on Swainson's hawks in the Central Valley (CDFG 1994), as follows:

- Projects within 1 mile of an active nest tree shall provide:
  - 1 acre of habitat management land for each acre of development authorized (1:1 ratio), at least 10% of which shall be met by fee title acquisition or a conservation easement allowing for the active management of the habitat, with the remaining 90% protected by a conservation easement acceptable to CDFW on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's Hawk; or
  - 0.5 acre of habitat management land for each acre of development authorized (0.5:1 ratio), all of which shall be met by fee title acquisition or a conservation easement acceptable to CDFW that allows for the active management of the habitat for prey production on the habitat management lands.
- Projects within 5 miles of an active nest tree but greater than 1 mile from the nest tree shall provide 0.75 acre of habitat management land for each acre of urban development authorized (0.75:1 ratio). All habitat management lands protected under this requirement may be protected through fee title acquisition or conservation easement on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's Hawks.

- Projects within 10 miles of an active nest tree but greater than 5 miles from an active nest tree shall provide 0.5 acre of habitat management land for each acre of urban development authorized (0.5:1 ratio). All habitat management lands protected under this requirement may be protected through fee title acquisition or conservation easement acceptable to CDFW on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's Hawks.

Management Authorization holders/project sponsors shall provide for the long-term management of the habitat management lands by funding a management endowment (the interest on which shall be used for managing the habitat management lands). If mitigation credits are purchased, long term management would be the responsibility of the mitigation bank.

Impact BIO-3: Construction-related Impacts on Nesting Swainson's Hawks (Less than Significant with Mitigation)

Two CNDDB occurrences of Swainson's Hawk are known within 5 miles of the study area (CDFW 2016). Mature trees within 0.5 mile of the study area provide potentially suitable nesting habitat for Swainson's Hawk. Construction activities occurring within 1 mile of an active nest could result in sufficient disturbance to cause Swainson's hawk breeding pairs to abandon their nest or could otherwise harm eggs or nestlings. Because Swainson's Hawk is a state-listed threatened species, disturbance that causes Swainson's hawks to abandon their nest or results in the loss of reproductive effort would constitute a significant impact.

The Program EIR identified impacts to Swainson's Hawk as potentially significant and identified Mitigation Measure BIO-11: *Conduct Preconstruction Surveys for Swainson's Hawk Nests* to reduce impacts to less than significant. This mitigation measure has been modified to reflect site condition for the Proposed Project. Implementation of **Mitigation Measure BIO-4 (Conduct Preconstruction Surveys for Swainson's Hawk Nests)** would reduce this impact to a level that is **less than significant**.

Mitigation Measure BIO-4: Conduct Preconstruction Surveys for Swainson's Hawk Nests.

To ensure that nesting Swainson's Hawks will not be disturbed by construction activities, the City will hire a qualified ornithologist to conduct preconstruction surveys of the Proposed Project sites and adjacent areas within 1 mile of Sites A and B. No fewer than three surveys will be completed in at least each of the two survey periods immediately prior to project initiation, according to this schedule, based on *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley* (Swainson's Hawk Technical Advisory Committee 2000):

- Survey Period I occurs from January 1 to March 20;
- Period II from March 20 to April 5;
- Period III from April 5 to April 20;

- Period IV from April 21 to June 10 (surveys are not recommended during this period because identification is difficult, as the adults tend to remain within the nest for longer periods of time); and
- Period V from June 10 to July 30.

If a nest site is found, no construction work shall commence until after the City engages in consultation with CDFW and CDFW-approved measures are implemented. As a performance standard, the measures implemented shall ensure that project initiation will not result in nest disturbance.

Impact BIO-4: Construction Disturbance of Tricolored Blackbird and Other Migratory Birds, Including Raptors (Less than Significant with Mitigation)

Table 6-2 lists the special-status bird species known to occur in the vicinity of the study area, and Figure 6-1 shows the CNDDB occurrences of special-status wildlife species within a 5-mile radius of the study area. The study area is unlikely to support nesting of special-status passerines because suitable habitat is lacking for special-status passerine species known to occur near the study area, although Tricolored Blackbirds may potentially nest near Site A (Table 6-2).

Many other migratory birds, including raptors, have the potential to nest in the vicinity of the Proposed Project sites. Raptors (e.g., kites, hawks, and owls) and other migratory birds and their nests are protected under both California Fish and Game Code Section 3503 (active bird nests) and the MBTA. Construction disturbance during the breeding season could result in the incidental loss of fertile eggs or nestlings, or could otherwise lead to nest abandonment. Trees in the study area, including those proposed for removal at Site A, could provide nesting habitat for birds protected under the MBTA. Loss of raptor and other migratory birds' eggs or nests, or any activities resulting in nest abandonment, would constitute a significant impact.

The Program EIR identified impacts to nesting birds as potentially significant and identified Mitigation Measure BIO-12: *Conduct Preconstruction Surveys for Nesting Birds* and Mitigation Measure BIO-13: *Avoid and Minimize Impacts on Nesting Raptors and Other Migratory Birds* to reduce impacts to less than significant. These mitigation measures have been modified adjusted to reflect site condition for the Proposed Project. Implementation of **Mitigation Measures BIO-5 (Conduct Preconstruction Surveys for Nesting Birds)** and **BIO-6 (Avoid and Minimize Impacts on Nesting Raptors and Other Migratory Birds)** would reduce this impact to a level of **less than significant.**

Mitigation Measure BIO-5: Conduct Preconstruction Surveys for Nesting Birds.

The City shall require that construction will be avoided during the nesting season (generally between February 1 and August 31), where practical. If construction activities cannot be avoided during the nesting season, a qualified biologist will conduct a preconstruction survey within 500 feet of the construction area to determine whether active nests are present on the site. The survey will be conducted no more than 30 days prior to construction. If the biologist determines that the area surveyed does not contain any active nests, then construction activities can

commence without any further mitigation. If active nests are found, CDFW and USFWS will be notified and Mitigation Measure BIO-6 will be implemented.

Mitigation Measure BIO-6: Avoid and Minimize Impacts on Nesting Raptors and Other Migratory Birds.

To avoid disturbing any active migratory bird nests, the City shall require that construction activities will be conducted during the non-breeding season for these species (generally between September 1 and January 31). If active nests are present on or adjacent to either of the Proposed Project sites, CDFW and USFWS will be notified. If active migratory bird nests are present and construction cannot be avoided during the breeding season, construction will not occur within 500 feet of an active nest until the young have fledged, as determined by a qualified biologist, or until the project applicant receives written authorization from CDFW and USFWS to proceed.

Impact BIO-5: Disturbance of Roosting Areas for Bats, including Special-status Bat Species (Less than Significant with Mitigation)

The four largest existing trees at Site A would be retained for the Proposed Project. Existing trees to be removed through construction of the Proposed Project provide marginally suitable roosting habitat for western red bat (California Species of Special Concern) and hoary bats (*Lasiurus cinereus*) (no listing status). The western red bat is strongly associated with mature riparian forests, although it has been detected roosting in orchards (Pierson et al. 2006). The hoary bat generally roosts in medium to large trees (Harris 1990), and only smaller trees would be removed at Site A. Due to the lack of their preferred habitat, western red bat and hoary bat are not expected to roost in trees at Site A. No trees would be removed from Site B.

Proposed construction activities would remove buildings at Site A that provide possible day and/or night roosts for non-special-status bats such as Brazilian free-tailed bat (*Tadarida brasiliensis*) and Yuma myotis (*Myotis yumanensis*). Townsend's big-eared bat is not expected to roost in the buildings, as this species is very sensitive to human disturbance and may abandon roost sites after a single human visit (Pierson and Rainey 1998) and the buildings at Site A have not been vacant for an extended period of time. No extensive survey of bat activity in the buildings at Site A was conducted; however, if bats are present, impacts from the removal of structures occupied by bats would be potentially significant.

Implementation of **Mitigation Measure BIO-7 (Protect Bat Colonies),** which requires seasonal work periods in active bat habitat and avoidance and minimization of disturbance, would reduce this impact to a level that is **less than significant with mitigation.**

Mitigation Measure BIO-7: Protect Bat Colonies.

The following measures shall be implemented to avoid and minimize impacts on bats:

- Prior to removal of structures, the City shall hire a qualified bat biologist familiar with bat biology and ecology to assess structures to be removed for potential, active bat habitat. If the biologist determines that bats are not actively occupying

the structures based on professional opinion following appropriate survey protocols, then the structures may be removed.

- For structures identified by the qualified biologist to be actively occupied by bats, removal of the structures shall not occur between April 15 and August 31 to avoid the bat maternity season,

- Demolition of structures shall be preceded by either humane eviction, phased dismantling, and/or deterrent methods to prevent direct mortality.

Impact BIO-6: Disturbance to or Displacement of Wildlife from Site Operations (Less than Significant)

Operation of the Proposed Project would generate noise, light, and an increased level of human activity at Sites A and B. Noise-generating pumps may operate during day and evening hours. Site A pumps would be housed in an enclosed building, which would reduce noise; Site B pumps would be surrounded by a wall, but no roof would be present, so noise levels may be higher than at Site A. (See Chapter 11, *Noise*, for further discussion of potential noise impacts and identified mitigation.) Sites A and B would have outside lighting in use at all times to provide security; however, impacts of lighting are anticipated to be less than significant. (See Chapter 4, *Aesthetics,* for further discussion of potential lighting impacts.) Operations are not anticipated to displace individuals from occupied habitat, however, or result in substantial adverse effects on special-status wildlife species with the potential to occur at the site; therefore, the impacts associated with noise, light, and human activity would be **less than significant**.

Impact BIO-7: Interfere with Wildlife Movement, Established Wildlife Corridors, or the Use of Native Wildlife Nursery Sites (Less than Significant with Mitigation)

The Proposed Project would be constructed primarily on disturbed and developed lands that do not function as important wildlife movement corridors. Disruption of nesting or breeding of special-status species would be minimized by conducting appropriate pre-construction surveys (as described in Impacts BIO-1 through BIO-5 and Mitigation Measures BIO-1 and BIO-4 through BIO-7). Therefore, impacts on wildlife movement would be **less than significant**.

Impact BIO-8: Conflict with Local Policies or Ordinances Protecting Biological Resources (Less than Significant with Mitigation)

The *Stanislaus County General Plan 2015* Conservation/Open Space Element (Stanislaus County 2016) establishes several policies (notably Goal One, Policies Three and Four, and Goal Ten, Policy Twenty-nine) to protect sensitive species, along with habitats such as vernal pools, riparian habitats, and oak woodlands. The Proposed Project does not conflict with any local policies protecting biological resources because no vernal pools, riparian habitats, or oak woodlands are present in the study area, based on field surveys conducted by a qualified biologist on May 4, 2016. Impacts of the Proposed Project on sensitive (i.e., special-status) species are discussed in Impacts BIO-1 through BIO-5 above. With implementation of

Mitigation Measures BIO-1 through BIO-7, impacts on sensitive species would be **less than significant**.

6.4.4 Cumulative Impacts

Impact BIO-9: Cumulative Biological Resource Impacts (Less than Significant with Mitigation)

Native plant and wildlife species in the Central Valley are at risk from competition with non-native species, ongoing loss of habitat, and other human activities. Habitat in the Central Valley has largely been converted to agriculture or other human uses, resulting in the local extirpation of several species that rely on sensitive habitats no longer present. Species that persist in this altered landscape (e.g., Swainson's Hawk, Tricolored Blackbird, and Burrowing Owl) are still at risk from cumulative impacts. The collective implementation of projects in the vicinity of the Proposed Project could degrade habitat and species viability from consequences such as disruption of wildlife migration corridors, displacement and fragmentation of habitats and species populations, and the introduction or promotion of non-native predators and competitors. This is a significant cumulative impact.

As described in Impacts BIO-1 through BIO-5, construction of the Proposed Project has the potential to adversely affect special-status wildlife species and/or their habitat. The Proposed Project's impacts on special-status wildlife would be reduced with implementation of Mitigation Measures BIO-1 and BIO-4 through BIO-7. These measures would require preconstruction surveys, avoidance and minimization measures, and other protective measures that would reduce construction-related disturbances on special-status species. Impacts due to loss of Burrowing Owl and Swainson's Hawk foraging habitat would be reduced with implementation of Mitigation Measures BIO-2 and BIO-3. Implementation of these measures would ensure that the Proposed Project's contribution to cumulative impacts on special-status species would not be considerable. With implementation of Mitigation Measures BIO-1 through BIO-7, the Proposed Project's contribution to this cumulative impact on biological resources would be reduced to a level that is **less than significant**.

Chapter 7
Cultural Resources

7.1 Overview

This chapter describes potential impacts of the Proposed Project related to cultural and paleontological resources. Cultural resources include prehistoric and historic-era archaeological sites; tribal cultural resources (TCRs) or Traditional Cultural Properties (TCPs); and historic-era buildings, structures, landscapes, districts, and linear features. Prehistoric archaeological sites are places where Native Americans lived or carried out activities during the prehistoric period, which is generally defined as before the early 1800s in the Proposed Project area. Historic-era archaeological sites reflect the activities of people after initial exploration and settlement in the region during the early 1800s. Native American sites can also reflect the historic era. Prehistoric and historic-era sites may contain artifacts, cultural features, subsistence remains, and/or human burials. TCRs are sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe.

Paleontological resources are the fossil remains of prehistoric flora and fauna, or traces of evidence of the existence of prehistoric flora and fauna. This chapter addresses the occurrence of paleontological resources within the Proposed Project area and the potential impact that construction activities and operation of the Proposed Project would have on scientifically important fossil remains, as identified in the CEQA Guidelines. The analysis presented in this chapter conforms to the Society of Vertebrate Paleontology criteria.

This chapter describes the regulatory setting associated with cultural and paleontological resources, the affected environment for these resources, project-related impacts on cultural and paleontological resources, and mitigation measures that would reduce these impacts.

7.2 Regulatory Setting

7.2.1 Federal Laws, Regulations, and Policies

The Proposed Project does not require any federal permits, and it is not located on federal lands; therefore, federal laws do not apply to the Proposed Project. The following laws are provided for context only.

National Historic Preservation Act

Projects that require federal permits, receive federal funding, or are located on federal lands must comply with 54 USC 306108, formally and more commonly known as Section 106 of the National Historic Preservation Act (NHPA). To comply with Section 106, a federal agency must "take into account the effect of the undertaking on any district, site, building, structure, or object that is included in or eligible for inclusion in the National Register of Historic Places

[NRHP]." The implementing regulations for Section 106 are found in 36 CFR Part 800, as amended (2004).

The implementing regulations of the NHPA require that cultural resources be evaluated for NRHP eligibility if they cannot be avoided by an undertaking or project. To determine if a site, district, structure, object, and/or building is significant, the NRHP Criteria for Evaluation are applied. A resource is significant and considered a historic property when it:

A. Is associated with events that have made a significant contribution to the broad patterns of our history; or

B. Is associated with the lives of persons significant in our past; or

C. Embodies the distinctive characteristics of a type, period, or method of construction, or that represents the work of a master, or that possesses high artistic values, or that represents a significant and distinguishable entity whose components may lack individual distinction; or

D. Yields, or may be likely to yield, information important in prehistory or history.

In addition, 36 CFR Section 60.4 requires that, to be considered significant and historic, resources must also exhibit the quality of significance in American history, architecture, archaeology, engineering, or culture and must possess integrity of location, design, setting, materials, workmanship, feeling, and association.

Other "criteria considerations" need to be applied to religious properties, properties that are less than 50 years old, a resource no longer situated in its original location, a birthplace or grave of a historical figure, a cemetery, a reconstructed building, and commemorative properties. These types of properties are typically not eligible for NRHP inclusion unless the criteria for evaluation and criteria considerations are met.

For archaeological sites evaluated under criterion D, "integrity" requires that the site remain sufficiently intact to convey the expected information to address specific important research questions.

TCPs are locations of cultural value that are historic properties. A place of cultural value is eligible as a TCP "because of its association with cultural practices or beliefs of a living community that (a) are rooted in that community's history, and (b) are important in maintaining the continuing cultural identity of the community" (Parker and King 1990, rev. 1998). A TCP must be a tangible property, meaning that it must be a place with a referenced location, and it must have been continually a part of the community's cultural practices and beliefs for the past 50 years or more.

7.2.2 State Laws, Regulations, and Policies

CEQA and CEQA Guidelines

Historical Resources

California cultural resources laws and regulations are embodied in CEQA (PRC Section 21000 et seq.) and the CEQA Guidelines (PRC Section 15000 et seq.), as well as other portions of the

Public Resources Code. CEQA requires that lead agencies determine whether their projects would have a significant effect on a unique archaeological resource or a historical resource under Sections 21083.2 and 21084.1, respectively. Section 15064.5(b) of the CEQA Guidelines notes that "a project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment." Lead agencies are expected to identify potentially feasible measures to mitigate significant adverse changes in the significance of a historical resource before they approve such projects.

Historical resources are those that are:

- listed in, or determined to be eligible for listing in, the California Register of Historical Resources (CRHR) (PRC Code Section 5024.1[d]);
- included in a local register of historical resources (PRC Section 5020.1[k]) or identified as significant in an historical resource survey meeting the requirements of Section 5024.1(g); or
- determined by a lead state agency to be historically significant.

Eligibility criteria for CRHR are set forth in PRC Section 5024.1(c). A resource is eligible for CRHR listing if it:

1. is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. is associated with the life of a person important in our past;
3. embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. has yielded, or may be likely to yield, information important in prehistory or history.

CEQA Guidelines Section 15064.5 also applies to unique archaeological resources, as defined in CEQA Section 21083.2(g). A unique archaeological resource implies an archaeological artifact, object, or site for which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets one of the following criteria:

- Contains information needed to answer important scientific research questions, and there is a demonstrable public interest in that information; or
- Has a special and particular quality, such as being oldest of its type or the best available example of its type; or
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

A non-unique archaeological resource is an archaeological artifact, object, or site that does not meet the above criteria. Impacts on non-unique archaeological resources and resources that do not qualify as historical resources receive no further consideration under CEQA.

Under CEQA Guidelines Section 15064.5, a project potentially would have significant impacts if it would cause substantial adverse change in the significance of one of the following:

- a historical resource (i.e., a cultural resource eligible for CRHR listing);
- an archaeological resource (i.e., a unique archaeological resource that does not meet CRHR listing criteria); or
- human remains (i.e., where the project would disturb or destroy burials).

Section 15064.5 of the CEQA Guidelines also assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. These procedures are detailed in PRC Section 5097.98.

Paleontological Resources

No state or local agency has specific jurisdiction over paleontological resources on private lands. A paleontological collecting permit is not required by any state or local agency to allow for the recovery of fossil remains discovered as a result of construction-related activities on state or private land in the project area; however, if a state agency were to acquire ownership of project lands, PRC Chapter 1.7 *Archaeological, Paleontological, and Historical Sites*, Section 5097.3, would apply. This section of the code specifies that surveys, excavations, or other operations as necessary on state lands may be undertaken to preserve or record paleontological resources.

As noted above, CEQA Section 21083.2 and CEQA Guidelines Section 15064.5 provide specific guidance on historical and unique archaeological resources and, under CEQA, resources called "historical resources" can be of historic or prehistoric age. It is possible that a paleontological resource could be determined to be a historical resource. Although CEQA does not define what constitutes "a unique paleontological resource," the criteria defining a unique archaeological resource could be applied to define a unique paleontological resource.

Tribal Cultural Resources

AB 52 was approved in September 2014 and went effect on July 1, 2015. This bill requires that state lead agencies consult with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of a proposed project, if so requested by the tribe. The bill, chaptered in CEQA Section 21084.2, specifies that a project that may cause a substantial adverse change in the significance of a TCR might have a significant effect on the environment. Also under AB 52, revisions to the CEQA Guidelines Appendix G Environmental Checklist went into effect on July 1, 2016, to include a consideration of substantial adverse change to TCRs.

TCRs are defined in CEQA Section 21074:

(a) "Tribal cultural resources" are either of the following:
   1. Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:
      (a) Included or determined to be eligible for inclusion in the California Register of Historical Resources.

(b) Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

(b) A cultural landscape that meets the criteria of subdivision (a) is a TCR to the extent that the landscape is geographically defined in terms of the size and scope of the landscape; and

(c) A historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a "nonunique archaeological resource" as defined in subdivision (h) of Section 21083.2 may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

Mitigation measures for TCRs will be developed in consultation with the affected California Native American tribe pursuant to newly chaptered Section 21080.3.2, or according to Section 21084.3. Section 21084.3 identifies mitigation measures that include avoidance and preservation of TCRs, and treating TCRs with "culturally appropriate dignity taking into account the tribal cultural values and meaning of the resource...."

7.2.3 Local Laws, Regulations, and Policies

Stanislaus County General Plan 2015

Cultural resources are addressed in the *Stanislaus County General Plan 2015* (2016) in Chapter 3, the Conservation/Open Space Element. The policies and implementation measures pertinent to the Proposed Project are listed below.

Goal Eight: Preserve areas of national, state, regional and local historical importance.

Policy Twenty-four: The County will support the preservation of Stanislaus County's cultural legacy of archeological, historical, and paleontological resources for future generations.

3. The County shall work with the County Historical Society, and other organizations and interested individuals to study, identify and inventory archeological resources and historical sites, structures, buildings and objects.

4. The County will cooperate with the State Historical [sic] Preservation Officer to identify and nominate historical structures, objects, buildings and sites for inclusion under the [National] Historical [sic] Preservation Act.

5. The County shall utilize the California Environmental Quality Act (CEQA) process to protect archaeological, historic, or paleontological resources. Most discretionary projects require review for compliance with CEQA. As part of this review, potential impacts must be identified and mitigated.

6. The County shall make referrals to the Office of Historic Preservation and the Central California Information Center as required to meet CEQA requirements.

7. The County will work with all interested individuals and organizations to protect and preserve the mining heritage of Stanislaus County.

Policy Twenty-five: "Qualified Historical Buildings" as defined by the State Building Code shall be preserved.

1. Whenever possible, the County Building Permits Division shall utilize the provisions of the State Building Code that allow historical buildings to be restored without damaging the historical character of the building.

Del Rio Community Plan

The Del Rio Community Plan is a focused planning policy and land use planning document that is part of the Stanislaus County General Plan (Stanislaus County 1992). The Del Rio Community Plan contains no specific goals or policies related to cultural or paleontological resources.

7.3 Environmental Setting

7.3.1 Prehistoric Setting

Very little archaeological work has been conducted in the Modesto area or in the San Joaquin Valley in general; therefore, the archaeology of the project area is understood within the prehistoric context developed for the Central Valley as a whole. Since the early 1930s, various schemes have been set forth by researchers to organize the archaeological data of California into a chronological framework. The Central Valley sequence established by Lillard, Heizer, and Fenenga in 1939 is particularly notable. Based on archaeological investigations in the lower Sacramento Valley, Lillard and colleagues divided human prehistory into three broad cultural horizons: Early, Middle, and Late. This chronology was first known as the Delta sequence and later became the basis of Richard Beardsley's Central California Taxonomic System (CCTS) (Moratto 1984:181). The system relies on the identification of characteristics such as burial patterns, shell bead types, stone tools, and the types of locations where the sites tend to occur. These traits and characteristics are used to identify an archaeological resource as belonging to a specific time period.

The CCTS has continued to undergo significant refinement but remains the framework within which California archaeologists explain cultural change. The general system is still widely used by archaeologists, but it has been expanded and revised to include economic and technological strategies, socio-politics, trade networks, population density, and variations of artifact types to differentiate between cultural periods. The current chronology (Rosenthal et al. 2010:150) for central California archaeology includes:

- Paleo-Indian: 11,550–8550 B.C.
- Lower Archaic: 8550–5550 B.C.
- Middle Archaic: 5550–550 B.C.

- Upper Archaic: 550 B.C to 1100 A.D.
- Emergent: 1100 A.D. to Historic

The Paleo-Indian Period (11,550–8,550 B.C.) is generally characterized by big-game hunters occupying broad geographic areas. Archaeological deposits from the Paleo-Indian period are rarely found in the Central Valley, however, and those that have been identified have largely been discovered at the south end of the San Joaquin Valley near Tulare Lake. Post-depositional processes, mainly glacial outwash occurring at the end of the Pleistocene Epoch, either destroyed or deeply buried much of the existing evidence of human activity in the region from this period. As result, little is known about Paleo-Indian lifeways in the region (Moratto 1984:214).

Similar to the preceding period, the Lower Archaic Period (8550–5550 B.C.) is presumed to reflect a mobile population that continued to hunt big game. Few localities in the Central Valley are associated with this period, and those that have been found are largely isolated artifacts consisting of large wide-stemmed and leaf-shaped projectile points, along with flaked stone crescents. Only two sites with associated deposits of faunal and shell remains have been identified for the Lower Archaic Period, one at Buena Vista Lake in the southern San Joaquin Valley (Rosenthal et al. 2010:151-152) and one in Sacramento (Tremaine 2008). Some sites in the Sierra Nevada foothills from this period, however, indicate the use of milling equipment (hand stones and milling stones) to process seeds and nuts.

The Middle Archaic Period (5550–550 B.C.) indicates a shift to a more settled way of life that is reflected by substantial, though often deeply buried, archaeological sites with artifacts that are more elaborate in design, imply a more diverse subsistence regime, and indicate interregional trade. Sites are often situated along the major rivers and streams within the Central Valley, emphasizing a focus on riverine and marsh habitats. The Windmiller Tradition or Pattern, which was first identified in sites around the Sacramento–San Joaquin River Delta, is often considered representative of this period. Characteristic artifacts from this period include a variety of fish hooks and spears; large stemmed and leaf-shaped projectile points of obsidian and chert; shaped charmstones of alabaster, steatite, or marble; and a variety of *Haliotis* and *Olivella* shell ornaments and beads, respectively. Mortars and pestles, associated with acorn preparation, became commonplace by the middle of the period. The presence of ventrally and dorsally extended burials with a western orientation is particularly indicative of the Windmiller Pattern.

Increased sedentism and technological specialization are evidenced during the Upper Archaic Period (550 B.C to 1100 A.D.), as populations exploited more diverse resources and established trade relationships. Mortars and pestles became the primary ground stone implements, suggesting that acorns had become a more important dietary staple. Regional diversity in artifact styles, such as *Haliotis* shell ornaments, bone tools, and ground charmstones or plummets, became more pronounced; burial postures also varied.

Archaeological sites from the Emergent Period (A.D. 1100 to the historic period) indicate increased social complexity and the development of large, central villages with resident political leaders and specialized activity sites. Enhanced regional diversity in terms of artifact styles, housing, and interment methods is evident in the archeological record. Artifacts associated with the period include the bow and arrow, small corner-notched projectile points, and a variety of shell and stone beads and ornaments.

7.3.2 Ethnographic Setting

The Modesto area lies within the ancestral territory of the Northern Valley Yokuts. "Yokuts" is a term applied to a large and diverse group of people inhabiting the San Joaquin Valley and Sierra Nevada foothills of central California. The Northern Valley Yokuts inhabited a 40- to 60-mile-wide area straddling the San Joaquin River, south of the Mokelumne River, east of the Diablo Range, and north of the sharp bend that the San Joaquin River takes to the east-northeast near Mendota in Fresno County. The Southern Valley Yokuts inhabited the San Joaquin Valley south of the bend in the river. Although they were divided geographically and ecologically, the two groups have a common linguistic heritage (Wallace 1978:462).

The Northern Valley tribes closely resembled the Yokuts groups to the south, although there were some cultural differences. The northerners had greater access to salmon and acorns, two important dietary resources, and some of their religious practices reflected the influences of groups to their north, such as the Miwok. While inhumation was the usual practice in the southern valley, the Northern Valley Yokuts either cremated their dead or buried them in a flexed position (Wallace 1978:464, 468). A chief headed the tribal villages, which averaged around 300 people. Family houses were round or oval, sunken, with a conically shaped pole frame, and covered with tule mats. Each village also had a lodge for dances and other community functions, as well as a sweathouse (Wallace 1978:462-464).

The Northern Valley Yokuts built their riverside villages on elevated areas along the water's edge to avoid the spring floods, which were a result of heavy Sierra Nevada snow melts. Living beside rivers and streams provided plentiful river perch, Sacramento pike, salmon, and sturgeon. Hunting provided waterfowl such as geese and ducks, as well as terrestrial animals such as antelope, elk, and brown bear, although by all indications, fish constituted most of their diet. The surrounding woodland, grasslands, and marshes provided acorns, tule root, and seeds.

The Northern Valley Yokuts used bone harpoon tips for fishing, stone sinkers for nets, chert projectile points for hunting, mortars and pestles, scrapers, knives, and bone awl tools to procure and process food. Marine shells, procured from coastal tribes, were used for necklaces and other adornments, and marine shell beads sometimes accompanied the deceased. The Yokuts used tule reed rafts to navigate the waterways for fishing and fowling. They also manufactured intricate baskets for a variety of purposes, including storing, cooking, eating, winnowing, hopper mortars, the transport of food materials, and ritual. Very little is known of the Northern Valley Yokuts' clothing, but drawings of their tattoos show that they served not only as a decoration but also as a form of identity (Wallace 1978:464).

Initially, the Diablo Range served as a natural barrier against heavy recruitment of Native Californians by the Spanish, who established missions along the coast. By the early 19th century, however, Spanish and (later) Mexican missionaries began to explore the inner valleys in search of potential neophytes. The Yokuts resisted recruitment and California Indians from a variety of tribes sought refuge among the Yokuts after fleeing the missions. Introduced diseases, destruction of traditional resources from cattle grazing, and forced relocation took a heavy toll on the Northern Yokuts. Despite decades of hardship, many individuals who can trace their ancestry to the Northern Valley Yokuts continue to live and thrive in the Central Valley and throughout California and the United States.

7.3.3 Historic Setting

The historic era began in Stanislaus County when the first Spanish expedition entered the San Joaquin Valley in 1806 under the leadership of Gabriel Moraga. Traveling north and northwest through the region in search of possible mission sites, Moraga's party explored along what came to be known as the Stanislaus River. Moraga visited the area again in 1808 and 1810 (Kyle et al. 2002:516-517).

After Mexico gained its independence from Spain in 1822, two additional expedition forces entered the area; however, the purposes of their campaigns were no longer exploratory. Soldiers were sent into the Central Valley to recover stolen animals and punish hostile Indians in order to reduce the attacks upon coastal towns, missions, and ranchos.

Americans also began to enter the region during the Mexican period. In 1827 and 1828, Jedediah Smith entered the San Joaquin Valley through the Tejon Pass and trapped beavers along the San Joaquin, Kings, and other rivers and streams that flowed from the Sierra. Smith was followed by fellow trappers such as Peter Ogden, Ewing Young, Kit Carson, and Joseph Walker.

The first permanent European settlement may have occurred in Stanislaus County when two land grants were issued by the Mexican government in 1843. The first was the *Rancho El Pescadero* on the west side of the San Joaquin River near the border of what would eventually become San Joaquin County. The second was the *Rancheria del Río de Estanislao* located north of the Stanislaus River bordering Tuolumne County. Two additional land grants were issued the following year. These were the *Rancho del Puerto* and *Rancho Orestimba*, both of which were on the west side of Tuolumne County near Rancho Pescadero (eReferenceDesk 2016).

The City of Modesto came into being in 1870 when the Central Pacific Railroad announced that the location would be the end point of the next extension of the rail line as it progressed south through the Central Valley (Kyle et al. 2002:521). By the time the tracks were completed in November of that year, a viable town had already been established by entrepreneurs (City of Modesto 2016). Modesto residents were among California's first irrigation advocates, and by 1904 a system of canals had been constructed to allow more productive agriculture. During the 19th century, grain-growing was Stanislaus County's dominant agricultural activity. Stock-raising, dairy farming, fruit and nut orchards, and vegetable farming all became more important over time. When Prohibition ended in 1933, the Gallo brothers came to Modesto, bringing the wine business to the area on an industrial scale. In the 21st century, almonds and walnuts are the most lucrative local crops, although fruit, vegetables, livestock, and other agricultural products remain important. Modesto is still the most important town in the region and is the Stanislaus County seat.

The Del Rio area is a census-designated place in Stanislaus County that receives services from the City of Modesto. Until the mid-1940s, the area supported scattered farms and orchards. The Del Rio Country Club was founded along on south bank of the Stanislaus River in 1946 (Del Rio Country Club 2016). After this time, the area slowly began to grow as housing tracts were established west of the golf course, along Country Club Drive on the south side of the golf course, and east of St. John Road, which borders the country club on the east (USGS 2016). The current level of development in the Del Rio area was completed around 2002 (NETR Online 2016).

7.4 Impact Analysis

7.4.1 Methodology

All aspects of the cultural resources study for the Proposed Project were conducted in accordance with the U.S. Secretary of the Interior's Standards and Guidelines for Identification of Cultural Resources (48 CFR Parts 44720–44723). The cultural resources study for the Proposed Project study area included archival research, Native American outreach and consultation, a field study, and the evaluation of identified cultural resources to determine their eligibility for listing on the NRHP and CRHR.

The Proposed Project study area is comprised of the 4-acre parcel located at 718 Ladd Road (Site A), the 0.4-acre parcel located at the northwest corner of McHenry Avenue and Stewart Road (Site B), and the new transmission pipeline and connections planned for Ladd Road, St. John Road, Stewart Road, and McHenry Avenue, as depicted in **Figure 2-1** in Chapter 2, *Project Description*.

Archival Research

A records search for the Proposed Project study area was conducted by the Central California Information Center (CCIC) of the California Historical Resources Information System at California State University, Stanislaus, before initiating the field study. The purpose of the records search was to determine if the study area had previously been surveyed for cultural resources, and to identify any previously recorded cultural resources in, or within ½ mile of, the Proposed Project study area. The CCIC archival research included review of the California Inventory of Historic Resources, local historical inventories, historical literature, and historical maps including USGS topographic maps, General Land Office maps, and Rancho Plat Maps.

The records search indicated that two previous studies had included portions of the Proposed Project study area. These studies are listed in **Table 7-1**; another three studies had been conducted within the ½ mile search area. One of the studies, 07171, is listed in Table 7-1 because it directly borders the Proposed Project study area along St. John Road. The remaining two studies are farther removed from the study area and are not included.

The records search identified one previously recorded cultural resource immediately south of the Site A parcel. This resource, P-50-002155, is the Dr. Moore Canal. Constructed in 1911, the Dr. Moore Canal is a small, concrete-lined branch canal that diverts water from the Modesto Irrigation District Main Canal for local agricultural purposes before reconnecting with the Main Canal downstream (Morlet 2006). The site record for the Dr. Moore Canal evaluated the resource as being not eligible for listing in the NRHP or CRHR.

Table 7-1. Previously Conducted Cultural Studies That Included the Proposed Project Study Area

CCIC Report No.	Author	Date	Title	Comments
06802	S. Davis-King	2008	Negative Historical Resource Survey Report, McHenry Road Widening, Phase I – Ladd Road to Hogue Road, Stanislaus County, California	Linear survey along McHenry Avenue and adjacent to Site B
07171	C. K. Graham	2009	Proposed Abandonment of the McHenry Industrial Lead from Milepost 21.25 near Escalon to Milepost 26.43 near McHenry, a total distance of 5.18 miles in San Joaquin and Stanislaus counties, California.	Linear survey along the abandoned Union Pacific Railroad line east of St. John Road, adjacent to the study area
07244	S. Waechter and M. Bunse	2007	North County Corridor Environmental Constraints Analysis: Cultural Resources	Literature search that included the area of Site A

The supporting documentation for the *Stanislaus County General Plan* (Stanislaus County 1987:3-51) does not identify any historical areas or points of historical interest in the Proposed Project study area.

A review of soils information (Natural Resources Conservation Service 2016) and geoarchaeological data (Rosenthal et al. 2004:76; 78-79) indicates that the soils within the project area (Delhi loamy sand, Hanford sandy loam, and Tujunga loamy sand) date from the late Pleistocene through the Holocene Epoch. These soils are considered to have moderate, high, and very high sensitivity ratings, respectively, for buried archaeological remains (Rosenthal et al. 2004:104). Proximity to the Stanislaus River increases the potential for buried resources.

Native American Coordination

A request was made to the California Native American Heritage Commission (NAHC) on April 20, 2016, to review its files for the presence of sacred sites at or near the Proposed Project study area. At the same time, requests were made for a list of individuals who might have concerns or have knowledge of traditional sites in the vicinity of the Project and for a separate list of tribes that have a traditional and cultural affiliation with the Proposed Project area for the purpose of consultation with regard to TCRs under PRC Section 21080.3.1. The NAHC responded on April 21, 2016, noting that no sacred sites are known to exist in the vicinity of the Proposed Project and providing a list of tribes for the purposes of PRC Section 21080.3.a consultation. After additional communication with the NAHC requesting a broader list of individuals who might have knowledge about the project area, the NAHC stated that the list provided for Section 21080.3.1 consultation was adequate. As a result, letters requesting information were sent to the individuals identified in **Table 7-2**. These individuals were contacted first by mail, then by phone. To date, those contacted have not voiced any concerns about the project.

Table 7-2. Native American Consultation

Contact	Tribe	Letter Date	Telephone Follow-up Date	Comments
Lois Martin, Chairperson	Southern Sierra Miwok Nation	June 10, 2016	June 27, 2016	Chairperson Martin noted that the project was out of their usual area of concern and she did not know of any resources in the project area. She noted, however, that work should stop if any cultural resources were discovered during construction.
Katherine Erolinda Perez, Chairperson	North Valley Yokuts Tribe	June 10, 2016	June 27, 2016	Left message on answering machine
Neil Peyron, Chairperson	Tule River Indian Tribe	June 10, 2016	June 27, 2016	Operator could not find letter in the mail log; Chairperson Peyron said it might have gone to the environmental coordinator and he would follow up with that person.

The City of Modesto also sent notification letters about the project, in accordance with PRC Section 21080.3.1(d), to the individuals listed in Table 7-2 on May 12, 2016. None of the contacted tribes requested consultation within the 30-day period prescribed under PRC Section 21080.3.1(b)(2).

All communications and correspondence with NAHC and Native American tribes are provided in **Appendix E**.

Field Studies

The Proposed Project study area was subjected to an intensive archaeological pedestrian survey on May 4, 2016, by a qualified archaeologist who meets the U.S. Secretary of the Interior's professional standards in archaeology ((48 FR 44738-44739; Appendix A to 36 CFR 61). During the pedestrian survey, the study area was inspected for the presence of archaeological materials, including prehistoric and historic-era habitation debris (e.g., stone tools or tool-manufacturing debris, glass fragments, tin cans), prehistoric features (e.g., hearths, house pits), and historic-era structural remains (e.g., house foundations, wells). Site A was surveyed in transects spaced at approximate 40-foot intervals. The much smaller Site B was surveyed at about 15-foot intervals. Although grasses covered much of both parcels, ground surface visibility ranged from fair to excellent. Both shoulders of St. John Road were surveyed to a distance of approximately 25 feet from the edge of pavement, where possible; ground surface visibility was excellent. The survey width along approximately the northern

1,200 feet of the west shoulder on St. John Road, the northern shoulder of Ladd Road, both sides of Stewart Road, and the west shoulder of McHenry Avenue was restricted by fencing, landscaping, and concrete sidewalks; however, the ground surface was examined wherever possible.

The architectural history field survey of Site A was performed by a qualified architectural historian who meets the U.S. Secretary of the Interior's professional standards in architectural history on May 4, 2016. Each building and structure of the farm complex on the property was examined and photographed. The buildings were recorded on California Department Parks and Recreation (DPR) 523 series forms.

The cultural resources technical report for the Proposed Project is included as Appendix E of this DEIR.

Results

Archaeological Resources

No archaeological resources were identified within the Proposed Project study area as the result of the archaeological field study.

Built Environment Resources

One rural property, consisting of a single-family home, a detached garage, a metal barn, and several outbuildings in disrepair, was identified within the Proposed Project study area and recorded on DPR forms (see Appendix E, Attachment 3). The resource is at 718 Ladd Road on the 4-acre parcel identified as Site A, which is the proposed location for a water storage tank and a pump station building (see Chapter 2, *Project Description*).

Research discovered that the house was constructed in 1946 by Joe Moreno, whose family continued to own the parcel until it was sold to the City of Modesto around 2010. Like many of his neighbors, Joe maintained a small orchard on his property until the early 2000s. Today the parcel is grass covered, with ornamental trees growing around the house and outbuildings.

The rectangular-plan house is 1,264 square feet with its main façade on Ladd Road. Its composition shingle roof is side-gabled with shed sections at the front and rear. It has the minimal eave overhang and exposed rafter tails of the Minimal Traditional style, a style that was popular for inexpensive houses beginning in the Great Depression and extending until about 1950. Cladding is stucco, and windows of several sizes are fitted with vinyl replacement sash. The projecting partial porch is supported by three square brick columns. The front door is near the center of the main elevation. It is sheltered by the porch roof and accessed by a set of concrete steps that lead from the driveway to the east side of the house. It is fitted with a metal screen security door. A brick chimney is present on the east elevation. A secondary entrance at the rear is fitted with a partially glazed wood door and accessed by a set of concrete steps. An awning at the southeast corner of the house appears to have been removed, and the door is sheltered by a few inches of eave overhang. A smaller wood-panel door west of the rear entrance is at grade and appears to house a water heater.

The rear yard has areas paved in concrete and asphalt as well as bare dirt. The garage is southeast of the house, and is also side-gabled and clad in stucco. Its single-vehicle opening

has a metal roll-up door. A similar, single-vehicle door to the west has been partially enclosed, and a partially glazed wood-panel door has been installed. A secondary personnel entrance is present on the east elevations, and aluminum slider windows are visible at the east, south, and west. Photographs of the structures are included in the DPR forms in Appendix E.

The Moreno property was evaluated for eligibility for listing in the NRHP and the CRHP, as follows:

- Criterion A/1: 718 Ladd Road is not associated with events that have made a significant contribution to the broad patterns of local, regional, or national history. Therefore, the building is not eligible to the NRHP or CRHR under Criterion 1/A.
- Criterion B/2: 718 Ladd Road is not associated with the lives of persons important to local, state, or national history, and therefore is not eligible to the NRHP or CRHR under Criterion B/2.
- Criterion C/3: 718 Ladd Road is a common example of dwelling constructed in the 1940s. It lacks architectural significance and is therefore not eligible to the NRHP or CRHR under Criterion C/3.
- Criterion D/4: In rare instances, buildings themselves can serve as sources of important information about historic construction materials or technologies and be significant under Criterion D/4. 718 Ladd Road does not appear to be a principal source of important information in this regard.

In sum, the property at 718 Ladd Road does not appear to be eligible for listing on either the NRHP or the CRHR.

Tribal Cultural Resources

Outreach to local Native American tribes for general information and concerns about the Proposed Project has not identified any TCRs. Similarly, consultation under PRC Section 21080.3 has not revealed the presence of TCRs in the Proposed Project study area.

Paleontological Resources

As noted in Chapter 9, *Groundwater,* the Proposed Project area is underlain by Pleistocene alluvial deposits consisting of poorly sorted gravel, sand, silt, and clay that are more than 400 feet thick. These materials in the Central Valley are known to contain a variety of fossils, including extinct horses, mammoths, and giant ground sloth. Other animals noted are marine-living animals such as marine turtles, shark teeth, and sea urchins (Sierra College 2016).

Directly below the alluvial deposits is the Mehrten Formation, which was deposited during the Miocene to Pliocene Epochs. The Mehrten Formation is composed of sandstone, breccia, conglomerate, tuff, siltstone, and claystone, some of which are known to contain both botanical and vertebrate fossils (Marchand and Wagner 1980). Fossils of giant tortoise have been found in Mehrten Formation deposits at Turlock and Modesto Reservoirs located southeast of the Project site (Biewer et al. 2016).

7.4.2 Criteria for Determining Significance

Based on Appendix G of the CEQA Guidelines, the Proposed Project would result in a significant impact on cultural resources if it would:

- Cause a substantial adverse change in the significance of a historical resource as defined in State CEQA Guidelines section 15064.5;
- Cause a substantial adverse change in the significance of an archaeological resource pursuant to State CEQA Guidelines section 15064.5;
- Directly or indirectly destroy a unique paleontological resource or site or unique geological feature; or
- Disturb any human remains, including those interred outside of dedicated cemeteries.
- Cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
  - Listed or eligible for listing in the CRHR, or in a local register of historical resources as defined in PRC Section 5020(k), or
  - A resource determined by the lead agency, in its discretion, and supported by substantial evidence, to be significant pursuant to criteria set forth in PRC Section 5024.1(c). In applying the criteria set forth in PRC Section 5024.1(c), the lead agency shall consider the significance of the resource to a California Native American tribe.

CEQA does not establish criteria for determining the significance of paleontological resources. Appendix G of the State CEQA Guidelines and the standard guidelines for assessment and mitigation of adverse impacts on paleontological resources set forth by the Society of Vertebrate Paleontology (2010) were used to establish three categories of sensitivity: high, low, and undetermined. Areas that consist of rock units that have yielded vertebrate or significant invertebrate, plant, or trace fossils are considered to have a high potential for containing paleontological resources.

7.4.3 Environmental Impacts

Impact CUL-1: Potential for a Substantial Adverse Impact on Historical Resources (No Impact)

No cultural resource within the Proposed Project study area has been determined to be eligible for inclusion in the CRHR or otherwise eligible as a significant historic resource under CEQA standards, and, thus, defined as an historical resource. As a result, there would be **no impact** on historical resources.

Impact CUL-2: Potential for a Substantial Adverse Impact on Archaeological Resources from Construction (Less than Significant with Mitigation)

An archaeological survey was conducted of the Proposed Project site, and no archaeological resources were found; however, archaeological remains could be buried with no surface manifestation. Drilling of the production and monitoring wells, installation of water pipelines, construction of structures to house the wells and pumps at Sites A and B, or excavation of the stormwater detention basin at Site A could uncover buried archaeological deposits. Should a previously undiscovered resource be found during construction and be determined eligible for inclusion in the CRHR, and should Proposed Project activities have the potential to render the resource ineligible for inclusion in the CRHR, the impact would be potentially significant. Implementation of **Mitigation Measure CR-1 (Suspend Construction Immediately if Cultural Resources Are Discovered, Evaluate All Identified Cultural Resources for CRHR Eligibility, and Implement Appropriate Mitigation Measures for Eligible Resources)** would reduce any impacts on CRHR-eligible archaeological sites accidentally uncovered during construction to a level that is less than significant.

> **Mitigation Measure CR-1: Suspend Construction Immediately if Cultural Resources Are Discovered, Evaluate All Identified Cultural Resources for CRHR Eligibility, and Implement Appropriate Mitigation Measures for Eligible Resources.**
>
> Not all cultural resources are visible on the ground surface. As a result, before initiation of ground-disturbing activities, the City or its designee shall arrange for construction crews to receive training about the kinds of archaeological materials that could be present at the Proposed Project site and the protocols to be followed should any such materials be uncovered during construction. Training shall be conducted by an archaeologist who meets the U.S. Secretary of the Interior's professional standards. Training shall be required during each phase of construction to educate new construction personnel.
>
> If any cultural resources, including structural features, unusual amounts of bone or shell, flaked or ground stone artifacts, historic-era artifacts, human remains, or architectural remains, are encountered during Proposed Project construction activities, work shall be suspended immediately at the location of the find and within a radius of at least 50 feet and the City will be contacted.
>
> All cultural resources uncovered during construction within the Proposed Project site shall be evaluated for eligibility for inclusion in CRHR. Resource evaluations shall be conducted by individuals who meet the U.S. Secretary of the Interior's professional standards in archaeology, history, or architectural history, as appropriate. If any of the resources meet the eligibility criteria identified in PRC Section 5024.1 or CEQA Guidelines Section 21083.2(g), mitigation measures will be developed and implemented in accordance with CEQA Guidelines Section 15126.4(b) before construction resumes.
>
> For a TCR or any resources eligible for listing in the CRHR that would be significantly adversely affected by the Proposed Project construction, additional mitigation

measures shall be implemented. Mitigation measures for archaeological resources may include (but are not limited to) avoidance; incorporation of sites within parks, greenspace, or other open space; capping the site; deeding the site into a permanent conservation easement; or data recovery excavation. Mitigation measures for archaeological resources shall be developed in consultation with responsible agencies and, as appropriate, interested parties such as Native American tribes. Native American consultation is required if an archaeological site is determined to be a TCR. Implementation of the approved mitigation is required before resuming any construction activities with the potential to affect identified eligible resources at the site.

Impact CUL-3: Potential to Directly or Indirectly Destroy a Unique Paleontological Resource or Site, or Unique Geological Feature (Less than Significant with Mitigation)

Production and monitoring wells excavated for the Proposed Project would reach depths of up to 600 feet deep. Research indicates that the alluvial soils that underlie the site have the potential to contain terrestrial and marine fossils; the deeper Mehrten Formation could also contain fossils. As a result, it is possible that fossils could be encountered during construction. Should fossils be discovered during construction and be determined to be a unique paleontological resource or site, and should Proposed Project activities have the potential to destroy the resource, the impact would be potentially significant. Implementation of **Mitigation Measure CR-2 (Suspend Construction Immediately if Paleontological Resources Are Discovered, Evaluate the Significance of the Resources, and Implement Appropriate Mitigation Measures as Necessary)** would reduce any impacts on unique paleontological resources or sites accidentally uncovered during construction to a level that is **less than significant.**

Mitigation Measure CR-2: Suspend Construction Immediately if Paleontological Resources Are Discovered, Evaluate the Significance of the Resources, and Implement Appropriate Mitigation Measures as Necessary.

Paleontological resources are not necessarily visible on the ground surface. As a result, before initiation of ground-disturbing activities, construction crews shall receive training about the kinds of paleontological materials that could be present at the Proposed Project site and the protocols to be followed should such materials be uncovered during construction. Training shall be conducted by a professional paleontologist. Training shall be required during each phase of construction to educate new construction personnel.

If any items of paleontological interest are discovered during construction, work shall be suspended immediately within 50 feet of the discovery site, or to the extent needed to protect the site, and the City shall be notified.

Any discovery of paleontological resources during construction shall be evaluated by the qualified paleontologist. If it is determined that the Proposed Project could damage a unique paleontological resource, mitigation shall be implemented in accordance with PRC Section 21083.2 and CEQA Guidelines Section 15126.4. If avoidance is not feasible, the paleontologist shall develop a treatment plan in consultation with the City. Work shall not be resumed until authorization is received

from the City and any recommendations received from the qualified paleontologist are implemented.

Impact CUL-4: Potential for Disturbance of Human Remains, including Those Interred Outside of Dedicated Cemeteries (Less than Significant with Mitigation)

No human remains were identified at the Proposed Project site as a result of background research or the field survey. The potential for human remains to be identified on the site during construction is considered low, although their presence cannot be entirely discounted. Implementation of **Mitigation Measure CR-3 (Halt Construction Immediately if Human Remains Are Discovered and Implement Applicable Provisions of the California Health and Safety Code)** would reduce impacts on any human remains discovered during construction to a level that is **less than significant**.

Mitigation Measure CR-3: Halt Construction Immediately if Human Remains Are Discovered and Implement Applicable Provisions of the California Health and Safety Code.

If human remains are discovered during construction activities, the requirements of Section 7050.5 of the California Health and Safety Code shall be followed. Potentially damaging excavation shall halt on the Proposed Project site within a minimum radius of 100 feet of the remains and the County Coroner shall be notified. The Coroner is required to examine all discoveries of human remains within 48 hours of receiving notice of a discovery on private or state lands (Health and Safety Code Section 7050.5[b]). If the Coroner determines that the remains are those of a Native American, he or she must contact the NAHC by phone within 24 hours of making that determination (Health and Safety Code Section 7050[c]). In accordance with the provisions of PRC Section 5097.98, the NAHC shall identify a Most Likely Descendent (MLD). The MLD designated by the NAHC shall have at least 48 hours to inspect the site and propose treatment and disposition of the remains and any associated grave goods. The City or its designee shall work with the MLD to ensure that the remains are removed to a protected location and treated with dignity and respect.

Impact CUL-5: Potential to Cause a Substantial Adverse Change in the Significance of a Tribal Cultural Resource (Less than Significant with Mitigation)

No TCRs have been identified in the Proposed Project study area to date. However, archaeological sites that are buried and discovered during construction have the potential to be TCRs. Should an archaeological site be discovered that is determined to be a TCR, Mitigation Measure CR-1 would be implemented and would result in a less-than-significant impact.

Although no Native American tribes responded to the City's project notification letter within the 30-day period prescribed under PRC Section 21080.3.1(b)(2), tribes will have the opportunity to comment on this DEIR through the public comment period. As a result, it is possible that TCRs may yet be identified. If TCRs are identified, the City will work with the tribe(s) to avoid or mitigate any impacts that might affect TCRs. If TCRs are identified within

the Proposed Project study area, implementation of Mitigation Measure CR-1 and **Mitigation Measure CR-4 (Prepare and Implement Treatment Plans for any TRCs Identified in the Proposed Project Study Area)** would reduce any potential impacts to a level that is **less than significant.**

> **Mitigation Measure CR-4: Prepare and Implement Treatment Plans for any TCRs Identified in the Proposed Project Study Area.**
>
> If TCRs are identified in the Proposed Project study area, the City shall consult and work with tribes with a traditional and cultural affiliation to the resource to develop feasible alternatives that will avoid impacts or develop and implement treatment plans that will substantially lessen the impacts on identified TCRs, in accordance with PRC Sections 21083(b)(2) or 21084.3.

7.4.4 Cumulative Impacts

Impact CUL-6: Potential to Eliminate Important Examples of the Major Periods of California History or Prehistory (Less than Significant with Mitigation)

The 2010 Water System Engineer's Report Program EIR (City of Modesto 2010) concluded that there would be no cumulative impacts regarding cultural resources. Since publication of that document, no other projects are planned in the immediate vicinity of Sites A or B that could create a significant cumulative impact in combination with the Proposed Project. As such, with implementation of Mitigation Measures CUL-1, CUL-2, CUL-3, and CUL-4, described above, all impacts would be reduced to a less-than-significant level and there would be no cumulative impact to which the Proposed Project could contribute related to cultural resources.

Chapter 8
Global Climate Change

8.1 Overview

This chapter describes the regulatory and environmental setting related to global climate change and greenhouse gases (GHGs) and then evaluates impacts related to the Proposed Project's forecasted GHG emissions. The impact evaluation begins by describing the methodology used to evaluate significance and the GHG significance criteria, and then presents the impact evaluation. Mitigation measures are identified for impacts that are determined to be significant.

8.2 Regulatory Setting

8.2.1 Federal Laws, Regulations, and Policies

At the federal level, USEPA has developed regulations to reduce GHG emissions from motor vehicles and has developed permitting requirements for large stationary emitters of GHGs. On April 1, 2010, USEPA and the National Highway Traffic Safety Administration (NHTSA) established a program to reduce GHG emissions and improve fuel economy standards for new model year 2012-2016 cars and light trucks. On August 9, 2011, USEPA and the NHTSA announced standards to reduce GHG emissions and improve fuel efficiency for heavy-duty trucks and buses.

8.2.2 State Laws, Regulations, and Policies

In recent years, California has enacted a number of policies and plans to address GHG emissions and climate change. In 2006, the California State Legislature enacted Assembly Bill (AB) 32, the Global Warming Solutions Act, which set the overall goals for reducing California's GHG emissions to 1990 levels by 2020. Two executive orders, EO S-3-05 and EO B-16-2012, further extend this goal to 80 percent below 1990 levels by 2050. EO B-18-12 requires California state agencies and departments to take immediate steps to "green" the state's buildings, reduce GHG emissions, and improve energy efficiency. In April 2015, Governor Brown issued EO B-30-15, setting an interim target to cut California's greenhouse gas emissions to 40 percent below 1990 levels by 2030, to help the state meet the 80 percent emissions reduction goal for 2050 set in EO S-03-05.

CARB has completed rulemaking to implement several GHG emission reduction regulations and continues to investigate the feasibility of implementing additional regulations. These include the low carbon fuel standard, which reduces GHG emissions associated with fuel usage, and the renewable portfolio standard, which requires electricity suppliers to increase the amount of electricity generated from renewable sources to 33 percent by 2020. The California Building Code (CBC) (Title 24 of the CCR) governs construction of buildings in

California. Parts 6 and 11 of Title 24 are relevant for energy use and green building standards, which reduce the amount of indirect GHG emissions associated with buildings.

CARB approved the First Update to the AB 32 Scoping Plan on May 22, 2014 (CARB 2014). This update defines climate change priorities for 5 years and also sets the groundwork to reach long-term goals set forth in EO S-3-05 and EO B-16-2012. The update also highlights California's progress toward meeting the near-term 2020 GHG emission reduction goals and evaluates how to align the state's longer term GHG reduction strategies with other state policy priorities for water, waste, natural resources, clean energy, transportation, and land use. The update identifies that GHG emissions from the water sector come primarily from the energy used to pump, convey, treat, and heat water (CARB 2014). As a result, key recommended actions by state agencies for the water sector include implementing new water-related energy conservation measures and efficiency standards, modifying state and regional water board policies to achieve conservation, and developing a comprehensive groundwater management strategy.

8.2.3 Local Laws, Regulations, and Policies

San Joaquin Valley Air Pollution Control District

The SJVAPCD's *Climate Change Action Plan* (CCAP), adopted in 2008, directed the District Air Pollution Control Officer to develop guidance to assist lead agencies, project proponents, permit applicants, and interested parties in assessing and reducing the impacts of project-specific GHG emissions on global climate change (SJVAPCD 2008, 2015a). On December 17, 2009, the SJVAPCD adopted *Guidance for Valley Land-use Agencies in Addressing GHG Emission Impacts for New Projects under CEQA* (Guidance) (SJVAPCD 2009). The Guidance establishes a streamlined process that can be used to evaluate the significance of project-specific GHG emission impacts on global climate change, based on the use of Best Performance Standards (BPS) (SJVAPCD 2009); the streamlined evaluation process is designed to meet the reduction goals of AB 32. The SJVAPCD defines BPS as "the most effective achieved-in-practice means of reducing or limiting GHG emissions from a GHG emissions source." Types of BPS include equipment type, equipment design, operational and maintenance practices, measures that improve energy efficiency, and measures that reduce vehicle miles traveled (SJVAPCD 2009). If BPS are not available, SJVAPCD encourages users to demonstrate at least a 29-percent reduction from business as usual (BAU). Based on CARB's AB 32 Scoping Plan document (CARB 2014), the SJVAPCD considers BAU to be the emissions occurring in 2020 via the application of unit-of-activity emission factors from the 2002-2004 period multiplied by the activity expected to occur in 2020. These 2020 BAU emissions represent the potential emissions if GHG emission reduction measures were not implemented (SJVAPCD 2009).

Stanislaus County Regional Sustainability Toolbox

Stanislaus County, in collaboration with the nine cities within the County, completed the Stanislaus Regional Sustainability Toolbox (RST). The RST includes multiple planning tools to achieve regional GHG reductions. The planning tools include an example climate action plan (CAP) with regional CAP strategies and low impact development (LID) standards and specifications. Relevant regional strategies from this model CAP that are related to water-related infrastructure projects like the Proposed Project include the following (ESA 2013):

Goal E.1: Increase Building and Equipment Efficiency Community-Wide

Strategy E.1.5: Industrial Equipment Energy Efficiency Promotion. Promote understanding of San Joaquin Valley Air Pollution Control District Industrial Equipment Energy Efficiency Best Performance Standards.

Action E.15a: Make information available regarding the San Joaquin Valley Air Pollution Control District Best Performance Standards for industrial energy efficiency.

Goal E.3: Increase Energy Efficiency and Renewable Energy Generation and Use in Municipal Operations

Strategy E.3.1: Municipal Energy Efficiency. Increase energy efficiency in government operations, including City buildings and facilities.

Strategy E.3.2: Municipal On-site Renewable Energy Sources. Increase on-site renewable energy systems at City facilities.

Goal W.2: Reduce Municipal Operations Water Consumption

Strategy W.2: Decrease Municipal Operations Water Consumption. Reduce municipal operations water consumption by 20% by 2020.

Stanislaus County General Plan 2015

The *Stanislaus County General Plan 2015* Conservation/Open Space Element (2016) identifies water conservation-related goals and policies that would contribute to reduced GHG emissions by conserving water resources and reducing related energy use for water supply/distribution activities. The following goal, policies, and implementation measures also apply to the Proposed Project:

Goal Six: Improve air quality.

Policy Nineteen: The County will strive to accurately determine and fairly mitigate the local and regional air quality impacts of proposed projects.

Implementation Measure 1. Require all development proposals, where appropriate, to include reasonable air quality mitigation measures.

Implementation Measure 2. Minimize case-by-case analysis of air quality impacts through the use of standard criteria for determining significant environmental effects, a uniform method of calculating project emissions, and standard mitigation methods to reduce air quality impacts.

Policy Twenty: The County shall strive to reduce motor vehicle emissions by reducing vehicle trips and vehicle miles traveled and increasing average vehicle ridership.

Del Rio Community Plan

The *Del Rio Community Plan* includes goals and policies indirectly related to reducing GHG emissions through development-related policies for the protection of air and water resources

(Stanislaus County 1992). Specifically, the following goal of the *Del Rio Community Plan* would be relevant to the Proposed Project:

Goal 3: Further development in the Del Rio area should be planned to ensure that adverse impacts on services and utilities, schools, transportation and circulation, agriculture, water, and air quality are appropriately mitigated.

8.3 Environmental Setting

Climate change results from the accumulation in the atmosphere of GHGs, which are produced primarily by the burning of fossil fuels for energy. Because GHGs (primarily carbon dioxide [CO_2], methane, and nitrous oxide) persist and mix in the atmosphere, emissions anywhere in the world affect the climate everywhere in the world. GHG emissions are typically reported in terms of carbon dioxide equivalents (CO_2e), which convert all GHGs to an equivalent basis taking into account their global warming potential compared to CO_2.

Anthropogenic (human-caused) emissions of GHGs are widely accepted in the scientific community as contributing to global warming. Temperature increases associated with climate change are expected to adversely affect plant and animal species, cause ocean acidification and sea level rise, affect water supplies, affect agriculture, and harm public health.

Global climate change is already affecting ecosystems and societies throughout the world. Climate change adaptation refers to the efforts undertaken by societies and ecosystems to adjust to and prepare for current and future climate change, thereby reducing vulnerability to those changes. Human adaptation has occurred naturally over history; people move to more suitable living locations, adjust food sources, and more recently, change energy sources. Similarly, plant and animal species also adapt over time to changing conditions; they migrate or alter behaviors in accordance with changing climates, food sources, and predators.

Many national, as well as local and regional, governments are implementing adaptive practices to address changes in climate, as well as planning for expected future impacts from climate change. Adaptations that are already in practice or under consideration include conserving water and minimizing runoff with climate-appropriate landscaping, capturing excess rainfall to minimize flooding and maintain a constant water supply through dry spells and droughts, protecting valuable resources and infrastructure from flood damage and sea level rise, and using water-efficient appliances. Managed water resources can assist with minimizing the effects of changes in streamflow, water temperature changes, and changes in salinity (USEPA 2015a, 2015b).

In 2013, total California GHG emissions were approximately 459 million metric tons of carbon dioxide equivalents (million MT CO_2e). This represents a 0.3-percent decrease in total annual GHG emissions from 2012. From 2000 to 2013, annual GHG emissions decreased by approximately 2.0 percent; the peak year for annual emissions was 2004 (CARB 2015a, 2015b).

In 2013, the transportation sector was the largest source of emissions, accounting for approximately 37 percent of total emissions. On-road vehicles accounted for more than 90 percent of emissions in the transportation sector. The industrial sector accounted for

approximately 23 percent of total emissions. Emissions from electricity generation were about 20 percent of total emissions (CARB 2015b).

Per capita emissions in California decreased by 12 percent from 2000 to 2013, even though population increased by approximately 12 percent during this period (CARB 2015b, California Department of Finance 2014). Per capita emissions from in-state electricity generation declined by approximately 24 percent from 2000 to 2013 (CARB 2015a, California Department of Finance 2014). These declines resulted from the state's move toward more efficient and renewable in-state and imported energy (electricity) sources.

8.3.1 Stanislaus County Regional Inventory

A baseline inventory was conducted of GHG emissions in Stanislaus County, including the nine cities within the county, during 2005 (ICF International 2013). Total 2005 GHG emissions from the Stanislaus County region were approximately 6.042 million MT CO_2e (specifically, 6,042,232 MT CO_2e), which does not include stationary-source emissions (658,692 MT CO_2e). Stationary sources, including landfills, were not included because they are regulated by separate federal and state regulations. The greatest regional GHG emission sources were building energy (a combined electricity and natural gas contribution of 40 percent), on-road transportation (27 percent), and agriculture (24 percent). Water-related emissions were approximately 0.5 percent. Per capita GHG emissions for Stanislaus County were 10.2 MT CO_2e, which was less than the 2005 statewide per capita GHG emission rate (12.5 MT CO_2e) but similar to the per capita emission rate of other counties (e.g., Sacramento County, 11.0 MT CO_2e; San Diego County, 10.0 MT CO_2e) (ICF International 2013).

8.4 Impact Analysis

8.4.1 Methodology

Construction and operational emissions were estimated using CalEEMod version 2013.2.2. CalEEMod is an emissions model that estimates GHG emissions for land use development projects. It contains reasonable default assumptions that can be replaced if site-specific information is available. CalEEMod incorporates both CARB's EMFAC for vehicles and current off-road in-use engine emissions modeled for construction equipment. Modeling for the Proposed Project assumed a potential overlap in the building construction and pipeline construction (trenching and jack/bore) phases. Detailed CalEEMod output, including relevant input parameters, is contained in **Appendix C**, *Air Quality and Global Climate Change Impacts Evaluation Supporting Documentation*. In general, CalEEMod default numbers were used for construction phases and equipment, construction duration, and quantity of construction workers for each phase, with exceptions noted below and/or in Appendix C. Some of these construction details are also provided in Chapter 2, *Project Description*.

The use of equipment and materials such as concrete and steel require energy and, therefore, indirectly result in GHG emissions. These indirect GHG emissions associated with building materials are referred to as "embodied energy" and are based on life-cycle GHG emission analyses of individual materials. The embodied energy from building materials has not been estimated for this analysis, as detailed specifications and estimates of building materials are not available. For a typical building construction project, the materials that have some of the largest amounts of embodied energy are cement and steel.

Project-specific inputs into CalEEMod included estimated soil export quantities for the pipeline and project site construction activities, estimated landscaping-related water use, change in carbon sequestration by vegetation added or removed, and use of City-provided assumptions for the project's pipeline construction activities. The estimated soil export quantities and landscaping-related water use calculations are provided in Appendix C. In general, it was assumed that soils would be kept within the Proposed Project work area. The equipment assumptions for all construction phases can also be found in Appendix C. It was assumed that Sites A and B (4.4 total acres) would be converted from grassland to unvegetated hardscape, except for the addition of approximately 70 new trees at Site A. These values were considered in the carbon sequestration calculations as a one-time change in GHG emissions and included in the construction-related emissions. Equipment assumptions and construction durations for well-drilling activities at the sites and the pipeline construction–related jack-and-bore activities were provided by the City and included in the construction emission analysis

Operational-related trips to the project sites assumed 1 worker per week-day. Estimated energy intensity associated with pumps at Site A and Site B (as described in Chapter 2, *Project Description*) assumed pumping usage of 8 hours per day year round (Appendix C).

Projected changes in climate associated with global warming may have related effects on other resources in the future, including effects on the Proposed Project (such as changed weather patterns). Anticipated potential worldwide climate change effects include coastal erosion, sea level rise, melting glaciers, atmospheric temperature warming, increased wildfire risk, ocean warming, food production issues (e.g., decreased crop yields), effects on terrestrial and marine ecosystems, flooding and/or drought conditions, and altered hydrologic patterns such as changes in river flows or lake levels (Intergovernmental Panel on Climate Change 2014). California-specific climate change effects and indicators of climate change are similar to those that may be experienced globally and are discussed in *Indicators of Climate Change in California*, a report prepared by the California Environmental Protection Agency's Office of Environmental Health Hazard Assessment in 2013 (OEHHA 2013). The evaluation of such effects on the Proposed Project is beyond the scope of this GHG analysis.

8.4.2 Criteria for Determining Significance

Based on Appendix G of the CEQA Guidelines and professional expertise, it was determined that the Proposed Project would result in a cumulatively considerable contribution to the significant cumulative impact related to GHG emissions if it would:

- Generate a substantial amount of GHG emissions; or
- Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of GHGs.

With regard to the first significance criterion ("substantial amount of GHG emissions"), SJVAPCD has adopted a BPS threshold for GHG emissions based on an achievable-in-practice analysis of improvement over a BAU scenario or a 29-percent reduction in GHG emissions from the BAU scenario. However, at this time there is not an approved BPS for this type of project or for construction equipment. Therefore, the published California air district mass emissions thresholds were reviewed and considered in developing an appropriate threshold to address this significance criterion for the Proposed Project's operational activities.

The Proposed Project has been evaluated to determine if a 29-percent reduction in GHG emissions from the BAU scenario could be achieved. For determination of this reduction, one-time emissions from construction and land use change have been amortized over 30 years and combined with the annual operational emissions. Using this methodology, GHG emissions could be considered less than significant for cumulative impacts if the generated GHG emissions compared to BAU would be reduced by 29 percent. This level of reduction is greater than the estimated average percent reduction needed to meet the 2020 goal of AB 32 compared to the projected BAU scenario for 2020. The most recent Scoping Plan estimates that a 15-percent reduction from BAU would be required to reach the goal of AB 32.

For the second significance criterion ("conflict with applicable plan, policy, or regulation"), the applicable plans and policies for operational-related emissions were determined to be CARB's Scoping Plan and its policies. Specifically, if a project activity does not conflict with CARB's GHG emission reduction policies, it would have a less-than-significant impact. In addition, the Proposed Project's operations were reviewed for compliance with Stanislaus County's regional CAP strategies and the County's applicable general plan policies.

8.4.3 Environmental Impacts

Impact GHG-1: Generate Substantial GHG Emissions, Either Directly or Indirectly, from Project Construction, Land Use Changes, and Operation (Significant and Unavoidable)

Construction of the Proposed Project would involve activities that would result in one-time emissions of GHGs. Changes in carbon sequestration due to land use change and tree planting would also result in one-time emissions of GHGs. As shown in Table 8-1, combined one-time GHG emissions associated with the Proposed Project's construction and change in carbon sequestration from land use changes would be approximately 536 MT CO_2e annually. These emissions are one-time emissions and would not continue to occur once the construction is complete. Amortized over the project life (approximately 30 years), construction and sequestration GHG emissions would be approximately 18 MT CO_2e per year.

Operation of the Proposed Project would generate GHG emissions from annual maintenance of emergency generators, worker vehicle trips, and, primarily, from the pumps' electricity use at the Proposed Project sites. Approximately one worker vehicle trip would occur daily during the week. The Proposed Project's operation would generate approximately 374 MT CO_2e per year in 2019. Electricity use makes up 363 MT CO_2e per year of these emissions. Combining the operation emissions with the amortized one-time emissions, the total annualized emissions are 392 MT CO_2e per year.

Table 8-1. Proposed Project Construction-related and Operational GHG Emissions

Emissions Source	MT CO_2e
Construction 2017	517
Construction 2018	49
Sequestration Change	-30
Total One-time (Construction and Sequestration)	536
One-time Annualized (30-year Amortization)	18
Operation Annual	502
Total Annualized Emissions	520
Renewable Portfolio Standard Reduction from Business as Usual	161.7
Percent Reduction Compared to Business as Usual	31%

Notes:

Construction, carbon sequestration, and operation emissions based on CalEEMod modeling results.
Amortization over 30 years based on the Proposed Project facility's anticipated lifetime (SJVAPCD 2015b).

SJVAPCD, the local air district with jurisdiction over the Proposed Project, has determined that GHG emissions are best controlled through implementation of BPS or demonstration of a 29-percent reduction from 2002-2004 conditions. The renewable portfolio standard requires Modesto Irrigation District, the Proposed Project's electricity provider, to increase its renewable electricity portfolio to 33 percent by 2020, as mandated by Senate Bill X1-2 (adopted in 2011). Under BAU conditions in the 2002-2004 timeframe, Modesto Irrigation District had essentially zero renewable energy sources according to the 2013 Renewable Portfolio Standard report (Modesto Irrigation District 2013). By 2012, Modesto Irrigation District was meeting approximately 25 percent of its retail energy sales from eligible renewable energy resources (Modesto Irrigation District 2013). Applying the renewable portfolio standard's mandatory 33-percent reduction in carbon intensity to the Proposed Project's 363 MT CO_2e per year from electricity results in a projected reduction of 120 MT CO_2e per year. This results in a 30-percent reduction to the total annualized emissions compared to BAU conditions. This is greater than the SJVAPCD's required 29-percent energy reduction from BAU conditions. This reduction is also consistent with the most recent AB 32 Scoping Plan's level of reductions for 2020, which estimate a 15-percent reduction from BAU projections.

In addition to the GHG emission reductions related to using renewable energy to meet the project's electricity demands, the proposed project would include drought-tolerant landscaping to reduce water use, which is also consistent with the AB 32 Scoping Plan's water use reduction measures. Even though this analysis could support a less-than-significant impact conclusion, the City has determined to find the impact significant and unavoidable for the following reasons: The main reductions in GHG emissions are outside the control of the City and depend on changes to operations by electricity providers. In addition, the Program EIR analysis for GHG emissions found the impact for the entire program significant and unavoidable even with implementation of Mitigation Measure CUM-1. Although this EIR contains **Mitigation Measure GHG-1 (Implement Greenhouse Gas Emissions Reduction Measures for Operation)** to implement Mitigation Measure CUM-1, the feasibility of some

measures is unknown. Therefore, to be conservative in its analysis, the Proposed Project's GHG emissions would be **significant and unavoidable.**

Mitigation Measure GHG-1: Implement Greenhouse Gas Emissions Reduction Measures for Operation.

The City of Modesto or its contractor(s) shall implement the following measures to the extent feasible and prepare a report that analyzes the feasibility of mitigation measures, details the extent of GHG emission reductions, and determines the basis for feasibility, with a goal of net zero emissions:

- Implement energy efficiency improvements of pumps through design, construction, and refurbishment methods.
- Investigate and implement, if feasible, opportunities for renewable energy development at the facilities subject to safety, emergency, and environmental considerations.
- Participate in local utility green energy and/or carbon offset programs to the extent feasible.
- Implement BMPs for vegetation management activities at Site A, which include using fuel-efficient landscaping equipment; shutting down equipment when not in use after 5 minutes; using spot application of herbicides; controlling nonnative weed species as soon as populations are found; planning and scheduling vegetation maintenance activities to minimize driving time and return trips to the site; using native or drought-resistant landscaping around facilities; and encouraging landscaping contractors to use manual techniques to the extent possible to reduce use of gas-powered equipment.
- Utilize electrically powered landscape equipment and outdoor electrical outlets.
- Utilize alternatively fueled construction equipment to the extent feasible. This could include equipment that uses electricity, hybrid, propane, or biodiesel fuels.
- Require shutting down of construction equipment when not in use after 5 minutes.
- Implement a construction worker commute strategy to minimize GHG emissions from workers commuting to the site. This may include encouraging use of carpools, vanpools, and public transportation.

Impact GHG-2: Potential to Conflict with Applicable Plans, Policies, or Regulations Adopted for the Purpose of Reducing Emissions of GHGs (Significant and Unavoidable)

SJVAPCD, the local air district with jurisdiction over the Proposed Project, has determined that GHG emissions are best controlled through implementation of BPS or demonstration of a 29-percent reduction from 2002-2004 conditions. The Renewable Portfolio Standard would reduce GHG emissions compared to BAU and would result in the Proposed Project having more than a 29-percent reduction. This is consistent with the goal of AB 32, as well as the policies/actions described in CARB's Scoping Plan and SJVAPCD's *Climate Change Action Plan.* Although the project is not subject to any other action measures that are outlined in the

Scoping Plan, the project would include drought-tolerant landscaping that is generally consistent with water reduction goals identified in the Scoping Plan.

In addition, the Proposed Project would comply with the RST's regional CAP goals, strategies, and policies, as well as the County's applicable general plan policies related to reduced energy use for water supply/distribution activities and conserving water. Specifically, the Proposed Project would have an energy-efficient design, utilize Modesto Irrigation District's increased renewable energy sources, and have an efficient irrigation system and drought-tolerant landscaping to minimize on-site water consumption at Site A.

The Proposed Project would achieve GHG emission reductions in its design, as discussed above, and, with implementation of Mitigation Measure GHG-1, would minimize GHG emissions to the maximum extent economically feasible. Therefore, the Proposed Project would comply with all applicable plans, policies, and regulations, including AB 32, and as well as the policies/actions described in CARB's Scoping Plan and SJVAPCD's *Climate Change Action Plan*. However, as discussed above, the main reductions in GHG emissions are outside the control of the City and depend on changes to operations by electricity providers. In addition, the Program EIR analysis for GHG emissions found the impact for the entire program significant and unavoidable even with the implementation of Mitigation Measure CUM-1 from the Program EIR. Although this EIR contains Mitigation Measure GHG-1 to implement Mitigation Measure CUM-1, the feasibility of some measures is unknown. Therefore, to be conservative in its analysis, the Proposed Project impact would be **significant and unavoidable**.

8.4.4 Cumulative Impacts

Impact GHG-3: Cumulative GHG Impact (Significant and Unavoidable)

It is widely recognized that no single project could generate enough GHG emissions to noticeably change the global climate. However, the combination of GHG emissions from the Proposed Project in combination with past, present, and future projects could contribute substantially to global climate change. Thus, the Proposed Project's GHG emissions should be evaluated in terms of whether or not they would result in a considerable contribution to global climate change. The analysis in this chapter is essentially a cumulative impacts analysis. Based on the analysis provided above, even with implementation of Mitigation Measure GHG-1, the Proposed Project would result in a cumulatively considerable contribution to a significant cumulative impact.

Chapter 9
Groundwater

9.1 Overview

This chapter describes the regulatory and environmental setting and potential impacts of the Proposed Project as they relate to groundwater. Key data sources used to prepare this section include the following:

- California Department of Water Resources' (DWR's) *Bulletin 118 – San Joaquin Valley Groundwater Basin, Modesto Subbasin* (DWR 2004);
- City of Modesto's *2010 Water System Engineer's Report* (City of Modesto 2010a);
- City of Modesto's *2010 Water System Engineer's Report Final Program Environmental Impact Report*, referred to herein as the Program EIR (City of Modesto 2010b);
- Stanislaus and Tuolumne Rivers Groundwater Basin Association's (STRGBA's) *Final Draft – Integrated Regional Groundwater Management Plan for the Modesto Subbasin* (STRGBA 2005);
- URS Corporation's *Draft Well Impact Analysis for the Del Rio Water System's Upgrade* (URS 2015a, 2015b), included in Appendix F of this DEIR; and
- Water Resources & Information Management Engineering, Inc.'s (WRIME's) *Recharge Characterization for Stanislaus and Tuolumne Rivers Groundwater Basin Association* (WRIME 2007).

9.2 Regulatory Setting

9.2.1 Federal Laws, Regulations and Policies

There are no federal laws, regulations, or policies specifically pertaining to groundwater resources.

9.2.2 State Laws, Regulations, and Policies

Sustainable Groundwater Management Act

On September 16, 2014, Governor Edmund G. Brown, Jr., signed the Sustainable Groundwater Management Act (SGMA), comprised of three separate bills: AB 1739, SB 1319, and SB 1168. A central feature of SGMA is that it allows local agencies to customize groundwater sustainability plans to their regional economic and environmental conditions and needs (State of California 2015). Among other things, SGMA requires that a groundwater

sustainability plan be adopted for high- and medium-priority groundwater basins (127 out of 515 basins and subbasins) in California. SGMA defines sustainable groundwater management as the "use of groundwater in a manner that can be maintained during the planning and implementation horizon without causing undesirable results," defined as the following (State of California 2015):

- Chronic lowering of groundwater levels (not including overdraft during a drought if a basin is otherwise managed);
- Significant and unreasonable reduction of groundwater storage;
- Significant and unreasonable seawater intrusion;
- Significant and unreasonable degraded water quality, including the migration of contaminant plumes that impair water supplies;
- Significant and unreasonable land subsidence that substantially interferes with surface land uses; or
- Depletions of interconnected surface water that have significant and unreasonable adverse impacts on beneficial uses of the surface water.

SGMA outlines the following timetable for adoption of groundwater sustainability plans (State of California 2015):

- By 2017, local groundwater sustainability agencies must be identified.
- By 2020, overdrafted basins must be covered by a groundwater sustainability plan; other high- and medium-priority basins not in overdraft must have plans by 2022.
- By 2040, each high- and medium-priority basin must achieve sustainability, although this deadline can be extended 10 years for good cause.

CASGEM Basin Prioritization

In 2009, the California State Legislature amended the California Water Code with SBx7-6, which mandates a statewide groundwater elevation monitoring program to track seasonal and long-term trends in groundwater elevations in California (DWR 2015). Pursuant to this amendment, DWR established the California Statewide Groundwater Elevation Monitoring (CASGEM) Program. The CASGEM Program establishes the framework for regular, systematic, and locally managed monitoring in all of California's groundwater basins (DWR 2015). To facilitate implementation of the CASGEM Program and focus limited resources, as required by the California Water Code, DWR ranked all of California's basins by priority: high, medium, low, and very low based on the following factors (DWR 2015):

1. Population overlying the basin;
2. Rate of current and projected growth of the population overlying the basin;
3. Number of public supply wells that draw from the basin;

4. Total number of wells that draw from the basin;
5. Irrigated acreage overlying the basin;
6. Degree to which persons overlying the basin rely on groundwater as their primary source of water;
7. Any documented impacts on the groundwater within the basin, including overdraft, subsidence, saline intrusion, and other water quality degradation; and
8. Any other information determined to be relevant by DWR.

As mentioned above, DWR's *Final CASGEM Basin Prioritization* (2014) results indicated that 127 of California's 515 groundwater basins and subbasins are high and medium priority. The Modesto Subbasin is classified as a high-priority basin, with noted impacts of "water quality degradation due to industrial and agricultural practices" (DWR 2014). The Modesto Subbasin is not specifically noted as being in overdraft.

DWR Water Well Standards (Bulletins 74-81 & 74-90 combined)

DWR's well standards, contained in Bulletin 74-81 together with the well standards in the supplement Bulletin 74-90, are recommended minimum statewide standards for the protection of groundwater quality (DWR No Date). The construction standards contained in Bulletins 74-81 and 74-90 apply to all water wells and cover such topics as well location with respect to contaminants and pollutants, sealing the upper annular space (i.e., space between the well casing and wall of the drilled hole), and surface construction features. The well standards require that the surface portions of wells be adequately sealed such that contaminated water cannot enter through the well and into the groundwater.

9.2.3 Local Laws, Regulations, and Policies

Stanislaus County General Plan 2015

The *Stanislaus County General Plan 2015* (2016) guides land use decisions and outlines goals and policies for land use in Stanislaus County. The Conservation and Open Space Element contains the following goals and policies related to groundwater:

Goal Two: Conserve water resources and protect water quality in the County.

Policy Five: Protect groundwater aquifers and recharge areas, particularly those critical for the replenishment of reservoirs and aquifers.

Implementation Measure 1: Proposals for urbanization in groundwater recharge areas shall be reviewed to ensure that (1) as much water as possible is returned to the recharge area, (2) the development will not cause discharge of materials detrimental to the quality of the water, and (3) the development will not result in significant groundwater overdrafting or deterioration in quality. The Department of Environmental Resources shall require:

A. In those areas where groundwaters are susceptible to overdrafting, the project proponent shall perform a hydrogeological analysis and include appropriate mitigation measures in the proposal.

B. In those areas where groundwater quality is susceptible to deterioration or is already of reduced quality, the level of wastewater treatment shall be such that it will not cause further quality deterioration.

Del Rio Community Plan

The *Del Rio Community Plan* is a focused planning policy and land use planning document that is part of the *Stanislaus County General Plan* (Stanislaus County 1992). The *Del Rio Community Plan* contains no specific goals or policies related to groundwater; however, it contains the following goals and policies that may be applicable to the Proposed Project with respect to groundwater.

Goal 5: Future development shall be served by adequate public infrastructure.

Policy A: All future development in Del Rio shall require underground utilities and facilities for community-wide secondary sewage treatment and water supply systems.

Goal 6: Significant natural resources in the community shall be preserved.

Integrated Regional Groundwater Management Plan for the Modesto Subbasin

The *Integrated Regional Groundwater Management Plan for the Modesto Subbasin* (IRGMP) (STRGBA 2005) was developed by the STRGBA, which is an association of the following six agencies:

- City of Modesto
- Modesto Irrigation District
- City of Oakdale
- Oakdale Irrigation District
- City of Riverbank
- Stanislaus County

The STRGBA was formed in 1994 and has since been actively engaged in management of the subbasin (STRGBA 2005). The IRGMP was developed in compliance with the Groundwater Management Planning Act of 2002 (SB 1938) and the Integrated Regional Water Management Planning Act of 2002 (SB 1672). The overarching goal of the IRGMP is:

> *to provide for the integrated use of groundwater and surface water within the basin to ensure the reliability of a long-term water supply to meet current and future beneficial uses including agricultural, industrial, and municipal water requirements while protecting the environment.*

Consistent with SB 1938, the IRGMP contains basin management objectives (BMOs) to meet the purpose and goals of the groundwater management plan. BMOs that may be applicable to the Proposed Project include the following:

- Maintain groundwater levels
  - Identification and mapping of the basin's natural recharge areas
  - Development of a water budget to determine if the basin is in overdraft and, if so, to determine the amount of overdraft
- Control degradation of groundwater quality
  - Maintaining groundwater levels to control the movement of poor quality water into and within the basin. Groundwater pumping that results in the lowering of groundwater levels in part of the basin could alter the natural groundwater flow direction in the basin. In the area with groundwater contamination, this change could result in the movement of poor quality water in the basin. The City of Modesto has reduced groundwater pumping in some parts of the basin, augmenting its groundwater with surface water deliveries to its customers. Other actions may include implementing the actions summarized for the groundwater level BMOs listed above.
- Protect against potential inelastic land surface subsidence
- Groundwater monitoring and assessment

Stanislaus County Groundwater Ordinance

The Stanislaus County Groundwater Ordinance requires that all applications for a Well Construction Permit filed after November 25, 2014, shall demonstrate, based on substantial evidence, that either (1) one or more of the exemptions set forth in Section 9.37.050 apply, or (2) extraction of groundwater from the proposed well will not constitute unsustainable extraction of groundwater. The ordinance notes that the above conditions do not apply to a well designed to replace an existing well that has been permitted under Chapter 9.36 prior to November 25, 2014, if the replacement well has no greater capacity than the well it is replacing.

The exemptions set forth in Section 9.37.050, referenced above, include the following:

> *Water resources management practices of public water agencies that have jurisdictional authority within the County, and their water rate payers, that are in compliance with and included in groundwater management plans and policies adopted by that agency in accordance with applicable state law and regulations, as may be amended, including but not limited to the California Groundwater Management Act (Water Code Sections 10750 et seq.), or that are in compliance with an approved Groundwater Sustainability Plan.*

9.3 Environmental Setting

9.3.1 Regional Setting

The Proposed Project is located in the San Joaquin Valley, overlying the Modesto Groundwater Subbasin. The Modesto Subbasin lies between the Stanislaus River to the north and the Tuolumne River to the south, and between the San Joaquin River on the west and crystalline basement rock of the Sierra Nevada foothills on the east (see **Figure 9-1**) (DWR 2004). The northern, western, and southern boundaries are shared with the Eastern San Joaquin Valley, Delta-Mendota, and Turlock Groundwater Subbasins, respectively (DWR 2004). The community of Del Rio and the Proposed Project are located in the northern portion of the subbasin, as shown in Figure 9-1.

9.3.2 Hydrogeology

Geology

The Modesto Subbasin includes both consolidated and unconsolidated sedimentary deposits (DWR 2004). The consolidated deposits lie in the eastern portion of the subbasin and include the Ione Formation of Miocene age, the Valley Springs Formation of Eocene age, and the Mehrten Formation, which was deposited during the Miocene to Pliocene Epochs. In general, consolidated deposits yield small quantities of water to wells; however, the Mehrten Formation may yield substantial quantities of water and is an important aquifer. The Mehrten Formation is composed of sandstone, breccia, conglomerate, tuff, siltstone, and claystone and is approximately 800 feet thick. The Mehrten Formation may lie as shallow as 400 feet beneath the City of Modesto (STRGBA 2005).

Unconsolidated deposits in the subbasin include continental deposits (i.e., deposited in a freshwater environment), lacustrine and marsh deposits (i.e., pertaining to lakes), older alluvium, younger alluvium, and flood-subbasin deposits. The continental deposits consist of poorly sorted gravel, sand, silt, and clay of varying thickness. They occur from 0 to 450 feet below ground surface (bgs) on the eastern side of the subbasin and range to more than 400 feet deep in the western portion (DWR 2004). The older alluvium consists of gravel, sand, silt, and clay with some hardpan. This alluvium is up to 400 feet thick and is generally present near or at the surface of the western half of the subbasin. The continental deposits and older alluvium are the main water-yielding units in the unconsolidated deposits (DWR 2004). The lacustrine and marsh deposits and the flood-subbasin deposits yield little water to wells, and the younger alluvium in most places probably yields only moderate quantities of water to wells (DWR 2004).

In the western portion of the subbasin, upper and lower layers of deposits are separated by a clay layer, known as the Corcoran clay (STRGBA 2005). The Corcoran clay is present at a depth of about 200 feet bgs and is 20–60 feet thick (STRGBA 2005). The approximate eastern extent of the Corcoran clay parallels Highway 99, running just northeast of the highway, and is shown in **Figure 9-2**.

Available: http://www.rnid.org/water/irgmp/default.html. Accessed September 15, 2015.

Figure 9-2: Corcoran Clay Extent

This page intentionally left blank

Aquifers

The western portion of the subbasin has two principal aquifers: one above and one below the Corcoran clay (STRGBA 2005). East of the Corcoran clay, the aquifer is generally unconfined; however, there may be localized clay lenses, or thin layers of clay, that restrict downward movement of groundwater. Underlying all aquifers is the confined aquifer of the Mehrten Formation (STRGBA 2005). DWR estimated the total storage capacity of the Modesto Subbasin to be 6,500,000 AF to a depth of 300 feet (DWR 2004).

Groundwater Flows and Recharge

Groundwater generally flows from east to west-southwest in the Modesto Subbasin; however, well pumping and recharge may affect the localized groundwater flow direction (STRGBA 2005). Groundwater contours suggest that groundwater is discharged to the San Joaquin and Tuolumne Rivers along most reaches of the rivers. Contours suggest that groundwater does not discharge to the Stanislaus River, nor does the river recharge groundwater (STRGBA 2005).

Groundwater recharge in the subbasin occurs primarily from percolation of applied irrigation water, as well as seepage from the Modesto Reservoir and irrigation canals (DWR 2004). Lesser recharge occurs from subsurface flows originating in the mountains and foothills along the east side of the subbasin and percolation of direct precipitation (DWR 2004). Groundwater recharge to the deeper aquifers can occur from seepage through unconfined aquifers or across the Corcoran clay, or from horizontal movement of water from the eastern portion of the subbasin (STRGBA 2005). Groundwater recharges to the Mehrten Formation's confined aquifers from areas between the eastern and western exposures of the formation. In general, groundwater recharge areas are in the eastern and central portions of the subbasin, between the Stanislaus and Tuolumne Rivers (STRGBA 2005).

DWR estimated overall natural recharge into the subbasin at 86,000 acre-feet per year (AFY) (DWR 2004). Applied irrigation water recharge was estimated to be 92,000 AFY, bringing total annual recharge to 178,000 AFY (although artificial recharge and subsurface inflow values were not determined) (DWR 2004). Annual urban and agricultural extractions were estimated to be 81,000 AFY and 145,000 AFY, respectively, for a total of 226,000 AFY.

Groundwater Levels

In general, groundwater elevations (i.e., feet above mean sea level) increase from west to east in the Modesto Subbasin, following the general topography of the land (WRIME 2007). Depth to groundwater (i.e., level of the water table below ground surface) similarly increases from west to east (WRIME 2007). **Figure 9-3** shows depth to groundwater in the subbasin.

Historically, the groundwater level in the Modesto Subbasin has declined over the past decades. On average across the region, the subbasin water level declined nearly 15 feet from 1970 through 2000 (DWR 2004). Groundwater levels were locally depressed beneath and around the Modesto urban area, but completion of the Modesto Regional Water Treatment Plant in 1994 and subsequent importation of surface water supplies from the Modesto Irrigation District caused groundwater levels to rebound to some degree (STRGBA 2005).

To obtain more site-specific information for the Proposed Project, the City conducted a baseline investigation to determine groundwater levels in the immediate vicinity of the Proposed Project wells (URS 2015a). The study gathered data by first identifying local well owners in the Del Rio area and requesting permission to install water level monitoring devices in their wells. A number of wells were identified in the vicinity of the Proposed Project (see Figure 9-4 and Figure 9-5). Of these, two private well owners granted access to the City to install monitoring devices in their wells on properties located at 706 Ladd Road, close to Site A, and 201 Stewart Road, close to Site B (URS 2015a).

In addition to the two private well owners, the City also placed a water level monitoring device in the City-owned well at 718 Ladd Road (Site A) and monitored groundwater levels over a period of 6 months, from August 2014 to February 2015. **Table 9-1** shows the summary results of the study and the change in groundwater levels at the three wells monitored. See Appendix F for the complete study results and discussion.

Table 9-1. Nearby Groundwater Levels, August 2014 to February 2015

Groundwater Level Statistics	Study Well Location		
	718 Ladd Road	706 Ladd Road	201 Stewart Road
Average Depth to Water (feet)	44.00	44.96	45.77
Maximum Depth to Water (feet)	47.20	48.85	52.53
Minimum Depth to Water (feet)	43.61	44.06	44.87
Difference (minimum – maximum, feet)	4.59	4.79	7.67
Change (over period of record, feet)	3.02	1.90	1.31
Change (daily, feet)	0.20	1.80	3.70

Source: URS 2015a

The findings summarized in Table 9-1 show that groundwater levels fluctuated to some degree over the 6-month course of the investigation. Groundwater levels did increase in the three wells studied (see "Change [over period of record, feet]"), but this is expected because of seasonal fluctuations. The monitoring commenced when water levels would be anticipated to be at their annual low point (August), and ceased when they would be anticipated to be at their annual high. The findings are generally consistent with groundwater monitoring conducted in the area by USGS, which has reported average seasonal water level fluctuations in the Modesto urban area of 1, 3, and 18 feet in shallow, intermediate, and deep zone wells (URS 2015a; USGS 2007).

Figure 9-3: Depth to Groundwater

This page intentionally left blank

As described in the City's baseline groundwater level report (URS 2015a) and in Section 9.3.3, "Groundwater Supply and Use, Private Domestic and Agricultural Well Owners," below, data from the DWR private well database collected during the study suggests that most private wells located within the Del Rio area are completed in the shallow zone. All three wells monitored in the City's study were completed in the shallow zone, and therefore, are considered to be representative of most private wells located in the area.

Subsidence

Subsidence is the lowering of the land surface elevation as a result of the compression, compaction, or consolidation of underlying soils, sediment, or rock. These processes are exacerbated under increased loading (e.g., additional sediment deposition or construction of structures, including fills) or the withdrawal of groundwater. Compaction and compression generally occur within unconsolidated granular soils or sediment over a relatively short timeframe. Consolidation usually occurs over a longer period (sometimes many years) in saturated, finer grained material as pore water (i.e., water within the spaces between sediment grains) is removed through groundwater pumping. Subsidence can cause the development of cracks or fissures in the ground surface. When subsidence is non-uniform or uneven, differential settlement results, potentially inducing stress to structures.

The Proposed Project area is not located within any recent or historical large areas of subsidence (DWR 2016a), and historically, land surface subsidence within the basin has not been substantial (STRGBA 2005). DWR's Groundwater Information Center (GIC) mapping system shows the Modesto Subbasin as being in a medium to high area for estimated potential subsidence (DWR 2016b).

9.3.3 Groundwater Supply and Use

Water Suppliers

Major water suppliers in the Modesto Subbasin include the Modesto and Oakdale Irrigation Districts, the Cities of Oakdale and Riverbank, and the City of Modesto (STRGBA 2005).

Annual groundwater use data for these service providers was not available at the time of publication.

City of Modesto

The City of Modesto provides domestic water service within its incorporated boundaries and to several other areas previously served by the Del Este Water Company (acquired by the City in the mid-1990s), including portions of the Cities of Ceres and Turlock and the communities of Salida, Empire, Del Rio, and Grayson. The City of Modesto operates a total of 118 groundwater wells, 108 of which are located within the Modesto Subbasin, including three in the Del Rio area. In addition to groundwater extracted from the subbasin, the City obtains treated surface water from the Modesto Irrigation District (STRGBA 2005).

Del Rio Service Area

As described above, the City of Modesto has been supplying water to the community of Del Rio since the 1990s. The City manages, operates, and maintains water service in Del Rio as an independent satellite system (Appendix H in City of Modesto 2010a).

The City's Del Rio water system is solely supplied by groundwater (Appendix H in City of Modesto 2010a). The system currently includes three operational wells, which are described in **Table 9-2.**

Table 9-2. Existing Del Rio Water System Groundwater Wells

Well Number	Location/Address	Year Drilled	Rated Pump Capacity (gpm)	Measured Flow (gpm)	Casing Depth (feet)
271	1260 Country Club	1956	395	200	284
282	7312 Hillcrest Drive	1980	1,080	1,000	275
289	7119 Beltis Drive	1987/91	1,090	800	360

Source: Appendix H in City of Modesto 2010a

The "measured flow" shown in Table 9-2 indicates the actual groundwater production of each well observed during well pump tests. As shown in Table 9-2, Well 271 is currently operating at approximately 50 percent of its 395-gpm rated pump capacity, producing 200 gpm (Appendix H in City of Modesto 2010a).

The Del Rio service area is located approximately 4 miles north of the City's boundary. In 2008, the Del Rio water system served 343 residential dwelling units and encompassed an area of approximately 350 acres (Appendix H in City of Modesto 2010a). Based on the *Del Rio Community Plan* (Stanislaus County 1992), future buildout of the Del Rio service area will include approximately 590 acres. Land uses in the service area are currently primarily residential with a large golf course in the middle of the service area. While the City provides water service to much of the Del Rio community, a number of parcels not served by the City, including the golf course, are served by private wells.

Water use in the Del Rio service area was 577 AF in 2015 (City of Modesto 2016).

Private Wells

A number of parcels in the Del Rio service area are supplied by private groundwater wells. The City conducted a groundwater well inventory of private wells within a 1-mile radius of the proposed new wells at Site A and Site B. **Figure 9-4** shows the locations of existing groundwater wells near the proposed new well at Site A. **Figure 9-5** shows locations of existing groundwater wells near the proposed well at Site B.

The City's groundwater well inventory, which queried DWR's well database, suggested that most private wells located within the Del Rio area are completed in the shallow aquifer zone (i.e., less than 265 feet bgs) (URS 2015a). The database indicated that very few domestic wells in the area are completed in the deep zone of the aquifer (i.e., 400-600 feet bgs), and no wells are completed at this depth within 1,000 feet of the Proposed Project new wells (URS 2015a).

Groundwater Well Inventory, Baseline Transducer Investigation,
City of Modesto, CA.

Figure 9-5: Well Inventory Map – Site B

This page intentionally left blank

The City was unable to obtain data on historical pumping rates of existing domestic wells in the Proposed Project area or verify the results of the well database search in the field. The City contacted landowners in the area, but landowners generally did not provide information or cooperate with the City's investigation (URS 2015a).

In general, most private wells in the Proposed Project vicinity are domestic wells. Irrigation wells may also be active in the area, most likely located west of Site A, but agricultural water users in the project vicinity likely obtain irrigation water from Modesto Irrigation District irrigation canals in the area.

9.3.4 Groundwater Basin Operational Yield

The 2010 WSER identified deficiencies in system supply and pressure requirements in the Del Rio service area, along with improvements to correct those deficiencies, including the proposed wells (City of Modesto 2010a). As part of the WSER analysis, the City estimated the preliminary operational yield for the three groundwater subbasins that underlie its service area (Modesto, Turlock, and Delta-Mendota Subbasins). The City estimated the total operational yield within its service area to be 53,500 AFY, 48,286 AFY of which occurs in the Modesto Subbasin (City of Modesto 2010a; Appendix F).

The 2010 WSER operational yield analysis was based on historical groundwater pumping by the City and was developed to maintain a minimum average groundwater elevation of 40 feet above mean sea level (msl) within and near the City's contiguous service area (City of Modesto 2010a). Essentially, the City's analysis concluded that if its total, long-term average groundwater pumping was held at or below 53,500 AFY (48,286 AFY for the Modesto Subbasin), then groundwater levels would remain stable at around 40 feet above msl. The City's concept of operational yield is similar to "sustainable yield," defined as the average annual amount of groundwater that can be extracted from a groundwater basin while maintaining a non-overdraft condition (City of Modesto and Modesto Irrigation District 2011). The key difference between operational yield and sustainable yield is that operational yield pertains to a specific location or localized aquifer (e.g., the portion of the Modesto Subbasin underlying the City of Modesto's service area) and a specific entity (e.g., City of Modesto), while sustainable yield pertains to the entire groundwater basin or subbasin and all of the entities pumping from it as a whole (City of Modesto 2010a). While the City has estimated the *operational yield* of the portion of the Modesto Subbasin underlying its service area, the *sustainable yield* of the Modesto Subbasin is not currently known (City of Modesto and Modesto Irrigation District 2011).

9.4 Impact Analysis

9.4.1 Methodology

Potential impacts on groundwater from the Proposed Project were assessed qualitatively and quantitatively, based on the degree to which the Proposed Project could lower the water table and adversely affect existing nearby wells, interfere with groundwater recharge, or cumulatively contribute to groundwater level drawdown or reduction in aquifer storage volume in the Modesto Subbasin as a whole. The analysis is based on the well impacts analysis conducted in 2015 by URS Corporation (URS 2015a, 2015b), which is included as Appendix F. The 2015 analysis was based on, and improved on, the prior analysis completed in 2012 in several significant ways:

1. ***Number of production wells.*** The previous investigation was conducted using only one of the two proposed production wells. The updated 2015 analysis considered possible effects from pumping at each of the two wells proposed as part of the Proposed Project, both separately and in combination.

2. ***Simulation run times.*** The previous analysis only simulated 30 days of pumping, and therefore did not account for potential long-term impacts on the aquifer. The updated 2015 analysis simulated 3,650 days (10 years) of pumping.

3. ***Operational pumping rates.*** The original analysis assumed an operational pumping rate of 1,280 gpm and operational times of 8 hours per day over the 30-day model period. The updated 2015 analysis used site-specific and monthly pumping rates, developed in coordination with the City, for both proposed wells. The flow information contained in the updated analysis more accurately reflects the pumping rates that may occur with the Proposed Project due to monthly variations in water demand.

4. ***Sensitivity analysis.*** In its updated analysis, URS quantified uncertainty in the model by conducting a sensitivity analysis on horizontal hydraulic conductivity (K), the hydraulic parameter used to predict water-level drawdown.

For the study, URS developed a numerical flow model based on the USGS Northeastern San Joaquin Valley Groundwater Numerical Flow Model. Appendix F further explains the methodology used for the updated well impacts analysis.

9.4.2 Criteria for Determining Significance

Based on Appendix G of the CEQA Guidelines and professional expertise, the Proposed Project would result in a significant impact related to groundwater if it would:

- Substantially deplete groundwater supplies or interfere with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level; or

- Result in substantial land subsidence as a result of the Proposed Project.

Other criteria in Appendix G of the CEQA Guidelines related to hydrology, flooding, and surface water quality and groundwater quality were adequately addressed in the Program EIR (City of Modesto 2010b: pp. 3.8-17–3.8-22) and evaluated in the Environmental Checklist (Appendix B), and the Proposed Project would not result in new or more adverse impacts than previously identified in the Program EIR. Impacts related to landslide, lateral spreading, liquefaction, or collapse are addressed in the Environmental Checklist (Appendix B) findings. These topics were not considered further in this analysis.

9.4.3 Environmental Impacts

Impact GRW-1: Potential to Lower the Groundwater Table and Adversely Affect Nearby Existing Wells (Less than Significant)

As described in Chapter 2, *Project Description,* the Proposed Project would involve installation of a new well at Ladd Road (Site A) and a replacement well at McHenry Avenue (Site B) (see Figure 2-1). The Site B well would replace the City's existing Well 271 (see Table 9-2). Both proposed wells would be drilled to a minimum of 300 feet and a maximum of 600 feet deep and would have a maximum yield of approximately 1,000 gpm. The wells would be operated at varying rates/times throughout the year depending on need, but would be expected to operate for an annual average of 10.8 hours per day. Each well would be expected to yield an annual average of 237 million gallons (726 acre-feet).

To assess potential effects of the proposed pumping on neighboring wells, the City conducted a well impact analysis (URS 2015b; Appendix F). The City's analysis used the USGS Northeastern San Joaquin Valley Groundwater Numerical Flow Model to model changes in water level that would occur from operation of the proposed wells. The USGS regional model covers the northeastern San Joaquin Valley extending from north of the Stanislaus River to south of the Merced River, bounded on the northeast by the Sierra Nevada foothills and on the southwest by the San Joaquin River. The regional model has 16 layers, each representing a separate subsurface lithology. **Figure 9-6** shows the model layers. The model simulation looked at drawdown impacts on existing wells located within 125 feet and a 1,000-foot radius from the proposed wells, and modeled changes in water level for shallow (100–265 feet bgs), intermediate (265–360 feet bgs), and deep (360–600 feet bgs) zone wells over a period of 10 years. The well pumping rates used in the model simulation were estimated as the maximum rate at which the wells would be operated. Note: the existing well pumping at Well 271 was not included in the baseline for the model. Therefore, the City's model takes a conservative approach by considering the total amount of new well pumping from the project rather than merely the incremental pumping above existing conditions.

Table 9- shows the results of the well impact analysis model simulation. The model results indicate that proposed pumping would cause limited (0.1–0.26 foot) additional drawdown in wells screened in the shallow zone of the aquifer.

Table 9-3. Simulated Maximum Drawdown from Operation of the Proposed Project Wells

Production Well	Distance from Well (feet)	Wells Pumping	Maximum Drawdown (feet)		
			Shallow Zone (100–265 feet deep)	Intermediate Zone (265–360 feet deep)	Deep Zone (360–600 feet deep)
Site A – New Well at Ladd Road	125	Site A Only	0.17	1.1	19
		Sites A and B	0.25	1.5	20
	1,000	Site A Only	0.16	1	7
		Sites A and B	0.26	1.4	8
Site B – Replacement Well at McHenry Road	125	Site B Only	0.1	1.6	17
		Sites A and B	0.21	2.1	18.2
	1,000	Site B Only	0.1	1.2	6.6
		Sites A and B	0.18	1.6	7.5

Source: URS 2015b

The largest simulated change in groundwater levels (20 feet of drawdown) occurred in the deep zone 125 feet away from Site A, with simulated pumping at both the proposed wells. The maximum simulated drawdown in the shallow zone was 0.26 foot, while the maximum simulated drawdown in the intermediate zone was 2.1 feet. In general, simulated reductions in groundwater levels were greatest close to the Proposed Project wells (i.e., at 125 feet rather than 1,000 feet) and when both wells were operating.

The simulated changes in groundwater levels were generally within the range of seasonal variation observed in the City's investigation (0.2–3.7 feet) (see Table 9-1), and within the level of seasonal variation observed by USGS monitoring wells (1–18 feet) (USGS 2007). Modeled differences in drawdown and water level change between shallow, intermediate, and deep aquifer zones can be attributed to differences in hydraulic conductivity between soil layers and are consistent with changes observed by the USGS.

re: Draft Well Impact Analysis for the Del Rio Water Systems
Upgrade: Revised Groundwater Flow Model, City of Modesto, California.

Figure 9-6: USGS Model Domain Cross-Section

This page intentionally left blank

As described in Section 9.3.3, "Groundwater Supply and Use," the DWR well database indicated that no wells are completed in the deep zone of the aquifer within 1,000 feet of the proposed wells. To the City's knowledge, all existing wells within 1,000 feet of the proposed wells are completed in the shallow zone of the aquifer. Therefore, based on the City's modeling results, groundwater levels at existing wells in the shallow zone would experience a maximum drawdown of 0.26 foot from operation of both proposed wells, which is within the normal range of seasonal variation in water levels in the region. This amount would not be anticipated to result in a significant adverse effect on existing wells. Additionally, because the Site B well would replace an existing well (Well 271, currently operating at 200 gpm in the shallow zone), the incremental drawdown caused by the Proposed Project above the existing drawdown rate is anticipated to be less than that modeled at Site B.

Based on the modeling analysis, the real-world groundwater level reductions that could occur from the Proposed Project are expected to be less than significant. The groundwater levels in the vicinity of the new wells are not expected to drop below the long-term average level of variation as a result of the Proposed Project. As described in Chapter 2, *Project Description,* the City would install a groundwater monitoring well at each proposed well site. The monitoring wells would be equipped to monitor groundwater levels at three depths (i.e., shallow, intermediate, and deep aquifer zones). Data from the wells would be used to monitor groundwater levels in the various aquifer zones.

Modeling indicates that, with operation of both wells, drawdown on wells in the vicinity of the Proposed Project is anticipated to be within the seasonal variation of groundwater levels (maximum 0.26 feet). In addition, a groundwater monitoring well would be installed at each proposed well site to monitor groundwater levels in the shallow, intermediate, and deep aquifer zones. For these reasons, this impact would be **less than significant**.

Impact GRW-2: Potential to Reduce or Interfere with Groundwater Recharge (Less than Significant)

As described in Chapter 2, *Project Description,* the Proposed Project would develop approximately 4.4 acres total at Sites A and B (4 acres at Site A and 0.4 acre at Site B). Both sites are largely undeveloped, with limited amounts of impervious surfaces. Site A currently contains a single-family home and a few outbuildings, and the remainder of the 4-acre site is fallow, unirrigated grassland that was formerly used for agricultural purposes. Existing impervious surface at Site A is estimated at 0.24 acre. The 0.4-acre Site B is currently undeveloped with no existing impervious surfaces or irrigated agriculture.

Proposed new impervious features at the Proposed Project sites would include the water storage tank and pump station building at Site A and the concrete pad and driveway at Site B. New impervious surface at Site A is estimated at 1.11 acres. Because all of the existing impervious surfaces (i.e., existing house, driveway, and outbuildings) at Site A would be removed, only 0.87 acre of this estimated amount would be additional impervious beyond existing conditions. New impervious surface at Site B is estimated at 0.03 acre. Site A would also include a stormwater retention basin designed to contain the 50-year storm event and the full capacity of water stored in the storage tank in the event of a tank rupture. The stormwater retention basin at Site A would be designed to capture stormwater runoff from impervious surfaces and allow that water to percolate into the aquifer below.

Given that the Proposed Project would not involve a substantial amount of new impervious surface area resulting from the Site A and Site B facilities (approximately 0.90 acre) and would not displace irrigated farmland, the Proposed Project would not substantially reduce or interfere with groundwater recharge. Additionally, the proposed retention basin at Site A may serve to recharge groundwater. Therefore, this impact would be **less than significant.**

Impact GRW-3: Potential to Result in Land Subsidence (Less than Significant)

As described in Section 9.3.2, "Hydrogeology," subsidence is the lowering of the land-surface elevation, which typically occurs following excessive groundwater withdrawal. Subsidence can result in differential settlement and potentially damage buildings and infrastructure. Historical rates of subsidence in the Modesto area have not been substantial. DWR identifies the Modesto Subbasin as having a medium to high potential for subsidence, however, and DWR's groundwater budget for the Modesto Subbasin from 1970 through 2000 showed that extractions were exceeding recharge (DWR 2004).

As described in Impact GRW-1, the Proposed Project wells are not anticipated to substantially lower existing local shallow (i.e., 100 to 265 feet bgs) or intermediate (i.e., 265 to 360 feet bgs) groundwater levels, with modeled maximum drawdown under all scenarios of 0.26 feet and 2.1 feet, respectively. Modeled maximum drawdown for the deep aquifer (i.e., 360 to 600 feet) ranges from 6.6 to 20 feet bgs, dependent upon the modeled scenario. However, regional water bearing geologic units maintain their elasticity despite observed seasonal variations of groundwater levels ranging from 1 to 18 feet with (USGS 2007). Under all scenarios, the proposed project's modeled maximum drawdown is comparable to regional seasonal variations in groundwater levels. Furthermore, site preparation and foundations for surface structures (e.g., pump station and water tank) would be built to California Building Code specifications, reducing the potential effects of differential settlement to a less-than-significant level. The Proposed Project would not substantially affect shallow, intermediate, or deep groundwater levels. Therefore, the Proposed Project is not expected to result in subsidence. This impact would be **less than significant.**

9.4.4 Cumulative Impacts

Impact GRW-4: Cumulative Contribution to Chronic Overdraft of Groundwater Subbasin (Significant and Unavoidable)

As described under Impact GRW-1, the Proposed Project is not anticipated to substantially reduce local groundwater levels in a way that would have a significant adverse impact on nearby shallow wells. However, operation of the proposed wells could cumulatively contribute to overdraft conditions in the Modesto Subbasin.

As described in the Section 9.3.2, "Hydrogeology," DWR has estimated that more groundwater is withdrawn from the subbasin than is recharged on an average annual basis. While the 2014 DWR Final Basin Prioritization results did not specifically note the Modesto Subbasin as being in overdraft (DWR 2014), overpumping in the Modesto Subbasin has historically led to declines in groundwater levels (DWR 2004).

As described in Section 9.3.3, "Groundwater Basin Operational Yield," the City estimated the total operational yield within its service area to be 53,500 AFY, with 48,286 AFY of that occurring in the Modesto Subbasin. Given that the proposed wells were designed to be operated within the City's operational yield, they would not be anticipated to substantially reduce groundwater levels within the City's service area. The expected total annual average production of the proposed wells is 350 million gallons, or approximately 1,701 AF; however, because the City would decommission its existing Well 271 (which currently produces approximately 323 AFY), the proposed wells would only increase groundwater production by approximately 1,378 AFY beyond existing conditions. As shown in **Error! Reference source not found.**, the most readily available data indicate that the City extracts an average of 38,145 AFY of groundwater from the Modesto Subbasin (City of Modesto 2010a). Adding the Proposed Project's total estimated additional production of 1,378 AFY to the average Modesto Subbasin production of 38,145 AFY would equal 39,523 AFY. This amount would be below the City's preliminary operational yield for the Modesto Subbasin of 48,286 AFY, and therefore is not anticipated to reduce groundwater elevations within the City's service area below 40 feet above msl.

With respect to groundwater use and drawdown in the Modesto Subbasin as a whole, in light of other groundwater users in the subbasin, the proposed wells would represent a relatively small but potentially considerable contribution to overall groundwater extractions. As shown in **Error! Reference source not found.**, a number of entities operate public water supply wells in the Modesto Subbasin, in addition to many private wells. Recent data were not available at the time of publication on overall groundwater extractions in the subbasin, but DWR has estimated urban and agricultural extractions at 81,000 and 145,000 AFY, respectively (DWR 2004). By contrast, DWR estimated natural and applied irrigation water recharge at 86,000 AFY and 92,000 AFY, respectively. Relative to total urban and agricultural extractions in the subbasin (226,000 AFY), the Proposed Project's contribution of 1,378 AFY would represent 0.6 percent of the total extractions in the subbasin. This would seem to be a small contribution, but given that the basin is already in a relatively chronic state of overdraft, as indicated by the deficit in recharge estimated by DWR and by historically declining water levels, each additional large capacity well could exacerbate the overdraft situation.

While the SGMA requires that all high- and medium-priority basins have sustainable groundwater management plans in place by 2022, and that overdrafted basins have plans in place by 2020, it does not impose limitations on groundwater resource development prior to those dates. Stanislaus County has enacted a Groundwater Ordinance, which requires entities applying for a Well Construction Permit after November 25, 2014, to demonstrate, based on substantial evidence, that extraction of groundwater from the proposed well will not constitute unsustainable extraction of groundwater (see Section 9.2.3, "Local Laws, Regulations, and Policies"). This ordinance is expected to limit future unsustainable groundwater extractions, but nevertheless, may not reverse the effects of past overpumping or completely prevent cumulative drawdown.

Climate change could also exacerbate the cumulative effects of groundwater pumping in the Modesto Subbasin. Under typical annual hydrological fluctuations, groundwater storage may be replenished in wet years. However, the added prospect of altered long-term precipitation patterns and hydrology in California due to climate change could reduce the potential for groundwater recharge.

In light of all of the above factors, the overdraft of the Modesto Subbasin is considered to be a significant cumulative impact, and the Proposed Project's contribution would be considerable. The City is already implementing all available measures to ensure that its groundwater extraction does not exacerbate this situation, and is an active participant in regional groundwater management with a goal of ensuring sustainable management of the subbasin. Additional measures may exist that others could take to reduce pumping in the basin (e.g., water conservation), but such measures would be outside of the City's jurisdiction to implement or require. As such, no additional feasible measures exist and this impact is considered **significant and unavoidable**.

Chapter 10
Land Use and Planning

10.1 Overview

This chapter describes the setting and potential impacts of the Proposed Project related to land use and planning.

10.2 Regulatory Setting

The following section discusses the policies and regulations that are relevant to the analysis of land use impacts of the Proposed Project. No specific federal or state land use regulations apply to the land use resources associated with the Proposed Project.

Stanislaus County General Plan 2015

The following policies contained in the Land Use Element of the *Stanislaus County General Plan 2015* (Stanislaus County 2016) are applicable to the Proposed Project:

Goal One: Provide for diverse land use needs by designating patterns which are responsive to the physical characteristics of the land as well as to environmental, economic, and social concerns of the residents of Stanislaus County.

Policy Two: Land designated Agriculture shall be restricted to uses that are compatible with agricultural practices, including natural resources management, open space, outdoor recreation and enjoyment of scenic beauty.

Policy Six: Preserve and encourage upgrading of existing unincorporated urban communities.

Goal Two: Ensure compatibility between land uses.

Policy Fourteen: Uses shall not be permitted to intrude into or be located adjacent to an agricultural area if they are detrimental to continued agricultural usage of the surrounding area.

Policy Sixteen: Outdoor lighting shall be designed to be compatible with other uses.

Goal Three: Foster stable economic growth through appropriate land use policies.

Policy Sixteen: Agriculture, as the primary industry of the County, shall be promoted and protected.

Goal Four: Ensure that an effective level of public service is provided in unincorporated areas.

Policy Twenty-four: Future growth shall not exceed the capabilities/capacity of the provider of services such as sewer, water, public safety, solid waste management, road systems, schools, health care facilities, etc.

Policy Twenty-six: Development, other than agricultural uses and churches, which requires discretionary approval and is within the sphere of influence of cities or in areas of specific designation created by agreement (e.g., Sperry Avenue and East Las Palmas Corridors), shall not be approved unless first approved by the city within whose sphere of influence it lies or by the city for which areas of specific designation were agreed. Development requests within the spheres of influence or areas of specific designation of any incorporated city shall not be approved unless the development is consistent with agreements with the cities which are in effect at the time of project consideration. Such development must meet the applicable development standards of the affected city as well as any public facilities fee collection agreement in effect at the time of project consideration. (Comment: This policy refers to those development standards that are transferable, such as street improvement standards, landscaping, or setbacks. It does not always apply to standards that require connection to a sanitary sewer system, for example, as that is not always feasible.)

Policy Twenty-seven: Development which requires discretionary approval and is outside the sphere of influence of cities, but located within one mile of a city's adopted sphere of influence and within a city's adopted general plan area, shall be referred out to the city for consideration. However, the County reserves the right for final discretionary action.

Goal Six: Promote and protect healthy living environments.

Policy Twenty-nine: Support the development of a built environment that is responsive to decreasing air and water pollution, reducing the consumption of natural resources and energy, increasing the reliability of local water supplies, and reduces vehicle miles traveled by facilitating alternative modes of transportation, and promoting active living (integration of physical activities, such as biking and walking, into everyday routines) opportunities.

Spheres of Influence

Policy: Whenever an application is to be considered which includes property within the sphere of influence of a city or special district (e.g., sewer, water, community services) or areas of specific designation created by agreement between County and City, the following procedures should be followed:

1. Development, other than agricultural uses and churches, which requires discretionary approval shall be referred to that city for preliminary approval. The project shall not be approved by the County unless written communication is received from the city memorializing their approval. If approved by the city, the city should specify what conditions are necessary to ensure that development will comply with city development standards. Requested conditions for such things as sewer service in an area where none is available shall not be imposed. Approval from a city does not preclude the

County decision-making body from exercising discretion, and it may either approve or deny the project.

2. Agricultural uses and churches which require discretionary approval should be referred to that city for comment. The County Planning Commission and Board of Supervisors shall consider the responses of the cities in the permit process. If the County finds that a project is inconsistent with the city's general plan designation, it shall not be approved. Agricultural use and churches shall not be considered inconsistent if the only inconsistency is with a statement that a development within the urban transition area or sphere of influence shall be discouraged (or similar sweeping statement). The city shall be asked to respond to the following questions:

    A. Is the proposed project inconsistent with the land use designation on the city's general plan? If so, please include a copy of the map (or that portion which includes the subject property) and the text describing uses permitted for the general plan designation. All findings of inconsistency must include supporting documentation.

    B. If the project is approved, specifically what type of conditions would be necessary to ensure the development will comply with city development standards such as street improvements, setbacks and landscaping?

    In the case of a proposed project within the sphere of influence of a sanitary sewer district, domestic water district or community services district, the proposal shall be forwarded to the district board for comment regarding the ability of the district to provide services. If the district serves an unincorporated community with a Municipal Advisory Council (MAC), the proposal shall also be referred to the MAC for comment.

Del Rio Community Plan

Stanislaus County prepared the *Del Rio Community Plan*, which was adopted by the Stanislaus County Board of Supervisors in 1992. The community plan designates land uses in two development areas. The northern portion (Area I) of Del Rio is designated as low-intensity residential and agriculture, while the southern portion (Area II) is designated as agriculture and future-specific planning. The Community Plan proposed to develop Del Rio as a mixed residential, recreational, and agricultural community with natural open space/recreational uses. Goals of the Del Rio Community Plan that relate to land use and planning for the Proposed Project include the following:

Goal 1: Future development should occur in an orderly manner to meet the needs of existing and future residents.

Policy A: Until the plan is updated, future development for Del Rio shall be in accordance with the Community Plan.

Goal 2: Prime agricultural land in the Del Rio vicinity should be preserved in areas where incompatibility impacts between agricultural and residential uses can be minimized.

Goal 3: Further development in the Del Rio area should be planned to ensure that adverse impacts on services and utilities, schools, transportation and circulation, agriculture, water and air quality are appropriately mitigated.

Policy A: All future developments in Del Rio shall be Planned Developments and, in Area II, approved only after specific plan and EIR are prepared for Area II which address cumulative development impacts on the entire Del Rio area, Community Plan conformance, and methods of plan implementation.

Goal 5: Future development shall be served by adequate public infrastructure.

Policy A: All future development in Del Rio shall require underground utilities and facilities for community-wide secondary sewage treatment and water supply systems.

Stanislaus County Zoning Ordinance

According to the Stanislaus County Zoning Ordinance, Site A is zoned A-2-40 Agriculture (Stanislaus County 2015). Permitted uses for A-2 districts include agricultural uses, single-family dwelling(s) on parcels less than 20 acres in size; two single-family dwellings on parcels 20 acres or more in size; mobile homes; buildings, appurtenances, and uses such as custom contract harvesting or land preparation; home occupations; garage sales; temporary agricultural service airports; detached accessory buildings, the use of which are incidental to, and reasonably related to, a main building on the same lot or to the primary use of the property as determined by the director of planning and community development; lagoons or ponds for the storage of animal wastes; Christmas tree sales lots and Halloween pumpkin sales lots; fireworks stands; and small family day cares and large family care homes. According to Section 21.20.030 of the Stanislaus County Code, this district allows development of certain uses that are not directly related to agriculture but may be necessary to serve the A-2 district. For example, development of facilities for public utilities qualifies as a "Tier Three" use that may be allowed if the Stanislaus County Planning Commission concludes that the use would not be substantially detrimental to or conflict with agricultural use of other property in the vicinity, and the parcel on which such use is requested is not located in one of the county's "most productive agricultural areas," as this term is used in the general plan; or if the character of the use that is requested is such that the land may reasonably be returned to agricultural use in the future.

Site B is zone P-D (189) Planned Development (Stanislaus County 2015). The P-D district permits all uses when consistent with the general plan but is subject to the approval of the development plan by the County's Planning Commission.

10.3 Environmental Setting

Del Rio is an unincorporated census-designated place (CDP) in central Stanislaus County. Del Rio has a population of approximately 1,270 and encompasses 2.1 square miles, with approximately 1.8 square miles being residential and the remaining space being utilized as a

golf course, open space, and water (U.S. Census Bureau 2010). The Stanislaus River runs along the northern edge of Del Rio, and the community is bounded by McHenry Avenue to the east, Ladd Road to the south, and Carver Road to the west. State Route 99 is approximately 5.8 miles west of Del Rio. Nearby cities include Escalon, Manteca, Modesto, and Riverbank.

Del Rio began with the development of a golf and country club in the 1940s, and residential lots were constructed soon afterward to finance a portion of the country club. Del Rio is an entirely residential community (Stanislaus County 1987).

The Proposed Project would involve activities at two separate sites within Del Rio. Site A consists of two parcels totaling approximately 4.0 acres that are owned by the City of Modesto. Site A is southeast of the intersection of Ladd Road and St. John Road on APNs 004-077-018 and 004-077-019. The site is bounded by a Modesto Irrigation District canal on the south, agricultural and residential sites on the east, and Union Pacific Railroad tracks on the west. The northern portion of Site A fronts Ladd Road. The site is currently occupied by a single-family dwelling, which consists of a house, garage, and outbuildings. The remainder of the site consists mostly of fallow, unirrigated grassland that was formerly used for agricultural purposes. Site A is located in Area II of the *Del Rio Community Plan*.

Site B is located on the northwest corner of McHenry Avenue and Stewart Road on the southeastern-most portion of APN 004-102-003 and is 0.4 acre. Site B is surrounded by single-family residences and outbuildings to the west and south, agricultural parcels to the north and east, and a fruit stand to the southeast. The site is currently vacant and undeveloped, except for a few power and communication poles, a large oak tree, and shrubs. Site B is located in Area I of the Del Rio Community Plan.

10.4 Impact Analysis

10.4.1 Methodology

The analysis of land use and planning is qualitative and includes consideration of applicable land use policies, plans, and programs. Inconsistencies with land use policies are considered a significant impact only if those inconsistencies would result in significant adverse effects on the physical environment. Physical impacts on the environment that could result from inconsistency with land use plans or policies are addressed in other resource chapters (Chapters 4 through 9 and 11). General consistency of the Proposed Project with local plans and, policies are discussed in Impact LU-2.

10.4.2 Criteria for Determining Significance

Based on Appendix G of the CEQA Guidelines and professional expertise, the Proposed Project would result in a significant impact related to land use and planning if it would:

- Physically divide an established community;
- Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including a general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect; or

- Conflict with any applicable habitat conservation plan or natural community conservation plan.

10.4.3 Environmental Impacts

Impact LU-1: Physically Divide a Community (Less than Significant)

The Proposed Project would improve existing water pressure and volume storage deficiencies, ensure that system pressure is sufficient for firefighting, improve water system flexibility and reliability, and provide additional water supply and storage to accommodate the anticipated growth of the Del Rio community in accordance with the *Del Rio Community Plan* and the *Stanislaus County General Plan 2015*. As a result, the Proposed Project would improve the development of Del Rio, not divide it.

The construction of facilities within or adjacent to existing road rights-of-way would not physically divide established communities but could temporarily disrupt neighborhood land uses during construction. The Proposed Project does not propose any physical elements that, if constructed, would restrict access within an established community. Construction vehicles may cause short-term delays on access roads, but their presence would be temporary and would not substantially conflict with the performance of these roadways.

This impact is therefore considered less than significant.

Impact LU-2: Conflict with Land Use Plans, Policies, or Regulations (Less than Significant)

Applicable land use plans include the *Del Rio Community Plan* and the *Stanislaus County General Plan 2015*. Construction of the pipelines, storage tank, and groundwater wells would be consistent with these adopted plans. Construction of the Proposed Project would improve water supply, pressure, and fire safety in the community of Del Rio. No conflict with these plans would result from installation of pipelines, and no habitable facilities would be constructed.

As noted in Section 10.1, "Regulatory Setting," Site A is zoned A-2-40 Agriculture and Site B is zoned P-D (189) Planned Development (Stanislaus County 2015). The proposed water storage tank, pump station building, transmission pipeline, and other associated facilities proposed at Site A would constitute facilities for public utilities and, therefore, qualify as a "Tier Three" use that is allowed within the A-2 district, subject to the approval of the Stanislaus County Planning Commission. Consistent with the zoning ordinance, the City would apply for a use permit. There is no Williamson Act contract on Site A (Stanislaus County 2015) and, given that the site is currently used for residential rather than agricultural purposes, the proposed facilities likely meet the criteria of a permitted use. As such, the proposed facilities at Site A would not result in a conflict with the County's zoning district.

With respect to Site B, the P-D zoning district permits all uses that are consistent with the general plan but is subject to the approval of the development plan by the County's Planning Commission. Consistent with the zoning ordinance, and as indicated in Table 2-2 of Chapter 2, *Project Description*, the City would request approval from the Stanislaus County Planning Commission for development of the groundwater well and other associated facilities at Site

B. There is no Williamson Act contract on Site B and the site is currently vacant; therefore, there would be no conflict with the County's zoning district at Site B.

In conclusion, this impact regarding conflicts with applicable land use plans, policies, and regulations would be less than significant.

Impact LU-3: Conflict with Habitat Conservation Plans or Other Land Conservation Plans (No Impact)

The Proposed Project would not conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan because the project area does not occur within an area covered by any of these types of plans. Therefore, there would be no impact.

10.4.4 Cumulative Impacts

Impact LU-4: Cumulative Land Use Impact (Less than Significant)

The Proposed Project would not result in any significant land use impacts. There is not a significant cumulative impact due to land use in the County. Land use and planning projects are subject to planning, environmental review, and a permitting process. Through these processes, inconsistencies with relevant plans and policies would be resolved before project implementation, thereby addressing consistency with local plans and policies. Furthermore, no significant cumulative impacts were identified in the Program EIR (City of Modesto 2010). Therefore, there are no significant cumulative land use impacts, and the Proposed Project in conjunction with other past, present, and future projects would not result in a significant cumulative impact.

This page intentionally left blank

Chapter 11
Noise and Vibration

11.1 Overview

This chapter describes the existing noise environment in the vicinity of the Proposed Project area, presents relevant noise and vibration regulations, identifies sensitive noise and vibration receptors that could be affected by the Proposed Project, and evaluates the potential noise and vibration impacts of the Proposed Project. Mitigation measures to avoid or reduce impacts are identified, as appropriate, including mitigation measures from the Program EIR. Additional technical information related to the noise and vibration analysis is provided in **Appendix G.**

11.2 Overview of Noise and Vibration Concepts and Terminology

11.2.1 Noise

In the CEQA context, noise can be defined as unwanted sound. Sound is characterized by various parameters, including the rate of oscillation of sound waves (frequency), the speed of propagation, and the pressure level or energy content (amplitude). In particular, the sound pressure level is the most common descriptor used to characterize the loudness of an ambient sound level, or sound intensity. The decibel (dB) scale is used to quantify sound intensity. Because sound pressure can vary enormously within the range of human hearing, a logarithmic scale is used to keep sound intensity numbers at a convenient and manageable level. The human ear is not equally sensitive to all frequencies in the spectrum, so noise measurements are weighted more heavily for frequencies to which humans are sensitive, creating the A-weighted decibel (dBA) scale.

The selection of a proper noise descriptor for a specific source depends on the spatial and temporal distribution, duration, and fluctuation of the noise. The noise descriptors most often encountered when dealing with traffic, community, and environmental noise are defined below (California Department of Transportation [Caltrans] 2011).

- **L_{max} (maximum noise level):** The maximum instantaneous noise level during a specific period of time. The L_{max} may also be referred to as the "peak (noise) level."
- **L_{min} (minimum noise level):** The minimum instantaneous noise level during a specific period of time.
- **L_n (Statistical Descriptor):** The noise level exceeded n percent of a specific period of time, generally accepted as an hourly statistic. An L_{10} would be the noise level exceeded 10 percent of the measurement period.

- **L_{eq} (equivalent noise level):** The energy mean (or average) noise level. The instantaneous noise levels during a specific period of time in dBA are converted to relative energy values. From the sum of the relative energy values, an average energy value is calculated, which is then converted back to dBA to determine the L_{eq}. In noise environments that are determined by major noise events, such as aircraft overflights, the L_{eq} value is heavily influenced by the magnitude and number of single events that produce the high noise levels.

- **L_{dn} (day-night average noise level):** The 24-hour L_{eq} with a 10-dBA "penalty" for noise events that occur during the noise-sensitive hours between 10:00 p.m. and 7:00 a.m. In other words, 10 dBA is "added" to noise events that occur in the nighttime hours, and this generates a higher reported noise level when determining compliance with noise standards. The L_{dn} attempts to account for the fact that noise during this specific period of time is a potential source of disturbance with respect to normal sleeping hours.

- **CNEL (Community Noise Equivalent Level):** Similar to the L_{dn} described above, but with an additional 5-dBA "penalty" added to noise events that occur during the noise-sensitive hours between 7:00 p.m. and 10:00 p.m., which are typically reserved for relaxation, conversation, reading, and television. When the same 24-hour noise data are used, the reported CNEL is typically approximately 0.5 dBA higher than the L_{dn}.

- **SENL (single-event [impulsive] noise level):** A receiver's cumulative noise exposure from a single impulsive noise event, which is defined as an acoustical event of short duration and involves a change in sound pressure above some reference value. SENLs typically represent the noise events used to calculate the L_{eq}, L_{dn}, and CNEL.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level associated with a given noise environment. A common statistical tool to measure the ambient noise level is the average, or equivalent, sound level, L_{eq}, which corresponds to a steady-state A-weighted sound level containing the same total energy as a time-varying signal over a given period (usually 1 hour). The L_{eq} is the foundation of composite noise descriptors such as L_{dn} and CNEL, as defined above, and correlates well with community response to noise.

In general, human sound perception is such that a change in sound level of 3 dB is barely noticeable, a change of 5 dB is clearly noticeable, and a change of 10 dB is perceived as doubling or halving the sound level. **Table 11-1** presents approximate noise levels for common noise sources, measured adjacent to the source.

Table 11-1. Examples of Common Noise Levels

Common Outdoor Activities	Noise Level (dBA)
Jet flyover at 1,000 feet	110
Gas lawnmower at 3 feet	100
Diesel truck at 50 feet traveling 50 miles per hour	90
Noisy urban area, daytime	80
Gas lawnmower at 100 feet, commercial area	70
Heavy traffic at 300 feet	60
Quiet urban area, daytime	50
Quiet urban area, nighttime	40
Quiet suburban area, nighttime	30
Quiet rural area, nighttime	20

Source: Caltrans 2009

11.2.2 Vibration

Vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of groundborne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as operating factory machinery, or transient, such as explosions. As is the case with airborne sound, groundborne vibrations may be described by amplitude and frequency.

Vibration amplitudes are usually expressed in peak particle velocity (PPV) or root mean square (RMS), as in RMS vibration velocity. PPV is defined as the maximum instantaneous positive or negative peak of a vibration signal. PPV is often used in monitoring of blasting vibration because it is related to the stresses that are experienced by buildings (Federal Transit Administration [FTA] 2006). PPV and RMS are normally described in inches per second (in/sec).

Human and structural response to different vibration levels is influenced by various factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. Table 11-2, developed by Caltrans, shows the vibration levels that would normally be required to result in damage to structures.

Table 11-2. Effects of Various Vibration Levels on People and Buildings

Peak Particle Velocity		Human Reaction	Effect on Buildings
inches/ second	mm/ second		
0.006-0.019	0.15-0.30	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
0.08	2.0	Vibrations readily perceptible	Recommended upper level to which ruins and ancient monuments should be subjected
0.10	2.5	Level at which continuous vibrations begin to annoy people	Virtually no risk of architectural damage to normal buildings
0.20	5.0	Vibrations annoying to people in buildings	Threshold at which there is a risk of architectural damage to normal dwelling – houses with plastered walls and ceilings
0.4-0.6	10-15	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause architectural damage and possibly minor structural damage

Notes: in/sec=inches per second; mm/sec= millimeters per second; PPV=peak particle velocity

Source: Caltrans 2013

Although PPV is appropriate for evaluating the potential for building damage, it is not always suitable for evaluating human response. It takes some time for the human body to respond to vibration signals. In a sense, the human body responds to average vibration amplitude. The RMS of a signal is the average of the squared amplitude of the signal, typically calculated over a period of 1 second. Like airborne sound, the RMS velocity is often expressed in decibel notation, as vibration decibels (VdB), which serves to compress the range of numbers required to describe vibration (FTA 2006). This is based on a reference value of 1 microinch per second (μin/sec).

The background vibration-velocity level in residential areas is usually approximately 50 VdB. Groundborne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels (FTA 2006).

Typical outdoor sources of perceptible groundborne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the groundborne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Construction activities can generate

groundborne vibrations, which can pose a risk to nearby structures. Constant or transient vibrations can weaken structures, crack façades, and disturb occupants (FTA 2006).

Construction vibrations can be transient, random, or continuous. Transient construction vibrations are generated by blasting, impact pile driving, and wrecking balls. Continuous vibrations result from vibratory pile drivers, large pumps, horizontal directional drilling, and compressors. Random vibration can result from jackhammers, pavement breakers, and heavy construction equipment. Table 11-3 describes the general human response to different levels of groundborne vibration-velocity levels.

Table 11-3. Human Response to Groundborne Vibration Levels

Vibration Velocity (Vibration Decibels)	Human Response
65	Approximate threshold of perception for many humans
75	Approximate dividing line between barely perceptible and distinctly perceptible
85	Vibration acceptable only for a small number of events per day

Source: FTA 2006

11.3 Regulatory Setting

11.3.1 Federal Laws, Regulations, and Policies

USEPA's Office of Noise Abatement and Control was originally established to coordinate federal noise control activities. After its inception, the Office of Noise Abatement and Control issued the Federal Noise Control Act of 1972, establishing programs and guidelines to identify and address the effects of noise on public health, welfare, and the environment. In 1981, USEPA administrators determined that subjective issues such as noise would be better addressed at lower levels of government. Consequently, in 1982 responsibilities for regulating noise control policies were transferred to state and local governments. However, noise control guidelines and regulations contained in USEPA rulings before 1982 remain in place as promulgated by designated federal agencies, thereby allowing more individualized control for specific issues by designated federal, state, and local government agencies.

To address the human response to groundborne vibration, FTA (a division of the U.S. Department of Transportation) has set forth guidelines for maximum-acceptable-vibration criteria for different types of land uses. These include 65 VdB referenced to 1 µin/sec and based on RMS velocity amplitude for land uses where low ambient vibration is essential for interior operations (e.g., hospitals, high-tech manufacturing, laboratory facilities); 80 VdB for residential uses and buildings where people normally sleep; and 83 VdB for institutional land uses with primarily daytime operations (e.g., schools, churches, clinics, offices) (FTA 2006).

Standards have also been established to address the potential for groundborne vibration to cause structural damage to buildings. These standards were developed by the Committee of Hearing, Bio Acoustics, and Bio Mechanics (CHABA) at the request of USEPA. For fragile structures, CHABA recommends a maximum limit of 0.25 in/sec PPV (FTA 2006).

11.3.2 State Laws, Regulations, and Policies

Governor's Office of Planning and Research

The Governor's Office of Planning and Research (OPR) published the *State of California General Plan Guidelines* (OPR 2003), which provide guidance for the acceptability of projects within specific L_{dn} contours. Table 11-4 summarizes acceptable and unacceptable CNEL criteria for various land use categories. Generally, residential uses (e.g., homes, mobile homes) are considered to be acceptable in areas where exterior noise levels do not exceed 60 dBA L_{dn}. Residential uses are normally unacceptable in areas exceeding 70 dBA L_{dn} and conditionally acceptable within 55–70 dBA L_{dn}. Schools are normally acceptable in areas up to 70 dBA L_{dn} and normally unacceptable in areas exceeding 70 dBA L_{dn}. Commercial uses are normally acceptable in areas up to 70 dBA CNEL. Between 67.5 and 77.5 dBA L_{dn}, commercial uses are conditionally acceptable, depending on the noise insulation features and the noise reduction requirements.

The guidelines also present adjustment factors that may be used to arrive at noise acceptability standards reflecting the noise control goals of the community, the particular community's sensitivity to noise, and the community's assessment of the relative importance of noise pollution. In addition, Title 24 of the California Code of Regulations establishes standards governing interior noise levels that apply to all new single-family and multifamily residential units in California. These standards require that acoustical studies be performed before construction at building locations where the existing L_{dn} exceeds 60 dBA. Such acoustical studies must establish mitigation measures that will limit maximum noise levels to 45 dBA L_{dn} in any habitable room. Although there are no generally applicable interior noise standards pertinent to all uses, many communities in California have adopted 45 dBA L_{dn} as an upper limit on interior noise in all residential units.

California Department of Transportation

For the protection of fragile, historic, and residential structures, Caltrans recommends a more conservative threshold of 0.2 in/sec PPV for normal residential buildings and 0.08 in/sec PPV for old or historically significant structures (Caltrans 2013). These standards are more stringent than the federal standard established by CHABA, presented above.

Table 11-4. Summary of Land Use Noise Compatibility Guidelines

Land Use Category	Community Noise Exposure (dBA L_{dn})			
	Normally Acceptable[1]	Conditionally Acceptable[2]	Normally Unacceptable[3]	Clearly Unacceptable[4]
Residential—Low-Density Single-Family, Duplex, Mobile Home	<60	55–70	70–75	75+
Residential—Multifamily	<65	60–70	70–75	75+
Transient Lodging—Motel, Hotel	<65	60–70	70–80	80+
Schools, Libraries, Churches, Hospitals, Nursing Homes	<70	60–70	70–80	80+
Auditoriums, Concert Halls, Amphitheaters		<70	65+	
Sports Arena, Outdoor Spectator Sports		<75	70+	
Playgrounds, Neighborhood Parks	<70		67.5–75	72.5+
Golf Courses, Riding Stables, Water Recreation, Cemeteries	<75		70–80	80+
Office Building, Business Commercial, and Professional	<70	67.5–77.5	75+	
Industrial, Manufacturing, Utilities, Agriculture	<75	70–80	75+	

Notes:

dBA = A-weighted decibels; L_{dn} = day-night average noise level

1 Specified land use is satisfactory, based on the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

2 New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning, will normally suffice.

3 New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design. Outdoor areas must be shielded.

4 New construction or development should generally not be undertaken.

Source: OPR 2003

11.3.3 Local Plans, Policies, Regulations, and Ordinances

Stanislaus County General Plan 2015

Stanislaus County addresses noise impacts through its General Plan and Municipal Code. The Noise Element of the *Stanislaus County General Plan 2015* (Stanislaus County 2016) utilizes noise exposure information to identify existing and potential noise conflicts through the Land Use Planning and Project Review processes. The Noise Element establishes exterior noise level standards and maximum allowable noise exposure from stationary noise sources at noise-sensitive land uses.

Goal Two: Protect the citizens of Stanislaus County from the harmful effects of exposure to excessive noise.

Policy Two: It is the policy of Stanislaus County to develop and implement effective measures to abate and avoid excessive noise exposure in the unincorporated areas of the County by requiring that effective noise mitigation measures be incorporated into the design of new noise generating and new noise sensitive land uses.

Implementation Measure 1: New development of noise-sensitive land uses will not be permitted in noise-impacted areas unless effective mitigation measures are incorporated into the project design to reduce noise levels to the following levels:

a) For transportation noise sources such as traffic on public roadways, railroads, and airports, 60 [dBA] Ldn (or CNEL) or less in outdoor activity areas of single family residences, 65 [dBA] Ldn (or CNEL) or less in community outdoor space for multi-family residences, and 45 [dBA] Ldn (or CNEL) or less within noise sensitive interior spaces. Where it is not possible to reduce exterior noise due to these sources to the prescribed level using a practical application of the best available noise-reduction technology, an exterior noise level of up to 65 Ldn (or CNEL) will be allowed. Under no circumstances will interior noise levels be allowed to exceed 45 Ldn (or CNEL) with the windows and doors closed in residential uses.

b) For other noise sources such as local industries or other stationary noise sources, noise levels shall not exceed the performance standards contained within Table IV-24 [reprinted as Table 11-5 below].

Implementation Measure 2: New development of industrial, commercial or other noise generating land uses will not be permitted if resulting noise levels will exceed 60 [dBA] Ldn (or CNEL) in noise-sensitive areas. Additionally, the development of new noise-generating land uses which are not preempted from local noise regulation will not be permitted if resulting noise levels will exceed the performance standards contained within Table IV-24 [Table 11-5 below] in areas containing residential or other noise sensitive land uses.

Table 11-5. Maximum Allowable Noise Exposure from Stationary Noise Sources

	Daytime 7a.m. to 10 p.m.	Nighttime 10 p.m. to 7 a.m.
Hourly L_{eq}, dBA	55	45
Maximum level, dBA	75	65

Note:

Each of the noise level standards specified in Table IV-24 shall be reduced by five (5) dBA for pure tone noises, noise consisting primarily of speech or music, or for recurring impulsive noises. The standards in Table IV-24 should be applied at a residential or other noise-sensitive land use and not on the property of a noise-generating land use. Where measured ambient noise levels exceed the standards, the standards shall be increased to the ambient levels.

Source: Stanislaus County General Plan, Noise Element, Table IV-24 (2016)

Policy Three: It is the objective of Stanislaus County to protect areas of the County where noise-sensitive land uses are located.

Implementation Measure 1: Require the evaluation of mitigation measures for projects that would cause the Ldn at noise-sensitive uses to increase by 3 dBA or more and exceed the "normally acceptable" level, cause the Ldn at noise-sensitive uses to increase 5 dBA or more and remain normally acceptable, or cause new noise levels to exceed the noise ordinance limits (after adoption).

Stanislaus County Municipal Code

Noise generating sources in Stanislaus County are also regulated under the Municipal Code, Chapter 10.46 (Noise Control). Property line and construction noise limits are established in this ordinance. Property line noise limits apply to noise generation from one property to an adjacent property with the existence of a sensitive receptor (if no receptor, an exception or variance to the standards may be appropriate). These standards do not apply to construction noise that occurs between 7 a.m. and 7 p.m. The following are the applicable portions of the Stanislaus County Noise Control Ordinance, and Tables 11-6 and 11-7 (reprinting Tables A and B of the ordinance) highlight the applicable noise limits.

Section 10.46.050 Exterior Noise Level Standards

A. It is unlawful for any person at any location within the unincorporated area of the county to create any noise or to allow the creation of any noise which causes the exterior noise level when measured at any property situated in either the incorporated or unincorporated area of the county to exceed the noise level standards as set forth below:

   1. Unless otherwise provided herein, the following exterior noise level standards shall apply to all properties within the designated noise zone:

Table 11-6. Exterior Noise Level Standards

Land Use Zone	Maximum A-Weighted Sound Level as Measured on a Sound Level Meter (L_{max})	
	7:00 a.m. to 9:59 p.m.	10:00 p.m. to 6:59 a.m.
Noise Sensitive	45	45
Residential	50	45
Commercial	60	55
Industrial	75	75

Source: Stanislaus County Code, Chapter 10, Table A.

2. Exterior noise levels shall not exceed the following cumulative duration allowance standards:

Table 11-7. Cumulative Duration Allowance Standards

Cumulative Duration	Allowance Decibels
Equal to or greater than 30 minutes per hour	Table 6 plus 0 dBA
Equal to or greater than 15 minutes per hour	Table 6 plus 5 dBA
Equal to or greater than 5 minutes per hour	Table 6 plus 10 dBA
Equal to or greater than 1 minute per hour	Table 6 plus 15 dBA
Less than 1 minute per hour	Table 6 plus 20 dBA

Source: Stanislaus County Code, Chapter 10, Table B.

3. Pure Tone Noise, Speech and Music. The exterior noise level standards set forth in Table A [Table 11-6] shall be reduced by five dB(A) for pure tone noises, noises consisting primarily of speech or music, or reoccurring impulsive noise.

4. In the event the measured ambient noise level exceeds the applicable noise level standard above, the ambient noise level shall become the applicable exterior noise level standard.

Section 10.46.060 Specific Noise Source Standards

E. Construction Equipment. No person shall operate any construction equipment so as to cause at or beyond the property line of any property upon which a dwelling unit is located an average sound level greater than seventy-five decibels between the hours of seven p.m. and seven a.m.

Section 10.46.070 Vibration. Operating or permitting the operation of any device that creates vibration that is above the vibration perception threshold of any individual at or beyond the property boundary of the source if on private property, or at one hundred fifty feet from the source if on a public space or public right-of-way is prohibited. For the

purpose of this section, "vibration perception threshold" means the minimum ground-borne or structure-borne vibration motion necessary to cause a reasonable person to be aware of the vibration by such direct means as, but not limited to, sensation by touch or visual observation of moving objects, or a measured motion velocity of 0.01 in/sec over the range of one to one hundred Hertz.

Section 10.46.080 Exemptions. The following sources are exempt from the provisions of this chapter:

J. **Public Entity or Public Utility Activity.** This chapter shall not apply to construction or maintenance activities performed by or at the direction of any public entity or public utility.

City of Modesto Urban Area General Plan

The following policies of Chapter VII, "Environmental Resources and Open Spaces," of the *City of Modesto Urban Area General Plan* (City of Modesto 2008) are applicable to the Proposed Project:

3. Noise Mitigation Policies – Baseline Developed Area

All development projects located within the Baseline Developed Area (and Redevelopment Area) shall be required to incorporate the following measures into the project.

a. The City of Modesto shall require construction activities to comply with the City's noise ordinance (Title 4, Chapter 9), and noise-reducing construction practices to be implemented as conditions of approval for development projects where substantial construction-related noise impacts would be likely to occur (e.g., where construction would include extended periods of pile driving, where construction would occur over an unusually long period, or where noise-sensitive uses like homes and schools would be in the immediate vicinity, etc.). The City should consider potential mitigation measures, including, but not limited to, the following:

    1. Construction equipment and vehicles should be equipped with properly operating mufflers according to the manufacturers' recommendations. Air compressors and pneumatic equipment should be equipped with mufflers, and impact tools should be equipped with shrouds or shields.

    2. Equipment that is quieter than standard equipment should be utilized.

    3. Haul routes that affect the fewest number of people should be selected.

b. During City review of a proposed project consistent with the updated General Plan, the City of Modesto shall use the following guidelines to decide whether to require additional study and/or mitigation for outdoor activity areas typically defined as common outdoor recreational areas, as discussed below:

    1. Single-family Residential uses: the noise would exceed 65 dBA, Ldn at outdoor activity areas. Outdoor activity areas for single-family residential uses are defined as backyards.

2. Other proposed uses: the noise/land compatibility guidelines (i.e., those noise levels that are "conditionally acceptable," "normally unacceptable," or "clearly unacceptable") shown on Table VII-2. For multi-family residential uses, the exterior noise level standard shall be applied at the common outdoor recreation area, such as pools, play areas, or tennis courts. Where such areas are not provided in multi-family residential uses, the standards shall be applied at individual patios and balconies of the development. Outdoor activity areas of transient lodging facilities include swimming pool and picnic areas.

e. For proposed non-residential uses, where noise mitigation is deemed necessary for new developments to meet the exterior noise land use compatibility guidelines (Table VII-2), the City of Modesto shall require developers to demonstrate that the proposed development will incorporate measures to reduce noise impacts to a less-than-significant level, as follows:

1. Where feasible and consistent with General Plan policy, incorporate setbacks and/or locate less-sensitive uses between a noise source and noise-sensitive uses.

2. Provide (to the extent feasible and consistent with General Plan policy) berms, barriers, or other techniques to shield noise-sensitive uses from noise sources.

3. Incorporate construction techniques to achieve specified interior noise limits. One source that can be used for such specifications is the Noise Control Manual for Residential Buildings (Builder's Guide) by David A. Harris (1997).

h. The City of Modesto shall limit trucking to specific routes, times, and speeds that minimize adverse effects to sensitive land uses such as schools and residential areas.

City of Modesto Code of Ordinances

See **Appendix G** for a complete list of applicable City ordinances related to noise and vibration.

11.4 Environmental Setting

Sensitive land uses generally are defined as those uses where exposure to noise and vibration would result in adverse effects, as well as uses where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both noise levels (interior and exterior) and vibration levels. Other sensitive land uses include schools, hospitals, convalescent facilities, parks, hotels, places of worship, libraries, and other uses where low noise and vibration levels are essential.

The land uses in the immediate vicinity of the project sites are residential and agricultural. Existing nearby sensitive receptors include rural residential dwellings south of Ladd Road, adjacent to Site A, and a single residential dwelling located west of McHenry Avenue, adjacent

to Site B. Refer to **Figures 11-1** and **11-2** for the general locations of existing sensitive receptors with respect to the project sites.

Existing Noise and Vibration Sources

The existing dominant noise sources in the vicinity of the project sites are influenced by surface transportation noise emanating from roadway vehicle traffic on Ladd Road and McHenry Avenue. Noise from agricultural uses adjacent to both project sites and from outdoor activities (e.g., people talking, dogs barking, operation of landscaping and agricultural equipment) also contributes to the existing noise environment. Refer to Figures 2-2 and 2-3 in Chapter 2, *Project Description,* for general locations of existing land uses and their respective locations relative to noise sources (i.e., Ladd Road and McHenry Avenue).

Existing vehicle traffic noise levels were modeled using the Federal Highway Administration (FHWA) Traffic Noise Model and traffic data obtained from traffic counts in Google Earth (Google Earth 2015). Additional input data included day/night percentages of autos, medium and heavy trucks, vehicle speeds, ground attenuation factors, and roadway widths. **Table 11-8** summarizes the modeled hourly L_{eq} noise levels at 100 feet from the roadway centerline and distance from the roadway centerline to the 60-, 65-, and 70-dBA L_{eq} contours for existing average daily traffic (ADT) volumes from Google Earth.

An ambient-noise survey was conducted September 23-29, 2015, to document the existing noise conditions at various locations in the vicinity of the project sites. The 24-hour continuous long-term noise-level measurements were taken in accordance with the American National Standards Institute's acoustic standards at two locations, one at Site A in the front yard of 816 Ladd Road and one at Site B near the pool in the backyard of 117 Stewart Road. Short-term (15-minute) ambient noise measurements were also conducted at various locations near both sites. Instrumentation consisted of a Larson Davis Laboratories (LDL) Model 820 and Model 824 precision integrating sound-level meter. The systems were calibrated before and after use with an LDL CAL200 acoustical calibrator to ensure that measurements would be accurate. Refer to Figures 11-1 and 11-2 for ambient-noise monitoring locations.

Table 11-8. Modeled Noise Levels for Existing Traffic in the Project Area

Roadway	Segment		L_{eq} 100 Feet from Roadway Centerline (dBA)	Distance (feet) from Roadway Centerline to L_{eq} Contour		
	From	To		70 dBA	65 dBA	60 dBA
Ladd Road	Tully Road	St. John Road	67	49	155	491
	St. John Road	McHenry Avenue	66	41	129	409
McHenry Avenue	Ladd Road	Stewart Road	67	45	143	453
	Stewart Road	Hogue Road	67	46	146	461
Stewart Road	McHenry Avenue	Del Cielo Way	56	4	12	37

Notes: dBA = A-weighted decibels; Ldn = day-night average noise level.

Source: Modeled by AECOM in 2015

Atmospheric conditions were observed during long-term noise-level measurement sessions. Wind speeds typically ranged from 3 to 12 miles per hour. Temperatures averaged from 62°F to 89°F, with average humidity of 46 percent. These atmospheric conditions were verified using historical data from the Weather Underground website (www.wunderground.com).

The L_{dn}, L_{90}, and values for each ambient-noise measurement location are summarized in **Table 11-9**. Refer to Appendix G for a complete listing of hourly noise levels and modeled L_{dn} for each noise measurement location. **Table 11-10** summarizes the short-term ambient noise measurements.

The noise levels shown in Table 11-9 indicate medium ambient noise levels at Site A and medium to high ambient noise levels at Site B. Most of the noise levels at Sites A and B result from roadway vehicle traffic along Ladd Road and McHenry Avenue, respectively. The noise levels shown in Table 11-10 were utilized for calibrating the FHWA Traffic Noise Model.

11.4.1 Criteria for Determining Significance

The significance criteria for this analysis are based on the environmental checklist in Appendix G of the CEQA Guidelines and applicable jurisdictional noise standards. The Proposed Project would have a significant effect related to noise if it would:

- Expose persons to or generation of noise levels in excess of standards established in a local general plan or noise ordinance or in the applicable standards of other agencies;
- Expose persons to or generation of excessive ground-borne vibration or ground-borne noise levels;
- Result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project;
- Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project;
- For a project located within an airport land use plan area, or, where such a plan has not been adopted, within two miles of a public airport or public-use airport, would the project expose people residing or working in the project area to excessive noise levels; or
- For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels.

The Proposed Project sites (Sites A and B) would not be located within an airport compatibility land use plan with an adopted 60 dBA L_{dn} noise contour. The Proposed Project would not expose new receptors or workers on the project site to excessive airport noise levels. Therefore, these issues are not evaluated further.

Notes: dB = A-weighted decibels; Leq = the equivalent hourly average noise level; Lmax = maximum noise level. Monitoring locations correspond to those depicted in Figures 11-1 and 11-2.

Source: Data collected by AECOM in 2015

Generally, a project may have a significant effect on the environment if it would substantially increase the ambient noise levels for adjoining areas or expose people to severe noise levels. In practice, more specific professional standards have been implemented. These standards state that a noise impact would be significant if it would generate noise that would conflict with local planning criteria or ordinances or substantially increase noise levels at noise-sensitive land uses.

For the Proposed Project, the significance of anticipated noise effects is based on a comparison between predicted noise levels and noise criteria defined by Stanislaus County (Site A) or the City of Modesto (Site B). For this project, noise impacts would be significant if existing or proposed noise-sensitive land uses would be exposed to noise levels in excess of the *County of Stanislaus General Plan* Noise Element (Stanislaus County 2016), Stanislaus County Municipal Code standards, *City of Modesto General Plan* Noise Element (City of Modesto 2008), or City of Modesto Noise Ordinance standards described in Section 11.3, "Regulatory Setting," or if implementing the Proposed Project would increase ambient noise levels at noise-sensitive land uses in excess of those described above.

As stated in Stanislaus County Code Section 10.46.050, Exterior Noise Level Standards, in the event the measured ambient noise level exceeds the applicable noise level standard identified above, the ambient noise level shall become the applicable exterior noise level standard. For Site A, the measured ambient daytime hourly L_{eq} is 50 dBA and the nighttime hourly L_{eq} is 46 dBA. For Site B, the measured ambient daytime hourly L_{eq} is 57 dBA and the nighttime hourly L_{eq} is 55 dBA. These standards do not apply to construction noise that occurs between 7 a.m. and 7 p.m.

Unless otherwise stated, standards for interior noise levels would not be exceeded if exterior noise-level standards are achieved.

The following considerations apply to the first four significance thresholds:

- **Noise impacts from operation of Proposed Project facilities:** For all affected noise-sensitive uses, noise that would be generated by operation of Proposed Project facilities would be significant if it would cause the overall exterior noise level to exceed the "normally acceptable" noise standard compatible with exterior land uses (i.e., at Site A – 50 dBA L_{eq} daytime or 46 dBA L_{eq} nighttime at the noise-sensitive receptor property line; at Site B – 57 dBA L_{eq} daytime or 55 dBA L_{eq} nighttime at the noise-sensitive receptor property line) or if it would result in an increase of ambient noise levels by 3 dBA.

- **Noise impacts from increased daily traffic:** For all affected noise-sensitive uses, noise generated by an increase in daily traffic volumes caused by the Proposed Project would be significant if it would cause the overall exterior noise level to exceed the "normally acceptable" noise standard compatible with exterior land uses (i.e., 60 dBA L_{dn}/CNEL at outdoor activity areas), exceed the interior noise standard (i.e., 45 dBA L_{dn}/CNEL in any inhabitable room), or result in an increase of ambient noise levels by 3 dBA.

- **Exposure of sensitive receptors to, or generation of, excessive vibration levels:** Short- and long-term vibration impacts would be significant if project construction or operation would result in the exposure of sensitive receptors to, or would generate, vibration levels that exceed Caltrans' recommended standard of 0.2 in/sec PPV for the prevention of structural damage to normal buildings or the FTA's maximum acceptable vibration standard of 80 VdB regarding human response for residential uses (i.e., annoyance) at any nearby existing sensitive land uses.

- **Temporary, short-term noise impacts from construction:** Temporary, short-term noise impacts caused by construction would be significant if construction-generated noise levels exceed the Stanislaus County Municipal Code Specific Noise Source Standards Subsection E (Section 10.46.060, "Construction Equipment") and the City of Modesto Code Ordinances (Section 4-9.103, "Enumeration"). Project-related construction noise at exterior uses of residential properties (buildings) in the project vicinity would be considered significant if it would exceed 75 dBA during weekday nighttime hours of 7 p.m. to 7 a.m.

11.4.2 Methodology

Project details and observations during on-site noise monitoring were used to determine potential locations of sensitive receptors and potential noise-generating land uses on the project sites. Noise-sensitive land uses and major noise sources near the project sites were identified based on existing documentation (e.g., equipment noise levels and attenuation rates) and site reconnaissance data. Potential noise impacts from proposed stationary noise sources were assessed based on existing documentation (e.g., a noise impact assessment of Well 315 conducted by Acoustical Engineering Consultants in 2012) and site reconnaissance data.

To assess the impacts of potential short-term construction noise on sensitive receptors, the sensitive receptors and their relative exposure (considering intervening building façades and distance) were identified to assess the impacts of potential short-term construction noise on sensitive receptors. The construction noise that would be generated by the Proposed Project was predicted by using the Federal Transit Noise and Vibration Impact Assessment methodology (FTA 2006). The emission noise levels referenced and the usage factors were based on the FHWA Roadway Construction Noise Model. The noise levels of the specific construction equipment that would be used and the resulting noise levels where sensitive receptors are located were calculated.

Traffic noise modeling was conducted based on average daily traffic volumes obtained from traffic counts in Google Earth (2015). The FHWA Highway Traffic Noise Prediction Model (FHWA RD 77-108) was used to calculate traffic noise levels along affected roadways based on the trip distribution estimates from the field-counted traffic volumes available in Google Earth Pro from 2007 (Google Earth 2015). The project's contribution to the existing traffic noise levels along area roadways was determined by comparing the predicted noise levels at a reference distance of 100 feet from the roadway centerline for cumulative conditions with and without project-generated traffic.

Potential noise impacts from long-term (operation-related) stationary sources were assessed based on existing documentation (e.g., a noise impact assessment of Well 315 conducted by Acoustical Engineering Consultants in 2012) and site reconnaissance data. This analysis also includes an evaluation of the proposed noise-generating uses that could affect noise-sensitive receptors near the project site.

To assess the land use compatibility of the Proposed Project with on-site noise levels, predicted operational noise contours were used to determine whether development of the Proposed Project would exceed the applicable noise criteria.

Groundborne vibration impacts were qualitatively assessed based on existing documentation (e.g., vibration levels produced by specific construction equipment operations) and the distance of sensitive receptors from the given source.

11.4.3 Environmental Impacts

Impact NOISE-1: Substantial Temporary or Periodic Increase in Ambient Noise Levels (Less than Significant with Mitigation)

Construction and maintenance activities for the Proposed Project would generate short-term, temporary, and intermittent noise at adjacent noise-sensitive receptors. Noise levels generated during construction and maintenance would fluctuate depending on the particular type, number, and duration of use of various pieces of equipment. Noise from construction and maintenance activities is typically considered point-source noise. Noise levels drop off at a rate of 6 dBA per doubling of distance over hard site surfaces such as streets and parking lots, and at approximately 7.5 dBA per doubling of distance over soft site surfaces such as grass fields and open terrain with vegetation (FTA 2006).

Equipment required for construction and maintenance activities for the Proposed Project would likely consist of a paver, backhoe, bulldozer, tractor, well drilling equipment, and various trucks. The maximum noise levels produced by one of these types of equipment, at a

distance of 50 feet and without noise controls, could range from 80 to 85 dBA L_{max} (**Table 11-11**). Noise levels vary for individual pieces of equipment because equipment comes in different sizes and with different engines. Noise levels also vary as a function of the activity level or duty cycle. Typical construction projects, with equipment moving from one point to another, including work breaks and idle time, have long-term noise averages that are lower than many short-term noise events. In addition, because of the dynamic nature of a construction site, noise levels are calculated from the center of the activity. Using these parameters, project-related construction noise was estimated using the FHWA Roadway Construction Noise Model (FHWA 2006), including simultaneous operation of multiple pieces of equipment, with the results shown in Table 11-11.

Construction equipment noise levels at 50 feet would be as high as 87 dBA L_{eq} during the varying construction phase activities (Table 11-11). Assuming standard spherical spreading loss (a reduction of 6 dB per doubling of distance) and the highest unmitigated construction noise level of 87 dBA L_{eq} at 50 feet, the Proposed Project construction noise levels are estimated to range between 67 and 87 dBA L_{eq} at the nearest noise-sensitive uses, as shown in **Table 11-12**. These results represent the worst-case, conservative noise exposure because they do not consider noise attenuation associated with intervening structures and atmospheric absorption. Therefore, actual construction equipment noise levels at the nearest residences could be lower. Construction activities are not expected to occur on weekends or legal holidays, nor would nighttime work be conducted.

Table 11-12 shows that the resulting predicted interior noise levels at the closest noise-sensitive receptor could be as high as 62 dBA at residential uses west of Site B, specifically the residence at 117 Stewart Road. Stanislaus County Municipal Code Specific Noise Source Standards Subsection E (Section 10.46.060, "Construction Equipment") and the City of Modesto Code Ordinances (Section 4-9.103, "Enumeration") were used for this analysis. Project-related construction noise at exterior uses of residential properties (buildings) in the project vicinity would be considered significant if it would exceed 75 dBA during weekday nighttime hours of 7 p.m. to 7 a.m. These are the most restrictive criteria established by the County and City and provide the most conservative assessment of noise impacts at existing noise-sensitive uses in the project vicinity.

Construction noise associated with the Proposed Project is predicted to dominate the existing noise environment at adjacent receptors during all construction phases. Construction activities would be exempt from noise standards when operating during allowable daytime hours outlined above. However, because noise levels would increase by 3 dB or more, there is the potential for noise impacts at the residential uses adjacent to the Proposed Project due to projected-related construction noise.

Table 11-11. Construction Phases and Calculated Noise Levels

Phase	Equipment Type	Noise Level at 50 Feet	
		L_{max}, dBA	L_{eq}, dBA
Site Preparation Phase	Excavator	85	81
	Dump Truck	84	80
	Dozer	85	81
Maximum and Combined Noise Level		85	87
Well Drilling	Drill Rig Truck	84	77
	Jack Hammer	85	78
	Generator	82	79
Maximum and Combined Noise Level		85	86
Pipeline	Excavator	85	81
	Crane	85	77
	Dozer	85	81
Maximum and Combined Noise Level		85	87
Site Restoration	Paver	85	82
	Concrete Mix Truck	85	81
	Man Lift	85	78
Maximum and Combined Noise Level		85	87

Notes: dB = decibels; Leq = equivalent sound level (the sound energy averaged over a continuous 15-minute to 1-hour period); Lmax = maximum instantaneous sound level

1 15 dB reduction for interior noise level with doors/windows open (USEPA 1974)

2 25 dB reduction for interior noise level with doors/windows closed (USEPA 1974)

Source: Data compiled by AECOM in 2015

The Program EIR identified construction noise as less than significant if no nighttime work is proposed, and identified Mitigation Measures NOISE-1: *Employ Noise-reducing Construction Practices* and NOISE-2: *Limit Nighttime Construction Noise* to reduce project-related construction impacts to a less-than-significant level. Mitigation Measure NOISE-2: *Limit Nighttime Construction Noise* was identified in the Program EIR but is not applicable to the Proposed Project because nighttime work is not proposed. Mitigation Measure NOISE-1 has been modified to ensure that construction activities associated with the Proposed Project would comply with the County's Municipal Code and the City's Code of Ordinances noise standards. Furthermore, the measure has been modified because nighttime construction work is not anticipated for this project, eliminating the potential for sleep disturbances, and noise level standards do not apply to construction noise that occurs between the daytime hours of 7 a.m. and 7 p.m. Therefore, with implementation of **Mitigation Measure NOISE-1 (Employ Noise-Reducing Construction Practices)** as modified below from the Program EIR, temporary, short-term project-generated construction noise would be considered less than significant.

Mitigation Measure NOISE-1: Employ Noise-reducing Construction Practices.

The following measures shall be implemented by the City or its contractor to reduce adverse effects from construction noise:

- At least two weeks prior to the start of construction, provide written notification to the potentially affected property owners and residents within 500 feet of the project site, identifying the type, duration, and frequency of construction activities to residences directly exposed to the project noise. Notification of heavy construction activities shall include anticipated dates and hours during which construction activities are anticipated to occur. Notification materials shall also identify a mechanism for residents to register complaints with the City through contact information, including a daytime telephone number, for the project representative to be contacted in the event that construction noise levels are deemed excessive, overly intrusive or construction occurs outside the permitted hours. Recommendations to assist noise-sensitive land uses in reducing interior noise levels (e.g., closing windows and doors) shall be included in the notification.

- Designate a disturbance coordinator and conspicuously post this person's number around the project sites, in adjacent public spaces, and in construction notifications. The disturbance coordinator shall be responsible for responding to any complaints about construction activities. The disturbance coordinator shall receive all public complaints about construction disturbances and be responsible for determining the cause of the complaint and implementation of feasible measures to be taken to alleviate the problem.

- Locate stationary or fixed construction equipment (e.g., compressors and generators), construction staging and stockpiling areas, and construction vehicle routes as far as feasible from noise-sensitive receptors.

- Prohibit the start-up of machines or equipment before 7 a.m. and after 7 p.m. Monday through Saturday and before 9 a.m. and after 5 p.m. on Sunday.

- Prohibit use of materials and equipment deliveries before 7 a.m. and after 7 p.m., Monday through Saturday and before 9 a.m. and after 5 p.m. on Sunday.

- Restrict the use of bells, whistles, alarms, and horns to safety-warning purposes.

- Equip all construction equipment with noise-reduction devices such as mufflers to minimize construction noise and operate all internal combustion engines with exhaust and intake silencers.

- Use noise-reducing enclosures around stationary noise generating equipment.

- To the extent feasible, the simultaneous operation of multiple construction equipment shall be limited.

- Install temporary barrier between noise sources and noise sensitive receptors, or the use of intervening structures (i.e.; on-site construction trailer, stockpiles).

Impact NOISE-2: Exposure of Persons to, or Generation of, Excessive Groundborne Vibration or Groundborne Noise Levels during Project Construction (Less than Significant)

Caltrans vibration standards state that new development should minimize vibration impacts to adjacent uses during demolition and construction activities. A vibration limit of 0.20 in/sec PPV was used to evaluate the potential for cosmetic damage to buildings of normal, conventional construction. A vibration level of 85 VdB was used to evaluate human response to groundborne vibration levels, as shown in Table 11-3 above.

Groundborne vibration would occur during construction of the Proposed Project due to equipment operation and transport of construction equipment and materials to and from the project sites. **Table 11-13** shows the results of the construction vibration analysis related to the Proposed Project.

Table 11-13. Project Construction Vibration Levels at Closest Sensitive Receptors

Receiver	Location	Shortest Distance (feet) Between Noise-Sensitive Uses and Proposed Construction Areas	Project Vibration Levels	
			PPV[1]	VdB[2]
LT-01	Front yard of 816 Ladd Road	130	0.008	66
LT-02	Beside pool in backyard of 117 Stewart Road	50	0.031	78
ST-01	Backyard of 706 Ladd Road	100	0.011	69
ST-02	Behind 625 Ladd Road	500	0.001	48
ST-03	7008 Hartley Court (vacant land)	100	0.011	69
ST-04	Front yard of 201 Stewart Road	300	0.002	55

Notes: PPV = Peak particle velocity; VdB = velocity level in decibels and based on the root mean square velocity amplitude.

Source: FTA 2006

Operation of heavy-duty construction equipment would produce groundborne vibrations measuring approximately 87 VdB (0.089 in/sec PPV) at a distance of 25 feet (FTA 2006; Caltrans 2004). For Site A, the distance between proposed construction activities and the closest acoustically sensitive use (706 Ladd Road residence) would be approximately 100 feet (Table 11-13). Assuming a standard reduction of 9 VdB per doubling of distance (FTA 2006), the project-related construction vibration level at 706 Ladd Road would be approximately 69 VdB (0.011 in/sec PPV). This level of vibration is well below the Caltrans vibration standard of 0.2 in/sec PPV for residential buildings. Thus, construction activities at Site A would not expose persons to, or generate, excessive groundborne vibration or

groundborne noise levels. As a result, project-generated vibration levels at Site A would be **less than significant**.

For Site B, the distance between proposed construction activities and the closest acoustically sensitive uses (117 Stewart Road residence) would be approximately 50 feet (Table 11-13). Assuming a standard reduction of 9 VdB per doubling of distance (FTA 2006), the project-related construction vibration level at 117 Stewart Road would be approximately 78 VdB (0.03 in/sec PPV). This level of vibration is well below the Caltrans vibration standard of 0.2 in/sec PPV for residential buildings. Thus, construction activities at Site B would not expose persons to, or generate, excessive groundborne vibration or groundborne noise levels. As a result, project-generated vibration levels at Site B would be **less than significant**.

Impact NOISE-3: Substantial Permanent Increase in Ambient Noise Levels (Less than Significant with Mitigation)

Long-term operation of the Proposed Project would result in the operation of new noise-generating stationary equipment. The Proposed Project would include the long-term operation of water wells and pumps, standby generators, and booster pump stations at Site A and Site B. Pumping frequency and duration would vary throughout the year depending upon need and based upon system pressure or tank level, ranging from as much as 20 hours per day during the summer months to as few as 2 hours per day in the winter. Pumping is expected to occur for an annual average of 8 hours per day.

Site A: Ladd Road

Site A would consist of an aboveground groundwater storage tank, water well and pump, standby generator, and booster pump station. The pump station building would be a masonry block building housing the production well, booster pumps, disinfection equipment, ancillary valves and flow meters, and electrical equipment.

The pump station building would have various sound attenuation features, including wall panels, fans, and louvers to reduce noise related to removing heat generated within the pump and electrical rooms. Metal wall panels would achieve a noise reduction coefficient of approximately 0.90. The pump station building would be ventilated by one side-wall-mounted exhaust fan with a capacity of 4,500 cubic feet per minute. Exhaust fans would have the lowest possible noise measurement unit. Ducting in the building would be designed to minimize noise. The intake and exhaust pump station louvers would be sized to minimize air flow noise.

Production well pumping would vary as previously described. The Proposed Project includes up to four 60-hp electric pumps. Two pumps would be on-duty, one would be for standby, and the fourth pump is intended for future buildout. The well and booster pumps would be housed inside the pump station building.

A standby diesel generator and an aboveground diesel storage tank would be installed on a concrete pad. The generator would be equipped with critical grade mufflers for the exhaust system and level 2 sound housing to achieve an approximate sound level of 75 dB within 30 feet of the unit.

Operational noise generated at Site A is assumed to be similar to operational noise at Well 315 (AEC 2012). Therefore, operational noise at Site A, including future use of a fourth pump, would be reduced through site design, specifically building materials of the fully enclosed pump station building, surface treatments, and acoustically designed louvers, which would reduce noise levels from 71 dBA at 23 feet to 46 dBA at 30 feet, which would achieve and not exceed the City's noise thresholds. Project-related operational noise at Site A would be considered exempt from Stanislaus County noise regulations because the Proposed Project is a public utility. However, with the incorporated site design features, operational noise would comply with the County's Municipal Code and the City's Code of Ordinances noise standards. Thus, the project would not result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project. As a result, project-generated operational noise levels for Site A would be **less than significant.**

Site B: McHenry Avenue

Site B would encompass approximately 0.4 acre. The facilities at this site would consist of a production well and pump, standby generator, disinfection facilities, connecting lines to the City's existing distribution system down McHenry Avenue, and space for a future treatment unit and treatment filters. These facilities would be fully enclosed by a 12-foot-tall concrete block wall with a 24-foot-wide gate; there would be no roof over these facilities. Equipment at the site would consist of an aboveground pump motor, engine generator, controls, chlorinator, and associated plumbing and equipment.

The production well pump and standby generator are the two main sources of operational noise associated with the well. The analysis assumed an aboveground pump. To evaluate potential effects of the Proposed Project, noise levels from an existing City well (Well 62 at Freedom Park) with similar equipment were evaluated (AEC 2012). Well 62 uses a Goulds (ITT Corporation) pump with a 200-hp Emerson motor and a 300-kW standby diesel generator inside a Quiet Site Level II enclosure by Cummins. Noise levels from the Cummins generator measured 71 dBA at a distance of 23 feet diagonally from the air intake of the unit. The pump noise measured 72 dBA at a distance of 18 feet from the motor (70 dBA at 23 feet), with a sound spectrum in the higher frequencies. The generator at Well 62 dominated the existing background noise levels, while the pump-only operational noise was much less noticeable, raising noise levels by 1 dBA. Subjectively, pump "whine" noise was barely audible over background noise levels (AEC 2012). Similar noise levels were assumed to be generated by the Proposed Project at Site B.

Based on the proposed site plan for Site B, the nearest adjacent residential property, at 117 Stewart Road, is approximately 30 feet west of the proposed location of the pump motor. The topography of the site is such that the pump, generator, and 12-foot-tall block wall would be at ground level, 7 feet below the grade of the house pad for the residence at 117 Stewart Road. It was assumed that the ground level of the residential property is 7 feet above the pump grade at a distance of approximately 70 feet from the property line.

Evaluation of the proposed facilities at Site B was conducted using an identical generator set and enclosure to those at Well 62 (300-kW standby diesel generator inside a Quiet Site Level II enclosure by Cummins). Noise levels are predicted to reach 48 dBA during daytime and nighttime at the property line of 117 Stewart Road, based on data from the 200-hp well pump described above (AEC 2012) and in consideration of the proposed 12-foot-tall block wall around the well facility. Noise levels are expected to be reduced to 39 dBA at the nearest

residential building façade, an additional 70 feet from the property line, and therefore would not disturb sleep patterns within the sleeping areas of the residence. The results indicate that sound levels could reach 58 dBA within the residential property line of 117 Stewart Road, adjacent to Site B, if unmitigated.

These noise sources would be considered exempt from Stanislaus County noise regulations because the Proposed Project is a public utility. However, local noise regulations were evaluated as well to determine the significance of potential noise impacts generated by the Proposed Project.

When the pump operates during nighttime hours, it is expected to exceed the County's noise standard of 45 dBA at the property line of 117 Stewart Road. Daytime operation of the pump is predicted to be less than the County's 55 dBA noise standards. Subjectively, the pump would be barely audible over background sources (ambient 58 dBA L_{eq}) during daytime hours, with the source becoming more audible as background levels drop during nighttime hours (ambient 55 dBA L_{eq}).

Routine testing of the generator set would occur one to two times per month. During these tests, sound levels would exceed the local noise regulations. However, the generator is exempt from noise regulations when providing emergency power to the pump station and during short-term testing periods.

Operational noise associated with the Proposed Project (58 dBA unmitigated) is predicted to dominate the existing noise environment when background levels are low (nighttime) at the residential property at 117 Stewart Road. Operational activities are considered exempt from noise standards when operating a public utility or under emergency circumstances. However, the increase in noise would be noticeable (3 dBA) and would create the potential for nighttime noise impacts (ambient 55 dBA L_{eq} nighttime) at the 117 Stewart Road residence west of the Proposed Project site. Thus, the project would result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project and would exceed nighttime stationary noise level standards. As a result, project-generated operational noise levels for Site B would be significant.

The Program EIR prescribed Mitigation Measure NOISE-3: *Employ Noise-reducing Methods during Operations* to reduce impacts to a less-than-significant level. This mitigation measure has been modified to ensure that operational impacts associated with the Proposed Project would comply with the County's Municipal Code and the City's Code of Ordinances noise standards, reducing unmitigated noise levels from 71 dBA at 23 feet to 48 dBA at 30 feet. Therefore, with implementation of **Mitigation Measure NOISE-2 (Employ Noise-reducing Methods during Operations at Site B),** this impact would be **less than significant.** This measure would not apply to Site A, where project impacts would be less than significant.

> **Mitigation Measure NOISE-2: Employ Noise-reducing Methods during Operations at Site B.**
>
> The City shall implement noise-reducing methods so that noise from well operations at Site B, located at the corner of McHenry Avenue and Stewart Road, does not exceed County noise-level standards at adjacent residences. Measures to be implemented shall include the following:

Generator

1. Project specifications shall include generator sound level limits of 73 dBA at 23 feet, similar to those at the City's Well 62 facility.

2. Noise control specifications for the generator set shall include a sound-attenuated enclosure for the pump and a sound wall within the facility wall. Specifications for the pump enclosure and sound wall are prescribed in item 5 below.

3. Routine testing of the generator shall be performed during daytime hours, between 10 a.m. and 5 p.m., when background sound levels are highest, to minimize potential noise impacts.

4. Obtain the services of a qualified acoustical consultant to conduct project-related operational noise measurements at sensitive receptor locations adjacent to the Proposed Project site to ensure that noise-reducing measures comply with applicable codes. If noise measurements do not comply with applicable codes, additional noise reduction measures should be designed and incorporated.

With these measures, no additional sound reduction would be required to reduce sound levels due to the generator set.

Pump Enclosure and Sound Wall

5. The pump enclosure shall be designed to the following specifications to ensure operational sound levels are reduced below County standards:

   (a) Install a modular sound wall with an optional removable roof adjacent to the pump. The sound-absorptive modular barrier system shall be installed along the west edge of the pump base to a height of at least 10 feet above grade. The barrier system will wrap around the north and south sides of the pump to create a three-walled system with integrated sound absorption. In general, acoustical barriers perform best when close to the noise source. Acceptable products include the following or an approved equivalent: Kinetics Noiseblock Barrier Panel System, Noise Barriers LLC QuietLine Barrier Walls, Sound Fighter Systems LSE.

   (b) Include an insulated sheet metal shroud around the pump motor and shaft. Construct the sheet metal shroud to block the line of sight to the motor ventilation openings. Construction materials shall include exterior-grade sheet metal used for heating, ventilation, and air conditioning (HVAC) ducts and acoustical duct liner.

   (c) If the above measures cannot be employed for the pump, one of the following measures will be implemented to meet the County's nighttime noise threshold of 45 dBA:

      i. Install a submersible pump that would place the motor under water and virtually eliminate the sound source.

ii. Increase the height of the equipment yard sound wall above 12 feet. Based on the noise analysis, increasing the equipment yard wall height to 13 feet would result in an additional 2 dBA of attenuation and a predicted sound level of 45 dBA. A 14-foot-tall wall could reduce sound levels by an additional 1 dBA.

iii. Construct a barrier adjacent to the motor with a removable roof barrier directly over the motor. This secondary barrier directly adjacent to the pump motor on the west side would effectively reduce sound levels below the nighttime noise threshold. The detachable roof would still provide access to the motor for servicing and removal.

The barrier adjacent to the motor shall be designed to the following specifications to ensure operational sound levels would be reduced below County standards:

- The barrier shall be constructed around the equipment within the wall surrounding the facility.
- The barrier shall weigh a minimum of 4 pounds per square foot. Painted and sealed concrete block easily meets this weight requirement.
- The barrier shall be continuous along its length and width with no gaps in the construction, including at the ground. The equipment yard pad shall be sloped such that weeping holes are only needed on the north and east sides of the facility.

iv. Construct an insulated sheet metal shroud around the motor and shaft. This metal shroud would accommodate air circulation requirements for the motor, but would divert sound energy away from the motor openings and base near the shaft. Sound energy would be attenuated by sound-absorbing material within the metal shroud.

Impact NOISE-4: Substantial Permanent Increase in Ambient Traffic Noise Levels (Less than Significant)

Implementation of the Proposed Project would result in an increase of traffic volumes due to the addition of construction-generated traffic and long-term operation. Construction-generated traffic on the local roadway network was analyzed based on the construction haul truck requirements presented in Table 2-1 provided in Chapter 2, *Project Description*. As such, all materials would be transported over designated haul routes on the local roadway network, thus increasing traffic volumes along affected roadway segments. Long-term operation-related traffic volume increases would be considerably less than construction-related traffic volume increases.

To examine the effect of project-generated traffic increases, traffic noise levels associated with the Proposed Project were calculated for roadway segments in the project area using the FHWA Highway Noise Prediction Model (FHWA-RD-77-108). Traffic noise levels were modeled under existing conditions, with and without implementation of the Proposed

Project's construction-related traffic and operational traffic. ADT volumes and the distribution thereof were obtained from traffic counts in Google Earth (based on historical traffic data) (Google Earth 2015). Vehicle speeds and truck volumes on local area roadways were determined based on field observations and posted vehicle speed limits. **Table 11-14** summarizes the modeled traffic noise levels at 100 feet from the centerline of affected roadway segments. Additional input data included day/night percentages of automobiles, medium and heavy trucks, vehicle speeds, ground attenuation factors, and roadway widths. Refer to Appendix G for complete modeling inputs and results.

Table 11-14. Predicted Traffic Noise Levels

Roadway	Segment		Ldn at 100 Feet, dBA					
	From	To	No Project	Plus Construction	Net Change	Plus Project	Net Change	Significant Impact?
Ladd Road	Tully Road	St. John Road	67	68	1	68	1	No
	St. John Road	McHenry Avenue	66	67	1	67	1	No
McHenry Road	Ladd Road	Stewart Road	67	67	1	67	1	No
	Stewart Road	Hogue Road	67	67	1	67	1	No
Stewart Road	McHenry Avenue	Del Cielo Way	56	58	2	58	2	No

Notes: dB = A-weighted decibels; Ldn = day-night average noise level; U.S. 50 = U.S. Highway 50.

Traffic noise levels are predicted at a standard distance of 100 feet from the roadway centerline and do not account for shielding from existing noise barriers or intervening structures. Traffic noise levels may vary depending on actual setback distances and localized shielding.

"Net change" for both construction-related ("plus construction") and operational ("plus project") conditions is calculated from the no-project condition.

Source: Data modeled by AECOM in 2015, using ADT volumes in Google Earth (2015).

The modeling shows that implementing the Proposed Project would not result in substantial increases in traffic noise levels compared to noise levels without the project. Based on volume, trip generation, and distribution data to model future traffic noise levels with and without the project, project-generated traffic noise increases would range from 0 to 2 dBA L_{dn}, as shown in Table 11-14. A project-related noise level increase of 5 dBA or greater would be significant where ambient noise levels are less than 60 dBA L_{dn}/CNEL; an increase of +3 dBA would be significant where ambient noise levels exceed 60 dBA L_{dn}/CNEL. Thus, short- and long-term noise levels from project-generated traffic sources would not result in a substantial permanent increase in ambient noise levels (3 dBA or greater) or exceed applicable transportation noise standards at sensitive receptors. As a result, project-generated construction-related and operational traffic noise levels would be **less than significant**.

11.4.4 Cumulative Impacts

Impact NOISE-5: Cumulative Noise Impacts (Less than Significant)

Noise is a localized occurrence and attenuates rapidly with distance. Therefore, only future cumulative development projects in the direct vicinity of the project site would have the potential to add to anticipated project-generated stationary-source noise levels, resulting in cumulative noise impacts.

Project implementation would result in significant noise impacts associated with construction activities and noise generated by on-site stationary equipment. Noise impacts from construction activities and on-site stationary sources would be reduced to less-than-significant levels with implementation of Mitigation Measure NOISE-1 (Employ Noise-reducing Construction Practices) for Sites A and B for construction activities and Mitigation Measure NOISE-2 (Employ Noise-reducing Methods during Operations at Site B) for Site B relative to stationary-source noise, thus complying with the City's and County's maximum allowable noise standards.

Stationary-source noise associated with the Proposed Project could potentially result in exceedance of the City's noise regulations at sensitive receptors. The noise from any stationary noise sources would be controlled at the source (by means of noise walls, enclosures, louvers, and site planning) in accordance with City and County standards, but there is no guarantee that all foreseeable future projects would include such noise controls as part of their proposals. Therefore, significant cumulative noise impacts associated with stationary noise sources could occur. As mentioned above, implementation of Mitigation Measure NOISE-2 for Site B would reduce project-generated stationary-source noise impacts to a less-than-significant level; thus, project implementation would not result in a considerable contribution to significant cumulative stationary-source noise impacts.

The City's noise regulations limit construction activities to daytime hours. There are no other planned construction projects anticipated in the area of the Proposed Project. Therefore, significant cumulative noise impacts associated with construction activities would not occur. Implementation of Mitigation Measure NOISE-1 for construction activities at Sites A and B would reduce project-related construction-noise impacts to a less-than-significant level. Coupled with the fact that noise diminishes with distance, project-related construction would not result in a considerable contribution to any significant cumulative noise impacts.

Construction noise and stationary-source noise can be controlled on site at the point of origin; however, traffic noise may extend beyond a project site along existing and proposed off-site and on-site roadways, resulting in significant traffic noise impacts on sensitive uses along these roadways. Because full buildout of the Proposed Project would not result in a perceptible increase in traffic noise on project-area roadways, the Proposed Project would not result in a considerable contribution to a significant cumulative impact. Thus, the traffic noise impacts from the Proposed Project are considered cumulatively **less than significant**.

Chapter 12
Alternatives

12.1 Introduction

This chapter describes the alternatives considered for the Proposed Project and evaluates their environmental impacts as compared with those of the Proposed Project. The chapter then describes the alternative development process, alternatives that were considered, and those that were considered but dismissed. The chapter closes with a discussion regarding the environmentally superior alternative.

The purpose of the alternatives analysis in an EIR is to describe a range of reasonable, potentially feasible alternatives to the project that would feasibly attain most of the identified project objectives, but would reduce or avoid one or more of the project's significant impacts. A more detailed description of the CEQA regulatory requirements for alternatives analysis is provided in Section 12.1.1 below.

12.1.1 Regulatory Requirements

CEQA requires that an EIR evaluate a reasonable range of potentially feasible alternatives to the Proposed Project, including a No Project Alternative. The No Project Alternative allows decision makers to compare the impacts of approving the action against the impacts of not approving the action. While there is no clear rule for determining a reasonable range of alternatives to the Proposed Project, CEQA provides guidance that can be used to define the range of alternatives for consideration in the environmental document.

The alternatives described in an EIR must feasibly accomplish most of the basic project objectives, should reduce or eliminate one or more of the significant impacts of the Proposed Project (although the alternative could have greater impacts overall), and must be potentially feasible (CEQA Guidelines Section 15126.6[a]). In determining whether alternatives are potentially feasible, Lead Agencies are guided by the general definition of feasibility found in CEQA Guidelines Section 15364: "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors." In accordance with CEQA Guidelines Section 15126.6 (f), the Lead Agency should consider site suitability, economic viability, availability of infrastructure, general plan consistency, other regulatory limitations, and jurisdictional boundaries in determining the feasibility of alternatives to be evaluated in an EIR.

An EIR must briefly describe the rationale for selection or rejection of alternatives and the information that the Lead Agency relied on in making the selection. The EIR also should identify any alternatives that were considered by the Lead Agency but were rejected as infeasible during the scoping process, along with a brief explanation of the reasons for their exclusion (CEQA Guidelines Section 15126.6[c]).

An EIR's analysis of alternatives is required to identify the environmentally superior alternative among all those considered (CEQA Guidelines Sections 15126.6(a) and 15126.6(e)(2). If the No Project Alternative is identified as the environmentally superior alternative, then the EIR must also identify an environmentally superior alternative among the other alternatives.

These guidelines were used in developing and evaluating the alternatives to the Proposed Project, as described below.

12.2 Alternatives Development Process

The Proposed Project's purpose and objectives, as well as its potentially significant environmental impacts as described in Chapters 4 through 11 of this DEIR, were considered while developing alternatives. Alternatives were developed to achieve most of the basic objectives of the Proposed Project, although the selected alternatives may reach these objectives to a greater or lesser extent than the Proposed Project. The alternatives also were selected to reduce the significance of anticipated adverse environmental impacts associated with the Proposed Project. A reasonable range of potentially feasible alternatives is presented in Section 12.3, "Alternatives Considered," describing their potential impacts as well as benefits.

12.2.1 Project Goals and Objectives

The objectives of the Proposed Project are as follows:

- Correct existing deficiencies in the Del Rio water system to meet design pressure and volume storage requirements;
- Ensure sufficient system pressure to provide firefighting flow capacity;
- Improve water system operational flexibility and reliability; and
- Allow for additional water supply and storage volume to accommodate anticipated future growth in the Del Rio area.

12.2.2 Significant Environmental Impacts of the Proposed Project Reduced to a Less-than-Significant Level with Mitigation

Several impacts have been identified as significant, but would be mitigated to a less-than-significant level through implementation of mitigation measures. These impacts are listed below and in Table ES-1 in the *Executive Summary* of this DEIR:

- Impact AES-1: Substantial Degradation of the Visual Character or Quality of the Site and its Surroundings from Project Construction
- Impact BIO-1: Construction-related Loss of Occupied Burrowing Owl Habitat
- Impact BIO-2: Construction-related Loss of Swainson's Hawk Foraging Habitat

- Impact BIO-3: Construction-related Impacts on Nesting Swainson's Hawks
- Impact BIO-4: Construction Disturbance of Tricolored Blackbird and Other Migratory Birds, Including Raptors
- Impact BIO-5: Disturbance of Roosting Areas for Bats, including Special-status Bat Species
- Impact BIO-7: Interference with Wildlife Movement, Established Wildlife Corridors, or the Use of Native Wildlife Nursery Sites
- Impact BIO-8: Conflict with Local Policies or Ordinances Protecting Biological Resources
- Impact BIO-9: Cumulative Biological Resource Impacts
- Impact CUL-2: Potential for a Substantial Adverse Impact on Archaeological Resources from Construction
- Impact CUL-3: Potential to Directly or Indirectly Destroy a Unique Paleontological Resource or Site, or Unique Geological Feature
- Impact CUL-4: Potential for Disturbance of Human Remains, including Those Interred Outside of Dedicated Cemeteries
- Impact CUL-5: Potential to Cause a Substantial Adverse Change in the Significance of a Tribal Cultural Resource
- Impact CUL-6: Potential to Eliminate Important Examples of the Major Periods of California History or Prehistory
- Environmental Checklist Section VI.a.iii: Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction
- Environmental Checklist Section VI.a.iv: Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides
- Environmental Checklist Section VI.d: Location on expansive soil, creating substantial risks to life or property
- Impact GHG-1: Generate Substantial GHG Emissions, Either Directly or Indirectly, from Project Construction, Land Use Changes, and Operation
- Impact GHG-2: Potential to Conflict with Applicable Plans, Policies, or Regulations Adopted for the Purpose of Reducing Emissions of GHGs
- Impact GHG-3: Cumulative GHG Impact

- Environmental Checklist Section VIII.d: Located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, create a significant hazard to the public or the environment
- Impact GRW-1: Potential to Lower the Groundwater Table and Adversely Affect Nearby Existing Wells
- Impact NOISE-1: Substantial Temporary or Periodic Increase in Ambient Noise Levels
- Impact NOISE-3: Substantial Permanent Increase in Ambient Noise Levels

12.2.3 Significant and Unavoidable Environmental Impacts of the Proposed Project

The following impacts have been identified as significant and unavoidable in this EIR:

- Impact AIR-7: Cumulative Impact on Air Quality
- Impact GHG-2: Potential for Conflict with Applicable Plans, Policies or Regulations Adopted for the Purpose of Reducing Emissions of GHGs
- Impact GRW-4: Cumulative Contribution to Chronic Overdraft of Groundwater Subbasin

The following impacts relevant to the Del Rio Tank and Wells Project were previously identified as significant and unavoidable in the Program EIR (City of Modesto 2010):

- Impact CUM-3: Emissions of Greenhouse Gases
- Impact CUM-4: Result in a Cumulatively Considerable Net Increase of Any Criteria Pollutant for which the Program Region is in Nonattainment under an Applicable Federal or State Ambient Air Quality Standard

12.3 Alternatives Considered

The No Project Alternative is considered in this EIR, as required by CEQA, to allow decision makers to compare the potential impacts of implementing the Proposed Project against the impacts of not implementing it. In addition, the following alternatives were considered because they meet most of the Proposed Project's objectives, are feasible, and avoid or substantially reduce one or more significant impacts of the Proposed Project:

- Alternative 1 – Construct at Existing City Well Locations
- Alternative 2 – Connect to the City's Supply System

12.3.1 No Project Alternative

Characteristics of this Alternative

CEQA requires analysis of the No Project Alternative. Under this alternative, no new water supply infrastructure would be constructed. Existing system deficiencies would continue to exist, and new development would be constrained by lack of water supply infrastructure. Where alternative sources of potable water are available, new development might still occur. This alternative would not meet the basic objective of the Proposed Project, namely, to construct capital improvements needed to provide and maintain reliable water service to existing and future customers in the Del Rio service area.

Impact Analysis

Aesthetics – Because no new physical structures would be built, there would be no impact on visual resources under this alternative.

Air Quality – Because no new construction would occur, there would be no construction or operational air pollutant emissions generated under this alternative.

Biological Resources – Since no new facilities would be built, there would be no construction-related or operational effects on biological resources.

Cultural Resources – As no new facilities would be constructed, there would be no impacts on cultural resources.

Global Climate Change – Because no new facilities would be built, there would be no construction-related or operational emissions, and therefore no impacts on GHG emissions.

Groundwater – No new facilities would be constructed that could cause impacts on groundwater levels or quality. However, existing system deficiencies in the Del Rio water system would not be corrected; as such, these existing adverse conditions would continue. This alternative, by constraining planned development, would eliminate the increase in demand for groundwater.

Land Use and Planning – This alternative would not result in any development that would have potential to physically divide an established community or potentially conflict with relevant general plans by failing to provide the necessary infrastructure to support the development envisioned in those plans.

Noise – No new facilities would be constructed; thus, new sources of noise would not be generated by construction or operation. As such, there would be no impact.

12.3.2 Alternative 1 – Construct at Existing City Well Locations

Characteristics of this Alternative

The City currently owns property and operates groundwater wells at three locations in the Del Rio service area:

- Well 289 located on Beltis Drive on the east side of Del Rio,
- Well 271 on Country Club Drive and Del Rio Avenue on the southwest side of Del Rio, and
- Well 282 on Hillcrest Drive on the west side of Del Rio.

Under this alternative, in lieu of purchasing new property for the proposed wells and tank, the City would design the proposed new facilities to fit within their existing well properties.

Well 271 is located near the country club golf course in a residential area, but the property adjacent to Well 271 is vacant, and additional land could be secured to accommodate a new well and storage tank. Well 271 is currently operating at 50 percent capacity due to the well's old age. Under this alternative, this well would be replaced onsite with a new well.

Well 289 is located in a residential neighborhood and adjacent to railroad tracks. If additional property could not be secured adjacent to Well 271, the property at Well 289 could accommodate a 0.25-million-gallon storage tank, and the existing well on site could be expanded to meet the City's pumping needs. The proposed storage tank at this site would likely be smaller in diameter and taller than the tank in the Proposed Project.

Well 282 is located in a residential neighborhood.

This alternative would not require transmission pipelines, because the well sites would already be connected to the existing water distribution system. This alternative would meet all of the project objectives.

Impact Analysis

Aesthetics – Under this alternative, new aboveground facilities would be constructed that could have adverse effects on visual resources. The existing sites currently support water supply facilities, and these features would be expanded under this alternative. These impacts would occur in different locations but, similar to the Proposed Project, would generally affect nearby residential uses. Since this alternative includes expansion of existing water supply infrastructure and may not incorporate landscaping or berms for screening purposes, this alternative could result in greater aesthetic impacts than those of the Proposed Project.

Air Quality – Construction-related and operational emissions of air pollutants under this alternative would be similar to those for the Proposed Project; nearby sensitive receptors would be similar in nature but greater in number.

Biological Resources – Similar to the Proposed Project, the sites proposed under this alternative are in residential areas with vacant land adjacent or nearby; impacts would be similar.

Cultural Resources – Impacts on historic, archaeological, and paleontological resources would be similar to those of the Proposed Project. No demolition of existing structures would be required.

Global Climate Change – Under this alternative, facilities would be constructed and operated in a similar manner to the Proposed Project. Construction and operation-related

emissions would be similar to the Proposed Project, though to a lesser extent due to the reduced need for pipeline construction activities.

Groundwater – This alternative proposes to install wells with similar capacity and operational characteristics as the Proposed Project. Therefore, impacts on groundwater level drawdown and the potential for related subsidence would be similar to those of the Proposed Project.

Land Use and Planning – The alternative would involve construction on property currently utilized for water supply and would not result in any development that would physically divide an established community.

Noise – Under this alternative, new sources of noise would be generated by construction and operation of additional facilities on sites currently supporting similar facilities. Operational noise generated by the additional pumps at the sites could increase compared to existing site conditions. These impacts would be similar to or greater than those of the Proposed Project because more residential sensitive receptors are located adjacent to the existing well sites compared to the sites in the Proposed Project.

12.3.3 Alternative 2 – Connect to the City's Supply System

Characteristics of this Alternative

Under this alternative, the City would construct a 3-mile pipeline to directly connect the Del Rio community to the City's water supply system. The pipeline would extend along the existing railroad track easement from the northern border of the City's limits north to St. John Road and Ladd Road, where the pipeline would connect to existing transmission pipes that serve the Del Rio community. The pipeline would cross two Modesto Irrigation District canals and two streets. Booster pump stations may be needed to transfer water from the City's system north to Del Rio.

Together with the City's existing groundwater wells, the new pipeline connection would meet the Proposed Project objectives related to water system pressure and operational flexibility, and would improve water supply reliability particularly during prolonged drought years when groundwater is less reliable. This alternative would utilize the City's existing water supply sources, including surface water supplies purchased from other water right holders, such as Modesto Irrigation District.

Impact Analysis

Aesthetics – Under this alternative, construction of the pipeline would have adverse effects on visual resources. However, the pipeline would be underground and would not be visible once construction is completed. Construction impacts would occur in different locations but at a similar level of effect compared to the Proposed Project. Permanent impacts of this alternative would be similar to those of the Proposed Project because no aboveground well facilities or tanks would be constructed, but pump stations would be constructed and operated.

Biological Resources – Compared to the Proposed Project, the pipelines proposed under this alternative would have less impact on biological resources because fewer facility

operations would take place. However, pipeline crossings of Modesto Irrigation District canals would have the potential to result in impacts on aquatic resources.

Cultural Resources – Impacts on historic, archaeological, and paleontological resources would be similar to those of the Proposed Project. No demolition of existing structures would be required; excavation would extend for a greater distance, expanding the area of potential effects.

Global Climate Change – Under this alternative, fewer facilities would be constructed and operated compared to the Proposed Project. Construction emissions would be similar to the Proposed Project, although to a lesser extent due to the reduced need for construction of a storage tank. Operational emissions would be similar to the Proposed Project due to the booster pump stations, which would be similar to the pump facilities included in the Proposed Project.

Groundwater – Impacts related to groundwater drawdown and the related potential for subsidence would be reduced under this alternative because the expansion of water capacity would originate in Modesto Irrigation District's surface water supply rather than groundwater wells.

Land Use and Planning – This alternative would not result in any development that would have potential to physically divide an established community. This alternative would not conflict with relevant general plans and would provide the necessary infrastructure to support the development envisioned in those plans.

Noise – Under this alternative, new sources of noise would be generated by construction and operation of facilities on a former railroad track and adjacent to farmland and single-family residences as a result of pipeline construction and operation of the pump stations. If pump stations are located in close proximity to sensitive receptors (residences), operational impacts would be similar to those of the Proposed Project.

Table 12-1. Summary of Alternatives and Comparison to the Proposed Project

Alternative	Characteristics	Relationship to Project Objectives	Impacts Compared to the Proposed Project
No Project Alternative	▪ No construction of new wells or storage tank ▪ Existing service deficiencies would continue and future growth would be constrained	▪ Would not meet project objectives	▪ All impacts related to Proposed Project construction and operation would be avoided
Construct at Existing City Well Locations	▪ Construction of new wells and tank at existing City-owned property with operating wells ▪ Transmission pipelines to connect the new wells to the existing system would not be necessary	▪ Would meet project objectives	▪ Could result in increased aesthetic impacts ▪ Less GHG emissions would be generated due to not constructing transmission pipelines ▪ More residential sensitive receptors near the sites would be exposed to noise-related impacts. ▪ All other environmental impacts would be similar to the Proposed Project
Connect to the City's Supply System	▪ Construct a 3-mile pipeline to connect the Del Rio water supply system to the City's system ▪ Encroachment approvals would be needed from Modesto Irrigation District to cross their canals	▪ Would meet project objectives	▪ Could result in reduced aesthetic impacts because the pipeline would be underground ▪ Similar amount of GHG emissions would be generated compared to the Proposed Project ▪ More residential sensitive receptors near the pipeline alignment would be exposed to construction-related noise impacts ▪ Other environmental impacts, such as biological resources, water supply, and cultural resources, could be greater than the Proposed Project

12.4 Alternatives Considered and Dismissed

The following alternatives were considered but ultimately dismissed from further analysis for one or more of the following reasons: (1) they would not sufficiently meet most of the Proposed Project objectives; (2) they were determined to be infeasible; or (3) they would not avoid or substantially reduce one or more significant impacts of the Proposed Project.

- **Site A Well Only Alternative:** Under this alternative, only the proposed well at Site A would be constructed, and not the water storage tank. This alternative would reduce aesthetic impacts at Site A, avoid all impacts at Site B, and reduce GHG emissions overall. However, this alternative would not meet most of the Proposed Project objectives. With only one well, the City could not accommodate system pressure demands and supply reliability needs for firefighting and operational reliability. Furthermore, without the storage tank and additional supply from a second well, the City could not accommodate anticipated future growth in Del Rio.

- **Reduced Potable Demand Alternative:** The City could increase water conservation mandates and require Del Rio customers to reduce demands on potable water supply by restricting swimming pool filling, assessing fines, and other methods. To meet the project objectives, a substantial reduction in demand would be needed. There is no guarantee that demand reductions would be realized to a level where system pressures would improve through conservation efforts alone. Furthermore, such demand reduction measures have already been implemented during the current statewide drought, and water users are less willing to reduce demands during non-drought years. To meet project objectives, water demand reductions would need to occur in all years, and such reductions are not believed to be feasible or likely. This alternative would not meet supply reliability objectives or future buildout goals.

- **Partnership with the Del Rio Golf and Country Club Alternative:** The Del Rio Golf and Country Club operates its own groundwater wells. The City could provide the country club recycled water for use in irrigating the golf course in exchange for its groundwater supplies. This would involve establishing a formal agreement between the two parties. Costs would be incurred by both parties for the water exchange. Environmental impacts would be generated through construction of a 7-mile-long recycled water pipeline from the City's wastewater treatment plant to the country club, and for connections between the country club's supply system and the Del Rio supply system. These impacts would likely be similar to, but more costly than, the Proposed Project. The City has previously initiated discussions with the country club related to a water exchange but the parties have not reached agreement. This alternative was determine to be infeasible because of cost and because the quantity of groundwater replaced would not be sufficient to achieve reliability objectives or buildout goals.

- **Partially Buried Tank Alternative.** Under this alternative, the City would construct a new partially buried concrete tank at Site A to reduce adverse aesthetic impacts. This alternative would, however require more excavation work and thereby result in substantially greater air quality, GHG, and noise impacts. This alternative would also generate more truck trips to off-haul and dispose of excavated soil. According to a tank materials evaluation that was conducted by the City, a buried concrete tank

would present operation-related difficulties with respect to inspection and repair due to confined entry space (City of Modesto 2012). Typically, tanks of the size proposed are manufactured of steel, but buried tanks are typically made of concrete to avoid corrosion and accessibility issues. Concrete tanks are more costly than steel tanks. Thus, while this alternative would reduce aesthetic impacts relative to the Proposed Project, for the various reasons described above, this alternative was dismissed from further analysis.

12.5 Environmentally Superior Alternative

Because each of the alternatives has fundamentally different characteristics, comparison of their environmental impacts and benefits is not simple. Considering all aspects on balance, the No Project Alternative is considered the environmentally superior alternative as it would avoid all of the environmental impacts associated with implementing the Proposed Project. The CEQA Guidelines require that, if the No Project Alternative is the environmentally superior alternative, the EIR must also identify an environmentally superior alternative among the other alternatives.

Among the other alternatives considered, Alternative 1: Construct at Existing City Well Locations is considered the environmentally superior alternative. This alternative would achieve all the project objectives to a similar degree as the Proposed Project. As described above, more sensitive receptors (residents) are located near the existing City well sites; therefore, this alternative would result in increased impacts on aesthetics, operation-related noise, and air quality because of the greater number of sensitive receptors near the well sites. However, less GHG emissions and construction-related noise impacts would occur because no pipelines would be constructed under this alternative. In summary, Alternative 1 would result in the most reductions in environmental impacts among the alternatives considered.

The other alternatives were not selected as the environmentally superior alternative for the following reasons:

- **Proposed Project.** The Proposed Project is, by definition, not an alternative, and therefore cannot be considered the environmentally superior alternative.

- **Alternative 2.** Connect to the City's Supply System. This alternative was not considered environmentally superior because it would not substantially reduce GHG emissions and would generate similar noise-related impacts on sensitive receptors. This alternative would also generate significant impacts on the City's water system and water supply sources, such as increased demand for groundwater pumping in other areas to meet demands of the Del Rio community. The cost to construct pipelines connecting the community to the City's supply system would be greater than the cost of the other alternatives. Regulatory and permitting requirements for crossing Modesto Irrigation District canals and construction within railroad track easements would also add to the complexity and impacts of this alternative.

Attachment C: Public Comments Received

Background and Purpose

Scoping refers to the process to determine the scope, focus, content, and extent of an environmental impact report (EIR). A key feature of the scoping process is to engage the public and public agencies for feedback regarding the proposed project. The scoping comment period offers an important opportunity for the public and agencies to review and comment during the early phases of the environmental compliance process. Scoping helps identify and select an appropriate range of alternatives to be considered in the EIR. Scoping also helps define analysis methods, initially identify potential environmental effects to be considered in detail, and consider mitigation measures to avoid or compensate for adverse effects. In some cases, it may also identify issues that the public feels do not warrant analysis.

This report documents the scoping process undertaken by the City of Modesto Utilities Department (City) for the Del Rio Tank and Wells Project (Proposed Project) to comply with Section 15082 of the California Environmental Quality Act (CEQA) Guidelines. This report also summarizes comments received from agencies consistent with Section 15082(b) of the CEQA Guidelines. Comments are reproduced in their entirety in the appendices to this report.

Proposed Project Scoping Process

Scoping is initiated when the lead agency issues a Notice of Preparation (NOP) announcing the beginning of the EIR process. In accordance with Section 15082 of the CEQA Guidelines, a NOP was developed that provided information on the background, goals, and objectives of the Proposed Project. The NOP announced the EIR's preparation and requested public and agency comment on the Proposed Project. A copy of the NOP is included in **Attachment A**.

The NOP was distributed for review and comment to numerous federal and state agencies; departmental and public services agencies within Stanislaus County, interested parties, and landowners within a 500-foot radius of the project sites. A copy of the mailing list is included in Attachment A. The City did not publish advertisements or post on the City's website to announce EIR scoping. The City did not hold a public scoping meeting for the Proposed Project.

The NOP for the Project was received by the State Office of Planning and Research, State Clearinghouse on July 28, 2015, which initiated the public scoping period. The State Clearinghouse Number for this project is 2015072055 and a copy of the State Clearinghouse posting can be found in **Attachment B**.

The public scoping comment period officially ended on August 28, 2015.

Comments Received

Eleven comment letters were received during the scoping period from the following parties:

- Tuolumne Me-Wuk Tribal Council July 13, 2015
- Central Valley Regional Water Quality Control Board (CVRWQCB) August 19, 2015

- Stanislaus County Environmental Review Committee (Stanislaus County) August 27, 2015
- Stanislaus Union School District (SUSD) August 10, 2015- No comment to project
- Pacific Gas and Electric (PG&E) July 30, 2015- No comment as no gas lines in the area.
- Modesto Irrigation District (MID) August 20, 2015
- Del Rio Property Owners Association (Del Rio POA) August 11, 2015
- North Modesto Groundwater Alliance (NMGA) August 26, 2015
- Dale Denlinger August 14, 2015
- Jim and Joani Matthews August 27, 2015
- Richard A. McCullough August 6, 2015

Copies of the comment letters are included in **Attachment C** of this report and summarized below.

Comment Summary by Topic

The comments received and concerns described during the scoping period involved the project description, alternatives, and project impacts. These comments are summarized below, and the commenter is identified. All comments received will be addressed in the EIR.

Comments on Project Description and Elements

- The NOP is deficient in not referencing the litigation between the Del Rio POA and the City of Modesto regarding the requirements the City has to make to improve the Del Rio Water System. (Del Rio POA).
- The "Draft EIR, Background and Need" section should be updated to address the July 15, 2005 Settlement Agreement as the Del Rio POA is concerned that only two of the five specific improvements have been addressed. (Del Rio POA)
- The Settlement Agreement of 2005 specifies the improvements to the water supply is for "existing City customers". However, the NOP states it addresses "future growth" needs. Concern regarding project capacity and the scope should change to insure that the improvements required by the Agreement of 2005 are met. (Del Rio POA)
- Concern for the 275 year old Heritage Oak Tree located at Stewart and McHenry Avenue. A certified arborist should be involved in the proposed development. (Matthews)
- The proposed water transmission pipelines at Site B should be routed adjacent to and parallel with McHenry Ave. (Matthews)
- Limit work activity around the 275 year old Oak Tree. Provide assurance in writing that no harm will come to the tree. (Matthews)
- Clarify whether the project sites will include the installation of a wall or a fence around the completed project. (NMGA)
- More details requested on landscaping around completed project (trees, brush, etc.) and request for a landscaping plan in the Draft EIR. (NMGA)

- Evaluate potential conflicts with existing irrigation facilities at Proposed Site A (Ladd Road) and Proposed Site B (McHenry/Stewart Rd), including the following conditions:
    - No encroachments are allowed within MIDs existing 60-foot right of way on the Dr. Moore Lateral
    - Existing pipelines are protected by a 15 foot irrigation easement. Otherwise, consultation with those served by the private pipelines is recommended
    - If the existing private pipeline at St. Johns/Ladd Road would be impacted, MID recommends a consultation with those served by the pipeline.
    - A review of MID's irrigation requirements is recommended. (MID)

Comments on Alternatives

- Suggestion to install the well and water tank to the northeast of the Del Rio Country Club ½ mile away from the proposed project site. (Denlinger)
- Rezone property that was changed to residential in 1995 back to agricultural land so it will not be developed. (Matthews)
- Limit growth in the area. (Matthews)
- Consider a "no project" alternative to compare completing the project and its impacts and not completing the project and its impacts. (NMGA)
- Consider alternative locations as the citizens of the Del Rio subdivision receive the benefits of the project, yet none of the construction activities or final project aesthetics will be on Del Rio subdivision property. (NMGA)
- Consider a "Reduced intensity alternative" for one well instead of two wells, or smaller wells with less capacity. (NMGA)
- Analyze if surface water from the MID water treatment plant can be used to serve the Del Rio subdivision instead of using groundwater. (NMGA)
- Evaluate whether a combined use of surface water and groundwater be used to supply the Del Rio subdivision to reduce groundwater usage in the area in order to sustain growth in the area. (NMGA)

Comments on Impacts

Aesthetics

- Concern over the appearance of a "huge tank" adjacent to a residential home. (Denlinger)
- Prepare artist rendering of the end result of the project with respect to a possible chain link fence, parking area, and landscaping near the residence at 117 Stewart Road, in particular as it relates to the existing east wall of the residence and the 275 year old Heritage Oak Tree. (Matthews)
- Include information regarding aesthetic impacts to surrounding land uses in the EIR. (Stanislaus County)
- Mitigation measures requested related to the 250,000 gallon storage tank to lessen the vertical profile. (NMGA)
- Request for the Draft EIR to have specific descriptions of all aesthetic mitigation measures so the public can accurately comment on the proposed project. (NMGA)

Cultural Resources

- Contact the Tuolumne Me-Wuk Tribal Council if discoveries are made during the project construction. (Tribal Council)

Hydrology, Hydraulics, and Water Quality

- Concern related to running water tables down at the Country Club as opposed to near farmland and residential properties (Denlinger)
- Clarification requested to what happens to the groundwater under residential properties when the project begins to pump 175 million gallons per year. What will the negative impacts be to residential properties? Inferior water quality? Lower levels of water? Decline in property values? (Matthews)
- Additional study requested before the approval of expansion on existing wells out of concern for the shallow aquifer below residential properties on Stewart Road. (McCullough)
- Studies related to the effects of the project wells on groundwater quantity, quality, availability and levels should be studied at the maximum capacity of 24 hours a day/7 days a week prior to construction. (NMGA)
- What is the actual (not estimated) sustainable yield of the aquifer at the 2 project well locations? (NMGA)
- Are the aquifers under the Proposed Project interconnected? Specifically the EIR should include:

- Subsurface lithology should be accurately characterized with vertical and lateral extent
- Conclude with certainty which aquifer (s) the project wells will draw from
- Conclude with certainty if the proposed wells will draw from additional aquifers (NMGA)

- Will the project cause groundwater to migrate away from shallow wells not related to the project when water is being extracted from the project wells? (NMGA)
- How will the City's groundwater management or mitigation plan prevent overdraft of groundwater in the vicinity of the project wells? (NMGA)
- Analyze impacts of potential water treatment options. (Stanislaus County)
- Consider the impacts of the project to existing domestic water wells, including withdrawal rate and usage patterns. (Stanislaus County)

Land Use

- Consider the projects' compatibility with surrounding land uses. (Stanislaus County)

Noise

- Evaluate the use of submersible pumps at "Site B" adjacent to the residential property at 117 Stewart Road. Noise concerns related to the starting and operation noise from vertical shaft pumps noted. (Matthews)
- Confirmation requested that a submersible pump will be used as opposed to a vertical shaft assembly as an effort to reduce noise. If confirmation to commit to submersible pump is not received, a request of anticipated decibel levels of the daily operations of the pump should be outlined in the NOP. Mitigation measures for the noise also requested. (Matthews)
- Analyze the specific decibel level the proposed wellheads and pump stations will produce during regular operation. (NMGA)
- Provide the mitigation measures to reduce the noise produced during regular operation. (NMGA)
- Analyze noise impacts of the project. (Stanislaus County)

Cumulative Impacts

- CEQA Guideline Section 15126.2(d) requires the EIR to include a detailed statement regarding the anticipated growth-inducing impacts this project will have the on Projects service area. (NMGA)

- Cumulative impact studies should be completed on the effects of sustainable yields of the Modesto and Turlock-sub basins, groundwater overdraft, and the depletion of water levels of nearby shallow, domestic wells. (NMGA)
- The EIR should analyze impacts on global climate change from the project by the extent to which the project reduces groundwater and redirects to the atmosphere, the extent to which the project will extend the reliance on groundwater during the drought, and how the project might contribute to uncontrolled groundwater development and contamination. (NMGA)
- What are the growth inducing impacts of this project? (Stanislaus County)

Comments on Project Permits and Approvals

- A Construction General Permit and implementation of Storm Water Pollution Prevention Plan may be required if one or more acres of soil or disruption (including clearing, grading, grubbing, etc.) of a larger community occurs during the project. (CVRWQB)
- Phase I and II MS4 permit may be required to reduce pollutants and runoff flows. Best Management Practices (BMPs) must be used and specific designs for low impact development and post-construction BMPs. (CVRWQCB)
- Storm water discharges association with industrial sites must comply with the Industrial Storm Water General Permit Order No. 2014-0057-DWQ. (CVRWQCB)
- Section 404 Guidelines of the Clean Water Act prohibit all discharges of fill material into navigable waters or wetlands, without a permit and confirmation that the discharge does not violate water quality standards. (CVRWQCB)
- The Department of Fish and Game shall be contacted in the project requires surface water drainage realignment. (CVRWQCB)
- A Water Quality Certification must be obtained by the CVRWQCB if a federal permit is required due to water disturbances. (CVRWQCB)
- A Waster Discharge Requirement (WDR) will be required if non-jurisdictional waters of the State are present in the project area. (CVRWQCB)
- Irrigated Lands Regulatory Program compliance is required if the property is used for commercial irrigated agriculture. (CVRWQCB)
- If the proposed project includes construction dewatering into groundwater of the United States, coverage under a National Pollutant Discharge Elimination System (NPDES) permit is required. Applications must be submitted to the CVRWQCB. (CVRWQCB)
- Existing overhead and underground electrical lines shall be protected or relocated per the District's Electrical Engineering Department. (MID)
- Costs for relocation of existing electrical facilities will be the responsibility of the requesting party. (MID)

- MID must review the following :
  - If there are no plans to irrigate the project properties, a Sign-Off of Irrigation Facilities form must be submitted to MID for review.
  - Draft improvement plans for Proposed Site B must be submitted to MID's Irrigation Operation Division for review prior to construction. (MID)

Attachment A:
Notice of Preparation and Distribution List

Notice of Preparation

To: Responsible, Federal and Trustee Agencies (Agency)

(Address)

From: City of Modesto Utilities Department (Agency)

P.O. Box 642 (1010 Tenth Street) (Address)

Modesto, CA 95353

Subject: **Notice of Preparation of a Draft Environmental Impact Report for the Del Rio Tank and Wells Project**

The City of Modesto Utilities Department will be the lead agency and will prepare an environmental impact report (EIR) for the project identified below. We are requesting the views of your agency as to the scope and content of the environmental information that is germane to your agency's statutory responsibilities in connection with the proposed project. Your agency may need to use the EIR prepared by our agency when considering your permit or other approval for the project.

The project description, location, and potential environmental effects are contained in the attached materials. A copy of the initial study ☐ *is* ☒ *is not* attached. Pursuant to State CEQA Guidelines Section 15063(a), the City has opted to forgo preparation of an initial study and proceed directly to the draft EIR.

Because of the time limits mandated by state law, your response must be sent at the earliest possible date but not later than 30 days after receipt of this notice.

Please send your response to Tamorah Bryant at the address shown above. Please include your name or the name of a contact person in your agency.

Project Title: Del Rio Tank and Wells

Project Applicant, if any:

Date: 7-21-2015

Signature:

Title: Acting Senior Civil Engineer

Telephone: (209) 577-5205

Email: tbryant@modestogov.com

July 2015

INTRODUCTION

Purpose of the NOP

The City of Modesto (City) is the lead agency for preparation and review of an environmental impact report (EIR) for the Del Rio Tank and Wells project (Proposed Project). The Proposed Project involves construction of a water storage tank, booster pump station, and two domestic water wells, which will provide additional storage volume water supply and pressure for the existing water system serving the Del Rio area. The City's 2008 Water System Engineer's Report Program Environmental Impact Report (Water System PEIR) evaluated the Proposed Project at a program level of detail.

This Notice of Preparation (NOP) presents general background information on the scoping process, the environmental issues to be addressed in the EIR, and the anticipated uses of the EIR. It also describes the Proposed Project as currently envisioned. The project description is subject to refinement during the process of preparing the draft EIR, depending on, among other things, input received in comments responding to this NOP and revisions to the Proposed Project. The City has prepared this NOP pursuant to Section 15082 of the State California Environmental Quality Act (CEQA) Guidelines.

Scope of the EIR

The EIR will be a project-level document which will build on the program-level analysis conducted in the Water System PEIR. The Water System PEIR provided a foundation for any necessary future environmental review documents that focus on individual CIP projects or programs. This project-level EIR will evaluate site-specific impacts and incorporate feasible mitigation measures and alternatives developed in the Water System PEIR as appropriate (CEQA Guidelines, Section 15168[c]).

The following is a preliminary list of potential environmental issues to be addressed in the EIR. The issues to be addressed will be finalized after comments on the NOP are received. The analysis in the draft EIR ultimately will determine whether these impacts actually could occur, will determine their level of significance, and will propose feasible mitigation measures to reduce significant impacts. Thresholds for determining significant impacts will be based on applicable sections of the State CEQA Guidelines, regulatory agency standards, and the judgment of the City of Modesto.

- Aesthetics
- Global Climate Change
- Noise
- Cumulative Impacts
- Groundwater
- Land Use
- Growth-Inducing Impacts
- Alternatives

Public Involvement

The City is soliciting the views of interested persons and agencies on the scope and content of the environmental information that is germane to the Proposed Project. Agencies may use the EIR prepared under the direction of the City when considering permits or other approvals for the Proposed Project. Because of the time limits mandated by state law, your written comments on the scope and content of the EIR must be ***received no later than the 30 calendar days following the date of posting of this notice***. Please send written comments to the City of Modesto, to the attention of Tamorah Bryant, Associate Civil Engineer, at the address provided on the title page of this document. Please include the name and phone number of the contact person for your agency, if applicable.

The City will ensure that adequate public review and input will be available for the EIR. Public input will be solicited at the following points in the process:

- **Scoping comment period:** The City will receive public comments during a 30-calendar day period beginning from the date of posting of this notice to solicit public input on the scope of the EIR.
- **Draft EIR comment period:** The City will provide a standard 45-day review and comment period for the draft EIR.
- **Final EIR comment period:** The City will certify the final EIR at a public meeting, during which the public and agencies can provide additional comments.

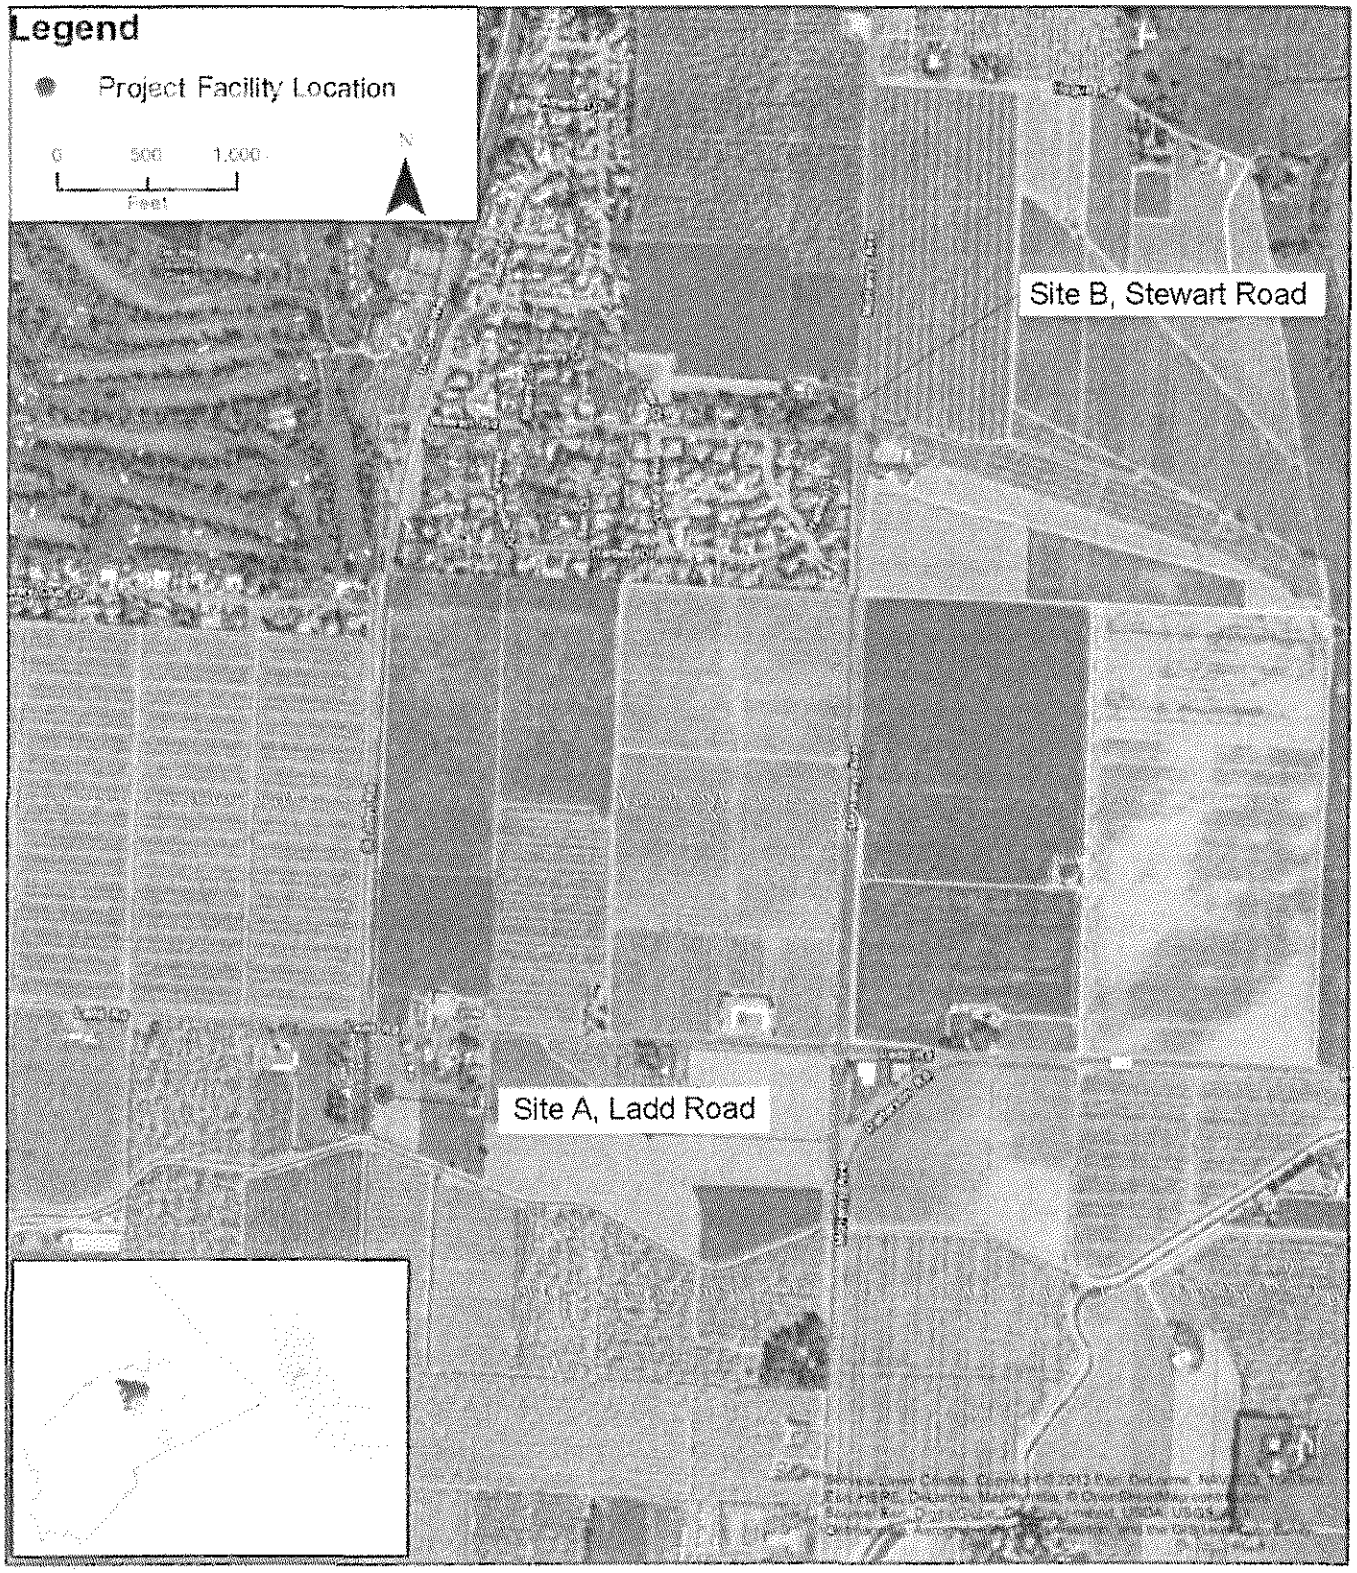
Background and Need

The City provides domestic water service within its incorporated boundaries and to several other areas previously served by the Del Este Water Company (acquired by the City in the mid-1990's), including portions of the cities of Ceres and Turlock, the communities of Salida, Empire, Del Rio, and Grayson. The Del Rio service area includes approximately 41,000 linear feet of City-owned distribution pipeline, ranging from 4 to 10 inches in diameter.

The Del Rio water system currently requires a new storage tank (and associated pump station), well, replacement well, backup generators, and pipelines to correct existing supply deficiencies. The existing Del Rio water system does not meet certain design pressure and storage volume requirements for water supply and fire-flow demand. The existing Del Rio water system also is not sufficient to supply anticipated future growth in the Del Rio area. The future Del Rio service area will include additional acreage that will expand the service area to the north, east, and southwest. According to the Del Rio Community Plan, 'future planned development land use' is proposed for the northwest and eastern portions of the service area, while development in the southwestern area will be residential. Full buildout of the service area will require additional pipelines and pumping capacity, as recommended, to provide adequate water service to meet the anticipated demand.

Project Location

The Proposed Project is located in the census-designated place of Del Rio in Stanislaus County. Del Rio is located approximately two miles north of the City's sphere of influence boundary. The Proposed Project would involve activities at two separate sites within Del Rio: (1) Site A: APNs 004-077-018 and 004-077-019, Ladd Road, and (2) Site B: APN 004-102-003, Stewart Road. **Figure 1** shows the locations of the Proposed Project sites.



Site Details Map

Modesto, California

Figure 1

Project Objectives

The objectives of the Proposed Project are as follows:

- Correct existing deficiencies in the Del Rio water system to meet design pressure and volume storage requirements;
- Ensure sufficient system pressure to provide firefighting flow capacity;
- Improve water system operational flexibility and reliability; and
- Provide additional water supply and storage volume to accommodate anticipated future growth in the Del Rio area.

Proposed Project Facilities

Site A - Tank and Well

The project facilities at this site will consist of an above ground water storage tank, water well and motor, a booster pump station, stand-by generator, and motor control center. Site improvements will include a small parking and access area, fencing or walls, a retention basin, and low-maintenance landscaping. Landscaping will include trees to help screen the tank from adjacent properties and from Ladd Road. As proposed, the water tank would store at least 250,000 gallons of water. The tank will stand a maximum 20 feet above grade and be approximately 70 feet in diameter. The footprint area of the tank will be approximately 3,900 square feet. The booster pump station will be enclosed within a masonry building approximately 2,100 square feet standing a maximum of 22 feet tall.

The site will be enclosed within an eight-foot-tall security wall or fence constructed of either concrete masonry or wrought iron topped with no-climb points. Portions of the site may also include a no-climb chain link fence. The specific type of wall or fence will be determined during the final design. Vehicular access and parking areas within the site will be paved either with Portland cement concrete or asphaltic concrete. Other portions of the site will be covered either with low-maintenance landscaping or gravel.

The water well will be drilled a maximum of 600 feet deep with a desired minimum yield of 1,000 gallons per minute. It is intended to primarily draw water from the confined aquifer below the Corcoran clay layer, which is typically 150 feet to 250 feet below ground. While 1,000 gallons per minute is the desired yield, pumping will vary throughout the year depending upon need, based upon system pressure or tank level, ranging from as much as 20 hours per day during the summer months to as few as two hours per day in the winter. Pumping is expected to occur for an annual average of eight hours per day, with an annual yield of about 175 million gallons.

Additionally, a transmission main will be constructed within St. John's Road from the tank site. The transmission main will run from the tank site northerly for a distance of

approximately 2,500 feet and will connect to the existing distribution system near the intersection of St. John's Road and Country Club Drive.

Site B - Well

The facilities at this site will consist of a water well and motor, stand-by generator, and motor control center. Site improvements will include paved surfaces around the wellhead, fencing or walls, a small retention basin, and low-maintenance landscaping. Landscaping will be designed to minimize the aesthetic effects of the wall and provide some screening for the well site facilities from adjacent roads.

The water well will be a maximum of 600 feet deep with a desired minimum yield of 1,000 gallons per minute. It is intended to primarily draw water from the confined aquifer below the Corcoran clay layer, which is typically 150 feet to 250 feet below ground. While 1,000 gallons per minute is the desired yield, pumping will vary throughout the year depending upon need, based upon system pressure or tank level, ranging from as much as 20 hours per day during the summer months to as few as two hours per day in the winter. Pumping is expected to occur for an annual average of eight hours per day, with an annual yield of about 175 million gallons.

The site will be enclosed with an eight-to-12-foot-tall security wall or fence constructed either of concrete masonry block or wrought iron topped with no-climb points. The specific type of wall will be determined during the final design. The retention basin may be enclosed with a chain link fence depending on the final layout, but will be screened from view from adjacent residents. The area surrounding the wellhead will be paved with Portland cement concrete. A gravel access road will be constructed around the proposed retention basin.

A transmission main will be constructed within Stewart Road from the well site. The transmission main will run from the well site westerly approximately 500 feet and will connect to the existing distribution system near the intersection of Stewart Road and Grove Point Drive.

Notice of Preparation Posting

Del Rio Tanks and Wells Project

SCH Number: 2015072055

Document Type: NOP - Notice of Preparation

Project Lead Agency: Modesto, City of

Project Description

The City of Modesto is the lead agency for preparation and review of an environmental impact report for the Del Rio Tank and Wells project (Proposed Project). The Proposed Project involves construction of a water storage tank, booster pump station, and two domestic water wells, which will provide additional storage volume water supply and pressure for the existing water system serving the Del Rio area. The City's 2008 Water System Engineer's Report Program Environmental Impact Report (Water System PEIR) evaluated the Proposed Project at a program level of detail.

Dear Tamorah Bryant,

Subject: NOP of Draft EIR for Del Rio Tank & Wells Project

We are in receipt of your letter concerning the Draft Environmental Impact Report for the Del Rio Tank and Wells Project. At this time we have no concerns as long as no cultural resources will be damaged during this project. We would like to be contacted if there are any inadvertent discoveries during project implementation.

Thank you for sending us the information concerning this project.

Respectfully,

Stanley R. Cox

COMMENTS TO REQUEST FOR REVIEW FOR THE DRAFT ENVIRONMENTAL IMPACT REPORT, DEL RIO TANKS AND WELLS PROJECT, SCH# 2015072055, STANISLAUS COUNTY

Pursuant to the State Clearinghouse's 28 July 2015 request, the Central Valley Regional Water Quality Control Board (Central Valley Water Board) has reviewed the *Request for Review for the Draft Environment Impact Report* for the Del Rio Tanks and Wells Project, located in Stanislaus County.

Our agency is delegated with the responsibility of protecting the quality of surface and groundwaters of the state; therefore our comments will address concerns surrounding those issues.

I. Regulatory Setting

Basin Plan

The Central Valley Water Board is required to formulate and adopt Basin Plans for all areas within the Central Valley region under Section 13240 of the Porter-Cologne Water Quality Control Act. Each Basin Plan must contain water quality objectives to ensure the reasonable protection of beneficial uses, as well as a program of implementation for achieving water quality objectives with the Basin Plans. Federal regulations require each state to adopt water quality standards to protect the public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act. In California, the beneficial uses, water quality objectives, and the Antidegradation Policy are the State's water quality standards. Water quality standards are also contained in the National Toxics Rule, 40 CFR Section 131.36, and the California Toxics Rule, 40 CFR Section 131.38.

The Basin Plan is subject to modification as necessary, considering applicable laws, policies, technologies, water quality conditions and priorities. The original Basin Plans were adopted in 1975, and have been updated and revised periodically as required, using Basin Plan amendments. Once the Central Valley Water Board has adopted a Basin Plan amendment in noticed public hearings, it must be approved by the State Water Resources Control Board (State Water Board), Office of Administrative Law (OAL) and in some cases,

the United States Environmental Protection Agency (USEPA). Basin Plan amendments only become effective after they have been approved by the OAL and in some cases, the USEPA. Every three (3) years, a review of the Basin Plan is completed that assesses the appropriateness of existing standards and evaluates and prioritizes Basin Planning issues.

For more information on the *Water Quality Control Plan for the Sacramento and San Joaquin River Basins*, please visit our website:
http://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/.

II. Permitting Requirements

Construction Storm Water General Permit

Dischargers whose project disturb one or more acres of soil or where projects disturb less than one acre but are part of a larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the General Permit for Storm Water Discharges Associated with Construction Activities (Construction General Permit), Construction General Permit Order No. 2009-009-DWQ. Construction activity subject to this permit includes clearing, grading, grubbing, disturbances to the ground, such as stockpiling, or excavation, but does not include regular maintenance activities performed to restore the original line, grade, or capacity of the facility. The Construction General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP).

For more information on the Construction General Permit, visit the State Water Resources Control Board website at:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/constpermits.shtml.

Phase I and II Municipal Separate Storm Sewer System (MS4) Permits[1]

The Phase I and II MS4 permits require the Permittees reduce pollutants and runoff flows from new development and redevelopment using Best Management Practices (BMPs) to the maximum extent practicable (MEP). MS4 Permittees have their own development standards, also known as Low Impact Development (LID)/post-construction standards that include a hydromodification component. The MS4 permits also require specific design concepts for LID/post-construction BMPs in the early stages of a project during the entitlement and CEQA process and the development plan review process.

For more information on which Phase I MS4 Permit this project applies to, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/municipal_permits/.

[1] Municipal Permits = The Phase I Municipal Separate Storm Water System (MS4) Permit covers medium sized Municipalities (serving between 100,000 and 250,000 people) and large sized municipalities (serving over 250,000 people). The Phase II MS4 provides coverage for small municipalities, including non-traditional Small MS4s, which include military bases, public campuses, prisons and hospitals.

For more information on the Phase II MS4 permit and who it applies to, visit the State Water Resources Control Board at:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/phase_ii_municipal.shtml

Industrial Storm Water General Permit
Storm water discharges associated with industrial sites must comply with the regulations contained in the Industrial Storm Water General Permit Order No. 2014-0057-DWQ.

For more information on the Industrial Storm Water General Permit, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/industrial_general_permits/index.shtml.

Clean Water Act Section 404 Permit
If the project will involve the discharge of dredged or fill material in navigable waters or wetlands, a permit pursuant to Section 404 of the Clean Water Act may be needed from the United States Army Corps of Engineers (USACOE). If a Section 404 permit is required by the USACOE, the Central Valley Water Board will review the permit application to ensure that discharge will not violate water quality standards. If the project requires surface water drainage realignment, the applicant is advised to contact the Department of Fish and Game for information on Streambed Alteration Permit requirements.

If you have any questions regarding the Clean Water Act Section 404 permits, please contact the Regulatory Division of the Sacramento District of USACOE at (916) 557-5250.

Clean Water Act Section 401 Permit – Water Quality Certification
If an USACOE permit (e.g., Non-Reporting Nationwide Permit, Nationwide Permit, Letter of Permission, Individual Permit, Regional General Permit, Programmatic General Permit), or any other federal permit (e.g., Section 10 of the Rivers and Harbors Act or Section 9 from the United States Coast Guard), is required for this project due to the disturbance of waters of the United States (such as streams and wetlands), then a Water Quality Certification must be obtained from the Central Valley Water Board prior to initiation of project activities. There are no waivers for 401 Water Quality Certifications.

Waste Discharge Requirements – Discharges to Waters of the State
If USACOE determines that only non-jurisdictional waters of the State (i.e., "non-federal" waters of the State) are present in the proposed project area, the proposed project may require a Waste Discharge Requirement (WDR) permit to be issued by Central Valley Water Board. Under the California Porter-Cologne Water Quality Control Act, discharges to all waters of the State, including all wetlands and other waters of the State including, but not limited to, isolated wetlands, are subject to State regulation.

For more information on the Water Quality Certification and WDR processes, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/help/business_help/permit2.shtml.

Regulatory Compliance for Commercially Irrigated Agriculture
If the property will be used for commercial irrigated agricultural, the discharger will be required to obtain regulatory coverage under the Irrigated Lands Regulatory Program. There are two options to comply:

1. **Obtain Coverage Under a Coalition Group.** Join the local Coalition Group that supports land owners with the implementation of the Irrigated Lands Regulatory Program. The Coalition Group conducts water quality monitoring and reporting to the Central Valley Water Board on behalf of its growers. The Coalition Groups charge an annual membership fee, which varies by Coalition Group. To find the Coalition Group in your area, visit the Central Valley Water Board's website at: http://www.waterboards.ca.gov/centralvalley/water_issues/irrigated_lands/app_approval/index.shtml; or contact water board staff at (916) 464-4611 or via email at IrrLands@waterboards.ca.gov.

2. **Obtain Coverage Under the General Waste Discharge Requirements for Individual Growers, General Order R5-2013-0100.** Dischargers not participating in a third-party group (Coalition) are regulated individually. Depending on the specific site conditions, growers may be required to monitor runoff from their property, install monitoring wells, and submit a notice of intent, farm plan, and other action plans regarding their actions to comply with their General Order. Yearly costs would include State administrative fees (for example, annual fees for farm sizes from 10-100 acres are currently $1,084 + $6.70/Acre); the cost to prepare annual monitoring reports; and water quality monitoring costs. To enroll as an Individual Discharger under the Irrigated Lands Regulatory Program, call the Central Valley Water Board phone line at (916) 464-4611 or e-mail board staff at IrrLands@waterboards.ca.gov.

Low or Limited Threat General NPDES Permit

If the proposed project includes construction dewatering and it is necessary to discharge the groundwater to waters of the United States, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. Dewatering discharges are typically considered a low or limited threat to water quality and may be covered under the General Order for *Dewatering and Other Low Threat Discharges to Surface Waters* (Low Threat General Order) or the General Order for *Limited Threat Discharges of Treated/Untreated Groundwater from Cleanup Sites, Wastewater from Superchlorination Projects, and Other Limited Threat Wastewaters to Surface Water* (Limited Threat General Order). A complete application must be submitted to the Central Valley Water Board to obtain coverage under these General NPDES permits.

For more information regarding the Low Threat General Order and the application process, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2013-0074.pdf

For more information regarding the Limited Threat General Order and the application process, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2013-0073.pdf

If you have questions regarding these comments, please contact me at (916) 464-4684 or tcleak@waterboards.ca.gov.

STANISLAUS COUNTY ENVIRONMENTAL REVIEW COMMITTEE

August 27, 2015

Tamorah Bryant, Acting Senior Civil Engineer
City of Modesto, Utilities Department
PO Box 642 / 1010 Tenth Street
Modesto, CA 95353

SUBJECT: ENVIRONMENTAL REFERRAL – CITY OF MODESTO – NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT – THE DEL RIO TANK AND WELLS PROJECT

Ms. Bryant:

Thank you for the opportunity to review the above-referenced project.

The Stanislaus County Environmental Review Committee (ERC) has reviewed the subject project and asks the City of Modesto to consider including the following information in its environmental impact report:

1. Aesthetic impacts to surrounding land uses;
2. The project's compatibility to surrounding land uses;
3. Growth-inducing impacts;
4. Noise impacts;
5. Impacts of potential water treatment options; and
6. The City should consider proper analysis to ensure no adverse impacts occur to existing groundwater users such as domestic wells. This analysis should include, but not be limited to, a drawdown interference analysis based upon the proposed pump(s) withdrawal rate and usage pattern.

The ERC appreciates the opportunity to comment on this project.

Sincerely,

Patrick Cavanah, Management Consultant
Environmental Review Committee

Tamorah,

I have reviewed this project and have no comments or changes to the document. Pacific Gas & Electric does have gas lines in the area but there are no other concerns from the utility. If you have any questions you can call me at 209-576-6532.

Thanks

RE: ***Del Rio tank & Wells***
APN's: 004-077-018, 019 & 004-102-003 (Ladd Road & Stewart Road)

Thank you for the opportunity to comment on this referral. Following are the recommendations from our Risk & Property, Electrical, Irrigation, and Domestic Water Divisions:

Irrigation

Proposed Site A - Ladd Road

- There are potential conflicts with existing irrigation facilities within the proposed Site A project area, as shown on the attached project site map. Modesto Irrigation District (MID) has the following conditions of approval for the proposed project:

  - No encroachments are allowed within MID's existing sixty-foot (60) right-of-way for the Dr. Moore Lateral.
  - There is an existing private pipeline that lies along the southern property line of APNs 004-077-018 and 004-077-019. The existing private pipeline is protected by a fifteen (15) foot private irrigation easement (Inst. No. 16603 dated October 1975). Should the proposed project impact or otherwise alter the existing private infrastructure, MID recommends the City of Modesto (City) consult with those who are served by the existing private pipeline.
  - If the City doesn't plan to irrigate APNs 004-077-018 and 004-077-019 and wants to be removed from irrigation billing, a Sign-Off of Irrigation Facilities form must be completed and submitted to MID for review.
  - There is an existing private pipeline that crosses St. Johns Rd. approximately 200 feet north of Ladd Road. Should the proposed transmission main impact or otherwise alter the existing private infrastructure, MID recommends the City consult with those who are served by the existing private pipeline.

Proposed Site B - McHenry Road at Stewart Road

- There are existing Improvement District (ID No. 125 – Langdon Merle ID) facilities located within APN 004-102-003.

  - Draft improvement plans for proposed Site B project area must be submitted to MID's Irrigation Operation Division for review prior to the start of construction.
  - Irrigation Operations staff recommends a pre-consultation meeting to discuss MID irrigation requirements. MID irrigation standard details will be provided upon request.

Domestic Water

- No comments at this time.

Electrical

- The attached maps show the approximate location of the District's existing electrical facilities.

- In conjunction with related project requirements, existing overhead and underground electric facilities within or adjacent to the proposed projects shall be protected or relocated as required by the District's Electric Engineering Department.

- Costs for relocation and/or undergrounding the Districts existing electrical facilities at the request of others will be borne by the requesting party. Estimates for relocating or undergrounding existing facilities will be supplied upon request.

- Please contact the District's Electric Engineering Design Department, attention Linh Nguyen at (209) 526-7437 in order to coordinate project requirements. Project cost estimates will be supplied upon request.

The Modesto Irrigation District reserves its future rights to utilize its property, including its canal and electrical easements and rights-of-way, in a manner it deems necessary for the installation and maintenance of electric, irrigation, agricultural and urban drainage, domestic water and telecommunication facilities. These needs, which have not yet been determined, may consist of poles, crossarms, wires, cables, braces, insulators, transformers, service lines, open channels, pipelines, control structures and any necessary appurtenances, as may, in District's opinion, be necessary or desirable.

If you have any questions, please contact me at 526-7433.

Sincerely,

Celia Aceves
Risk & Property Analyst

Del Rio Property Owners Association
P.O. Box 118
Salida, CA 95368

City of Modesto
Utilities Department
P.O. Box 642
Modesto, California 95353

August 11, 2015

Dear Utilities Department:

We are in receipt of your "Notice of Preparation of a Draft Environmental Impact Report for the Del Rio Tank and Wells Project," together with an invitation to respond.

As an association, we are in support of the Wells Project. However, we believe that your Notice is deficient in that it does not reference the litigation between our association and the City of Modesto, nor the settlement agreement (the "Agreement")in that case which requires the City to make improvements to the Del Rio water system, including those specified in the Tank and Wells Project.

By way of background, in 2004, our organization, the Del Rio Community Association, now called the Del Rio Property Owners Association ("DRPOA"), brought suit against the City of Modesto alleging, inter alia, that the proposed rate increase violated California law in that it far exceeded the cost of providing the service. During that litigation, the City disclosed the West-Yosh Technical Memorandum which specified several improvements that were deemed critical to the Del Rio water system, and which needed to be done immediately at a very significant cost. Based upon that report, the litigation was settled with the City committing in the Agreement to complete all of the West-Yosh critical improvements within eight years of the July 15, 2005 date of that Agreement. Thus, the improvements were all to be in place not later than July 15, 2013.

In spite of this commitment, and its legal obligations to provide adequate water, to date, the City has completed work on only two of these "critical" improvements. We believe that the "Draft EIR, Background and Need" section, must necessarily address the July 15, 2005 Settlement Agreement and the City's obligations under it. For example, it is most concerning to us and our community that of the 5 specific improvements cited in the report, only 2 have been completed, and that there is a possibility that the City is somehow going to be prevented from performing its obligations under the Settlement with us.

The DRPOA and City engineering staff have stayed in communication about these improvements and the DRPOA has given multiple time extensions. However, our position is that the City is still bound by this agreement and must provide the necessary improvements to guarantee sufficient water pressure to assure the safety and supply of the Del Rio community. We make one other point: The initiating cause (i.e. the 1/28/2005 Settlement Agreement)

of the Del Rio Tanks and Wells Project specifies that the City will make such "improvements and repairs ... as necessary to continue to provide water service to ***existing City customers*** in the Del Rio Community." It did not, nor did it intend to, address anticipated future growth as cited in the "Background and Need" section of the Notice. It is the position of the DRPOA that if the size and scope of the project plan includes capacity to provide for future growth and that such provision makes the project unacceptable or infeasible for whatever reason, the obligations undertaken by the City in the Agreement would require the City to scale back the project to only the needs of the current Del Rio Community so that the improvements required by the Agreement can be completed.

If you have further questions, or need copies of the Report or the Settlement Agreement, please contact our board.

Very truly yours,

Bret de St Jean, President
Del Rio Property Owners Association

RE: Notice of Preparation of Draft EIR for the Del Rio Tank and Wells Project
Comments Regarding Scope and Content of Draft EIR

Dear Ms. Bryant:

I represent the North Modesto Groundwater Alliance ("the Alliance"). The Alliance is an unincorporated association formed in 2012 and comprised of residents and property owners whose collective goal is to ensure that the environmental effects and impacts to the North Modesto area from the Del Rio Tank and Wells Project ("Project") are analyzed, reviewed and reported in full compliance with the California Environmental Quality Act ("CEQA").

Pursuant to CEQA Guidelines Section 15082, I submit the following response on behalf of the Alliance to the Notice of Preparation of Draft EIR for the Del Rio Tanks and Well Project ("NOP") dated July 21, 2015. The following are significant environmental issues and reasonable alternatives and mitigation measures that the Alliance believes that the City of Modesto Utilities Department ("City") needs to explore and thoroughly study in its draft EIR:

1. Groundwater.

A. Sustainable yield of aquifer.

i) In the City's analysis of the effects that the Project wells will have on groundwater quantity, quality, availability and levels in the region where the Project's wells will be located, the Project wells need to be studied on the basis of operation at their maximum capacity 24 hours per day, seven days per week. The rationale for this requirement is that the City will not be regulated or limited in terms of the quantity of water it will be allowed to pump from the two Project wells over any time period, and with growing demand on the Project wells from buildout of the Del Rio Community Plan and other land uses, the City will only be limited in the amount of water it pumps based upon a) demand for water, and b) the maximum capacity of the wells' pumps. Therefore, the impacts of the two Project wells on regional groundwater availability must be studied as if the wells will operate at maximum capacity, 24 hours per day, seven days per week.

ii) The sustainable yield of an aquifer (layer of groundwater) is defined as the average annual amount of groundwater that can be extracted from a groundwater basin while maintaining a non-overdraft condition. What is the actual (not estimated) sustainable yield of the aquifer in the immediate location of the two proposed Project wells?

iii) Are the aquifers underlying the proposed Project site hydrologically interconnected? The NOP project description for Site A (Ladd Road) states that the Site A well "is intended to primarily draw water from the confined aquifer below the Corcoran clay layer, which is typically 150 feet to 250 feet below ground." Words such as "intended", "primarily" and "typically" are qualifiers that imply that the well may also draw water from other aquifers (Webster's Ninth New Collegiate Dictionary defines "primarily" as "for the most part" or "chiefly") and are inherently vague and ambiguous. Furthermore, it is the Alliance's understanding from discussions with expert geologists who are very familiar with the geology of North Modesto that the Corcoran clay layer terminates west of the proposed Project well sites, and does not extend as far east as the Site A well. Therefore, contrary to the statement in the NOP, the aquifer where the wells will be screened is not confined. **It is critically important to Alliance members that the EIR: a) comprehensively and accurately characterize the subsurface lithology, including its vertical and lateral extent, in the area of the proposed Project wells, b) state unambiguously and with certainty and precision which aquifer(s) each of the proposed Project wells will draw from, c) state whether the proposed wells will in fact draw from other aquifers too, and if they will, d) state which other aquifers they will draw from. There are many people, including but certainly not limited to the members of the Alliance, who must have this information because their own wells are at risk because of the proposed Project.**

iv) When groundwater is extracted from the aquifer in which the proposed Project wells will be screened, will such extraction draw groundwater from shallower aquifers in the vicinity of the Project wells or cause groundwater to migrate away from wells that are not as deep as the Project wells?

B. Groundwater Management and/or Mitigation Plan.

i) What is the City's groundwater management and/or mitigation plan to prevent an overdraft condition in the vicinity of the Project wells?

2. Growth-inducing Impacts.

How will the proposed Project foster economic or population growth, or the construction of additional housing, either directly or indirectly in the proposed Project's service area? CEQA Guideline Section 15126.2(d) requires an EIR to include a detailed statement of the proposed project's anticipated growth-inducing impacts in the North Modesto area.

3. Noise.

What levels of noise, in terms of specific decibel levels, will the engines at the proposed wellheads and pump stations produce during operation? What specific measures or mitigation will the City definitely install at the Project site to reduce such noise to acceptable residential levels?

4. Aesthetics.

The City must fully analyze the aesthetic impacts of the Project on the neighborhood in the immediate vicinity of the proposed Project. What specifically does the City intend to do to mitigate the permanent degradation of the visual character and quality of the nearby neighborhood caused by the Project? Will the 250,000 gallon storage tank be partially set below-grade to lessen its vertical profile? If so, specifically in a measurement of feet how deep will the tank be set?

What specific type of fencing or wall (height, type, and material) will surround the Project? The NOP repeatedly states that the City will install "an eight-foot-tall security wall or fence" without committing to one or the other. Instead, it procrastinates making such commitment by stating that "The specific type of wall or fence will be determined during the final design." The proposed Project was originally approved by the City Council 3½ years ago on March 13, 2012. Certainly, the City must know by now whether it plans to install a fence or a wall. Unless the specific visual mitigation measure is stated in the Draft EIR, with a full description of height, type, material and finish, the public will be unable to comment on whether or not such measure is adequate.

What ***specific*** type of landscaping will be used to mitigate the visual blight caused by the Project? How much landscaping will be used (i.e. number and type of trees, shrubs, etc.). How will the landscaping be maintained? Will the landscaping plan be in the Draft EIR?

The City's Program EIR and the Finding of Conformance were both hopelessly vague and ambiguous in discussing these aesthetic mitigation issues. As a result, the public was left guessing exactly what the City would do to mitigate the visual degradation and blight caused by the proposed Project, and the City maintained complete discretion right up to the moment of installation as to what measures it would ultimately employ. The Draft EIR must contain a **specific** description of all aesthetic mitigation measures that it will **definitely** install.

5. Analysis of Alternatives to the Project.

CEQA Guidelines Section 15126.6(a) requires that an EIR describe a range of reasonable alternatives to the proposed Project.

A. "No-project" Alternative.

The purpose of describing and analyzing a "no project" alternative is to allow decision

makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. The City has always represented that the purpose of the Project is limited to upgrading the quality of water being delivered to the existing Del Rio subdivision and to increase pressure within the fire suppression water lines for better fire protection. The City has also consistently denied that the Project is being constructed to serve the build-out of the Del Rio Community Plan. If the City is correctly representing the true purpose of the Project, why are two wells with such high capacity for pumping and delivering groundwater necessary?

The City needs to discuss the existing conditions at the time the Notice of Preparation was published, and also analyze and discuss whether upgrades to the existing wells serving the existing Del Rio subdivision, such as abandonment/closure of the existing shallow well and re-drilling a larger and deeper well in the same location, could supply a higher quality water and simultaneously better water pressure for the fire suppression system to the existing Del Rios subdivision in lieu of the Project.

B. Alternative Location.

The key question and first step in this analysis is whether any of the significant effects of the Project would be avoided or substantially lessened by putting the project in another location. The Project is being constructed for the exclusive use and benefit of the Del Rio subdivision, yet with the exception of the Stewart Road well, not one part of the proposed Project – the Site A well, the storage tank, or the masonry building enclosing the pump station – will be constructed on Del Rio property. Based upon the current Project design, Del Rio residents living west of St. John's Road will receive all of the benefits of the Project with none of the burdens, and Petitioner's members will shoulder all of the burdens with none of the benefits. What alternative sites within the Del Rio subdivision west of St. John's Road that will be served by the Project are being analyzed by the City for construction of the Project?

C. Alternatives to the Project.

Depending upon how much groundwater is available on a sustained basis for the proposed Project (which can only be determined by analyzing the sustainable yield of the aquifer being used to deliver water to the Project) and how much impact the Project wells will have on the aquifers and existing nearby wells, the EIR should consider a "reduced intensity alternative" of only one well instead of two, or smaller wells with less capacity.

Two other alternatives to the Project that need to be thoroughly analyzed are 1) the use of surface water from the MID water treatment plant to serve the Del Rio community instead of groundwater, and 2) a conjunctive use of surface water and groundwater to supply the Del Rio community, which is the same combination that the City uses to serve residents within the City limits. This latter alternative would result in a reduction of the amount of groundwater needed for Del Rio, and in the Alliance's view is the best alternative because it is the only sustainable option that will serve the needs of the Del Rio area as growth continues and simultaneously maintain water quality and long-term aquifer viability.

6. Cumulative Impacts.

Pursuant to CEQA Guidelines Section 15130, the City should analyze in the EIR the cumulative impacts of the Project created as a result of the combination of the Project with other City and MID groundwater projects causing related impacts. As defined in CEQA Guidelines Section 15355, a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. The City derives approximately 60% of its water from groundwater wells from its other projects, so it needs to study the cumulative impact associated with the Project's incremental effect and the effects of other projects on the sustainable yields of the Modesto and Turlock sub-basins, the cumulative impact of the Project on the creation of a condition of groundwater overdraft, and the cumulative impact of the Project on the depletion of water levels of nearby shallow domestic and agricultural wells.

7. Project Impact on Global Climate Change.

The City should analyze in the EIR the Project's potential impact on global climate change, including:

a) The extent to which the Project reduces the amount of stored water deep underground and redirects it to the more active hydrologic system at the land-surface, where it evaporates into the atmosphere and ultimately falls as precipitation into the ocean or elsewhere;

b) The extent to which the prolonged drought in California is increasing dependence on groundwater for agriculture, and the impact that the Project will have on exacerbating that condition; and

c) The extent to which the Project contributes to uncontrolled groundwater development, overexploitation of groundwater and contamination of groundwater.

The Alliance looks forward to reviewing the Draft EIR.

Sincerely,

Daniel W. Smith

we are very much against the well being dug and put on the property next to us. It makes no sense to pump water and pipe it 1/2 mile to the country club. They have property right to the north east of the del Rio club. no one would see the huge tank and it would be right there. let them run their water tables down, not ours. farmers in this area are very upset. this is farm land not country club property..

August 23, 2015

Tamorah Bryant
Acting Civil Engineer
City of Modesto-Utilities

Dear Ms. Bryant:

We have received a Notice of Preparation (NOP) concerning the formulation of the Draft Environmental Impact Report for the Del Rio Tanks and wells project. As the adjacent property (117 Stewart Rd.) of the proposed Site "B" Facility, there will be of course, not only consequential impacts to our lives and property-but also direct impacts which we expect the City of Modesto to mitigate to the best of their ability. We would like to address some of these concerns as listed in the Introduction to the NOP and outlined by Horizon Water and Environment, 2015, in sequence as listed.

AESTHETICS:

Aesthetics should be an integral part in the planning of any project. Too often, a utilitarian mindset prevails when planning such a project as the well development. This is always a short -sighted approach which leads to the substantial lack of pride in the completed project and an incremental loss of pride in the community as a whole. The description of the proposed site development unfortunately leaves a lot of latitude in this respect; "portions of the site may also include a no-climb chain link fence"; "parking areas within the site will be paved either with Portland Cement Concrete or asphaltic concrete"; ---either low-maintenance landscaping or gravel." The end result of such a project under these parameters could be pretty much anything. We would like to request an artist's rendering of the proposed site, including its proximity to our existing east wall and the 275 year old Heritage Oak Tree on the corner lot. With this in hand, we will be able to offer a more considered opinion.

GLOBAL CLIMATE CHANGE:

Past my paygrade.

NOISE:

Noise is of course one of several factors that will directly impact both the quiet enjoyment of our property and its resale value in a negative fashion. In our previous discussions with civil engineer, Robert Christensen, we expressed our concern about this matter and were assured that this would be looked into. The main area of concern of course are the vertical shaft pumps that are unfortunately the primary choice for such projects. The starting and operational noise from this style of pump can have a substantial impact to adjacent properties. With this in mind, we would request that the use of submersible pumps be thoroughly evaluated and not just dismissed off-hand. There are any number of manufacturers that have developed pumps that are ready, willing and able to handle the requirements as outlined in the NOP with efficiency and reliability, such as the Grundfor-SP Series Model 1100S, capable of 220 -1,400 G.P.M.- and heads up to 1,200 ft. If we would receive a commitment in writing that the well adjacent to our property will be submersible, we will consider this matter to be resolved. If we do not receive such a commitment we will by necessity assume that the pump will be of the conventional vertical shaft assembly with all of the inherent issues of noise involved. In this regard we would request the anticipated decibel levels of the operational facility such as outlined in the NOP, along with the measures proposed by the city to eliminate or mitigate these noises.

CUMULATIVE IMPACTS:

No statement.

GROUNDWATER:

As we are all aware, the groundwater issue has become a major issue for Valley Residents and a deep concern of ours especially in the context of this proposed development. Our home was built in 1929, and as far as I know, we are using the original well and pump house. Though I have changed out the conventional well pump to a submersible, we have had zero issues with our well. Groundwater level when I changed out our conventional (1996) was at 40 feet, and I set our pump at 60 feet (consistent with the old pump). When this new well starts pumping out 1,000 G.P.M. From under our house, what will happen? The projected annual average of 175 million gallons a year is a staggering number. Is our well and our neighbors wells going to be immune to this water grab underneath our property, or will it suffer the fate of so many small wells in the

foot-hills that have gone dry. As per the Modesto Bee article of May 10, 2015, by retired U.S. Geological Hydrologist, Vance Kennedy, we would be naive not to be concerned. We would like to know what the City of Modesto proposes to do for us and the residents of our community who might start having water issues, coincidental, or not, with the proposed development. What is meant by the statement that the water will be "primarily" drawn from the confined aquifer below the Corcoran clay level? While we believe the goal to be 100% what is the projected actual? 90%? 99%? 99.9%? Unknown? Even at a 99% effective rate, that would mean an annual projected loss of 1.75 million gallons a year from our groundwater supply. In its attempt to regulate groundwater resources, the Stanislaus County Board of Supervisors has submitted a draft resolution (Draft CS-Section 9.37.020) in which it sights several concerns about the effects of drafting (overdrafting) groundwater resources. Among its concerns, it sights the fact that mining of groundwater resources can lead to impacts ranging from movement of inferior quality water, lower levels of water, and groundwater degradation. It goes on to state that mining of groundwater resources could have adverse economic impacts including, but not limited to, loss of arable land, "a decline in property values", increased pumping costs, replacement of wells, etc. These findings are in the context of limiting the export of groundwater to third parties outside of Stanislaus County. That does not however, change the fact that groundwater over drafting can and does lead to negative impacts. I would venture to say that 175 million gallons/year times two equals potential troubles for all concerned.

LANDUSE:

No statement.

GROWTH INDUCING IMPACTS:

Obviously this falls under the category "If you build it, they will come."

ALTERNATIVES:

1. Rezone property that was changed from agricultural to residential in 1995, back to its proper designation of agricultural The properties involved in this rezoning have not been developed, nor should they be.
2. Limit growth in the area.

ADDITIONAL CONCERN:

Another issue that has been previously addressed with Mr. Christensen was the health and welfare of the Heritage Oak Tree that lives on the corner of Stewart and McHenry. This Heritage Oak is some 275 years old and has been the subject of a Modesto Bee Article and a item of concern of the noted late arborist author and columnist, John Haller. Mr. Haller once referred to this Heritage Oak, as quote: "One of the premier specimens of a valley oak." This coming from someone who devoted his career to the understanding and care of trees and author of the book Tree Care, by Audel Publishing John Haller c. 1997. We need to acknowledge and respect not only the beauty and heritage of this tree, but also take any and all measures to protect this tree in all phases of the proposed development, including, but not limited to:

1. Recognition of the status of this Heritage Oak and a commitment to its continued health and welfare; including the guidance of a certified arborist in all phases of the proposed development to make sure that no harm comes its way.

2. Routing of water pipe west to Stewart Rd. Water main needs to be kept away by running it adjacent to and parallel with McHenry Ave.

3. Limited Activity Around Oak. We were assured by Mr. Christensen that the city would take all necessary measures to insure that no harm comes to this tree, we would like to see such assurance in writing.

Sincerely Yours,

Jim and Joani Matthews

Subject: Response to Draft Environment Impact Report for the Del Rio Tank and Well Project

I went to a meeting several years ago sponsored by The City of Modesto and at that meeting we were told that a deep well would not affect the more shallow aquifer in our area. Later I read in The Modesto Bee another expert who wrote that was untrue.

In The Modesto Bee August 2, 2015 "Well data base faces a drought of user data?" In that article I saw a very real lack of data for the Del Rio area. With this in mind, I believe more study should be done before any approval of any expansion of existing wells or adding of a new well to site B: APN004-102-003 on Stewart Road. There are a number of private homes off of Stewart that have always been on shallow private wells.

I am sending a copy of this letter to Mr. Dick Monteith, District 4 Representative on the Stanislaus County Board of Supervisors asking for his help to ensure we are not harmed by this proposal.

Appendix B

Environmental Checklist

B. Environmental Checklist

Project Title:	Del Rio Tank and Wells Project
Lead Agency Name and Address:	City of Modesto Utilities Department P.O. Box 642 (1010 Tenth Street) Modesto, CA 95353
Contact Person and Phone Number:	Tamorah Bryant, Senior Civil Engineer (209) 577-5205
Project Location:	Unincorporated Stanislaus County Site A: APN 004-077-018 and 004-077-019 (718 Ladd Road), southeast of the intersection of Ladd Road and St. John Road Site B: APN 004-102-003, northwest of the intersection of McHenry Avenue and Stewart Road (portion near Stewart Road)
County General Plan Designation:	Site A: AG, Agriculture Site B: PD, Planned Development
County Zoning Classifications:	Site A: A-2-40, 40-acre lot Agriculture Site B: PD, Planned Development
Description of Project:	See EIR Chapter 2, *Project Description*
Surrounding Land Uses and Setting:	Site A: vacant on the west parcel, 1 single-family house and accessory buildings on the east parcel Site B: vacant land, formerly agriculture
Other Public Agencies whose Approval or Input May Be Needed:	▪ California State Water Resources Control Board ▪ Central Valley Regional Water Quality Control Board ▪ California Department of Public Health ▪ San Joaquin Valley Air Pollution Control District ▪ Stanislaus County ▪ Modesto Irrigation District

1. Environmental Factors Potentially Affected

In accordance with Section 15168 of the California Code of Regulations, this Initial Study discloses whether the proposed project described in Chapter 2 may cause any project-specific significant effect on the environment that was not examined in the Final Program Environmental Impact Report (Program EIR) for the Water System Engineer's Report (City of Modesto 2010) and whether new or additional mitigation measures or alternatives may be required as a result. The Initial Study thereby documents whether or not the Proposed Project is "within the scope" of the Program EIR. Topics fully evaluated in the EIR for the Proposed Project were chosen because this IS identified the potential for a significant impact beyond that identified and analyzed in the Program EIR. Applicable mitigation measures identified in the Program EIR and additional project-specific mitigation measures identified in the Proposed Project EIR would be applied to the Proposed Project as necessary to reduce impacts to a level that is less than significant.

The environmental factors checked below would potentially be affected by this Proposed Project (i.e., the Project would involve at least one impact that is a "Potentially Significant Impact"), as indicated by the checklist on the following pages.

[X] Aesthetics	[ ] Agricultural and Forestry Resources	[X] Air Quality
[X] Biological Resources	[X] Cultural Resources	[X] Geology / Soils
[X] Greenhouse Gas Emissions	[ ] Hazards and Hazardous Materials	[X] Hydrology / Water Quality
[X] Land Use & Planning	[ ] Mineral Resources	[X] Noise
[ ] Population & Housing	[ ] Public Services	[ ] Recreation
[ ] Transportation/Traffic	[ ] Utilities & Service Systems	[ ] Mandatory Findings of Significance

2. Evaluation of Environmental Impacts

The degree of change from existing conditions resulting from implementation of the Proposed Project is compared to the impact evaluation criteria to determine if the change is significant. Where it is determined that one or more significant impacts could result from implementation of the Proposed Project that was not examined in Program EIR, the topic is carried forward for analysis in the EIR. Existing conditions serve as a baseline for evaluating the impacts of the Proposed Project.

The following terminology is used in this document to describe the various levels of environmental impacts associated with the Proposed Project:

- A finding of *no impact* is identified if the analysis concludes that the Proposed Project would not affect a particular environmental topical area in any way.

- An impact is considered *less than significant* if the analysis concludes that the Proposed Project would not cause a substantial adverse change in the environment.
- An impact would be considered to have *potentially significant issues* if the analysis concludes that the Proposed Project could cause a significant environmental impact. A program that potentially produces significant impact(s) warrants a greater level of analysis and consideration provided by an EIR.

3. CEQA Environmental Checklist

I. AESTHETICS: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect on a scenic vista?	X		
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a designated scenic highway?	X		
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	X		
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	X		

The Proposed Project would involve construction and operation of quasi-industrial uses (water storage tank, wells, pump station building, security lighting) in an area that is currently occupied by and surrounded by open space, agricultural fields, and residential uses. In addition, the Program EIR identified potentially significant impacts and mitigation measures to reduce those impacts to a less-than-significant level (City of Modesto 2010: pp. 3.1-9–3.1-11). The potential exists for the Proposed Project to result in significant impacts. Therefore, a full analysis of the Proposed Project's potential effects on aesthetic resources is provided in the EIR.

II. AGRICULTURAL AND FORESTRY RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the State's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?			X
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?			X
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in PRC section 12220(g)), timberland (as defined by PRC section 4526), or timberland zoned Timberland Protection (as defined by Government Code section 51104(g)?			X
d) Result in the loss of forest land or conversion of forest land to non-forest use?			X
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?			X

Explanations

Based on the below supporting environmental analysis derived from the Program EIR (City of Modesto 2010: pp. 3.2-5–3.2-8), and pursuant to Sections 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that the Proposed Project is consistent with the project described and analyzed in the Program EIR. No new or additional significant impacts related to agricultural and forestry resources have been identified for the Proposed Project. Therefore, no further review for this impact is required under CEQA.

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural use – *No Impact*

According to the California Department of Conservation's map, "Stanislaus County Important Farmland 2014," Site A is designated Rural Residential and Site B is designated as Urban and Built-Up (California Department of Conservation 2015). The pipeline connecting Site A to an existing pipeline at Country Club Drive would be installed fully within the right-of-way of St. John Road and Ladd Road. The pipeline connecting Site B to an existing pipeline on Stewart Road at Grove Point Way would be installed fully within the right-of-way of McHenry Avenue. Therefore, no Prime Farmland, Unique Farmland, or Farmland of Statewide Importance would be converted to non-agricultural use for this project. No additional impact on Prime Agricultural land is anticipated, compared to the Program EIR. There would be **no impact**.

Note that the Program EIR identified this impact as significant and unavoidable because other projects would adversely affect Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. However, this Project does not adversely affect any Prime Agricultural land.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract – *No Impact*

According to the California Department of Conservation, no Williamson Act contracts are in effect on the project sites (California Department of Conservation 2012). Therefore, the Proposed Project would not conflict with a Williamson Act contract.

Site B is zoned as P-D (Planned Development) and therefore would not conflict with zoning for agricultural use. The Site A and Site B pipelines would be installed within road rights-of-way and therefore would not conflict with zoning for agricultural uses.

Site A is zoned as A-2-40 (General Agriculture District), which permits various uses, including (but not limited to) agricultural uses, single-family dwellings, mobile homes, buildings and appurtenances that are incidental or related to farming purposes, garage sales, and temporary agricultural service airports. According to Section 21.20.030 of the Stanislaus County Code, the A-2 district allows "Tier Three" uses that are not directly related to agriculture but may be necessary to serve the A-2 district. Specifically, public buildings and facilities for public utilities may be permitted on parcels zoned A-2, but such uses are subject to permit approval by the Stanislaus County Planning Commission. In addition, the Agricultural Element of the *Stanislaus County General Plan 2015* includes buffer setback guidelines for new or expanding uses in or adjacent to parcels zoned A-2, requiring that all projects incorporate a minimum 150-foot-wide buffer setback (Stanislaus County 2016a). Uses permitted within the buffer area include utilities, drainage facilities, landscaping, parking lots, and similar low-intensity uses.

The proposed facilities would likely meet the "Tier Three" criteria of a permitted use. Although agricultural uses are located immediately east of Site A, a berm and retention basin would be constructed within the 150-foot-wide buffer setback, both of which qualify as permitted buffer uses. As required by County Code, the City would apply for a use permit from Stanislaus County. In addition, Site A is currently occupied by a residence and is not used for agricultural

purposes. For these reasons, the Proposed Project would not result in a conflict with the County's zoning district. There would be **no impact**.

c) Conflict with existing zoning for forest land or timberland – *No Impact*

The Proposed Project would not conflict with zoning for forest land. No zoning for forest land or timberland is identified in the project area (Stanislaus County 2015) and Stanislaus County does not classify land as Timberland Protection Zones. There would be **no impact**.

d) Cause a loss of forest lands – *No Impact*

The Proposed Project would not result in the loss of forest lands or the conversion of forest land to non-forest use. No zoning for forest land is identified in the project area (Stanislaus County 2015). There would be **no impact** on forest lands.

e) Cause changes to the existing environment due to conversion of agricultural or forest lands – *No Impact*

As mentioned in items (a) and (b) above, the Proposed Project would not directly or indirectly lead to changes in the existing environment that could have adverse effects on agricultural land. Therefore, the Proposed Project would not result in conversion of farmland to non-agricultural use or conversion of forest land to non-forest use. There would be **no impact**.

III. AIR QUALITY: Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Conflict with or obstruct implementation of applicable air quality plans?	X		
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	X		
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	X		
d) Expose sensitive receptors to substantial pollutant concentrations?	X		
e) Create objectionable odors affecting a substantial number of people?	X		

Explanations

a-d) Conflict with air quality plans, violate air quality standards, result in cumulatively considerable increase of criteria pollutants, expose sensitive receptors to substantial pollutant concentrations – *Potentially Significant Issues*

The Proposed Project would be located in Stanislaus County, which is one of eight counties that comprise the San Joaquin Valley Air Pollution Control District (SJVAPCD) and the San Joaquin Valley Air Basin (Basin). The County's portion of the Basin has been designated as nonattainment for the federal and state standards for ozone and particulate matter less than 2.5 microns in diameter ($PM_{2.5}$), as well as for the state standard for particulate matter less than 10 microns in diameter (CARB 2016, USEPA 2016). The portion of the Basin within Stanislaus County is in attainment or unclassified for all other criteria pollutants. The SJVAPCD has developed air quality plans for ozone and $PM_{2.5}$, as required under the Clean Air Act.

The Proposed Project would have the potential to emit PM from ground-disturbing construction activities and to emit ozone precursor pollutants (i.e., reactive organic gases and nitrogen oxides) from fuel combustion by construction equipment, materials delivery and fill hauling vehicles, and construction worker vehicle trips. In addition, diesel PM, a toxic air contaminant, would be emitted from equipment and vehicles using diesel as a fuel source. These construction-related emissions could occur near or adjacent to sensitive receptors. These impacts would be **potentially significant**. This issue is investigated further in the Proposed Project EIR.

The project area is not within an area identified as likely to contain naturally occurring asbestos (NOA), which is a toxic air contaminant. Therefore, it is unlikely that the Proposed Project's ground-disturbing activities would result in any NOA emissions.

e) Create objectionable odors affecting a substantial number of people – *Potentially Significant Issue*

Construction of the Proposed Project components could generate objectionable odors through emissions of diesel particulate matter by construction equipment and through the use of diesel emergency backup generators during project operations. These impacts would be **potentially significant** and are investigated further in the EIR.

IV. BIOLOGICAL RESOURCES: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	X		
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?			X
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			X
d) Interfere substantially with the movement of any native resident or migratory species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	X		
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			X
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan?	X		

Explanations

a) Substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species - *Potentially Significant Issues*

Potential impacts on candidate, sensitive, or special-status species could occur from direct impacts due to construction of Project components, or from Project-related modification of potential habitat. These impacts would be **potentially significant**. The EIR evaluates the potential for candidate, sensitive, or special-status species to occur in proposed improvement locations based on known occurrences and habitat requirements of these species.

b) Substantial adverse effect on any riparian habitat or other sensitive natural community – *No Impact*

Riparian habitat occurs in the vicinity of the project area along the Stanislaus River. Other sensitive natural communities may also be present in the project area. Potential impacts on these habitats or communities could occur as a result of construction and/or operation of the proposed wells and tank and proposed transmission pipelines at both project sites.

A field survey of Sites A and B was conducted by a trained biologist on May 4, 2016. No riparian habitat or other sensitive natural communities are present within the study area. Thus, **no impact** would result to these habitats or communities.

c) Substantial adverse effects on federally protected wetlands – *No Impact*

Federally protected wetlands and waters and other surface waters or wetland features may be present in the project area. Activities associated with the Proposed Project could result in the disturbance or loss of jurisdictional wetland and aquatic communities. A field survey of the Site A and Site B study areas was conducted by a trained biologist on May 4, 2016. No waters of the United States (waters of the U.S.) are present within the study area. The study area was surveyed for the presence of hydrophytic vegetation, hydric soils, and wetland hydrology. None of these wetland indicators were present in the study area. The Modesto Irrigation District canal immediately south of Site A would not be affected by Proposed Project activities, based on City compliance with construction-related and operational drainage requirements as described in Chapter 2, *Project Description*, of the EIR and in Section IX, "Hydrology," of this Environmental Checklist. There would be **no impact**.

d) Substantial interference with wildlife movement, established wildlife corridors, or the use of native wildlife nursery sites – *Potentially Significant Issues*

The Proposed Project could interfere with breeding or migration of wildlife species. Specifically, if construction of project components occurs during the breeding season for migratory species, impacts on these species could result. These impacts would be **potentially significant** and are evaluated in the EIR.

e) Conflict with local policies or ordinances protecting biological resources – *Potentially Significant Issues*

The *Stanislaus County General Plan 2015* Conservation/Open Space Element (Stanislaus County 2016a) establishes several policies (notably Goal One, Policies Three and Four, and Goal Ten, Policy Twenty-nine) to protect sensitive species, along with habitats such as vernal pools, riparian habitats, and oak woodlands. The Proposed Project does not conflict with any local policies protecting biological resources because no vernal pools, riparian habitats, or oak woodlands are present in the study area, based on field surveys conducted by a qualified biologist on May 4, 2016. As indicated in item (a) above, impacts on sensitive species are **potentially significant issues** and are evaluated in Chapter 6, *Biological Resources,* of the DEIR.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State Habitat Conservation Plan – *No Impact*

The PG&E San Joaquin Valley Operation & Maintenance Habitat Conservation Plan (PG&E O&M HCP) (PG&E 2006) covers specific PG&E activities throughout nine counties in the San Joaquin Valley, including Stanislaus County. The PG&E O&M HCP complies with the federal and state ESAs and addresses multiple species and critical habitats. The PG&E O&M HCP outlines steps to minimize, avoid, and compensate for possible direct, indirect, and cumulative adverse effects on threatened and endangered species that could result from PG&E operation and maintenance activities in the San Joaquin Valley. The Proposed Project is within the PG&E O&M HCP boundaries but is not within PG&E's service area and is not a covered activity under the PG&E O&M HCP.

Wildlife species covered by the PG&E O&M HCP with the potential to be affected by the Proposed Project are Swainson's Hawk and Burrowing Owl. There is no overlap between the Proposed Project and PG&E's San Joaquin Valley O&M activities, as the Proposed Project is not located within a PG&E service area The Proposed Project would not conflict with implementation of the HCP's conservation strategy for these species because the project is not within a PG&E service area. Therefore, there would be **no impact**. In any event, the EIR for the Proposed Project includes mitigation measures to address any impacts on Burrowing Owls and Swainson's Hawk.

V. CULTURAL RESOURCES: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?	X		
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	X		
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	X		
d) Disturb any human remains, including those interred outside of formal cemeteries?	X		
e) Cause a substantial adverse change in the significance of a tribal cultural resource as defined in §21074?	X		

Explanations

a-b) Adverse change in the significance of a historical resource or an archaeological resource – *Potentially Significant Issues*

Historical resources, as defined in Public Resources Code (PRC) Section 15064.5, include, but are not limited to, any resource that is listed, or is eligible for listing, in the California Register of Historical Resources (CRHR); any resource that is included in a local register of historical resources; or any object, building, structure, site, area, place, record, or manuscript determined to be historically significant by a lead agency. Furthermore, historical resources, as defined under PRC Section 5024.1, include resources listed, or eligible for listing, in the National Register of Historical Places; State Historical Landmarks; and points of historical interest.

There is potential for the discovery of new historical resources of an archaeological nature within the project area. Potential impacts on historical resources would occur if these resources are present and would be physically disturbed by project-related construction activities (e.g., direct ground disturbance or vibration from ground disturbance). Impacts that result in de-listing of a resource from the CRHR, or render the resource ineligible for listing in the CRHR, would also be considered significant. These impacts would be **potentially significant.**

The EIR compares the locations of currently known or newly identified historical resources with the activities that make up the Proposed Project to evaluate potential effects to those resources.

c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature – *Potentially Significant Issues*

The Proposed Project area is underlain by Pleistocene alluvial deposits consisting of poorly sorted gravel, sand, silt, and clay that are more than 400 feet thick. These materials in the Central Valley are known to contain a variety of fossils, including extinct horses, mammoths, and giant ground sloth. Other animals noted are marine-living animals such as marine turtles, shark teeth, and sea urchins (Sierra College 2016).

Directly below the alluvial deposits is the Mehrten Formation, which was deposited during the Miocene to Pliocene Epochs. The Mehrten Formation is composed of sandstone, breccia, conglomerate, tuff, siltstone, and claystone and is approximately 800 feet thick and may lie as shallow as 400 feet beneath the City of Modesto (Stanislaus and Tuolumne Rivers Groundwater Basin Association 2005). The Mehrten Formation is not known for containing fossils; however, there is a possibility that fossils could be encountered during project construction; which would constitute a **potentially significant** impact. This topic is evaluated further in the EIR.

d) Disturbance of any human remains, including those interred outside of formal cemeteries – *Potentially Significant Issues*

Human remains are not currently known to exist at the project sites; however, they may be present without any surface manifestation and, as a result, could be disturbed by the Proposed Project's activities. This impact would be **potentially significant**. The EIR addresses the potential presence of and impacts on human remains during construction.

e) Adverse change in the significance of a tribal cultural resource as defined in PRC 21074 – *Potentially Significant Issues*

The Proposed Project is within a geographic area associated with the Northern Valley Yokuts tribes, which have a traditional and cultural affiliation with the region. Assembly Bill 52, which was enacted on May 12, 2016, requires that a state lead agency consult with California Native American tribes that have a traditional and cultural affiliation to a project area to determine if any tribal cultural resources (TCRs) would be affected by the proposed project. PRC Section 21074 defines TCRs as resources that are historical resources under California Code of Regulations (CCR) Section 15064.5; cultural landscapes that meet the criteria of CCR Section 15064.5; and as unique archaeological sites under PRC Section 21083.2. There is the potential for TCRs to be located in the project area and for the Proposed Project to have an adverse change to any such resources.

The City will consult with local tribes about the presence of TCRs within the project area and, should any be identified, the protection of TCRs from project-related actions. The consultation efforts and the identification of TCRs, if present, are analyzed in the EIR.

VI. GEOLOGY AND SOILS: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death related to:			
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			X
ii) Strong seismic ground shaking?		X	
iii) Seismic-related ground failure, including liquefaction?		X	
iv) Landslides?			X
b) Result in substantial soil erosion or the loss of topsoil?		X	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	X		
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?		X	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of wastewater?			X

Explanations

Based on the below supporting environmental analysis derived from the Program EIR (City of Modesto 2010: pp. 3.6-9–3.6-10), and pursuant to Sections 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that, with the exception of Checklist item (c), the Proposed Project is consistent with the project described and analyzed in the Program EIR. No new or additional significant impacts related to geology or soils have been identified for the Proposed Project. Therefore, no further review of impacts is required under CEQA except for Checklist item (c). Information presented below is based on the geotechnical investigation conducted at Site A (Blackburn Consultants 2012), Phase I Environmental Site Assessments conducted at Site A (ATC

Associates 2012a) and Site B (ATC Associates 2012b), and other information sources identified below. A geotechnical study would be completed at Site B as part of the design process.

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Seismic-related rupture of a known earthquake fault – *No Impact*

The Proposed Project is not located within an Alquist-Priolo designated hazard zone. The nearest active faults are the Carnegie Fault (approximately 29 miles west), Greenville Fault (approximately 33 miles west), and Ortigalita Fault (approximately 36 miles southwest) (California Geological Survey 2010). Since there are no known faults in the project area, there would be **no impact** from fault rupture.

ii) Strong seismic ground shaking – *Less than Significant*

As analyzed in the Program EIR (City of Modesto 2010: p. 3.6-5), the Central Valley generally experiences lower levels of more infrequent ground shaking than many other regions of California due to the substantial distance to active faults and the underlying geologic and soil conditions. In Stanislaus County, the level of seismic ground shaking ranges from "High" risk along the western border of the County and the foothills of the Diablo Range, to "Moderate" risk in the central part of the County, to "Low" risk in the eastern portion (California Geological Survey 2008). The project area lies within the Central portion of the County and is considered to be at "Moderate" risk for earthquake shaking potential. The Proposed Project would be required to comply with the most recent California Building Code seismic standards for construction, ensuring that any adverse effects to structures or people would be **less than significant**.

iii) Seismic-related ground failure, including liquefaction – *Less Than Significant*

Settlement is the lowering of the land-surface elevation as a result of the compression, compaction, or consolidation of underlying soils, sediment, or rock. These processes are exacerbated under increased loading (e.g., additional sediment deposition or construction of structures, including fills) or the withdrawal of subsurface water. Soils consisting of fine-grained silts and clays with a high water table are more susceptible to differential settlement. Liquefaction is the temporary transformation of soils that are saturated and have very low cohesion, or are cohesionless, into a viscous liquid as a result of ground shaking. Liquefaction may occur in water-saturated soils during moderate to severe earthquakes. The potential for liquefaction to occur depends on soil composition, soil saturation levels, and the intensity and duration of seismic ground shaking.

The Program EIR (City of Modesto 2010: pp. 3.6-9–3.6-10) noted that there may be potentially significant impacts from liquefaction if individual projects were constructed on expansive soils. Pursuant to Mitigation Measure GEO-1 in the Program EIR, the City hired a registered engineer to conduct a project-specific geotechnical investigation at Site A; a geotechnical investigation would be conducted at Site B as part of the design process.

Site A is underlain by Hanford soils generally have a sandy loam texture (Natural Resources Conservation Service [NRCS] 2016). A geotechnical study for Site A (Blackburn Consulting 2012) identified loose to very dense silty sand to approximately 8 feet below ground surface (bgs), loose to medium-dense poorly graded sand to about 13–20 feet bgs, and hard elastic silt with sand to hard sandy silt at greater depths. Groundwater was encountered at 40 feet bgs. Based on the subsurface soil and groundwater conditions and the estimated magnitude and duration of ground shaking at Site A, the potential for liquefaction is considered very low.

Site B is predominantly underlain by Delhi sand with some Oakdale sandy loam (NRCS 2016). Delhi sands generally consist of sand up to 44 inches bgs with loamy fine sand at greater depths. Estimated depth to groundwater ranges between 50 and 60 feet bgs (California Department of Water Resources 2016). Based on the subsurface groundwater conditions and the estimated magnitude and duration of ground shaking at Site B, the potential for liquefaction is considered low. A geotechnical investigation would be conducted at Site B as part of the design process, to confirm the understanding of these conditions.

The proposed transmission lines connecting the new wells at Site A and Site B to the City's existing distribution system would be installed under St. John Road, McHenry Avenue, and Stewart Road. Existing soils under the roadways would be excavated and the new transmission lines constructed using suitable backfill soils and levels of compaction to meet engineering specifications.

Due to the existence of sandy loam and loamy sand soils and a relatively low water table, seismic-induced differential settlement, ground failure, or liquefaction would not be expected. Therefore, potential impacts would be less than significant.

The Proposed Project includes the installation of production wells and extraction of groundwater resources. Groundwater withdrawal has the potential to result in subsidence and/or collapse during a seismic event and may be **potentially significant**. Analysis of groundwater resources and the Proposed Project's potential risk of land subsidence or collapse will be addressed in detail in Chapter 9, *Groundwater*, of the EIR.

iv) Landslides – *No Impact*

As described in the Program EIR (City of Modesto 2010: pp. 3.6-9–3.6-10), and pursuant to Mitigation Measure GEO-1 in the Program EIR, the City hired a registered engineer to conduct project-specific geotechnical investigation at Site A; a geotechnical investigation would be conducted at Site B as part of the design process. Landslides are not likely to occur on or near the project sites. Landslides are downward movement of a slope, generally increasing in occurrence in relation to steepening slope angles, following precipitation events or saturation of soils, wildfires, and/or human disturbance. Similar to landslides but typically on gentler slopes, lateral spreading or lateral flow can occur where saturated soils lose cohesion and have a rapid, fluid-like movement.

The floor of the Central Valley where the Proposed Project is located is relatively flat, with only minor changes in topography. The Proposed Project does not include any features that would

increase the exposure of people to landslide hazards. Therefore, there would be **no impact** related to landslide effects.

b) Substantial soil erosion or the loss of topsoil – *Less Than Significant*

Site A is underlain by Hanford sandy loam (Blackburn Consultants 2012, NRCS 2016). Hanford sandy loam has moderate infiltration rates, and is deep and well drained with moderately coarse texture. This unit has a moderate susceptibility to erosion. Site B is predominately underlain by Delhi sand with some Oakdale sandy loam (NRCS 2016). Delhi sand and Oakdale sandy loam have high infiltration rates, and are deep and well drained to excessively drained sands and gravels (NRCS 2016). Delhi sand and Oakdale sandy loam have low to moderate susceptibility to erosion.

The Proposed Project may include grading, excavation, trenching, or other construction-related activities that leave soils exposed to erosion; however, after construction, the project sites would be flat, and loss of topsoil and soil erosion would not be substantial. Compliance with statutory regulations governing discharges from construction activities, as discussed in Chapter 2 of the EIR and Section IX, "Hydrology," of this Environmental Checklist, would reduce the potential for erosion and topsoil impacts to a less-than-significant level. During facility operations at Site A, the proposed stormwater retention basin and berm slopes may be susceptible to erosion. As stated in the Project Description, however, the Proposed Project includes planting vegetation on the berms and stabilizing the slopes of the retention basin by hydroseeding or planting with drought-tolerant plants. At Site B, the wells, pipeline, and standby generator would be installed on level ground and the site would connect to the City's storm drainage system in McHenry Avenue. Therefore, these impacts are considered **less than significant**.

c) Location on a geologic unit or soil that is unstable or that would become unstable as a result of the Proposed Project and potentially result in an on-site or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse – *Potentially Significant Issue*

Pursuant to the site-specific geotechnical investigations, and as described above in item a) iv), the project sites are located in an area that is relatively flat with only minor changes in topography; landslides and lateral spreading are not likely to occur on either of the proposed sites. Construction-related ground-disturbing or excavation activities could alter the soil stability at the construction locations. Excavation and trenching for the transmission pipelines may create unstable slopes during construction; however, open trenches and excavation would be conducted according to California Building Code standards and engineering plan specifications, ensuring the risk of localized slope failure would be **less than significant**.

As discussed in item a) iii) above, soil and groundwater characteristics for the proposed sites are not conducive to the effects of liquefaction. Impacts related to liquefaction would be **less than significant**.

Soil collapse occurs when the land surface is saturated at depths greater than those reached by typical rain events, effectively eliminating the clay bonds holding the soil grains together. Collapsible soils generally consist of loose, dry, low-density, low-plasticity, silt- to fine-sand-

sized materials that compact under the addition of water or excessive loading. Collapse typically occurs in areas underlain by young alluvial fans, debris flow sediments, and loess (wind-blown sediment) deposits. Similar to expansive soils, collapsible soils result in structural damage such as cracking of the foundation, floors, and walls in response to differential settlement. A geotechnical investigation conducted at Site A did not identify geologic or soil conditions susceptible to collapse (Blackburn Consultants 2012). Similar geologic and soil conditions underlie Site B and the pipeline alignment. Impacts related to collapse are considered **less than significant**.

The Proposed Project includes the installation of production wells and extraction of groundwater resources. Groundwater withdrawal has the potential to result in subsidence and/or collapse and may be **potentially significant**. Analysis of groundwater resources and the Proposed Project's potential risk of land subsidence or collapse will be addressed in detail in Chapter 9, *Groundwater*, of the EIR.

d) Location on expansive soil, creating substantial risks to life or property – *Less Than Significant*

Pursuant to Mitigation Measure GEO-1 in the Program EIR, the City conducted a geotechnical investigation at Site A. The geotechnical investigation at Site A indicated that the soils at these sites do not contain a relatively high percentage of clay minerals. Clay minerals have the potential to shrink and swell with changing moisture conditions. Extensive shrinking/swelling can fracture building foundations and damage infrastructure. Instead, Site A is underlain by Hanford soils (NRCS 2016), which are loose to very dense silty sand to approximately 8 feet bgs, loose to medium-dense poorly graded sand to about 13–20 feet bgs, and hard elastic silt with sand to hard sandy silt at greater depths (Blackburn Consulting 2012).

A geotechnical investigation would be conducted at Site B as part of the design process. Site B is predominantly underlain by Delhi sand with some Oakdale sandy loam (NRCS 2016). Delhi sands generally consist of sand up to 44 inches bgs with loamy fine sand at greater depths. Estimated depth to groundwater ranges between 50 and 60 feet bgs (California Department of Water Resources 2016). Soils on the Hanford sandy loam, Delhi sand, and Oakdale sandy have a low plasticity rating (NRCS 2016). These soils are not considered expansive and would not be susceptible to frequent shrinking/swelling. Impacts related to expansive soils are therefore **less than significant.**

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems in areas where sewers are not available for the disposal of wastewater – *No Impact*

The Proposed Project does not involve construction of septic tanks or alternative wastewater disposal systems. Therefore, there would be **no impact** related to the suitability of soils to support septic tanks or alternative disposal systems.

VII. GREENHOUSE GAS EMISSIONS: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Generate greenhouse gas (GHG) emissions, either directly or indirectly, that may have a significant impact on the environment?	X		
b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purposed of reducing the emissions of GHGs?	X		
c) Encourage activities that result in the use of substantial amounts of fuel or energy, or use these resources in a wasteful manner?	X		

The Proposed Project would involve construction activities, including truck trips, worker vehicle trips, and operation of heavy equipment; all of these activities would result in GHG emissions. Operation-related emissions would result as well, including standby generators, use of electricity, and worker vehicle trips. The potential exists for the Proposed Project to have a significant impact with regard to GHG emissions. Therefore, a full analysis of the Proposed Project's potential effects on greenhouse gas emissions and energy resources is provided in the EIR.

VIII. HAZARDS AND HAZARDOUS MATERIALS: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, storage or disposal of hazardous materials?		X	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?		X	
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?			X
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?		X	
e) Be located within an airport land use plan area or, where such a plan has not been adopted, be within 2 miles of a public airport or public use airport and result in a safety hazard for people residing or working in the study area?			X
f) Be located within the vicinity of a private airstrip and result in a safety hazard for people residing or working in the study area?			X
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?		X	
h) Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?			X

Explanations

Based on the below supporting environmental analysis derived from the Program EIR (City of Modesto 2010: pp. 3.7-8–3.7-11), and pursuant to Sections 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that the Proposed Project is consistent with the project described and analyzed in the Program EIR. No new or additional significant impacts related to hazards and hazardous materials have been identified for the Proposed Project. Therefore, no further review for this impact is required under CEQA.

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials – *Less Than Significant*

Construction of the Proposed Project would involve use of heavy equipment that uses hazardous materials, such as fuel and lubricants. Consistent with the analysis and finding in the Program EIR (City of Modesto 2010: p. 3.7-8), compliance with existing, standard federal, state, and local regulations regarding hazardous waste handling and disposal would be sufficient to prevent a significant impact from transport, use, or disposal of such hazardous materials.

Once construction is complete, continued maintenance of the proposed groundwater well and water storage facilities at Sites A and B would require routine transport and use of hazardous materials. In addition, backup generators would require diesel fuel (at both sites) and calcium hypochlorite (at Site A only), which would be stored onsite; diesel fuel and calcium hypochlorite are considered hazardous materials. Routine transport of diesel and calcium hypochlorite to the project sites would be required to maintain project operations. Transport and handling of hazardous materials would be conducted in accordance with applicable federal, state, and local regulations. Such regulations would include accidental spill handling and notification procedures such as those issued by City of Modesto Fire Prevention Department; Stanislaus County Spill Prevention, Control, and Countermeasures (SPCC) standards; and Occupational Safety and Health Administration (OSHA) requirements. Therefore, this impact is considered **less than significant**.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment – *Less Than Significant*

As described in item (a) above, construction of the Proposed Project would require use and storage of hazardous materials such as fuel and lubricants. As described in the Program EIR (City of Modesto 2010: p. 3.7-9), compliance with existing, standard federal, state, and local regulations regarding hazardous waste handling and disposal would be sufficient to prevent and address release of hazardous materials to the environment.

The Proposed Project would include storage of hazardous materials, including diesel fuel (at both sites) and calcium hypochlorite (at Site A only). Storage and use of such hazardous materials could create a significant hazard to the public or the environment through upset and accident conditions (e.g., if storage containers were to leak or rupture, or hazardous materials were to otherwise spill), resulting in a significant impact. Further, as described in Chapter 2, *Project Description*, of the EIR, the Proposed Project sites would be designed according to applicable federal, state, and local regulations, including providing secondary containment for all chemical storage and fuel storage, and compliance with City of Modesto Fire Prevention Department requirements, Stanislaus County SPCC standards, the Uniform Fire Code (UFC), and OSHA requirements. Therefore, this impact is considered **less than significant**.

c) Emit hazardous emissions or involve handling hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school – *No Impact*

No portion of the Proposed Project would take place within 0.25 mile of an existing or proposed school. The nearest schools to the project sites are Stanislaus Elementary School, 1.9 miles southwest of Site A and 2.75 miles southwest of Site B; and Rio Altura Elementary School, 3.0 miles east of Site A and 2.3 miles southeast of Site B. The Proposed Project would have **no impact** on schools.

d) Located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, create a significant hazard to the public or the environment – *Less Than Significant*

As analyzed in the Program EIR (City of Modesto 2010: pp. 3.7-9–3.7-10), construction would disturb and excavate soils within existing roadways and undeveloped areas for installation of storage tanks, pipelines, and groundwater wells. However, because the exact locations of these facilities were not finalized at the time the Program EIR was certified, it was not known whether areas of known hazardous material contamination existed within specific project sites. Mitigation Measure HAZ-1 in the Program EIR required that, prior to the commencement of construction activities, the City prepare a risk assessment in accordance with ASTM Standard 1527-05, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process."

Pursuant to Mitigation Measure HAZ-1, the City conducted Phase I Environmental Site Assessments at Site A and Site B in 2012 (ATC Associates 2012a, 2012b). Site A currently supports a single-family residence and occupied buildings on the east portion of the project site. Historical land uses for Site A (ATC Associates 2012a) consisted of undeveloped land, residential, and agricultural uses. Evidence of large-scale use or disposal of pesticides, herbicides, or fertilizers (such as mixing tanks, chemical storage areas, sprayers, or stressed vegetation) was not observed in aerial photographs, topographic mapping, or a site visit of the property. Database queries of the State and Tribal Registered Underground Storage Tanks (UST, INDIAN UST) list, Historical UST (HIST UST) list, California Facility Manifest Database (CA FID UST), and Statewide Environmental Evaluation and Planning System (SWEEPS UST) reported three underground storage tank (UST) sites:

- A 500-gallon diesel fuel UST is located west of Site A beyond the Union Pacific Railroad track. There is no evidence of soil or groundwater contamination related to this UST and no impacts on Site A.
- An Open-Inactive cleanup site listed by the Central Valley Regional Water Quality Control Board is located 446 feet west of Site A. Contamination consists of pesticide or herbicide releases to soils only; groundwater was not affected. There is no evidence of migration of contamination offsite and no impacts on Site A.

- An active 390-gallon gasoline UST for agricultural uses is located 606 feet east of Site A. There are no reports and no evidence of soil or groundwater contamination related to this UST and no impacts on Site A.

Other potential sources of hazardous materials at Site A include asbestos-containing materials and lead-based paint within the residential buildings (ATC Associates 2012a). Although the presence of these hazards was not confirmed in the Phase I Environmental Site Assessment, building materials used at the time of construction of the homestead (circa 1946) commonly contained asbestos-containing materials and/or lead-based paint. Abatement of asbestos-containing materials and lead-based materials during any demolition of existing buildings would be supervised by a contractor certified by the California Occupational Safety and Health Administration and would be conducted in a manner compliant with federal, state, and local regulations. These regulations would protect construction workers by requiring the use of personal protective equipment, and would protect the public by implementing dust-control procedures or other means to prevent the release of airborne particulates.

The homestead is served by an existing septic tank and leach lines located just south of the main residence. Removal or abandonment of the treatment system would be conducted in accordance with local and state regulations to prevent any potential release of or worker exposure to waste material or contaminated soils.

Historical land uses for Site B (ATC Associates 2012b) consist of an agricultural field or undeveloped land. Evidence of large-scale use or disposal of pesticides, herbicides, or fertilizers (such as mixing tanks, chemical storage areas, sprayers, or stressed vegetation) was not observed in aerial photographs, topographic mapping, or a site visit of the property. A database query of the UST and INDIAN UST list reported one 1,000-gallon gasoline UST and one 500-gallon gasoline UST at the property for agricultural uses. Further investigation of county and state resources could not confirm the presence of these USTs, however, and no files, reports of releases, or violations were identified with the property or addresses near Site B.

There are no records of hazardous materials sites or hazardous cleanup sites along St. John Road and the proposed pipeline alignment.

In summary, Phase I Environmental Site Assessments conducted at Sites A and B did not identify any documented hazardous materials storage areas, hazardous materials cleanup sites, or leaking USTs that may affect the project sites. Demolition of existing buildings and wastewater treatment systems would be conducted in accordance with local and state regulations. In addition, the Program EIR included Mitigation Measure HAZ-2, which specifies worker training and mandates City remediation for any unanticipated hazardous waste materials encountered during construction activities. By following regulatory requirements and implementing Mitigation Measure HAZ-2, the potential for hazardous materials to create a significant hazard to the public or the environment is considered **less than significant**.

e) Located within an airport land use plan area, or where such a plan has not been adopted, or be within 2 miles of a private or public airport and result in a safety hazard for people residing or working in the study area – *No Impact*

The Proposed Project is not located within an airport land use plan area or within 2 miles of a public or private airport. The nearest airport or private airstrip is the Modesto City-County Airport, approximately 7.2 miles south of the project sites. As such, there would be **no impact**.

f) Create a safety hazard for people working in the area due to the presence of a private airstrip – *No Impact*

The Proposed Project is not located within an airport land use plan area or within 2 miles of a public or private airport. The nearest airport or private airstrip is the Modesto City-County Airport, approximately 7.2 miles south of the project sites. As such, there would be no impact on safety hazards for people due to presence of a private airstrip.

g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan – *Less Than Significant*

Consistent with the analysis in the Program EIR (City of Modesto 2010: p. 3.7-11), the majority of the Proposed Project's facilities would be located underground or within the public right-of-way. As such, when fully constructed, the Proposed Project would have no impact on the implementation of, or physical interference with, an adopted emergency response plan or emergency evacuation plan. However, the Proposed Project would include installation of pipelines within the public right-of-way and other facilities that may require temporary closure of at least one lane of traffic during construction. Depending on the specific location of the proposed facilities and the construction activities required, effects on roads or building ingress and egress could impede the movement of emergency response vehicles or otherwise interfere with an emergency response plan or emergency evacuation plan. Project facilities would be constructed in accordance with the City's Standard Construction Procedures; these include preparing and implementing a traffic control plan, public notification, and preconstruction meetings. Once constructed, the Proposed Project would not affect implementation of emergency response plans. Consistent with the finding in the Program EIR, this impact is considered **less than significant**.

h) Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands – *No Impact*

The Proposed Project would be located in a rural area surrounded by agricultural lands. Consistent with the analysis and finding in the Program EIR (City of Modesto 2010: p. 3.7-11), there are no wildlands in the project area and, therefore, there is no potential for people or structures to be exposed to a significant risk of loss, injury, or death involving wildland fires. There would be **no impact**.

IX. HYDROLOGY: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Violate any water quality standards or waste discharge requirements?		X	
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local ground water table level (for example, the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	X		
c) Substantially alter the existing drainage patterns of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?		X	
d) Substantially alter the existing drainage patterns of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?		X	
e) Create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?		X	
f) Otherwise substantially degrade water quality?		X	
g) Place housing within a 100-year flood-hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?			X
h) Place within a 100-year flood-hazard area structures which would impede or redirect flood flows?			X
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?			X
j) Inundation by seiche, tsunami, or mudflow?			X

Explanations

Based on the below supporting environmental analysis derived from the Program EIR (City of Modesto 2010: pp. 3.8-17–3.8-22), and pursuant to Sections 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that, with the exception of item (b), the Proposed Project is consistent with the project described and analyzed in the Program EIR. No new or additional significant impacts related to geology or soils have been identified for the Proposed Project. Therefore, no further review for this impact is required under CEQA except for item (b).

a) Violate any water quality standards or waste discharge requirements – *Less Than Significant*

Construction of proposed facilities and improvements would involve excavation, grading, and use of heavy construction equipment, all of which would have the potential to cause water quality degradation in local waterways. Use and storage of hazardous materials during construction could also result in water contamination (e.g., from leaks or spills) without adequate safeguards. Because the project sites cover more than 1 acre, project construction would be conducted according to standard protocols of the Clean Water Act Section 402 General Construction Permit (State Water Resource Control Board Order No. 2009-0009-DWQ). As required under the National Pollutant Discharge Elimination System, a stormwater pollution prevention plan would be implemented for the sites. Proposed storage tanks for diesel fuel (at both sites) and calcium hypochlorite (at Site A only) would be operated and maintained according to federal, state, and local protocols, as discussed in Section VIII, "Hazards and Hazardous Materials," of the Program EIR. With implementation of standard construction and operational procedures, this impact would be **less than significant**.

b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge, resulting in a net deficit in aquifer volume or lowering of the local groundwater table level – *Potentially Significant Issue*

The purpose of the Proposed Project is to extract groundwater supplies. The Proposed Project has the potential to interfere with groundwater supplies and recharge to some degree by increasing impervious surface area (e.g., from pump buildings and storage tanks). These impacts are considered **potentially significant** and are evaluated in the EIR.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, resulting in substantial erosion or siltation on-site or off-site, or create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff – *Less Than Significant*

The Program EIR evaluated the potential for projects to affect water quality through changes in drainage patterns and found it to be less than significant (City of Modesto 2010: 3.8-20). The Proposed Project would not alter the course of any stream or river, but would change the existing drainage patterns at the project sites. As described in Chapter 2, *Project Description*, of

the EIR, proposed facilities at Site A would result in an increase of impervious surfaces and could, therefore, increase the amount of runoff or otherwise change patterns of drainage and infiltration. Site A includes construction of a stormwater retention basin to capture and infiltrate stormwater runoff from the project site. The basin would be designed with the appropriate capacity to receive rainfall runoff and water from the water storage tank, if it were to fail. Runoff from new impervious surfaces proposed at Site B would be retained onsite.

The Proposed Project would involve grading, excavation, trenching, and other construction-related activities that leave soils exposed to erosion. During construction, runoff at the sites would be controlled through implementation of a stormwater pollution prevention plan as required under the National Pollutant Discharge Elimination System; after construction, the project sites would be flat, and loss of topsoil and soil erosion would not be substantial. At Site A, the proposed stormwater retention basin and berm slopes may be susceptible to erosion; however, as stated in Chapter 2, *Project Description*, of the EIR, the Proposed Project includes planting vegetation on the berms and stabilizing the slopes of the retention basin with hydroseeding or planting with drought-tolerant plants.

As described in Section VIII, "Hazards and Hazardous Materials," of this Environmental Checklist, potential water quality pollutants, including diesel fuel and calcium hypochlorite, would be handled according to standard federal, state, and local regulations. The Proposed Project would not result in substantial erosion or siltation, exceed the capacity of existing or planned stormwater drainage systems, or generate substantial new sources of polluted runoff. This impact would be **less than significant**.

d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff resulting in flooding on-site or off-site – *Less Than Significant*

As described in item (c) above, the Proposed Project would alter the existing drainage patterns through addition of impervious surfaces, although these effects are not anticipated to be significant. The amount of increased surface runoff generated from both project sites would be captured and allowed to percolate to groundwater onsite; increased surface runoff generated at the project sites would not be sufficient to result in flooding, either onsite or offsite. This impact is considered **less than significant**.

e) Create runoff that would exceed the existing stormwater systems – *Less Than Significant*

As described in items (c) and (d) above, the Proposed Project would include construction of impervious surfaces that could increase the amount of surface runoff generated at the project sites. Runoff generated at Sites A and B would be captured in onsite retention basins. This impact is considered **less than significant**.

f) Substantially degrade water quality – *Less Than Significant*

Apart from the potential construction-related water quality impacts discussed in item (a) above, the Proposed Project would not substantially degrade water quality. Operation of the Proposed Project facilities would not involve direct discharges to surface waters; stormwater runoff at both sites would be captured and infiltrated to groundwater. Onsite safety measures would be implemented to prevent spills of hazardous materials. Groundwater quality around the well location could be degraded during the well drilling process; however, any turbidity or suspended solids around the well would be flushed out while preparing the well system for operation. This impact is considered **less than significant**.

g) Place housing within a 100-year flood hazard area, as mapped on a federal flood hazard boundary or flood insurance map or other flood hazard delineation map - *No Impact*

The Proposed Project would not involve placement of housing within a flood hazard area. **No impact** would occur.

h) Place structures within a 100-year flood hazard area resulting in impeding or redirect flood flows – *No Impact*

The Proposed Project is not located within a 100-year flood hazard area. According to the Federal Emergency Management Agency's Flood Insurance Rate Map for the area, Sites A and B are located in Zone X (unshaded) or "areas determined to be outside the 0.2% annual chance flood plain" (ATC Associates 2012a, 2012b). **No impact** would occur.

i) Expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding resulting from the failure of a levee or dam – *No Impact*

According to the dam inundation map included in the *Stanislaus County General Plan 2015* (2016a), the Proposed Project is not located in a dam inundation area and is therefore not subject to significant loss due to flooding if an upstream dam were to fail. **No impact** would occur.

j) Contribute to inundation by seiche, tsunami, or mudflow – *No Impact*

The Proposed Project would be located in the Central Valley of California and is not near any lakes or other large bodies of water. There is no potential for seiche or tsunami in the project area. The topography of the area is generally flat, and mudflow is not a noted hazard in the area. **No impact** would occur.

X. LAND USE AND PLANNING: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Physically divide an established community?	X		
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	X		
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	X		

Explanations

a) Physically divide an established community – *Less Than Significant*

The Proposed Project is expected to improve water system flexibility and reliability and provide additional water supply and storage to accommodate anticipated growth in the Del Rio community. As a result, the Proposed Project would improve development of Del Rio, rather than divide it. During the construction phase, however, the Proposed Project could temporarily disrupt surrounding land uses. Construction vehicles may cause short-term delays on access roads. This issue is considered **potentially significant** and is evaluated further in the EIR.

b) Conflict with an applicable land use plan, policy, or regulation with jurisdiction over the project adopted for the purpose of avoiding or mitigating an environmental effect – *Potentially Significant Issue*

Although the Proposed Project would improve water system flexibility and reliability for the Del Rio community, construction and operation of the Proposed Project could conflict with policies contained in the *Del Rio Community Plan* (Stanislaus County 1992) and *Stanislaus County General Plan 2015* (Stanislaus County 2016a). This impact is considered **potentially significant** and is evaluated further in the EIR.

c) Conflict with an applicable habitat conservation plan or natural community conservation plan – *Potentially Significant Issue*

As described in Section IV, "Biological Resources," above, the Proposed Project could conflict with an adopted habitat conservation plan or natural community conservation plans. This issue is considered **potentially significant** and is evaluated further in the EIR.

XI. MINERAL RESOURCES: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?			X
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?			X

Explanation

Based on the below supporting environmental analysis derived from the Program EIR (City of Modesto 2010: p. 3.6-10), and pursuant to Sections 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that the Proposed Project is consistent with the project described and analyzed in the Program EIR. No new or additional significant impacts related to mineral resources have been identified for the Proposed Project. Therefore, no further review for this impact is required under CEQA.

a-b) Loss of availability of mineral resources – *No Impact*

The Program EIR found that the proposed infrastructure would have no effect on the availability of sand and gravel operations in the area. Based on review of the *Stanislaus County General Plan 2015* (2016a) and California Department of Conservation Surface Mining and Reclamation Act Mineral Lands Classification mapping (California Department of Conservation 1993), there are no known mineral resource zones or historic or active mines or quarries within the project area. In addition, construction and operation of the Proposed Project would not directly affect mineral production sites or prevent future availability of mineral resources. As a result, the Proposed Project would have **no impact** on mineral resources.

XII. NOISE: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	X		
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	X		
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	X		
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above existing levels without the project?	X		
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	X		
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	X		

The Program EIR identified several noise-related impacts as significant (City of Modesto 2010: pp. 3.10-8–3.10-12). Construction activities for the Proposed Project would involve operation of heavy machinery during an approximately 15-month construction period, in the vicinity of residential uses that would be defined as sensitive receptors. Operation of the Proposed Project would involve pumps running an average of 8 hours per day, occasional use of standby generators, and other noise-producing activities. These activities have the potential to result in noise impacts on nearby sensitive receptors. Therefore, a full analysis of the Proposed Project's potential effects on noise is provided in the EIR.

XIII. POPULATION AND HOUSING: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Induce substantial growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?		X	
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?			X
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?			X

Explanations

Based on the below supporting environmental analysis derived from the Program EIR (City of Modesto 2010: pp. 3.11-7–3.11-11), and pursuant to Sections 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that the Proposed Project is consistent with the project described and analyzed in the Program EIR. No new or additional significant impacts related to population and housing have been identified for the Proposed Project. Therefore, no further review for this impact is required under CEQA.

a) Induce population growth, either directly or indirectly – *Less Than Significant*

The Program EIR evaluated the potential to induce substantial population growth and found it to be a significant and unavoidable impact (City of Modesto 2010: pp. 3.11-8–3.11-11). This conclusion was primarily based on the determination (p. 3.11-8) that

> *[E]xpansion of and upgrades to the water system to provide new service to currently undeveloped parcels within the communities of North Ceres, Turlock, and Waterford, and the planned urbanizing areas of Del Rio, Grayson, Hickman, and Modesto (including the contiguous service area), would remove an obstacle to population growth.*

This is not the case with the Proposed Project. The Proposed Project would improve existing water pressure and volume storage deficiencies, ensure that system pressure is sufficient for firefighting, improve water system flexibility and reliability, and provide additional water supply and storage to accommodate the anticipated growth of the Del Rio community in accordance with the *Del Rio Community Plan* and the *Stanislaus County General Plan 2015.*

Throughout the Proposed Project's construction phases, workers would be temporarily employed at project sites. It is anticipated that regional labor could meet the project's construction workforce requirements. While some workers might temporarily relocate from other areas, the increase would likely be minor and short term. It is anticipated that existing City staff

would operate and maintain the project facilities in the long term. The Proposed Project would not result in the construction of new homes. No new long-term employment opportunities or substantial population growth would occur in the project area due to construction of the Proposed Project.

One of the primary objectives of the Proposed Project is to ensure that adequate water supply and appropriate water pressure for fire-fighting services are available to the City's Del Rio service area. The City is also committed to providing water supply to meet the buildout population growth projected by the *Del Rio Community Plan* (Stanislaus County 1992). As such, although the Proposed Project would not include any residential housing or businesses, it would remove potential obstacles to growth in the Del Rio community, and thereby could have an indirect effect on population growth within the Program area. However, because population growth induced by the Proposed Project would occur only within the bounds of planned growth; the Proposed Project would not contribute to unplanned growth. All growth would be consistent with that contemplated in the Program EIR, and therefore this issue is considered **less than significant**.

b) Displace existing housing – *No Impact*

The Program EIR identified no impact with regard to displacement of housing or people (City of Modesto 2010: pp. 3.11-7–3.11-8). The Proposed Project would be constructed within the public right-of-way and on parcels owned by the City. The Proposed Project would not displace existing housing. **No impact** would occur.

c) Displace existing populations – *No Impact*

The Program EIR identified no impact with regard to displacement of housing or people (City of Modesto 2010: pp. 3.11-7–3.11-8). As described in item (b) above, the proposed facilities would be constructed within the public right-of-way and would not displace substantial numbers of people, necessitating the construction of replacement housing elsewhere. **No impact** would occur.

XIV. PUBLIC SERVICES: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Fire protection?		X	
b) Police protection?		X	
c) Schools?		X	
d) Parks?		X	
e) Other public facilities?		X	

Explanations

Based on the below supporting environmental analysis derived from the Program EIR (City of Modesto 2010: p. 3.12-9), and pursuant to Sections 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that the Proposed Project is consistent with the project described and analyzed in the Program EIR. No new or additional significant impacts related to public services have been identified for the Proposed Project. Therefore, no further review for this impact is required under CEQA.

a-b) Need for additional or physically altered fire and police services – *Less than Significant*

The Program EIR evaluated impacts on fire and police services and found them to be less than significant (City of Modesto 2010: p. 3.12-9). As noted in Section XIII, "Population and Housing," of this Environmental Checklist, construction of the Proposed Project would employ construction workers at the project sites, which would likely come from the regional labor force. While some construction workers could temporarily relocate from other areas, the project would not result in a substantial increase in the local population. During construction, potential incidents could require the involvement of local law enforcement, fire protection, or emergency services. However, such increases in incidents are not anticipated to be of a magnitude that would adversely affect response times or other performance objectives of these public services. The Proposed Project's impacts on fire and police services would be **less than significant.** Potential conflicts with emergency response plans are addressed in Section IX, "Hazards and Hazardous Materials," and construction-related effects on emergency access are described in Section XVI, "Transportation and Traffic," of this Environmental Checklist.

c-e) Need for additional or physically altered schools, parks, or other public facilities – *Less than Significant*

The Program EIR evaluated impacts on schools, parks, and other public services and found them to be less than significant (City of Modesto 2010: p. 3.12-9). As described in items (a-b) above, construction of the Proposed Project would employ construction workers who would likely originate from the regional labor force. While some construction workers could temporarily relocate from other areas, the project would not result in a substantial increase in the local population. In addition, project operations following implementation of the Proposed Project would be similar to existing conditions. No need for additional schools or public facilities or physical modifications to schools or other public facilities would result from the Proposed Project.

Furthermore, during the EIR scoping period, the Stanislaus Union School District submitted a comment letter stating that the school district had no comments or concerns with the Proposed Project (Stanislaus Union School District 2015). The Pacific Gas and Electric Company submitted a comment letter during the scoping period stating that the agency had no comments or concerns regarding the Proposed Project (Pacific Gas and Electric Company 2015).

The project's impacts on local schools, parks, and other public facilities would be **less than significant**. Potential effects on parks are evaluated in Section XV, "Recreation," of this Environmental Checklist.

XV. RECREATION: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?		X	
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			X

Explanations

Based on the below supporting environmental analysis derived from the Program EIR (City of Modesto 2010: p. 3.13-9), and pursuant to Sections 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that the Proposed Project is consistent with the project described and analyzed in the Program EIR. No new or additional significant impacts related to recreation have been identified for the Proposed Project. Therefore, no further review for this impact is required under CEQA.

a) Increase use of existing parks or recreational facilities – *Less than Significant*

The Program EIR determined that there would be no impact on parks and recreational facilities (City of Modesto 2010: p. 3.13-9). The Proposed Project would not directly generate increased demand for recreational facilities. Potential increased demand for parks or recreation facilities due to potential population growth is addressed in Section XIII, "Population and Housing," of this Environmental Checklist. There are no parks or recreational facilities in the vicinity of the project sites. The Proposed Project would not substantially increase the use of any existing parks or recreational facilities such that physical deterioration of those facilities would occur or be accelerated. This impact would be **less than significant**.

b) Creation of new or altered recreational facilities – *No Impact*

The Program EIR determined that there would be no impact on recreational facilities (City of Modesto 2010: p. 3.13-9). The Proposed Project does not include recreational facilities and would not directly require the construction or alteration of any such facilities. Potential increased needs for new or altered parks or recreation facilities due to potential population growth are addressed in Section XIII, "Population and Housing," of this Environmental Checklist. There would be **no impact**.

XVI. TRANSPORTATION/TRAFFIC. Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation, including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?		X	
b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?		X	
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?			X
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?		X	
e) Result in inadequate emergency access?		X	
f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?		X	

Explanations

Based on the below supporting environmental analysis derived from the Program EIR (City of Modesto 2010: pp. 3.14-15–3.14-19), and pursuant to Sections 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that the Proposed Project is consistent with the project described and analyzed in the Program EIR. No new or additional significant impacts related to transportation and traffic have been identified for the Proposed Project. Therefore, no further review for this impact is required under CEQA.

a-b) Conflict with applicable circulation plans, ordinances or policies or conflict with an applicable congestion management program – *Less Than Significant*

The Program EIR determined that traffic impacts related to conflicts with plans, ordinances, policies, or congestion management programs were less than significant (City of Modesto 2010: p. 3.14-17–3.14-18) because the "minor amount of new trips would not cause a noticeable increase in traffic on adjacent streets." Project construction activities at Sites A and B would result in an estimated 48-52 vehicle trips (refer to Table 2-1 in Chapter 2, *Project Description*). Construction trips would result from the conveyance of equipment to the site and from construction workers arriving and departing the site.

Operation of the wells and tank would result in occasional visits to the site, primarily for maintenance purposes. Operation-related trips to the project sites are estimated to be worker per day.

The Proposed Project would involve no continuous demand for parking for maintenance staff. Any needed parking would be accommodated onsite.

Construction of the Proposed Project would result in a temporary increase in roadway traffic in the project area and potentially in the broader area of Modesto and Stanislaus County. In addition, construction of some improvements may require temporary road or lane closures and would be conducted within the road right-of-way. These activities could conflict with applicable circulation plans, ordinances, or policies or congestion management plans. These impacts were disclosed in the Program EIR, however, and no greater impacts would be expected to occur as a result of the Proposed Project. The City's Standard Construction Procedures would be implemented during construction; these include preparing a traffic control plan, public notification, and preconstruction meetings. Adherence to the City's Standard Construction Procedures would ensure a **less-than-significant impact**, consistent with the Program EIR.

c) Change in air traffic patterns – *No Impact*

The Program EIR determined that impacts related to air traffic patterns were not pertinent to the analysis (City of Modesto 2010: p. 3.14-16) because no elements of the program would affect air traffic. Neither Site A nor Site B is located near any airport or airstrip, or the infrastructure that would have an effect on air traffic, due to any of its features. This is consistent with the analysis in the Program EIR. Furthermore, the construction of the tank, wells, and associated infrastructure would result in no substantial changes to the affected roadways or traffic on them, after construction is complete. The Proposed Project would not conflict with plans or policies for non-automobile transportation. There would be **no impact**.

d-e) Increased hazards due to design features and inadequate emergency access – *Less Than Significant*

The Program EIR determined that impacts related to hazards due to design features and emergency access were not pertinent to the analysis (City of Modesto 2010: p. 3.14-16) because no program features that would obstruct or change the design of any roadway. At Site A, construction activities would temporarily increase emergency response times due to lane

narrowing or lane closures to allow the installation of approximately 2,500 linear feet of water transmission pipeline in St. John Road from the Site A parcels on Ladd Road to the intersection with Country Club Drive.

At Site B, construction activities would temporarily increase emergency response times due to lane narrowing or lane closures to allow the installation of approximately 500 linear feet of water transmission pipeline from the Site B parcel on McHenry Avenue to the intersection of Stewart Road and Grove Point Drive.

These temporary construction-related impacts were disclosed in the Program EIR, and no greater impacts would be expected to occur as a result of the Proposed Project. The City's Standard Construction Procedures would be implemented during construction; these include preparing a traffic control plan, public notification, and preconstruction meetings. Adherence to the City's Standard Construction Procedures would ensure a **less-than-significant impact**, consistent with the Program EIR.

f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities – *Less Than Significant*

The Program EIR determined that impacts related to alternative transportation were not pertinent to the analysis (City of Modesto 2010: p. 3.14-16) because "The program would not generate any substantial traffic and would not place any above-surface facilities within road rights-of-way. Therefore, it would not affect the provision of alternative transportation." The Proposed Project's construction activities, including construction activities to install pipelines within the public right-of-way, could conflict with adopted non-motorized transportation plans, including the Stanislaus Council of Government's *Non-Motorized Transportation Master Plan* (2013). No existing paths or bicycle routes have been identified in the project area. Pedestrian sidewalks, where present, would be closed temporarily during construction. The City's Standard Construction Procedures would be implemented during construction; these include preparing a traffic control plan, public notification, and preconstruction meetings. Adherence to the City's Standard Construction Procedures would ensure a **less-than-significant impact**, consistent with the Program EIR.

The Stanislaus Council of Government's *Non-Motorized Transportation Master Plan* (2013) identifies a future Class 3 bicycle route along McHenry Avenue adjacent to Site B. There are no immediate plans to develop this route, however, and implementation of the bicycle route will depend on available funding. If and when the bicycle route along McHenry Avenue near Site B is implemented, the Site B facilities within the right-of-way (pipeline installed beneath McHenry Avenue) would already be in place and would not impede use of the bicycle lanes. Operational impacts of the Proposed Project on non-motorized transportation would be **less than significant**.

XVII. UTILITIES AND SERVICE SYSTEMS: Would the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Exceed wastewater treatment requirements of the applicable RWQCB?		X	
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?		X	
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?		X	
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	X		
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			X
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?		X	
g) Comply with federal, State, and local statutes and regulations related to solid waste?			X

Explanations

Based on the below environmental analysis derived from the Program EIR (City of Modesto 2010: pp. 3.15-12–3.15-13), and pursuant to Sections 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that, with the exception of Checklist item (d), the proposed project is consistent with the project described and analyzed in the Program EIR. No new or additional significant impacts on wastewater treatment demands have been identified for the Proposed Project. Therefore, no further review for this impact is required under CEQA except for Checklist item (d).

a,b,e) Exceed or require new or expanded wastewater treatment facilities or exceed wastewater treatment requirements of the RWQCB – *Less Than Significant*

The proposed new water supply infrastructure at Sites A and B would not directly result in a substantial increase in the demand for wastewater treatment facilities. The Proposed Project

would serve planned growth in the project area, as described in Section XIII, "Population and Housing," of this Environmental Checklist.

This impact is considered **less than significant**.

c) Require the construction of new stormwater drainage facilities or expansion of existing facilities – *Less Than Significant*

The proposed new water supply infrastructure at Sites A and B would not directly result in a substantial increase in the demand for stormwater drainage facilities. The Proposed Project would serve planned growth in the project area, as described in Section XIII, "Population and Housing," of this Environmental Checklist.

The Proposed Project would result in increased impervious surfaces and subsequent stormwater runoff. However, as described in Section IX, "Hydrology and Water Quality," of this Environmental Checklist, stormwater runoff generated at Sites A and B would be retained and infiltrated onsite.

Based on this evaluation, and pursuant to Sections 15168 and 15162 of the CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that the proposed project is consistent with the project described and analyzed in the Program EIR. No new or additional significant impacts on stormwater drainage demands have been identified for the Proposed Project. Therefore, no further review for this impact is required under CEQA. This impact is considered **less than significant**.

d) Have sufficient water supplies available to serve the project from existing entitlements and resources – *Potentially Significant Issues*

The purpose of the Proposed Project is to extract groundwater supplies. The Proposed Project would not directly affect surface water supplies or surface water rights. The potential impact of the Proposed Project on groundwater supplies is fully evaluated in the EIR.

f, g) Have available landfill capacity to accommodate the project's solid waste disposal needs and comply with federal, State, and local statutes and regulations related to solid waste – *Less Than Significant*

The Program EIR evaluated impacts of the program with regard to landfill capacity and determined that they were less than significant (City of Modesto 2010: pp. 3.15-13–3.15-14) because

> *generation of construction waste ...would not require existing disposal facilities or conveyance transfer and haul systems to be expanded. The proposed program would not result in the creation of additional solid waste once proposed facilities are operational.*

Construction-related activities for the Proposed Project would generate waste material during demolition of existing structures at Site A, excavation of soils, and installation of new infrastructure. Disposal of all solid waste material would comply with all federal, state, and local

statutes and regulations. Where feasible, the excavated soil and demolition debris would be recycled, reused, and/or disposed of onsite. Excess material may be transported to the Fink Road Sanitary Landfill, located near Crows Landing in Stanislaus County (Stanislaus County 2016b) or other nearby solid waste facilities for disposal. The Fink Road Sanitary Landfill has a remaining capacity of 8 million cubic yards and is not anticipated to reach full capacity until 2023 (California Department of Resources Recycling and Recovery 2016).

Once construction is completed, no solid waste would be generated at the project sites. There would be **less than significant** impacts on landfill capacity and compliance on solid waste disposal regulations.

XVIII. MANDATORY FINDINGS OF SIGNIFICANCE: Does the project:	Potentially Significant Issues	Less Than Significant Impact	No Impact
a) Have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	X		
b) Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of the past projects, the effects of other current projects, and the effects of probable future projects.)	X		
c) Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	X		

Explanations

a) Effects on environmental quality, fish or wildlife, and historic resources – *Potentially Significant Issues*

Construction activities associated with the various proposed improvements could result in **potentially significant** impacts on special-status plant and animal species as well as cultural and historical resources. These issues are evaluated in Chapter 6, *Biological Resources*, and Chapter 7, *Cultural Resources,* of the EIR.

b) Cumulative Impacts – *Potentially Significant Issues*

The degree to which project effects would contribute to a significant cumulative impact are evaluated in an EIR. To meet the adequacy standard established by CEQA Guidelines Section 15130, the EIR identifies past, present, and reasonably probable future projects and programs producing related or cumulative impacts.

Stanislaus County adopted its General Plan Update on August 23, 2016. The update is limited to revisions to the land use, circulation, conservation/open space, noise, safety, and agricultural elements but does not change specific land uses in the County. The Del Rio Community Plan Map will be updated to reflect amendments approved since 1992, but the remainder of the plan has not changed. The General Plan Update Draft EIR was circulated for public review between

April 19 and June 3, 2016. The General Plan Update Final EIR was also certified on August 23, 2016.

For the purposes of this initial study, cumulative impacts related to aesthetics, air quality, biology, cultural resources, global climate change, groundwater supply, land use, and noise, are considered **potentially significant** and are evaluated in the EIR. The potential for cumulatively significant contributions to aesthetics and land use impacts are also evaluated in the EIR.

The following impacts are also considered cumulatively significant in the context of the Proposed Project, and are evaluated below to determine whether the Proposed Project's contribution would be considerable:

- Traffic—Automobile traffic congestion is already a severe problem in the County, particularly within cities. Provisions for adequate automotive transportation networks and reducing automobile traffic by providing alternative means of transportation are identified as key issues to be addressed in general plans. Traffic conditions may worsen as development in the County continues.

- Utilities and Service Systems—Similar to transportation infrastructure, provisions for adequate water, wastewater, stormwater, and solid waste infrastructure are key issues as the County continues to grow.

Cumulative Impacts due to Disruption to Automobile Traffic Patterns (*Less than Significant*) Construction related to the Proposed Project would generate traffic in the form of construction vehicles, deliveries of construction materials, and worker trips. In addition, construction activities may result in temporary lane or road closures. As part of the Proposed Project, however, standard practices would be employed to minimize effects on traffic, including scheduling of work, implementation of a public information program, coordination with appropriate agencies, and implementation of a traffic control plan. In addition, traffic effects in any given location would be short term and affected roadways are not areas where traffic problems exist. Therefore, the Proposed Project is not anticipated to make a considerable contribution to cumulative impacts related to traffic.

Cumulative Effects on Utilities and Service Systems (*Beneficial*) During construction, standard measures such as notification to public service providers and surveys to locate existing underground utilities would be implemented to avoid any interruptions to utilities and service systems. Over the long term, the Proposed Project would not generate the need for additional stormwater or wastewater infrastructure or increased solid waste disposal needs. The Proposed Project would not generate wastewater or solid waste. Stormwater runoff generated at Sites A and B would be captured and infiltrated onsite. Additionally, the Proposed Project would provide necessary water supply infrastructure to support planned development identified in the *Del Rio Community Plan* (Stanislaus County 1992). As such, the Proposed Project is anticipated to be beneficial from the standpoint of cumulative impacts related to utilities and service systems.

c) Effects on Human Beings – *Potentially Significant Issues*

Construction activities could result in temporary adverse impacts on people due to effects such as air pollutant and GHG emissions, noise disturbances, and increased traffic on local roads. Project operation could result in permanent increases in air pollutant and GHG emissions and noise disturbances. Such impacts are considered **potentially significant** and are evaluated in the EIR in Chapter 4, *Aesthetics;* Chapter 5, *Air Quality*; Chapter 8, *Global Climate Change*; Chapter 10, *Land Use;* and Chapter 11, *Noise,* of the EIR.

C. Determination

On the basis of this initial evaluation:

	I find that the proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
	I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions to the project have been made by or agreed to by the Project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
X	I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
	I find that the proposed project MAY have an impact on the environment that is "potentially significant" or "potentially significant unless mitigated" but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards and (2) has been addressed by mitigation measures based on the earlier analysis, as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
	I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the Project, nothing further is required.

Modesto Del Rio Project - GHG-related Calculations for use with CALEEMOD

Table Appx-1. Pump Energy Use Calculations

Pumps	Pump Size (hp)	Pump Size (KW)	Average use per year (assuming 8 hours use per day)	Energy Intensity (KWhr/year)
Site A- Pump 1	60	44.8	3942	176,444
Site A- Pump 2	60	44.8	3942	176,444
Site A- Pump 3	60	44.8	3942	176,444
Site A- Pump 4	60	44.8	3942	176,444
Site B Pump	200	149.2	3942	588,146

1,293,922	**TOTAL (KWhr/Year)**
640.6	**KWhr/Year/sqft** (assuming project building = 2020 sf)

Table Appx-2. Proposed Building Calculations:

Pump Station Building:	2020	sqft
Tank	173	sqft

Table Appx-3. Landscaping Water Use Calculations

Landscaping Area (Sqft)	Landscaping Area (acres)	Water Use Factor (for City Park from CALEEMOD User Guide Appendix D Table 9-1) (Gallons/acre/year)	Water Use (gallons/year)
10522	0.2416	1191481	287862

Table Appx-4. Hauling Truck Trip Estimates for Soils Generated during Pipeline Activities		
Pipeline (combined) = 3000 linear feet (approx. 0.57 miles)		
Disturbance area width = 20 feet		
Total area disturbed = 60000 sf (1.38 acres)		
Assume install approximately 200 feet of pipeline/day then add 1 week for buffer = 4 weeks (20 days) to install pipelines		
Maximum area disturbed daily = 8000 square feet		
Estimate trench depth of 6 feet, trench width of 6 feet, estimate approximately 90% of excavated soil is returned to trench.		
Total excavated volume =	180000 cubic feet	6667 cubic yards
Total spoils to be disposed of =	18000 cubic feet	667 cubic yards
Volume disposed of per day (assuming 200 linear sf disturbed each day)	**900 cubic feet**	**33 cubic yards**
	Assume each hauling truck can carry 20 cubic yards. That would result in approx. 2 roundtrip truck trips (4 one-way trips) per day for pipeline trenching to carry the approximately 33 cubic yards requiring disposal. It was assumed pipeline jack and bore trips would be about half of the trenching. Trips would be to Site A and an assumed distance of 2 miles per roundtrip for all pipeline activities. These values were used for CALEEMOD's Trips and VMT section.	

Table Appx-5. Soil Export Calculations (Project Sites)		
Total area disturbed Site A + Site B = 190,000 sf (4.4 acres)		
Assume entire site acreage will require exported soil for a 0.5-ft depth		
Soil excavated volume =	95000 cubic feet	3519 cubic yards
Assume only 10% needs to be exported. Assume 25% is exported during site preparation and 75% exported during grading.		
Site Prep Soil Export Volume	**2375 cubic feet**	**88 cubic yards**
Grading Soil Export Volume	**7125 cubic feet**	**264 cubic yards**

These ***cubic yard*** values were used in CALEEMOD's Grading section for the Site Preparation and Grading construction phases.

Modesto Del Rio

Stanislaus County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
User Defined Industrial	1.00	User Defined Unit	4.40	2,020.00	0

1.2 Other Project Characteristics

Urbanization	Rural	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	46
Climate Zone	3			**Operational Year**	2018
Utility Company	Modesto Irrigation District				
CO2 Intensity (lb/MWhr)	833.46	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreage reflects actual acreage of the combined Site A and Site B parcels (4.4 acres). Square feet = pump station building (2,020 sf).

Construction Phase - Pipe duration =3000total ft of pipe / install 200 ft pipe/day =15 days + 5 for issues. Duration of well drilling activities and jack/bore based on City input.

Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Off-road Equipment - Used RoadMod equipment assumptions from its drainage/subgrade phase.

Off-road Equipment -

Off-road Equipment - Specific equipment details, including 475 hp of drilling rig, were provided by City.

Off-road Equipment - Equipment list based on Sacramento Roadmod equipment defaults for trenching activities.

Off-road Equipment -

Off-road Equipment - Specifics of well drilling equipment, including 475 horsepower of drilling rig, were provided by City.

Trips and VMT - Estimated worker trips using ~2.5 trips/worker and estimated bldg const (10 workers), well drill (5), and jack/bore (6). Adjusted vendor to 2 per day. Arch. coating workers ~20% of bldng const. Pipe hauling assumed to be 2 miles roundtrip to Site A.

Demolition - Estimated square footages of 5 structures to be removed at Site A based on aerial images. 5 structures include a house (1828 square feet), garage (465sf), pump house (37sf), shed (363sf), and shop (768sf).

Grading - Updated acres disturbed to match total Site A+Site B for Grading/Site Prep, and estimated pipe disturbed area. Well Drilling area is based on an assumed disturbance area of 100 feet by 100 feet (approx. 0.23 acres).

Vehicle Trips - Assume an average of 1 daily trip for facility maintenance/operation.

Energy Use - Sum of the Site A + Site B pump energy intensities.

Water And Wastewater - Based on 60 percent design, 10,522 square feet (approx. 0.241 acres) would be irrigated. Matched CALEEMOD City Park use.

Land Use Change - Assume grassland replaced by mulch or paved areas. Sequestration notes indicate new trees.

Sequestration - Trees quantity/type from 60percent design (16 crabapple, 6 Chinese Tallow, and 48 Coast Redwood).

Water Mitigation -

Operational Off-Road Equipment - Site A + Site B each have 1 generator with the same 450 kw (603hp) size. Assumed that they each would be run for approximately 20 hours annually for routine maintenance.

IPaC Trust Resources Report

NAME

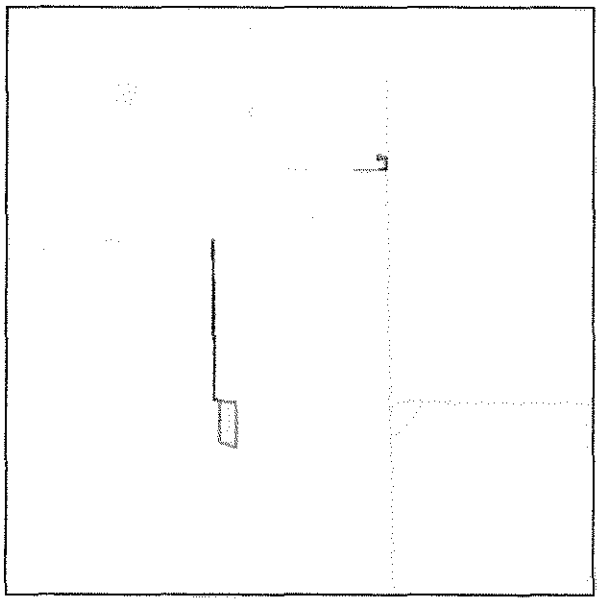
Del Rio Tank and Wells Project

LOCATION

Stanislaus County, California

IPAC LINK

https://ecos.fws.gov/ipac/project/FJFXC-E2NKV-HXVBH-XDTXV-GNRVEM



U.S. Fish & Wildlife Service Contact Information

Trust resources in this location are managed by:

Sacramento Fish And Wildlife Office
Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846
(916) 414-6600

Endangered Species

Proposed, candidate, threatened, and endangered species are managed by the Endangered Species Program of the U.S. Fish & Wildlife Service.

This USFWS trust resource report is for informational purposes only and should not be used for planning or analyzing project level impacts.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list from the Regulatory Documents section.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency.

A letter from the local office and a species list which fulfills this requirement can only be obtained by requesting an official species list either from the Regulatory Documents section in IPaC or from the local field office directly.

The list of species below are those that may occur or could potentially be affected by activities in this location:

Amphibians

California Red-legged Frog Rana draytonii — Threatened

CRITICAL HABITAT
There is **final** critical habitat designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=D02D

California Tiger Salamander Ambystoma californiense — Threatened

CRITICAL HABITAT
There is **final** critical habitat designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=D01T

Crustaceans

Vernal Pool Fairy Shrimp Branchinecta lynchi — Threatened

CRITICAL HABITAT
There is **final** critical habitat designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=K03G

Vernal Pool Tadpole Shrimp Lepidurus packardi — Endangered

CRITICAL HABITAT
There is **final** critical habitat designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=K048

Fishes

Delta Smelt Hypomesus transpacificus — Threatened

CRITICAL HABITAT
There is **final** critical habitat designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=E070

Steelhead Oncorhynchus (=Salmo) mykiss — Threatened

CRITICAL HABITAT
There is **final** critical habitat designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=E08D

Insects

Valley Elderberry Longhorn Beetle Desmocerus californicus dimorphus — Threatened

CRITICAL HABITAT
There is **final** critical habitat designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=I01L

Reptiles

Giant Garter Snake Thamnophis gigas — Threatened

CRITICAL HABITAT
No critical habitat has been designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=C057

Critical Habitats

There are no critical habitats in this location

Migratory Birds

Birds are protected by the Migratory Bird Treaty Act and the Bald and Golden Eagle Protection Act.

Any activity that results in the take of migratory birds or eagles is prohibited unless authorized by the U.S. Fish & Wildlife Service.[1] There are no provisions for allowing the take of migratory birds that are unintentionally killed or injured.

Any person or organization who plans or conducts activities that may result in the take of migratory birds is responsible for complying with the appropriate regulations and implementing appropriate conservation measures.

---

1. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The following species of migratory birds could potentially be affected by activities in this location:

Bald Eagle Haliaeetus leucocephalus — Bird of conservation concern
Year-round
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B008

Black Rail Laterallus jamaicensis — Bird of conservation concern
Season: Breeding
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B09A

Burrowing Owl Athene cunicularia — Bird of conservation concern
Year-round
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0NC

Fox Sparrow Passerella iliaca — Bird of conservation concern
Season: Wintering

Lesser Yellowlegs Tringa flavipes — Bird of conservation concern
Season: Wintering
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0MD

Lewis's Woodpecker Melanerpes lewis — Bird of conservation concern
Season: Wintering
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0HQ

Loggerhead Shrike Lanius ludovicianus — Bird of conservation concern
Year-round
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0FY

Long-billed Curlew Numenius americanus — Bird of conservation concern
Season: Wintering
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B06S

Marbled Godwit Limosa fedoa — Bird of conservation concern
Season: Wintering
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0JL

Mountain Plover Charadrius montanus — Bird of conservation concern
Season: Wintering
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B078

Nuttall's Woodpecker Picoides nuttallii — Bird of conservation concern
Year-round
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0HT

Oak Titmouse Baeolophus inornatus — Bird of conservation concern
Year-round
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0MJ

Peregrine Falcon Falco peregrinus — Bird of conservation concern
Season: Wintering
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0FU

Short-eared Owl Asio flammeus — Bird of conservation concern
Season: Wintering
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0HD

Swainson's Hawk Buteo swainsoni — Bird of conservation concern
Season: Breeding
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B070

Tricolored Blackbird Agelaius tricolor — Bird of conservation concern
Year-round
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B06P

Western Grebe aechmophorus occidentalis — Bird of conservation concern
Season: Wintering
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0EA

Williamson's Sapsucker Sphyrapicus thyroideus — Bird of conservation concern

Year-round

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0FX

Yellow-billed Magpie Pica nuttalli — Bird of conservation concern

Year-round

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0N8

Wildlife refuges and fish hatcheries

Refuge and fish hatchery data is unavailable at this time.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

DATA LIMITATIONS
The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

DATA EXCLUSIONS
Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

DATA PRECAUTIONS
Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

There are no wetlands in this location

Cultural Resources Practice Lead

Limitations

This report contains confidential cultural resources location information; report distribution should be restricted to those with a need to know. Cultural resources are non-renewable, and their scientific, cultural, and aesthetic values can be significantly impaired by disturbance. To deter vandalism, artifact hunting, and other activities that can damage cultural resources, the locations of cultural resources should be kept confidential. The legal authority to restrict cultural resources information is provided in California Government Code Section 6254.1 and the National Historic Preservation Act of 1966, as amended, Section 304.

Executive Summary

The City of Modesto (City) is proposing the Del Rio Tank and Wells Project (Proposed Project) to improve the water system in the community of Del Rio by constructing a new water storage tank, pump station, backup generators, and new water conveyance; installing two wells; and decommissioning one well. The Proposed Project is located in an unincorporated area in northern Stanislaus County about 2 miles north of the City's sphere of influence. This document reports the findings of a cultural resources assessment for the Proposed Project. The City retained Horizon Water and Environment, LLC (Horizon) to complete the cultural resources assessment in support of the project.

This report documents cultural resources inventory methods and results as required for compliance with federal and California regulations. The study consisted of a literature review to identify any previously recorded cultural resources that could be affected by the Proposed Project and a field survey to locate any archaeological sites that may exist but have not yet been recorded. The study also included a survey of the built environment, which resulted in the recordation of an abandoned home and outbuildings on Ladd Road (Site A). The structures were evaluated for listing in the National Register of Historic Places (NRHP) and the California Register of Historical Resources (CRHR).

No archaeological resources were identified during the course of the field survey, and the recorded buildings on Ladd Road do not appear eligible for NRHP/CRHR listing. As a result, the Proposed Project would not have an impact on significant cultural resources.

This report has been prepared based on certain key assumptions made by Horizon that substantially affect its conclusions and recommendations: (a) that the information gathered during the record search is up to date and accurate, and (b) that the field survey results accurately identified the presence or absence of archaeological resources visible on the ground surface. These assumptions, although believed to be reasonable and appropriate, may not prove to be true in the future. Horizon's conclusions and recommendations are conditioned upon these assumptions.

The archaeological inventory was performed based upon information obtained at the Central California Information Center of the California Historical Resources Information System, direct observation of site conditions, and other information that is generally applicable as of August 2016, when the inventory was performed. The conclusions and recommendations herein are therefore based on information available up to that time. Further information may come to light in the future that could substantially change the conclusions found herein.

Information obtained from these sources in this timeframe is assumed to be correct and complete. Horizon does not assume any liability for findings or lack of findings based upon misrepresentation of information presented to Horizon or for items that are not visible, made visible, accessible, or present at the time of the project area inventory.

1 Introduction

1.1 Location and Setting

The Proposed Project consists of two sites situated in northern Stanislaus County, 0.75–1.2 miles south of the Stanislaus River and the Stanislaus/San Joaquin County line and approximately 2 miles north of the City of Modesto **(Figure 1)**. The Modesto region is on the east side of the northern San Joaquin Valley.

The project location is depicted within the Salida and Riverbank U.S. Geological Survey (USGS) 7.5-minute topographic quadrangles **(Figure 2)**. The area immediately adjacent to the two project locations is flat and largely rural. The Del Rio Golf and Country Club is located west of St. John Road near its intersection with Stewart Road (near Site A), and some housing development is present on both sides of Stewart Road between St. John Road and McHenry Avenue (near Site B) and around the golf course.

1.2 Project Description and Area of Potential Effects

The City of Modesto Utilities Department proposes to construct an above ground water storage tank, water well, and booster pump station, along with several other appurtenant features and landscape improvements, on property located at 718 Ladd Road near its intersection with St. John Road (Site A). Additionally, a water transmission main would be constructed within St. John Road to convey water north from the tank site to connect with the existing distribution system near the intersection of St. John Road and Country Club Drive. A second water well would be constructed at a parcel on McHenry Avenue near its intersection with Stewart Road (Site B). This well would connect directly with an existing water main under McHenry Avenue and extend south to Stewart Road; additional pipeline would be installed along Stewart Road west from the junction with McHenry Avenue to approximately the intersection with Grove Pointe Way **(Figure 3)**.

Construction activities would include both trenching and jack-and-bore methods for water main installation; demolition of existing buildings and associated features (e.g., well and septic systems) at Site A; clearing of some vegetation; grubbing and placement of fill; and compaction of soils. New structures (i.e., storage tank, pump station buildings to house wells and pumps, standby generator) and a standby generator would be constructed on concrete slabs. In addition, a 1.3-acre stormwater detention basin would be constructed at Site A.

The area of potential effects (APE) for the Proposed Project consists of the 4-acre parcel on Ladd Road (Site A) and the 0.4-acre parcel on McHenry Avenue (Site B). The APE also includes 25 feet to both sides of the roads that would receive new pipeline: approximately 2,500 feet along St. John Road, 190 feet along McHenry Road, and 760 feet along Stewart Road. This is a total of 4.4 acres and 3,450 linear feet (0.65 mile). The depth of disturbance within the APE (known as the vertical APE) is expected to be about 42 inches (3.5 feet) for water main/pipeline construction, XXXX feet for building/facility construction, and 8 feet for the Site A stormwater detention basin. The wells would be excavated to a minimum depth of 300 feet and a maximum depth of 600 feet.

1.3 Regulatory Setting and Need for Study

1.3.1 State of California Regulations

CEQA and State CEQA Guidelines

The Proposed Project must comply with California Environmental Quality Act (CEQA) (Public Resources Code [PRC] Section 21000 et seq.) and the CEQA Guidelines (California Code of Regulations [CCR], Title 14, Chapter 3), which determine, in part, whether the project would have a significant effect on a unique archaeological resource (PRC Section 21083.2) or a historical resource (PRC Section 21084.1).

CEQA Guidelines Section 15064.5 notes that "a project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment." Lead agencies are required to identify potentially feasible measures or alternatives to avoid or mitigate significant adverse changes in the significance of a historical resource before they approve such projects. According to the CEQA Guidelines, a historical resource meets any of the following criteria:

- Listed in, or determined to be eligible for listing in, the California Register of Historical Resources (CRHR) (PRC Section 5024.1(k));
- Included in a local register of historical resources (PRC Section 5020.1) or identified as significant in a historical resource survey that meets the requirements of PRC Section 5024.1(g); or
- Determined by a lead state agency to be historically significant.

CEQA Guidelines Section 15064.5 also applies to unique archaeological resources as defined in PRC Section 21084.1.

Assembly Bill 52 (codified as PRC Section 21080.3.1), which went into effect on July 1, 2015, requires that CEQA lead agencies consult with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of a proposed project, if so requested by the tribe, and if the agency intends to release a negative declaration, mitigated negative declaration, or environmental impact report for the project. Under the same bill PRC Section 21084.2 also specifies that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource (TCR) is a project that may have a significant effect on the environment. This latter language will be added to the CEQA checklist in the near future, but the regulation itself officially took effect on July 1, 2016. The City, as the project's CEQA lead agency, will consult with Native American tribes as required under PRC Section 21080.3.1.

As defined in PRC Section 21074(a), TCRs are:

(1) Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:

   a. Included or determined to be eligible for inclusion in the CRHR; or

b. Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

(2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

In addition to Section 21074(a) above, TCRs are further defined under Section 21074(b) and (c) as follows:

(b) A cultural landscape that meets the criteria of subdivision (a) is a TCR to the extent that the landscape is geographically defined in terms of the size and scope of the landscape; and

(c) A historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a "nonunique archaeological resource" as defined in subdivision (h) of Section 21083.2 may also be a tribal cultural resource if it conforms to the criteria of subdivision (a) [of Section 21074].

Mitigation measures for TCRs must be developed in consultation with the affected California Native American tribe in accordance with the newly chaptered Section 21080.3.2 or Section 21084.3. The latter section identifies mitigation measures that include avoidance and preservation of TCRs and treating TCRs with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource.

California Register of Historical Resources

PRC Section 5024.1 establishes the CRHR. The register lists all California properties considered to be significant historical resources. The CRHR incorporates all properties listed as or determined to be eligible for listing in the National Register of Historic Places (NRHP), including properties evaluated under Section 106 of the National Historic Preservation Act (NHPA). The criteria for listing, which are similar to those of the NRHP, include resources that:

(1) Are associated with the events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

(2) Are associated with the lives of persons important in our past;

(3) Embody the distinctive characteristics of a type, period, region, or method of construction, or represent the work of an important creative individual, or possess high artistic values; or

(4) Have yielded, or may be likely to yield, information important in prehistory or history.

PRC Section 5024.1 sets forth the criteria for eligibility as well as guidelines for assessing historical integrity and resources that have special considerations.

1.3.2 Federal Regulations

Construction of the Proposed Project by the City of Modesto would require a Clean Water Act Section 402 permit from the Central Valley Regional Water Quality Control Board. As a result, the

project constitutes a federal undertaking as defined by 54 U.S. Code (USC) Section 300101 of the NHPA and mandates compliance with 54 USC Section 306108, commonly known as Section 106 of the NHPA and its implementing regulations, found in 36 Code of Federal Regulations (CFR) Section 800, as amended in 2001. To comply with Section 106, the project proponent must "take into account the effect of the undertaking on any district, site, building, structure, or object that is included in or eligible for inclusion in the National Register."

The implementing regulations of the NHPA require that cultural resources be evaluated for NRHP eligibility if they cannot be avoided by an undertaking. To determine site significance through application of NRHP criteria, several levels of potential significance must be considered that reflect different (although not necessarily mutually exclusive) values. As provided in 36 CFR Section 60.4, "the quality of significance in American history, architecture, archaeology, and culture [that] is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association" must be considered within its historic context. To meet eligibility criteria of the NRHP, resources must also be at least 50 years old, except in rare cases, and must:

(A) Be associated with events that have made a significant contribution to the broad patterns of our history; or

(B) Be associated with the lives of persons significant in our past; or

(C) Embody the distinctive characteristics of a type, period, or method of construction, or represent the work of a master, or that possess high artistic values, or represent a significant and distinguishable entity whose components may lack individual distinction; or

(D) Have yielded, or be likely to yield, information important in prehistory or history.

For archaeological sites evaluated under Criterion D, integrity requires that the site remain sufficiently intact to convey the expected information to address specific important research questions.

Cultural resources also may be considered separately under the National Environmental Policy Act in accordance with 42 USC Sections 4321-4327. These sections require federal agencies to consider potential environmental impacts and appropriate mitigation measures for projects with federal involvement.

1.4 Personnel

Field work, analysis, and reporting were carried out by the professionals identified below, all of whom meet the U.S. Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation (48 CFR Section 44716, as amended in 1983). Procedures followed in conducting the analysis complied with NHPA Section 106 as set forth in 36 CFR Section 800.

- Janis Offermann, Registered Professional Archaeologist, acted as Principal Investigator for the project, conducted the archaeological field survey, and prepared this report. She has a Bachelor's degree in Anthropology from Sonoma State University in Rohnert Park, California, and a Master's degree in Anthropology from the University of California at Davis. She has more than 40 years of experience in California archaeology and cultural resource management. Ms. Offermann is the cultural resources practice leader with Horizon.

- Kara Brunzell, MA, conducted the built environment field survey, completed recordation of the Ladd Road buildings, and evaluated the structures for NRHP/CRHR eligibility. She has a Bachelor's degree in History from the University of California at Los Angeles and a Master's degree in History/Public History from California State University, Sacramento. She has 9 years of experience in architectural history and has worked throughout California.

2 Project Context

2.1 Environmental Setting

The Proposed Project is located near the east side of the northern San Joaquin Valley. The area is generally flat and has an elevation of approximately 100 feet above mean sea level (amsl); this reflects the elevation of Site A and the pipeline on St. John Road. The location of the Del Rio Country Club, on an east/west–trending "ridge" just south of the Stanislaus River, is somewhat higher, with a maximum elevation of 128 feet amsl. Site B, at the east end of this ridge, has an elevation of approximately 112 feet amsl.

Orchards border the APE along the west side of St. John Road and east of McHenry Avenue. Although the Ladd Road parcel (Site A) once contained a small orchard, it is now covered with low-growing grasses. Site B is similarly covered with weedy grasses and forbs, as is the east side of St. John Road. Houses line both sides of Stewart Road adjacent the APE.

Because archaeological resources may be buried with no surface manifestation, precluding their observation during pedestrian survey, the potential for buried archaeological resources within a given project area requires assessment. The probability that a buried archaeological resource is present in a project area is governed by several factors: (1) the presence of a buried, "stable land surface" called a paleosol; (2) the age of this paleosol; (3) the relative availability of a subsistence base required for human sustenance near the buried paleosol; and (4) the presence or absence of known archaeological resources in the area. Assessments that evaluate the potential for buried resources are commonly referred to as "geoarchaeological studies."

A review of soils information (Natural Resources Conservation Service 2016) and geoarchaeological data (Rosenthal et al. 2004:76, 78-79) indicates that the soils within the project area (Delhi loamy sand, Hanford sandy loam, and Tujunga loamy sand) date from the late Pleistocene through the Holocene Epoch. These soils are considered to have moderate, high, and very high sensitivity ratings, respectively, for buried archaeological remains (Rosenthal et al. 2004:104). Proximity to the Stanislaus River increases the potential for buried resources.

2.2 Prehistoric Context

Very little archaeological work has been conducted in the Modesto area or in the San Joaquin Valley in general; therefore, the archaeology of the project area is understood within the prehistoric context developed for the Central Valley as a whole. Since the early 1930s, various schemes have been set forth by researchers to organize the archaeological data of California into a chronological framework. The Central Valley sequence established by Lillard, Heizer, and Fenenga in 1939 is particularly notable. Based on archaeological investigations in the lower Sacramento Valley, Lillard and colleagues divided human prehistory into three broad cultural horizons: Early, Middle, and Late. This chronology was first known as the Delta sequence and later became the basis of Richard Beardsley's Central California Taxonomic System (CCTS) (Moratto 1984:181). The system relies on the identification of characteristics such as burial patterns, shell bead types, stone tools, and the types of locations where the sites tend to occur. These traits and characteristics are used to identify an archaeological resource as belonging to a specific time period.

The CCTS has continued to undergo significant refinement but remains the framework within which California archaeologists explain cultural change. The general system is still widely used by archaeologists, but it has been expanded and revised to include economic and technological strategies, socio-politics, trade networks, population density, and variations of artifact types to differentiate between cultural periods. The current chronology (Rosenthal et al. 2010:150) for central California archaeology includes:

- Paleo-Indian: 11,550–8550 B.C.
- Lower Archaic: 8550–5550 B.C.
- Middle Archaic: 5550–550 B.C.
- Upper Archaic: 550 B.C to 1100 A.D.
- Emergent: 1100 A.D. to Historic

The Paleo-Indian Period (11,550–8,550 B.C.) is generally characterized by big-game hunters occupying broad geographic areas. Archaeological deposits from the Paleo-Indian period are rarely found in the Central Valley, however, and those that have been identified have largely been discovered at the south end of the San Joaquin Valley near Tulare Lake. Post-depositional processes, mainly glacial outwash occurring at the end of the Pleistocene Epoch, either destroyed or deeply buried much of the existing evidence of human activity in the region from this period. As result, little is known about Paleo-Indian lifeways in the region (Moratto 1984:214).

Similar to the preceding period, the Lower Archaic Period (8550–5550 B.C.) is presumed to reflect a mobile population that continued to hunt big game. Few localities in the Central Valley are associated with this period, and those that have been found are largely isolated artifacts consisting of large wide-stemmed and leaf-shaped projectile points, along with flaked stone crescents. Only two sites with associated deposits of faunal and shell remains have been identified for the Lower Archaic Period, one at Buena Vista Lake in the southern San Joaquin Valley (Rosenthal et al. 2010:151-152) and one in Sacramento (Tremaine 2008). Some sites in the Sierra Nevada foothills from this period, however, indicate the use of milling equipment (hand stones and milling stones) to process seeds and nuts.

The Middle Archaic Period (5550–550 B.C.) indicates a shift to a more settled way of life that is reflected by substantial, though often deeply buried, archaeological sites with artifacts that are more elaborate in design, imply a more diverse subsistence regime, and indicate interregional trade. Sites are often situated along the major rivers and streams within the Central Valley, emphasizing a focus on riverine and marsh habitats. The Windmiller Tradition or Pattern, which was first identified in sites around the Sacramento–San Joaquin River Delta, is often considered representative of this period. Characteristic artifacts from this period include a variety of fish hooks and spears; large stemmed and leaf-shaped projectile points of obsidian and chert; shaped charmstones of alabaster, steatite, or marble; and a variety of *Haliotis* and *Olivella* shell ornaments and beads, respectively. Mortars and pestles, associated with acorn preparation, became commonplace by the middle of the period. The presence of ventrally and dorsally extended burials with a western orientation is particularly indicative of the Windmiller Pattern.

Increased sedentism and technological specialization are evidenced during the Upper Archaic Period (550 B.C to 1100 A.D.), as populations exploited more diverse resources and established trade relationships. Mortars and pestles became the primary ground stone implements, suggesting that acorns had become a more important dietary staple. Regional diversity in artifact styles, such as *Haliotis* shell ornaments, bone tools, and ground charmstones or plummets, became more pronounced; burial postures also varied.

Archaeological sites from the Emergent Period (A.D. 1100 to the historic period) indicate increased social complexity and the development of large, central villages with resident political leaders and specialized activity sites. Enhanced regional diversity in terms of artifact styles, housing, and interment methods is evident in the archeological record. Artifacts associated with the period include the bow and arrow, small corner-notched projectile points, and a variety of shell and stone beads and ornaments.

2.3 Ethnohistoric Context

The Modesto area lies within the ancestral territory of the Northern Valley Yokuts. The term "Yokuts" is applied to a large and diverse group of people inhabiting the San Joaquin Valley and Sierra Nevada foothills of central California. The Northern Valley Yokuts inhabited a 40- to 60-mile-wide area straddling the San Joaquin River, south of the Mokelumne River, east of the Diablo Range, and north of the sharp bend that the San Joaquin River takes to the east-northeast near Mendota in Fresno County. The Southern Valley Yokuts occupied the San Joaquin Valley south of the bend in the river. Although they were divided geographically and ecologically, the two Yokuts divisions have a common linguistic heritage (Wallace 1978:462).

The Northern Valley tribes closely resembled the Yokuts groups to the south, although there were some cultural differences. The northerners had greater access to salmon and acorns, two important dietary resources, compared to the Southern Yokuts, and some of their religious practices reflected the influences of groups to their north, such as the Miwok. While inhumation was the usual practice in the southern valley, the Northern Valley Yokuts either cremated their dead or buried them in a flexed position (Wallace 1978:464, 468). A chief headed the tribal villages, which averaged around 300 people. Family houses were round or oval in shape, sunken, with a cone-shaped pole frame, and covered with tule mats. Each village also had a lodge for dances and other community functions, as well as a sweathouse (Wallace 1978:462-464).

The Northern Valley Yokuts built their riverside villages on elevated areas along the water's edge to avoid the spring floods, which were a result of heavy Sierra Nevada snow melts. Living beside rivers and streams provided plentiful river perch, Sacramento pike, salmon, and sturgeon. Hunting provided waterfowl such as geese and ducks as well as terrestrial animals such as antelope, elk, and brown bear, although by all indications, fish constituted a majority of the diet. The surrounding woodland, grasslands, and marshes provided acorns, tule root, and seeds.

The Northern Valley Yokuts used bone harpoon tips for fishing, stone sinkers for nets, chert projectile points for hunting, and mortars and pestles, scrapers, knives, and bone awl tools to procure and process food. Marine shells, procured from coastal tribes, were used for necklaces and other adornments, and marine shell beads sometimes accompanied the deceased. The northern tribes used tule reed rafts to navigate the waterways for fishing and hunting fowl. The Yokuts also manufactured intricate baskets for a variety of purposes, including storing, cooking, eating, winnowing, hopper mortars, the transport of food materials, and rituals. Very little is known of the Northern Valley Yokuts' clothing, but drawings of their tattoos show that they served not only as a decoration but also as a form of identity (Wallace 1978:464).

Initially, the Diablo Range served as a natural barrier against heavy recruitment of Native Californians by the Spanish, who established missions along the coast; however, by the early 19th century, Spanish—and later, Mexican—missionaries began to explore the inner valleys in search of potential neophytes, or converts to Catholicism. The Yokuts resisted recruitment and California Indians from various tribes sought refuge among the Yokuts after fleeing the missions. Introduced diseases, destruction of traditional resources from cattle grazing, and forced relocation took a heavy toll on the Northern Yokuts. Despite decades of hardship, many individuals who can trace their ancestry to the Northern Valley Yokuts continue to live and thrive in the Central Valley, as well as throughout California and the United States.

2.4 Historic-era Context

The historic era began in Stanislaus County when the first Spanish expedition entered the San Joaquin Valley in 1806 under the leadership of Gabriel Moraga. Traveling north and northwest through the region in search of possible mission sites, Moraga's party explored up what came to be known as the Stanislaus River. Moraga visited the area again in 1808 and 1810 (Kyle et al. 2002:516-517).

After Mexico gained its independence from Spain in 1822, two additional expedition forces entered the area; however, the purposes of their campaigns were no longer exploratory. Soldiers were sent into the Central Valley to recover stolen animals and punish rebellious Indians in an attempt to reduce attacks upon coastal towns, missions, and ranchos.

Americans also began to enter the region during the Mexican period. In 1827 and 1828, Jedediah Smith entered the San Joaquin Valley through the Tejon Pass and trapped beavers along the San Joaquin, Kings, and other rivers and streams that flowed from the Sierra. Smith was followed by fellow trappers such as Peter Ogden, Ewing Young, Kit Carson, and Joseph Walker.

The first permanent European settlement in Stanislaus County may have been established when two land grants were issued by the Mexican government in 1843. The first was the Rancho El Pescadero on the west side of the San Joaquin River near the border of what would eventually become San Joaquin County. The second was the Rancheria del Rio de Estanislao located north of the Stanislaus River bordering Tuolumne County. Two additional land grants were issued the following year. These were the Ranchos del Puerto and Orestimba, both of which were on the west side of the county near Rancho Pescadero (Tinkham 1921).

The City of Modesto came into being in 1870 when the Central Pacific Railroad announced the location would be the end point of the next extension of the rail line as it progressed south through the Central Valley (Kyle et al. 2002:521). By the time the tracks were completed in November of that year, entrepreneurs had already established a viable town (City of Modesto 2016). Modesto residents were among California's first irrigation advocates, and by 1904 a system of canals had been constructed to allow more productive agriculture. During the 19th century, grain growing was Stanislaus County's dominant agricultural activity. Stock raising, dairy farming, fruit and nut orchards, and vegetable farms all became more important over time. When Prohibition ended in 1933, the Gallo brothers came to Modesto, bringing the wine business to the area on an industrial scale. In the 21st century, almonds and walnuts are the most lucrative local crops, although fruits, vegetables, livestock, and other agricultural products remain important. Modesto is still the most important town in the region and is the Stanislaus County seat.

The Del Rio area is a census-designated place in Stanislaus County that receives services from the City of Modesto. Until the mid-1940s, the area supported scattered farms and orchards. The Del Rio Country Club was founded along on south bank of the Stanislaus River in 1946 (Del Rio Country Club 2016). After this time, the area slowly began to grow as housing tracts were established west of the golf course, along Country Club Drive on the south side of the golf course, and east of St. John Road, which borders the country club on the east (USGS 2016). The current level of development in the Del Rio area was completed around 2002 (NETR Online 2016).

This page intentionally left blank.

3 Native American Consultation and Archival Research

In accordance with the U.S. Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation (48 CFR Section 44716, amended 1983), the goals of this archaeological inventory were to identify and completely document the location, qualities, and condition of any potential historic properties in the Proposed Project's APE. Methods employed to achieve these goals are described below.

3.1 Native American Consultation

A request was made to the Native American Heritage Commission (NAHC) on April 20, 2016, to review its files for the presence of sacred sites at or near the project location. At the same time, requests were made for a list of individuals who might have concerns or have knowledge of traditional sites in the vicinity of the project site and for a separate list of tribes that have a traditional and cultural affiliation with the project area for the purpose of consultation as required by PRC Section 21080.3.1. The NAHC responded on April 21, 2016, noting that no sacred sites are known to exist in the vicinity of the Proposed Project, and with a list of tribes for the purposes of PRC Section 21080.3.1 consultation. After additional communication with the NAHC requesting a broader list of individuals who might have knowledge about the project area, the NAHC stated that the list provided for Section 21080.3.1 consultation was adequate. As a result, letters requesting information were sent to the individuals identified in **Table 1**. These individuals were contacted first by mail, then by phone. To date, those contacted have not voiced any concerns about the Proposed Project.

The City of Modesto also sent notification letters about the Proposed Project, in accordance with PRC Section 21080.3.1(d), to the individuals listed in Table 1 on May 12, 2016. None of the contacted tribes requested consultation within the 30-day period prescribed under PRC Section 21080.3.1(b)(2).

All communications and correspondence with the NAHC and Native American tribes conducted by Horizon are provided in **Attachment 1**.

Table 1. Native American Consultation

Contact	Tribe	Letter Date	Telephone Follow-up Date	Comments
Lois Martin, Chairperson	Southern Sierra Miwok Nation	June 10, 2016	June 27, 2016	Chairperson Martin noted that the project was outside of the tribe's usual area of concern and she did not know of any resources in the project area. She noted, however, that work should stop if any cultural resources were discovered during construction.
Katherine Erolinda Perez, Chairperson	North Valley Yokuts Tribe	June 10, 2016	June 27, 2016	Left message on answering machine
Neil Peyron, Chairperson	Tule River Indian Tribe	June 10, 2016	June 27, 2016	Operator could not find letter in the mail log; Chairperson Peyron said it might have gone to the environmental coordinator and he would follow up with that person.

3.2 Archival Research

A records search was conducted by the Central California Information Center (CCIC) of the California Historical Resources Information System at California State University, Stanislaus for the Proposed Project prior to initiating the field study. The purpose of the records search was to determine if the study area had previously been surveyed for cultural resources, and to identify any previously recorded cultural resources in or within ½ mile of the project site. The archival research included review of the California Inventory of Historic Resources, local historical inventories, historical literature, and historical maps, including USGS topographic maps, General Land Office maps, and Rancho Plat Maps. The results of the record search are included in **Attachment 2**.

The records search indicated that two previous studies had been conducted that included portions of the study area. These studies are listed in **Table 2**; another three studies had been conducted within the ½-mile search area. One of these studies, No. 07171, is listed in Table 2 because it is directly adjacent to the study area along St. John Road. The remaining two studies are farther removed from the project site.

Table 2. Cultural Studies Previously Conducted Entirely or Partially in the Project Area

CCIC Report No.	Author	Date	Title	Comments
06802	S. Davis-King	2008	Negative Historical Resource Survey Report McHenry Road Widening Phase I Ladd Road to Hogue Road Stanislaus County, California	Linear survey along McHenry Avenue and adjacent to Site B
07171	C. K. Graham	2009	Proposed Abandonment of the McHenry Industrial Lead from Milepost 21.25 near Escalon to Milepost 26.43 near McHenry, a total distance of 5.18 miles in San Joaquin and Stanislaus counties, California.	Linear survey along the abandoned Union Pacific Railroad line east of St. John Road, adjacent the study area
07244	S. Waechter and M. Bunse	2007	North County Corridor Environmental Constraints Analysis: Cultural Resources	Literature search that included the area of Site A

Note: CCIC = Central California Information Center

The records search identified one previously recorded cultural resource immediately south of the Site A parcel. This resource, P-50-002155, is the Dr. Moore Canal. Constructed in 1911, the Dr. Moore Canal is a small, concrete-lined branch canal that diverts water from the Modesto Irrigation District Main Canal for local agricultural purposes before reconnecting with the Main Canal downstream (Morlet 2006). The site record for the Dr. Moore Canal evaluated the resource as being not eligible for listing in the NRHP or CRHR.

The supporting documentation for the Stanislaus County General Plan does not identify any historical areas or points of historical interest in the study area (Stanislaus County 1994).

4 Inventory Methods and Results

4.1 Pedestrian Survey

The study area was subjected to an intensive archaeological pedestrian survey on May 4, 2016, by a qualified archaeologist who meets the U.S. Secretary of the Interior's professional standards in archaeology (48 Federal Register 44738-44739; Appendix A to 36 CFR 61). During the pedestrian survey, the study area was inspected for the presence of archaeological materials, including prehistoric and historic-era habitation debris (e.g., stone tools or tool manufacturing debris, glass fragments, tin cans), prehistoric features (e.g., hearths, house pits), and historic-era structural remains (e.g., house foundations, wells). The Site A parcel was surveyed in transects spaced at approximate 40-foot intervals. The much smaller Site B parcel was surveyed at about 15-foot intervals. Although grasses covered much of both parcels, ground surface visibility ranged from fair to excellent. Both shoulders of St. John Road were surveyed to a distance of approximately 25 feet from the edge of pavement, where possible; ground surface visibility was excellent. Along approximately the northern 1,200 feet of the west shoulder on St. John Road, the north shoulder of Ladd Road, both sides of Stewart Road, and the west shoulder of McHenry Avenue, the survey width was restricted by fencing, landscaping, and concrete sidewalks; however, the ground surface was examined wherever possible.

The architectural history field survey of the Site A parcel was performed on May 4, 2016, by a qualified architectural historian who meets the U.S. Secretary of the Interior's professional standards in architectural history. Each building and structure of the farm complex on the property was examined and photographed. The buildings were recorded on California Department of Parks and Recreation (DPR) 523 series forms **(Attachment 3)**.

4.2 Survey Results

4.2.1 Archaeological Resources

No archaeological resources were identified within the study area as a result of the archaeological field survey.

4.2.2 Built Environment Resources

One rural property, consisting of a single-family home, a detached garage, a metal barn, and several outbuildings in disrepair, was identified within the APE and recorded on DPR forms (**Attachment 3**). The resource is at 718 Ladd Road on the 4-acre parcel identified, for the purposes of this Proposed Project, as Site A, which is the proposed location for a water storage tank, a pump station building, and a stormwater detention basin.

Research indicated that the house was constructed in 1946 by Joe Moreno, whose family continued to own the parcel until it was sold to the City of Modesto around 2010. Like many of his neighbors, Joe maintained a small orchard on his property until the early 2000s. Additional information about the history of the property is provided in Attachment 3. Today the parcel is grass-covered with ornamental trees growing around the house and outbuildings.

The rectangular-plan house covers 1,264 square feet with its main façade on Ladd Road. Its composition shingle roof is side-gabled with shed sections at the front and rear. It has the minimal eave overhang and exposed rafter tails of the Minimal Traditional style, a style that was popular for inexpensive houses beginning in the Great Depression up until about 1950. Cladding is stucco, and windows of several sizes are fitted with vinyl replacement sash. The projecting partial porch is supported by three square brick columns. The front door is near the center of the main elevation. It is sheltered by the porch roof and accessed by a set of concrete steps that lead from the driveway to the east of the house. It is fitted with a metal security screen door. There is a brick chimney on the east elevation. A secondary entrance at the rear is fitted with a partially glazed wood door and accessed by a set of concrete steps. An awning appears to have been removed at the southeast corner of the house, and the door is sheltered only by a few inches of eave overhang. A smaller wood panel door west of the rear entrance is at grade and appears to house a water heater.

The rear yard has areas paved in concrete and asphalt as well as areas of bare dirt. The detached garage is southeast of the house and is also side-gabled and clad in stucco. Its single vehicle opening has a metal roll-up door. A similar single vehicle door to the west has been partially enclosed, and a partially glazed wood-panel door installed. There is a secondary personnel entrance on the east elevation and aluminum slider windows at the east, south, and west. Photographs of the structures are included in the DPR forms in Attachment 3.

The Moreno property was evaluated for eligibility for listing in the NRHP and the CRHP, as follows:

Criterion A/1: 718 Ladd Road is not associated with events that have made a significant contribution to the broad patterns of local, regional, or national history. Therefore, the building is not eligible to the NRHP or CRHR under NRHP Criterion 1 or CRHR Criterion A.

Criterion B/2: 718 Ladd Road is not associated with the lives of persons important to local, state, or national history and is therefore not eligible to the NRHP or CRHR under Criterion B/2.

Criterion C/3: 718 Ladd Road is a common example of dwellings constructed in the 1940s. It lacks architectural significance and is therefore not eligible to the NRHP or CRHR under Criterion C/3.

Criterion D/4: In rare instances, buildings themselves can serve as sources of important information about historic construction materials or technologies and may be significant under Criterion D/4. 718 Ladd Road does not appear to be a principal source of important information in this regard.

In sum, the property at 718 Ladd Road does not appear to be eligible for listing on either the NRHP or the CRHR.

4.2.3 Tribal Cultural Resources

Outreach to local Native American tribes for general information and concerns about the Proposed Project have not identified any TCRs. Similarly, consultation by the City under PRC Section 21080.3 has not revealed the presence of TCRs in the study area.

5 Summary and Recommendations

The City of Modesto is proposing to improve the water system of the community of Del Rio by constructing two new wells and appurtenant facilities at two different locations (Site A on Ladd Road and Site B on McHenry Avenue) and installing new water conveyance pipelines to connect the wells to the City's water distribution system. Archival research and pedestrian surveys did not identify any archaeological resources within the APE. A single-family house and associated outbuildings located at 718 Ladd Road were recorded and evaluated for NRHP/CRHR eligibility by a qualified architectural historian. It was determined that the structures do not appear eligible for listing on the NRHP or CRHR.

Although no archaeological sites were identified by the archaeological inventory, archaeological sites may be buried with no surface manifestation. Furthermore, as noted in Section 2.1, the soils that underlie the sites have a moderate to very high sensitivity for the presence of buried archaeological remains. If prehistoric or historic-era materials are encountered, all work in the vicinity should halt until a qualified archaeologist can evaluate the discovery and make recommendations in accordance with 36 CFR Section 800.13(b). Prehistoric materials would most likely include obsidian and chert flaked-stone tools (e.g., projectile points, knives, choppers), tool-making debris, or milling equipment such as mortars and pestles. Historic-era materials might include remains of agricultural implements; stone or concrete footings and walls; and deposits of metal, glass, and/or ceramic refuse.

The possibility of encountering human remains cannot be discounted. Under Section 7050.5 of the California Health and Safety Code, it is a misdemeanor to knowingly disturb a human burial. If human remains are encountered, work must halt in the vicinity of the remains and, as required by law, the Stanislaus County coroner should be notified immediately. An archaeologist should also be contacted to evaluate the find. If human remains are determined to be of Native American origin, the coroner must notify the NAHC within 24 hours of that determination. In accordance with PRC Section 5097.98, the NAHC, in turn, will immediately contact an individual who is most likely descended from the remains (i.e., the Most Likely Descendant). The Most Likely Descendant has 48 hours to inspect the site and recommend treatment of the remains. The landowner is obligated to work with the Most Likely Descendant in good faith to find a respectful resolution to the situation and entertain all reasonable options regarding the Most Likely Descendant's preferences for treatment.

RE: Proposed Modesto Del Rio Well Project, City of Modesto, Salida and Riverbank USGS Quadrangles, Stanislaus County, California

Dear Ms. Offermann:

Attached is a consultation list of tribes with traditional lands or cultural places located within the boundaries of the above referenced counties. Please note that the intent above reference codes is to mitigate impacts to tribal cultural resources, as defined, for California Environmental Quality Act (CEQA) projects.

As of July 1, 2015, Public Resources Code Sections 21080.3.1 and 21080.3.2 **require public agencies** to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose mitigating impacts to tribal cultural resources:

> Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section. (Public Resources Code Section 21080.3.1(d))

The law does not preclude agencies from initiating consultation with the tribes that are culturally and traditionally affiliated with their jurisdictions. The NAHC believes that in fact that this is the best practice to ensure that tribes are consulted commensurate with the intent of the law.

In accordance with Public Resources Code Section 21080.3.1(d), formal notification must include a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation. The NAHC believes that agencies should also include with their notification letters information regarding any cultural resources assessment that has been completed on the APE, such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

   - A listing of any and all known cultural resources have already been recorded on or adjacent to the APE;
   - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
   - If the probability is low, moderate, or high that cultural resources are located in the APE.
   - Whether the records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the potential APE; and
   - If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

   * Any report that may contain site forms, site significance, and suggested mitigation measurers.

     All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for pubic disclosure in accordance with Government Code Section 6254.10.

3. The results of any Sacred Lands File (SFL) check conducted through Native American Heritage Commission. A search of the SFL was completed for the USGS quadrangle information provided with negative results.

4. Any ethnographic studies conducted for any area including all or part of the potential APE; and

5. Any geotechnical reports regarding all or part of the potential APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS is not exhaustive, and a negative response to these searches does not preclude the existence of a cultural place. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the case that they do, having the information beforehand well help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance we are able to assure that our consultation list contains current information.

If you have any questions, please contact me at my email address: gayle.totton@nahc.ca.gov.

Sincerely,

Gayle Totton, M.A., PhD.

Subject: City of Modesto Utilities Department Del Rio Well Project

Dear Chairperson Martin,

The City of Modesto Utilities Department is proposing to upgrade their facilities to correct existing supply deficiencies. The project proposes to construct an above ground water storage tank, a water well, and a booster pump station, along with several other appurtenant features and landscape improvements at a site on Ladd Road near the intersection with St. John's Road. Additionally, a transmission main will be constructed within St. John's Road from the tank site on Ladd Road. The transmission main will run from the tank site northerly for a distance of approximately 2,500 feet, and will connect to the existing distribution system near the intersection of St. John's Road and Country Club Drive. A second water well will be constructed at a parcel on McHenry Avenue near the intersection of Stewart Road. This well will connect directly with an existing water main under Stewart Road. The transmission main will run from the well site on McHenry Avenue for approximately 190 feet, then west under Stewart Road for approximately 760 feet to the intersection with Grove Point Way. The attached maps depict the project location.

The Native American Heritage Commission has identified you as an individual who might have concerns about, or additional knowledge of, ancestral cultural resources in the project area. Please notify me if you are aware of any areas of concern within or in close proximity to the project area. Please note that the purpose of this letter is early identification of Native American cultural resources in order ensure their consideration during the project planning phase; this letter is not consultation pursuant to Public Resources Code 21080.3.1 (AB 52). If you have concerns, please respond within 30 days of receipt of this letter.

You may contact me directly at 916-553-4923 or janis@horizonh2o.com, or by mail at the address listed above. Thank you for your time in considering this request.

Sincerely

Dear Ms. Offermann:

The Central California Information Center received your record search request for the project area referenced above, located on the Riverbank and Salida ISGS quadrangles in Stanislaus County. The following reflects the results of the records search for the project study areas and radius:

As per data currently available at the CCaIC, the locations of resources/reports are provided in the following format: ☐ custom GIS maps ☒ shapefiles ☐ hand-drawn maps

Summary Data:

Resources within project areas:	0
Resources within 1/4 mi radius:	Site A: 1:P-50-002155 (Dr. Moore Canal); Site B: 0
Reports within project areas:	0
Reports within 1/4 mi radius:	5: ST-06802, 7171, 7244, 7341, 8284

Resources known to have value to local cultural groups: None have been formally reported to the CCIC.

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public

Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the California Historical Resources Information System (CHRIS).

Note: Billing will be transmitted separately via email by our Financial Services office *($325.30), payable within 60 days of receipt of the invoice.

Sincerely,

E. A. Greathouse, Coordinator
Central California Information Center
California Historical Resources Information System

*P3a. Description:

The Dr. Moore Canal is a small branch canal that diverts from the Modesto Irrigation District Main Canal to irrigate the surrounding area and returns to the Main Canal further west from the project area. The concrete lined canal enters the project area at PM 28.903 and is approximately thirty feet wide. The canal was built for and continues to be used for agricultural irrigation. The Modesto Irrigation District built the canal in 1911. The MID main canal and its many laterals deliver water from the Tuolumne River to the agricultural lands within the county. Caltrans installed the existing culvert in 1963 when State Route 108 was improved. The culvert is located along the east side of State Route 108 where it carries the irrigation water under the road to the west side of the Route.

BUILDING, STRUCTURE, AND OBJECT RECORD

Map Reference No.: 1

*Resource Identifier: Modesto Irrigation District (MID) Canal, Dr. Moore *NRHP Status Code:

B1. Historic Name: Dr. Moore

B2. Common Name: Dr. Moore County/Route/Postmile: 10-STA-108; PM 28.9/29.25; EA-10-0N440

B3. Original Use: Irrigation Canal B4. Present Use: Irrigation Canal

*B5. Architectural Style: concrete lined canal with culvert

*B6. Construction History:

According to the MID, the concrete lined canal was constructed in 1911 by the Modesto Irrigation District. Caltrans constructed the culvert in 1963 by Construction Agreement 10-859. The culvert is cleaned out annually to prevent clogging of the waterway. No other changes have been made.

*B10. Significance: Theme: N/A Area: N/A

Period of Significance: N/A Property Type: N/A Applicable Criteria: N/A

The Dr. Moore Canal is a small branch canal that diverts from the MID Main Canal at T.2S, R.9E, S.28 to irrigate the surrounding area and returns at T.2S, R.9E, S.31 to the Main Canal. Research did not lead to any information as to the origin of the name. The canal continues to provide irrigation waters to the surrounding agricultural lands. This branch is a small piece of over two hundred miles of the current MID canal system. There is evidence that the canal was constructed as early as 1903. According to MID, the canal was acquired in 1911 and assumed its current appearance. Caltrans modified the waterway in 1963 with the improvement of SR 108.

This canal is a common type found throughout Stanislaus County and is not associated with a significant event or person(s), (Criteria A & B). Likewise, the property does not embody the distinctive characteristics of a type, period, or method of construction, or represent the work of a master, or possess high artistic values, (Criterion C). Thus, the property is not eligible for listing in the National Register and is not an historical resource for the purpose of CEQA.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
The house is sited on a rural property of just under four acres in Stanislaus County. Ladd Road is about a half mile south of the Stanislaus River in the greater Modesto area. The agricultural neighborhood is dominated by fruit cultivation. Many farms also have single-family dwellings. The Moreno House is south of Ladd Road and is bounded by the Union Pacific railroad tracks on the west and the Dr. Moore canal on the south. There is another domestic farm immediately to the east. The Moreno property is characterized by dry grass, except for the area around the house and garage where there are overgrown shrubs and a handful of mature walnut and ornamental trees. The house fronts onto Ladd Road at the northeast corner of the property, with a pump house and single garage to the rear (see photos 1 and 2). A metal barn and some dilapidated sheds are located farther south behind the garage (continued p. 3).

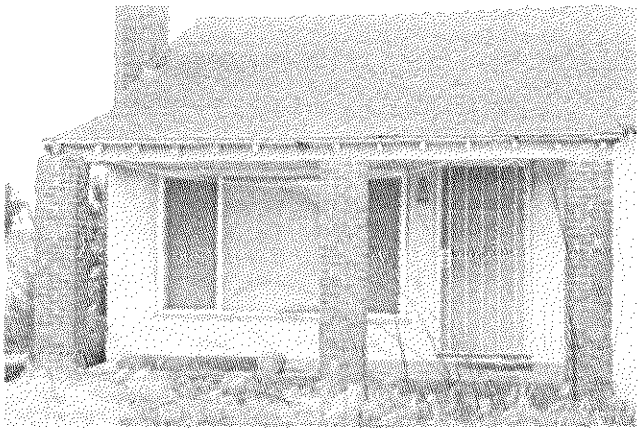
***P3a. Description: (continued)**

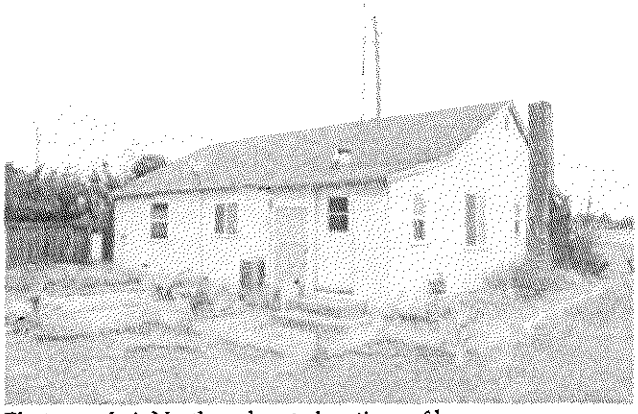
The rectangular-plan house is 1,264 square feet with its main façade on Ladd Road. Its compositions shingle roof is side-gabled with shed sections at the front and rear. It has the minimal eave overhang and exposed rafter tails of the Minimal Traditional style, a style that was popular for inexpensive houses beginning in the Great Depression up until about 1950. Cladding is stucco, and windows of several sizes are fitted with vinyl replacement sash (see photo 1). The projecting partial porch is supported by three square brick columns. The front door is near the center of the main elevation. It is sheltered by the porch roof and accessed via a set of concrete steps that lead from the driveway to the east of the house. It is fitted with a metal security screen door (see photo 3). There is a brick chimney on the east elevation (see photo 1). A secondary entrance at the rear is fitted with a partially glazed wood door and accessed via a set of concrete steps. An awning appears to have been removed at the southeast corner of the house, and the door is sheltered only by a few inches of eave overhang. A smaller wood panel door west of the rear entrance is at grade and appears to house a water heater (see photo 4).

The rear yard has areas paved in concrete and asphalt as well as bare dirt. The garage is southeast of the house, and also side-gabled and clad in stucco. Its single vehicle opening has a metal roll-up door. A similar single vehicle door to the west has been partially enclosed, and a partially glazed wood-panel door installed (see photo 5). There is a secondary personnel entrance on the east elevations, and aluminum slider windows at the east, south, and west (see photo 7).

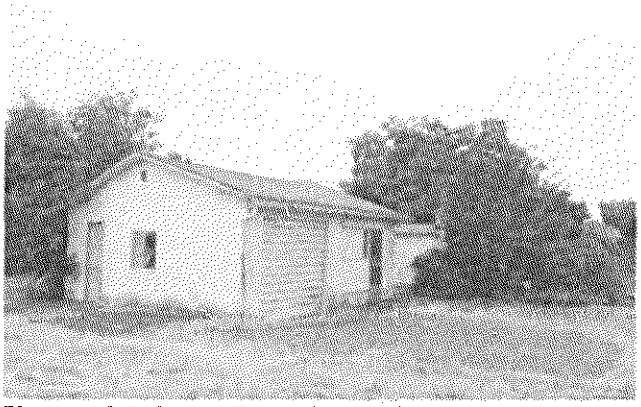
Photograph 2: Property overview looking southeast from Union Pacific railroad tracks near Ladd Road, May 7, 2016.



Photograph 3: Detail showing front entrance and porch, camera looking south, May 7, 2016



Photograph 4: North and east elevations of house, camera looking northwest, May 7, 2016.

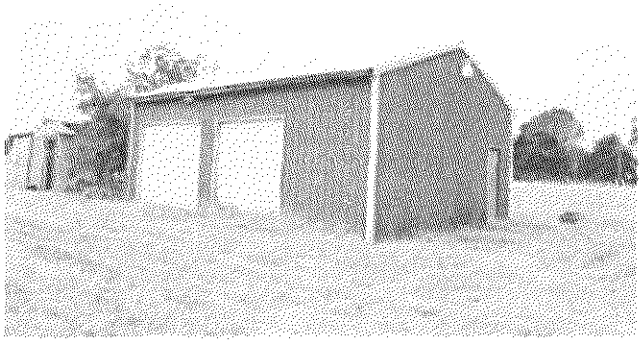


Photograph 5: Garage, East and north elevations, camera looking southwest, May 7, 2016.

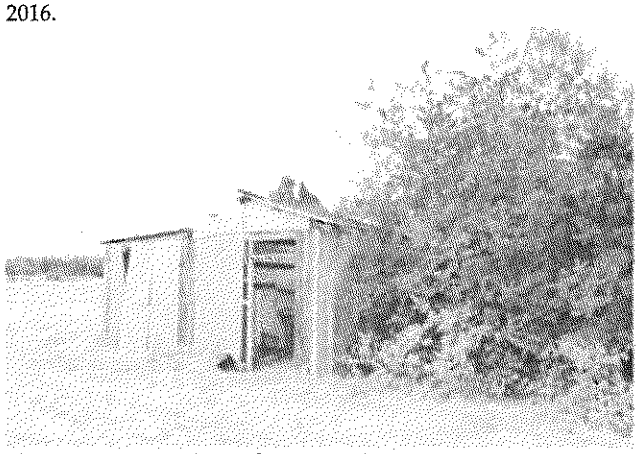
A concrete path leads from the rear door to a diminutive building that houses the well pump. It is front-gabled with exposed rafter tails and stucco cladding like the house (see photo 6). There is a front-gabled corrugated metal barn south of the domestic buildings. It has two large vehicle openings fitted with metal roll-up doors on its east elevation and a personnel door on the north (see photo 8). Immediately south of the barn there is a grouping of dilapidated sheds. They have gabled and shed roofs and are constructed of a combination of unpainted wood and metal (see photo 9).

Photograph 6: Rear yard with paved path and pump house, camera looking southwest, May 7, 2016

Photograph 7: Garage with house in background, camera looking northwest, May 7, 2016.



Photograph 8: Metal barn, camera looking southwest, May 7, 2016.



Photograph 9: Sheds south of metal barn, camera looking southwest, May 7, 2016.

B10. Significance (continued):

Modesto

The Central Pacific Railroad laid out the village of Modesto in 1870 when it extended its tracks through Stanislaus County. Modesto residents were among California's first irrigation advocates, and by 1904 a system of canals had been constructed in order to allow more productive agriculture. During the nineteenth century grain-growing was Stanislaus County's dominant agricultural activity. Stock-raising, dairying, fruit and nut orchards, and vegetable farms all became more important over time. When Prohibition ended in 1933, the Gallo brothers came to Modesto, bringing the wine business to the area on an industrial scale. In the twenty-first century, almonds and

walnuts are the most lucrative local crops, although fruit, vegetables, livestock, and other agricultural products remain important. Modesto is still the most important commercial center in the region as well as the county seat..[1]

718 Ladd Road

Mamie Barcelona was born in California in 1908, the daughter of Italian immigrants. One of nine children, she grew up in San Jose and worked in canneries as a young adult. In the early 1940s, she married Joseph Perry (Perez) Moreno. Joe P. Moreno was born in 1907, to Spanish parents aboard a ship en route to Hawaii. Mamie and Joe married in the early 1940s. In 1943, they had a daughter named Maria. By 1945, the year their daughter Sandra was born, they owned the property on Ladd Road. They owned two adjacent parcels (each just under two acres) that were bounded by Ladd Road on the north and the Dr. Moore Canal (a branch of the Modesto Irrigation Canal) on the south. The western parcel was adjacent to the Union Pacific railroad tracks. The Morenos built the house on the eastern parcel the following year, and apparently moved in shortly thereafter. The two outbuildings behind the house to the south appear to have been built about the same time. Joe worked as a custodian for the local school district, and farmed the property and hunted pheasants in his spare time. Based on historic aerial photographs, the Morenos had a small fruit orchard planted on their land, as most of their neighbors did during this era. The Morenos were members of St. Frances of Rome Catholic Church in Riverbank, a small community about four miles east of their farm.[2]

Maria Moreno married Gary Crawshaw in 1963, and the couple later moved to Columbia, California. In 1964, Sandra Moreno was working as a bank teller and living in the house. In 1966, Sandra married Robert Meagher at the age of 21, and moved out of her parents' house. Mamie and Joe lived on in the house together until her death in 1993. Joe then deeded the property to his daughter, but continued to live in the house until he had to move into assisted living as his health declined. The orchards were removed from the property in the early 2000s. Joe Moreno died in 2004, and his daughters inherited the house and land. They later sold the property to the City of Modesto.[3]

Evaluation:

The National Register of Historic Places (NRHP) requires that a significance criterion for A-D be met for a resource to be eligible; the California Register of Historical Resources (CRHR) requires that a significance criterion from 1-4 be met for a resource to be eligible.

Criterion A/1: 718 Ladd Road is not associated with events that have made a significant contribution to the broad patterns of local, regional, or national history. Therefore, the building is not eligible to the NRHP or CRHR under Criterion 1/A.

Criterion B/2: 718 Ladd Road is not associated with the lives of persons important to local, state, or national history, and therefore is not eligible to the NRHP or CRHR under Criterion B/2.

Criterion C/3: 718 Ladd Road is a common example of dwelling constructed in the 1940s. It lacks architectural significance and is therefore not eligible to the NRHP or CRHR under Criterion C/3.

Criterion D/4: In rare instances, buildings themselves can serve as sources of important information about historic construction materials or technologies and be significant under Criterion D/4. 718 Ladd Road does not appear to be a principal source of important information in this regard.

It has been assigned a Historic Resource Status Code of 6Z, and therefore does not qualify as a historic resource under CEQA.

1) **Re: Draft Well Impact Analysis for the Del Rio Water Systems Upgrade: Groundwater Well Inventory, Baseline Transducer Investigation, City of Modesto, California**

Dear Mr. Ohlson:

This letter report is the first of two deliverables, and provides all data collected under task one of the contract agreement between URS and the City of Modesto, California. The data and analysis provided in this text have been prepared to document the results of a domestic groundwater well inventory and a baseline groundwater level investigation conducted in the Del Rio area of Modesto. The purpose of this project was to provide more site-specific baseline hydrogeological information and to further assess the potential effect pumping the Del Rio New and Replacement wells may have on domestic, agricultural, and ranch wells in the surrounding area of the proposed Del Rio well sites. Because the proposed wells will be located within an active pumping area, the City of Modesto has chosen to conduct the analysis to determine impacts to groundwater that may result from pumping the proposed wells.

INTRODUCTION

The purpose of this project was to provide more site-specific baseline hydrogeological information and to further assess the potential effect pumping the Del Rio New and Replacement wells may have on domestic, agricultural, and ranch wells in the surrounding area of the proposed Del Rio well sites (Figure 1). In an effort to achieve this goal, URS conducted a baseline transducer monitoring investigation. This technical memorandum summarizes field work, site inventory, and groundwater level data gathered from the transducer investigation as outlined in Task 1of the scope of work (URS, 2014).

Task 1 involved two phases, the first of which involved working with the City of Modesto staff to identify local well owners in the Del Rio area (Figure 1). During this phase, URS attempted to contact the landowners to ascertain historic pumping rates and water level data, and also determine periods of groundwater demand. Several attempts to contact landowners were made by City of Modesto and URS personnel; many landowners were hesitant and resistant to the request by either not replying to requests for contact, or denied access. Because landowners were resistant to well monitoring efforts, no data on historical pumping and water level behavior was obtained. The first phase effort yielded access from the wells of only two private land owners who granted URS access for water level monitoring with pressure transducers.

Fax: 916.679.2900

The second phase of Task 1 involved the placement of pressure transducers in three groundwater wells and monitoring of groundwater levels for a period of six months. Transducers were installed on August 08, 2014; water-levels were measured at15 minute intervals until February 17, 2015. The objective of this Tech Memo is to provide all data gathered during this investigation and provide an interpretation of water-level trends during the period of record.

PRVATE WELL INVENTORY

A well inventory map is plotted on an aerial image (Figure 2) to illustrate the locations of existing domestic wells within a one mile radius of the Proposed Del Rio New Well location. Domestic well data were gathered from the California Department of Water Resources (CA DWR) well registry database. URS compiled all drillers' logs CA DWR provided in a well database. The database contains well information (well diameter, top and bottom of well screen, and lithology data). This information was used to help refine the list of wells to include for water-level monitoring and installation of transducers. Historic water-level and water usage data was unable to be obtained.

Initially, only three private land owners returned URS attempts for contact, and out of the initial effort, URS was able to perform initial site inventories on four wells. Figure 1 provides the locations for these wells. Table 1 shows site details and well-specific data for these sites. Attachment A provides wellhead pictures gathered during the field inventory. Out of the four wells initially inventoried, URS was granted permission to monitor water levels in only two of the domestic wells with transducers for six months (Setliff Property and Denlinger Property at 718 Ladd Rd), and was denied access to the other two (Table 1). Because of the resistance by landowners to this monitoring, URS installed a third transducer at a City of Modesto Well at 718 Ladd Rd., a well located at the proposed location for the Del Rio New Well (Figure 1).

MONITORING WELL AND GROUNDWATER LEVEL DATA

The proposed Del Rio production wells are expected to be screened from 400 feet to 600 feet below ground surface in the deep alluvial aquifer. URS was unable to obtain access to wells completed in that aquifer. A review of the DWR well inventory database suggests that very few wells are completed at this depth, and of those, none are located within 1,000 feet of the proposed well locations. Most domestic wells in the Del Rio area are completed in the shallow aquifer (100-265 feet below ground surface). Well completion records that were obtained (Table 1) indicate that the wells monitored for this investigation are screened at depths less than 200 feet below ground surface (shallow aquifer), and are representative of the large majority of domestic wells in the area. The data presented in this tech memo provides a representative baseline dataset for the majority of domestic wells located in the Del Rio area.

Hydrographs compiled from transducer data from the three shallow groundwater wells monitored from August 08, 2014 to February 17, 2015 are presented in Figures 3,4, and 5. Two wells (Ladd Rd wells, Figures 3 and 4) are located proximally to the chosen location for Del Rio New Well and one well is located proximally to the chosen location for the Del Rio Replacement Well (Setliff Well, Figure 5). For purposes of this tech memo, the term "proximally located" is used to refer to wells within 1,000 feet of proposed production well location.

Upward trends in groundwater levels are evident in all figures throughout the six month record. The upward trend displayed over the six month time period was probably influenced by seasonal fluctuations in the regional aquifer. Monitoring commenced in August when water levels were expected to be at their annual low point; monitoring ceased in February during the expected annual high. Statistical evaluation provided in insets on each figure show that water levels increased over the period of record by 3.02, 1.90, and 1.31 feet in figures 3, 4 and 5, respectively. Seasonal trends observed in long-term historical records from groundwater monitoring conducted by the USGS are consistent with the fluctuations observed during this investigation (USGS, 2007). Average seasonal water level fluctuations reported by USGS in shallow (100-265 feet), intermediate (265-360 feet), and deep (360-600 feet) zone wells have been 1, 3, and 18 feet, respectively.

Frequently occurring, short-duration (less than one-hour duration), high-magnitude (1-4 feet) decreases in water levels followed by a rapid recovery in water levels are observed throughout the period of record in Figures 4 and 5; this water level behavior is similar to the drawdown curve produced by a well that is pumped for a short time period, shut off, and allowed to recover. To illustrate the influence of domestic localized pumping to the aquifer, an amplification of the hydrograph (Figure 5) is provided in Inset 1 of Figure 5. The pumping drawdown curves in the hydrograph (Inset 1, Figure 5) are not consistent with pumping of municipal wells (municipal pumping lasts for 2-4 hours), and are most likely the result of local domestic groundwater usage. The lack of interest and willingness by private well owners prevented URS from obtaining pertinent private well operational data, hindering further analysis.

CONCLUSIONS

Based the results of the groundwater well inventory and baseline water-level monitoring, the following conclusions were drawn:

- The DWR Private well database suggests that the majority of private wells located within the Del Rio area of Modesto, CA are completed in the shallow zone (less than 265 feet below ground).
- Data gathered during the course of this groundwater level investigation were collected from wells completed in the shallow zone, and therefore, are representative of the majority of private domestic wells located in the area, and are expected to provide representative baseline for the majority of private wells in the Del Rio area.
- There are few private wells completed at the depth that the proposed Del Rio wells are expected to be completed, and none are located within 1,000 feet of the proposed locations.
- A gradual increase in water-levels observed throughout the course of this investigation of 0.3 to 3.02 feet was probably the result of normal seasonal changes for the aquifer.
- Short-duration, high magnitude decreases in groundwater-levels followed by recovery were observed in water levels of two wells throughout the period of record. These impacts to groundwater levels are greater than the observed seasonal fluctuation, and are attributed to local domestic pumping for groundwater usage.
- Local domestic groundwater pumping and usage is currently impacting the water levels in the shallow zone by 1-4 feet.

2870 Gateway Oaks Drive, Suite 150
Sacramento, CA 95833
Tel: 916.679.2000
Fax: 916.679.2900

- Determining hydrogeogolgical characteristics and aquifer properties were ultimately hindered by the lack of interest and willingness of private land owners to assist in this effort by allowing access and provide historic usage information.

REMCOMENDATIONS

- It is recommended that groundwater levels be periodically monitored in proximally located wells where access is allowed when the Del Rio wells are on-line. It is recommended that water levels are monitored in all three zones (shallow, intermediate, and deep) of the alluvial aquifer.

URS appreciates this opportunity to provide hydrogeologic consulting services to the City of Modesto. Please contact the undersigned at (916) 717-1628 if you have any questions.

Sincerely,

Eddy Teasdale, PG. (#7791)., C.HG. (#926)

Re: Draft Well Impact Analysis for the Del Rio Water Systems Upgrade: Revised Groundwater Flow Model, City of Modesto, California

Dear Mr. Ohlson:

This letter report has been prepared to document the results of drawdown analysis conducted at the two proposed Del Rio Well locations. The purpose of the analysis was to re-evaluate the potential impacts of pumping the Del Rio New Well and the Del Rio Replacement well on local groundwater levels in the area. Because these wells will be located within an active pumping area, the City of Modesto has chosen to conduct the analysis to determine impacts to groundwater that may result from pumping the proposed wells. This letter report presents a determination of the estimated maximum groundwater drawdown expected in wells at 125 feet and 1,000 feet radii in each of three depth zones by pumping of the one proposed well or both proposed wells.

1.0 INTRODUCTION

An aerial photo showing the two proposed location of the Del Rio production wells and surface features in the area is presented on Figure 1. URS conducted an initial drawdown analysis in 2012, and submitted the findings in a letter report submitted to the City of Modesto on June 26, 2012 (URS, 2012). The current work builds upon the previous analysis providing more in-depth, accurate and detailed modelling results in the following ways;

1) The previous investigation was conducted using only one of the two proposed production wells. Because there are two proposed production wells anticipated, two evaluations were conducted, one for each production well location. This was done to account for the impacts of both proposed wells. Model simulations were conducted accounting for the pumping of each proposed Del Rio production well separately, and then combined.
2) Simulation Run Times: In the previous analysis (URS, 2012) 30 days of pumping were simulated with the model, and the simulations did not account for long-term impacts to the aquifer. The simulated pumping time evaluated for this report was 3,650 days (10 years).
3) Del Rio production well flow rates: The original Del Rio model assumed an operational pumping rate of 1,280 gallons per minute (gpm), and operational times of 8 hours a day over a 30-day period. For the revised model, URS coordinated with City of Modesto staff to derive both site-specific operational pumping rates (flow information) and operational time information. The flow rates for both Del Rio production wells were updated to more accurately simulate the hydraulic effects of anticipated pumping rates, which will vary over the course of a year because of anticipated monthly variations in water demand.
4) Sensitivity Analysis: URS quantified uncertainty in the model by conducting a sensitivity analysis on horizontal hydraulic conductivity (K), the hydraulic parameter used to predict water-level drawdown.

URS Corp
2870 Gateway Oaks Drive, Suite 150
Sacramento, CA 95833
Tel: 916.679.2000
Fax: 916.679.2900

To complete the drawdown analysis efficiently, URS developed a numerical groundwater flow model based on the United States Geological Survey (USGS) Northeastern San Joaquin Valley Groundwater Numerical Flow Model (USGS, 2007). The computer code selected to model groundwater flow was MODFLOW. MODFLOW is a three dimensional, cell-centered, finite difference, saturated flow model developed by the USGS (McDonald and Harbaugh, 1998). MODFLOW is widely accepted in the professional hydrologic community and is recognized as a valid numerical model to simulate groundwater flow. The area covered by the regional USGS groundwater model includes the northeastern San Joaquin Valley extending from north of the Stanislaus River to the south of the Merced River and bounded on the northeast by the Sierra Nevada foothills and the southwest by the San Joaquin River. The area included in the USGS model domain is shown on Figure 2. The regional model has 16 model layers, each layer representing a separate subsurface lithology. The total model thickness varies from approximately 900 to 1,200 feet thick. A cross-section view of the USGS model is presented in Figure 3.

For the drawdown analysis, the regional USGS groundwater flow model was converted into a local-scale, transient-state groundwater flow model using Telescope Mesh Refinement (TMR) techniques with *Groundwater Modeling System* (GMS). GMS was developed by Aquaveo (Aquaveo, 2011) and is a comprehensive graphical user interface for performing groundwater simulations. TMR (also called grid zooming) is the technique for creating a more refined model from a portion of the larger model (i.e., the Regional Scale USGS model) to more accurately simulate hydraulic stresses in the Del Rio Well "area of interest"; the refined model grid retains the directional orientation of the regional model. The TMR model is not linked to the larger model; rather, it is a separate model but it uses the hydrogeologic properties (i.e., hydraulic conductivity/ transmissivity, storage coefficient, etc.) of the larger model. The northern boundary of the TMR model is the Stanislaus River and the southern boundary is an east-west line approximately 2 to 3 miles south from the river. The active area of the local model is about 11 mi^2 (7,200 acres).. The horizontal TMR model grid and its 16 vertical layers are shown on Figure 4.. These layers were assigned the same hydraulic properties and thickness as the layers in the regional model.

2.0 DRAWDOWN ANALYSIS

2.1 Drawdown Analysis Assumptions and Inputs

In the model, hydraulic conductivity parameters vary according to depth and layer; groups of cells within each layer have their own unique value. Variations in hydraulic conductivity within and between layers are illustrated for shallow, intermediate, and deep zones in Figure 5. Based on anticipated water supply demand, City of Modesto staff calculated monthly pumping rates and well burden estimates for both proposed Del Rio wells; the estimated pumping rates updated for the new simulations are shown for each well and each month of the water year in Figure 6. The monthly pumping rates were estimated from expected operational pumping rates (1,000 gpm) and estimated monthly operation periods. The estimated operational times were variable (4-18 hours) based on expected demand; however, operational times used for the estimates are conservative because the majority of the current municipal wells operate between 2 and 4 hours per day. The model simulation time was 3,650 days (10 years). The proposed Del Rio Wells will be screened in the deep zone from 400 to 600 feet below ground surface (bgs).

2.2 Drawdown Analysis Results

To assess the possible drawdown impacts from pumping, two separate evaluations were conducted (one for Del Rio New Well and one for Del Rio Replacement Well), and four scenarios were simulated for each evaluation. Scenario 1 assumed one well was operational and simulated effects on groundwater levels at wells within a 125-foot radius of the proposed well location. Scenario 2 assumed both proposed Del Rio Wells were in operation and simulated effects on groundwater levels at wells within a 125-foot radium of the proposed well location. Scenario 3 assumed one well was operational and simulated effects on groundwater levels at wells within a 125-foot radius of the proposed well location. Scenario 4 assumed both wells in operation, and simulated effects on groundwater levels at wells within a 1,000-foot radius of the proposed well location. The groundwater model simulation matrix is summarized in Table 1.

The TMR model domain for Del Rio Wells consists of 16 individual model layers and existing wells were grouped by depth as the following:

- Shallow Aquifer – Layers 1 to 8 and wells screened from 100 to 265 feet deep
- Intermediate Aquifer – Layers 9 and wells screened from 265 to 360 feet deep
- Deep Aquifer – Layer 10 through 12 and wells screened from 360 to 600 feet deep

Maximum simulated drawdown at the maximum pumping rate (751 gpm) for both models are summarized in Table 2. A more thorough discussion of drawdown is provided below.

2.2.1 Drawdown Analysis Results for evaluation 1, Del Rio New Well

Evaluation 1 was conducted for the purpose of estimating drawdown in the Del Rio New Well near Ladd Rd (Figure 1). This section discusses the drawdown estimated by the evaluation.

2.2.1.1 Evaluation 1, Scenario 1, One pump operational (125-foot radius)

Temporal analysis of drawdown for Evaluation 1, scenario 1 in all zones is provided in Figure 7. For comparative purposes, operational pumping rates are provided on the figure (Figure 7, dashed lines). Drawdown was consistent with well demand, as demand increased (i.e. increased pumping rates) during the higher demand periods, drawdown increased and then recovered after the high demand period in each year. The following bullets summarize maximum drawdown predicted at the maximum anticipated monthly flow rate of 751 gpm anticipated for the month of July.

- Shallow aquifer drawdown is predicted to be 0.17 ft. (Table 2, Figure 7)
- Intermediate aquifer drawdown is predicted to be 1.1 ft. (Table 2, Figure 7)
- Deep aquifer drawdown is predicted to be 19 ft. (Table 2, Figure 7)

2.2.1.2 Evaluation 1, Scenario 2, Both pumps operational (125-foot radius)

Temporal analysis of drawdown for Evaluation 1, scenarios 2 in all zones is provided in Figure 8. For comparative purposes, simulated drawdown when both wells are operational is compared with simulated drawdown when only one well is operational (Figure 8, dashed lines). Drawdown was consistent with well demand, as demand increased (i.e. increased pumping rates), drawdown increased. The following

bullets summarize maximum drawdown observed at the maximum anticipated monthly flow rate of 751 gpm anticipated for the month of July.

- In the shallow aquifer is predicted to be 0.25 ft. (Table 2, Figure 8)
- In the intermediate aquifer is predicted to be 1.5 ft. (Table 2, Figure 8)
- In the deep aquifer is predicted to be 20 ft. (Table 2, Figure 8)

2.2.1.3 Evaluation 1, Scenario 3, One pump operational (1,000-foot radius)

Temporal analysis of drawdown for Evaluation 1, scenarios 3 in all zones is provided in Figure 9. For comparative purposes, operational pumping rates are provided on the figure (Figure 9, dashed lines). Drawdown was consistent with well demand, as demand increased (i.e. increased pumping rates), drawdown increased. , the following bullets summarize maximum drawdown observed at the maximum anticipated monthly flow rate of 751 gpm anticipated for the month of July:

- In the shallow aquifer is predicted to be 0.21 ft. (Table 2, Figure 9)
- In the intermediate aquifer is predicted to be 1 ft. (Table 2, Figure 9)
- In the deep aquifer is predicted to be 7 ft. (Table 2, Figure 9)

2.2.1.4 Evaluation 1, Scenario 4, Both pumps operational (1,000-foot radius)

Temporal analysis of drawdown for Evaluation 1, scenarios 4 in all zones is provided in Figure 10. For comparative purposes, simulated drawdown when both wells are operational is compared with simulated drawdown when only one well is operational (Figure 10, dashed lines). Drawdown was consistent with well demand, as demand increased (i.e. increased pumping rates), drawdown increased. To satisfy the objectives of this investigation, the following discussion summarizes maximum drawdown observed at the maximum anticipated monthly flow rate of 751 gpm anticipated for the month of July:

- In the shallow aquifer is predicted to be 0.26 ft. (Table 2, Figure 10)
- In the intermediate aquifer is predicted to be 1.4 ft. (Table 2, Figure 10)
- In the deep aquifer is predicted to be 8 ft. (Table 2, Figure 10)

2.2.2 Drawdown Analysis Results for Evaluation 2, Del Rio Replacement Well

Evaluation 2 was conducted for the purpose of estimating drawdown in the Del Rio Replacement Well located near the intersection of McHenry Ave and Stewart Rd. (Figure 1). This section discusses the drawdown predicted at two radial distances by the evaluation.

2.2.2.1 Evaluation 2, Scenario 1, One pump operational (125-foot radius)

Temporal analysis of drawdown for Evaluation 2, scenarios 1 in all zones is provided in Figure 11. For comparative purposes, operational pumping rates are provided on the figure (Figure 11, dashed lines). Drawdown was consistent with well demand, as demand increased (i.e. increased pumping rates), drawdown increased. , the following discussion summarizes maximum drawdown observed at the maximum anticipated monthly flow rate of 751 gpm anticipated for the month of July.

- In the shallow aquifer is predicted to be 0.1 ft. (Table 2, Figure 11)
- In the intermediate aquifer is predicted to be 1.6 ft. (Table 2, Figure 11)
- In the deep aquifer is predicted to be 17 ft. (Table 2, Figure 11)

2.2.2.2 Evaluation 2, Scenario 2, Both pumps operational (125-foot radius)
Temporal analysis of drawdown for Evaluation 2, scenarios 2 in all zones is provided in Figure 12. For comparative purposes, simulated drawdown when both wells are operational is compared with simulated drawdown when only one well is operational (Figure 12, dashed lines). Drawdown was consistent with well demand, as demand increased (i.e. increased pumping rates), drawdown increased. The following discussion summarizes maximum drawdown observed at the maximum anticipated monthly flow rate of 751 gpm anticipated for the month of July.

- In the shallow aquifer is predicted to be 0.21 ft. (Table 2, Figure 12)
- In the intermediate aquifer is predicted to be 2.1 ft. (Table 2, Figure 12)
- In the deep aquifer is predicted to be 18.2 ft. (Table 2, Figure 12)

2.2.2.3 Evaluation 2, Scenario 3, One pump operational (1,000-foot radius)
Temporal analysis of drawdown for Evaluation 2, scenarios 3 in all zones is provided in Figure 13. For comparative purposes, operational pumping rates are provided on the figure (Figure 13, dashed lines). Drawdown was consistent with well demand, as demand increased (i.e. increased pumping rates), drawdown increased. The following discussion summarizes maximum drawdown observed at the maximum anticipated monthly flow rate of 751 gpm anticipated for the month of July:

- In the shallow aquifer is predicted to be 0.1 ft. (Table 2, Figure 13)
- In the intermediate aquifer is predicted to be 1.2 ft. (Table 2, Figure 13)
- In the deep aquifer is predicted to be 6.6 ft. (Table 2, Figure 13)

2.2.2.4 Evaluation 2, Scenario 4, Both pumps operational (1,000-foot radius)
Temporal analysis of drawdown for Evaluation 2, scenarios 4 in all zones is provided in Figure 14. For comparative purposes, simulated drawdown when both wells are operational is compared with simulated drawdown when only one well is operational (Figure 14, dashed lines). Drawdown was consistent with well demand, as demand increased (i.e. increased pumping rates), drawdown increased. The following discussion summarizes maximum drawdown observed at the maximum anticipated monthly flow rate of 751 gpm anticipated for the month of July:

- In the shallow aquifer is predicted to be 0.18 ft. (Table 2, Figure 14)
- In the intermediate aquifer is predicted to be 1.6 ft. (Table 2, Figure 14)
- In the deep aquifer is predicted to be 7.5 ft. (Table 2, Figure 14)

3.0 SENSITIVITY ANALYSIS AND QUANTIFICATION OF UNCERTAINTY

Other than pumping rates and distance from the pumping well, hydraulic conductivity is the predominant variable that determines drawdown. In order to quantify uncertainty associated with input parameters, a sensitivity analysis was conducted on hydraulic conductivity values assigned to model layers. The sensitivity of drawdown to hydraulic conductivity was evaluated between a low end limit and an upper end limit. To provide the low end member, the models original hydraulic conductivity values were decreased by 50% in all cells in all layers within the model. To provide the upper end member for the uncertainty analysis, the model's original hydraulic conductivity values were increased by 50% in all cells in all layers within the model. The scenarios with both proposed Del Rio Wells pumping were re-

simulated with the lower and upper end member values substitutions. This was done to provide conservative estimates for both upper and lower end members. Figure 15 provides the temporal analysis of modelled drawdown for the sensitivity analysis conducted in the shallow (in red), intermediate (in blue), and deep (in green) zones. The drawdowns at radial distances of 125-feet (Figure 15, top), and 1,000-feet (Figure 15, bottom) are shown for original hydraulic conductivity, 0.5 times hydraulic conductivity, and 1.5 times hydraulic conductivity. The 1.5 times hydraulic conductivity value substitution resulted in less drawdown in shallow, intermediate and deep zone wells, and the 0.5 times hydraulic conductivity value substitution resulted in increased drawdown in the three zone's wells.
Table 3 summarizes sensitivity analysis results and compares them to the values obtained with original hydraulic conductivity values (highlighted in yellow). Drawdowns for the three hydraulic conductivities predicted for two flow rates (198 and 751 gpm) and two radial distances from the pumping well (125 and 1,000 feet from the pumping well) are compared in Table 3. The two flow rates provided in Table 3 are representative of periods of low demand (198 gpm) and periods of high demand (751 gpm). On average, a 50 percent reduction in hydraulic conductivity resulted in a 48% more drawdown in shallow wells, 35% more drawdown in Intermediate wells, and 35% more drawdown in deep wells. A 50 perc ent increase in hydraulic conductivity resulted in average of 68 percent less drawdown in shallow wells, 55 percent less drawdown in intermediate wells, and 35 percent less drawdown in deep wells.

4.0 SUMMARY AND CONCLUSIONS

Based on the model-predicted drawdown analysis, the impacts from pumping the proposed Del Rio wells at monthly rates estimated for varying demand will not significantly impact surrounding wells screened in the shallow and intermediate aquifers, in which all of the domestic wells in the Del Rio area are screened. Based on model simulations, pumping could cause between 0.1 and 1.6 feet of additional drawdown in wells screened from 100 to 360 feet bgs. In an effort to gather site-specific water-level data in the Del Rio area of Modesto, CA, data gathered by URS personnel between August 2014 and February 2015 show that natural annual seasonal fluctuations are between 1 to 3 feet in shallow wells (URS, 2015) These findings and observations are supported by data published by USGS in wells in the Modesto urban area, which indicate that natural seasonal groundwater fluctuations are generally less than 3 feet in the shallow (water table) aquifer (USGS, 2007).

Based on the drawdown analysis, the impacts from pumping the proposed two Del Rio wells could cause between 6.6 and 20 feet of drawdown in wells screened from 360 to 600 feet bgs within 1,000 feet of the proposed well location. However, DWR well survey data indicate that there are no wells within a 2,500-foot radius of either proposed Del Rio Wells that are screened in that depth interval. Data from USGS wells in the Modesto urban area indicate that seasonal fluctuations are approximately 18 feet in the deeper wells (USGS, 2007)

4.0 MODEL USE, LIMITATIONS, AND USEABILITY

This groundwater model can be a powerful tool, if used appropriately, to assist in making management decisions. Use of this model is subject to some limitations; like any computer model, it has inherent uncertainty. This does not, however, preclude its use to help make groundwater management decisions.

To the contrary, this model should be used whenever possible as a tool to assess current operations and to help implement response actions.

Groundwater models are simplifications of the natural environment and, therefore, have recognized limitations. Hence, some uncertainty exists in the ability of this model to predict groundwater flow. During the development of the USGS model, considerable effort was expended to minimize model uncertainty by using real-world values as model input whenever available and by conducting numerous model simulations to calibrate and verify the model. Uncertainty of the model output reflects uncertainties in the conceptual model, the input parameters, and the ability of the mathematical model to simulate real-world conditions adequately. The model was developed based on USGS steady-state flow conditions. Because flow conditions change over time, the average conditions that the calibrated steady-state model simulates may not always match real conditions closely; this may affect the uncertainty of this model. The resulting uncertainty is therefore variable, depending on the degree to which actual conditions differ from the calibrated steady-state model.

5.0 RECOMENDATIONS

URS recommends the installation of nested groundwater wells that are proximally located (within 1,000 feet of the pumping location) to each Del Rio location. Observed water-level data can be coupled with the modelling data to determine if pumping of the Del Rio municipal wells are impacting the surrounding aquifer after well installation. Water-levels should be monitored at regular intervals (i.e. daily, weekly, monthly), or through the use of transducers. The data could be used for long term monitoring purposes, and would be useful in calibrating the current Modesto groundwater model.

1 INTRODUCTION

This Technical Report includes a summary of applicable regulations and a description of the existing noise sensitive uses in the vicinity of the two proposed sites for the Del Rio Well project area. Typical noise levels for various non-transportation noise sources are included in this analysis pertaining to construction activities associated with the project. This Technical Report also provides quantitative noise levels for transportation noise sources associated with major roadways in the analysis area. Calculated and predicted operational noise levels associated with the project will be analyzed at sensitive receptors in close proximity to project sites, and mitigation measures are discussed where applicable.

This page intentionally left blank.

2 PROJECT DESCRIPTION

The Del Rio Tank and Wells project sites are located in the community of Del Rio in Stanislaus County, California. Site A is located at the southeast intersection of Ladd Road and St. John's Road on APNs 004-077-018 and 004-077-019, Ladd Road. Site B is located at the northwest corner of McHenry Avenue and Stewart Road on the southeastern-most portion of APN 004-102-003. Exhibit 2-1 shows the locations of the proposed project sites.

The Del Rio water system currently requires a new storage tank (and associated pump station), well, replacement well, backup generators, and pipelines to correct existing supply deficiencies. The existing Del Rio water system does not meet certain design pressure and storage volume requirements for water supply and fire-flow demand. The existing Del Rio water system also is not sufficient to supply anticipated future growth in the Del Rio area. The proposed project involves the construction and operation of water wells, a storage tank, and associated distribution facilities.

2.1 SITE A – LADD ROAD TANK AND WELL

Site A, located on Ladd Road, would encompass approximately four acres and is owned by the City of Modesto. The project facilities at Site A would consist of an above ground water storage tank, water well and pump, a stand-by generator, and a booster pump station. Site improvements would include a small parking and access area, fencing or walls, a retention basin, and low-maintenance landscaping. In addition, a 2,500-foot-long, 16-inch diameter transmission main would be installed to connect the proposed well to the City's existing water distribution system. Exhibit 2-2 provides a site plan of the Site A facilities.

The water tank would store at least 250,000 gallons (0.25 million gallons) of water. The tank would stand a maximum 20 feet above grade and would be approximately 55 feet in diameter. The footprint area of the tank would be approximately 173 square feet. The tank would be constructed on a circular concrete pad. The pump station building will house the production well, booster pumps, disinfection equipment, ancillary valves and flow meters, and electrical equipment. A masonry building will include three separate rooms: a pump station room, an electrical room, and calcium hypochlorite room.

The production groundwater well would be drilled a maximum of 600 feet deep with a minimum yield of 1,000 gallons per minute (gpm), 1,000 gpm is the desired yield. Pumping will vary throughout the year depending upon need, based upon system pressure or tank level, ranging from as much as 20 hours per day during the summer months to as few as two hours per day in the winter. Pumping is expected to occur for an annual average of eight hours per day. The well would be housed inside the pump station building. The proposed project includes up to four 60-horsepower (hp) electric pumps. Two pumps would be on-duty, one is for standby, and the fourth pump is for future buildout. The booster pumps would be housed inside the pump station building.

A 16-inch diameter transmission main would be constructed from the pump station building to the intersection of St. John's Road and Country Club Drive. The transmission main would extend for a distance of approximately 2,500 linear feet, and would be installed in accordance with Stanislaus County Department of Public Works Trenching requirements, which would include a 36-inch trench and a 60-inch trench patch. A portion of the transmission main (approximately 65 feet) would be installed by jack and bore underneath an existing rail crossing on Ladd Road, just east of St. John Road.

A standby diesel generator and an above-ground diesel storage tank would be installed on a 10-foot by 20-foot concrete pad within the project site. The standby generator would be used as an alternate power source to the proposed project facilities as necessary. The generator would be equipped with critical grade mufflers for the exhaust system and level 2 sound housing in order to achieve an approximate sound level of 75 decibels (dB) within 30 feet of the unit.

2.2 SITE B – MCHENRY AVENUE WELL

Site B, located on McHenry Avenue, would encompass approximately 0.4 acres that the City is in negotiations to acquire. The facilities at this site would consist of a production well and pump, stand-by generator, disinfection facilities, connecting lines to the City's existing distribution system down McHenry Avenue, and space for a future treatment unit and treatment filters. These facilities would be fully enclosed by a 12-foot tall concrete block wall with a 24-foot wide gate. The site would be accessed from a new driveway off McHenry Avenue; there would be no site access from Stewart Road. Site improvements would include a concrete pad and paved driveway, well and associated piping, controls, treatment, generator and appurtenances. Exhibit 2-3 provides a site plan of the Site B facilities.

The Site B groundwater well would be drilled to a maximum of 600 feet deep with a desired minimum yield of 1,000 gallons per minute. While 1,000 gallons per minute is the desired yield, pumping will vary throughout the year depending upon need, based upon system pressure or tank level, ranging from as much as 20 hours per day during the summer months to as few as two hours per day in the winter. Pumping is expected to occur for an annual average of eight hours per day. The pump will be powered by electricity and would have a size of approximately 200 hp.

A 12-inch transmission pipeline would be constructed from the well to existing City distribution pipelines along McHenry Avenue. The transmission main would run from the well site easterly approximately 500 feet and would be installed in accordance with Stanislaus County Department of Public Works trenching requirements, which would include a 32-inch trench and a 56-inch trench patch.

A standby diesel generator and an above-ground diesel storage tank would be installed on a 10 foot by 20 foot concrete pad within the project site. The standby generator would be used as an alternate power source to the proposed project facilities as necessary. The generator would be equipped with critical grade mufflers for the exhaust system and level 2 sound housing in order to achieve an approximate sound level of 75 dBA within 30 feet of the unit.

2.3 CONSTRUCTION METHODS

Site preparation would include clearing and grubbing; excavation, import, and placement of fill; and compaction. Clearing and grubbing would be conducted using standard excavators, bulldozers, and hand labor.

To the extent feasible, excavated soil would be reused on-site. If required, fill would be delivered to the project sites by conventional haul trucks (approximately 15 cubic yards [cy] per load). Fill material would be placed with an excavator and compacted with a compactor/roller. The installation of new water transmission pipelines would occur beneath existing streets, and within the project sites. The construction method for new water transmission pipelines would include "jack and bore" with "sending/receiving pits." This method reduces disturbance to the ground surface and disruption to other facilities or surface features. The directional drilling involves use of cutting

Exhibit 2-3. Site B Facilities

heads or hydraulic jacks to install pipe from a launch (bore) pit to a receiving pit, and the microtunneling technique uses a small tunneling machine. Slurry, typically bentonite (inert clay) and water, is used as a lubricant for tunneling and pipe installation for both methods. Construction crews would spend 3 to 4 weeks excavating the launch and receiving pits. The actual tunneling work would take 3 to 5 days. Staging areas would be needed to store pipe, construction equipment, and other construction-related material. Staging areas would likely be established at Sites A and B, along the pipeline routes where space is available within the road right-of-way, or in vacant lots. The final step in the construction process is to restore the ground surface. Site restoration would generally involve paving, installing landscaping, or installing erosion controls, as necessary.

The main pieces of equipment that may be used are:

- well drilling equipment
- track-mounted excavator
- small crane
- end dump truck
- ten-wheel dump truck
- paving equipment
- flat-bed delivery truck
- concrete truck
- grader
- bulldozer
- backhoe
- front-end loader
- compactor
- forklift
- compressors/jack hammers
- water truck
- boom truck
- mowing equipment (e.g., weed eaters, commercial lawnmowers)

2.4 CONSTRUCTION SCHEDULE

Construction of the Proposed Project is anticipated to last for up to approximately 15 months, beginning in 2016, and completed in 2017. Within this timeframe, the majority of construction work that involves use of operating equipment would occur within a 10-month period. Construction activities would generally occur Monday through Friday between 7:00 a.m. and 5:00 p.m., excluding weekends and State or Federal observed holidays.

2.5 PROJECT OPERATIONS

Operation of the proposed project would primarily involve the operation, inspection, and maintenance of the facilities. The pump stations, storage tank, and wells would be remotely controlled through a Supervisory Control and Data Acquisition (SCADA) system. The facilities would be inspected at least once a week to verify instrument readings, check on the condition of the site, and maintain equipment.

The City would inspect the water system on an annual basis to determine whether maintenance was needed. Maintenance activities for the storage tank would include the periodic cleaning of the tank's inside (with the use

of a vacuum system) to maintain capacity and functioning and occasional recoating of the tank, as needed. Maintenance activities of the wells would include various mechanical tests and meter calibration (with equipment specific to those activities) and general maintenance of treatment systems (e.g., treatment system flushing or regeneration). The City would inspect the wells and pump stations on a regular basis (numerous times during the wet months and less frequently the remainder of the year) to ensure optimal performance. Maintenance of the pump stations and pipelines would be performed on an as-needed basis.

2.6 ACOUSTIC FUNDAMENTALS

Noise is generally defined as sound that is loud, disagreeable, unexpected, or unwanted. Sound, as described in more detail below, is mechanical energy transmitted in the form of a wave because of a disturbance or vibration, and as any pressure variation in air that the human ear can detect.

2.6.1 SOUND PROPERTIES

A sound wave is introduced into a medium (air) by a vibrating object. The vibrating object (e.g., vocal cords, the string and sound board of a guitar, the diaphragm of a radio speaker) is the source of the disturbance that moves through the medium. Regardless of the type of source that creates the sound wave, the particles of the medium through which the sound moves are vibrating in a back-and-forth motion at a given frequency (pitch). The frequency of a wave refers to how often the particles vibrate when a wave passes through the medium. The frequency of a wave is measured as the number of complete back-and-forth vibrations of a particle per unit of time. If a particle of air undergoes 1,000 longitudinal vibrations in 2 seconds, then the frequency of the wave would be 500 vibrations per second. A commonly used unit for frequency is cycles per second, called hertz (Hz).

Each particle vibrates as a result of the motion of its nearest neighbor. For example, the first particle of the medium begins vibrating at 500 Hz and sets the second particle of the medium into motion at the same frequency (500 Hz). The second particle begins vibrating at 500 Hz and sets the third particle into motion at 500 Hz. The process continues throughout the medium; hence each particle vibrates at the same frequency, which is the frequency of the original source. A guitar string vibrating at 500 Hz will set the air particles in the room vibrating at the same frequency (500 Hz), which carries a sound signal to the ear of a listener that is detected as a 500-Hz sound wave.

The back-and-forth vibration motion of the particles of the medium would not be the only observable phenomenon occurring at a given frequency. Because a sound wave is a pressure wave, a detector could be used to detect oscillations in pressure from high to low, and back to high pressure. As the compression (high-pressure) and rarefaction (low-pressure) disturbances move through the medium, they would reach the detector at a given frequency. For example, a compression would reach the detector 500 times per second if the frequency of the wave were 500 Hz. Similarly, a rarefaction would reach the detector 500 times per second if the frequency of the wave were 500 Hz. Thus, the frequency of a sound wave refers not only to the number of back-and-forth vibrations of the particles per unit of time, but also to the number of compression or rarefaction disturbances that pass a given point per unit of time.

A detector could be used to detect the frequency of these pressure oscillations over a given period of time. The period of the sound wave can be found by measuring the time between successive high-pressure points (corresponding to the compressions) or the time between successive low-pressure points (corresponding to the

rarefactions). The frequency is simply the reciprocal of the period; thus, an inverse relationship exists so that as frequency increases, the period decreases, and vice versa.

A wave is an energy transport phenomenon that transports energy along a medium. The amount of energy carried by a wave is related to the amplitude (loudness) of the wave. A high-energy wave is characterized by high amplitude; a low-energy wave is characterized by low amplitude. The amplitude of a wave refers to the maximum amount of displacement of a particle from its rest position. The energy transported by a wave is directly proportional to the square of the amplitude of the wave. This means that a doubling of the amplitude of a wave is indicative of a quadrupling of the energy transported by the wave.

2.6.2 SOUND AND THE HUMAN EAR

Because of the ability of the human ear to detect a wide range of sound-pressure fluctuations, sound-pressure levels are expressed in logarithmic units called decibels (dB) to avoid a very large and awkward range in numbers. The sound-pressure level in decibels is calculated by taking the log of the ratio between the actual sound pressure and the reference sound pressure squared. The reference sound pressure is considered the absolute hearing threshold (Caltrans 2011). Use of this logarithmic scale reveals that the total sound from two individual sources, each measured at 65 A-weighted decibels (dBA), is 68 dBA, not 130 dBA; that is, doubling the source strength increases the sound pressure by 3 dBA.

Because the human ear is not equally sensitive to all sound frequencies, a specific frequency-dependent rating scale was devised to relate noise to human sensitivity. A dBA scale performs this compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear. The basis for compensation is the faintest sound audible to the average ear at the frequency of maximum sensitivity. This dBA scale has been chosen by most authorities to regulate environmental noise. Typical indoor and outdoor noise levels are presented in Exhibit 2-4.

With respect to how humans perceive and react to changes in noise levels, a 1-dBA increase is imperceptible, a 3-dBA increase is barely perceptible, a 6-dBA increase is clearly noticeable, and a 10-dBA increase is subjectively perceived as approximately twice as loud (Egan 1988), as presented in Table 2-1. Table 2-1 was developed on the basis of the reactions of test subjects to changes in the levels of steady-state pure tones or broadband noise and to changes in levels of a given noise source. It is probably most applicable to noise levels in the range of 50–70 dBA, as this is the usual range of voice and interior noise levels.

Table 2-1. Subjective Reaction to Changes in Noise Levels of Similar Sources

Change in Level, dBA	Subjective Reaction	Factor Change in Acoustical Energy
1	Imperceptible (except for tones)	1.3
3	Just barely perceptible	2.0
6	Clearly noticeable	4.0
10	About twice (or half) as loud	10.0

Note: dBA = A-weighted decibels

Exhibit 2-4. Typical Noise Levels

2.6.3 SOUND PROPAGATION AND ATTENUATION

As sound (noise) propagates from the source to the receptor, the attenuation, or manner of noise reduction in relation to distance, is dependent on surface characteristics, atmospheric conditions, and the presence of physical barriers. The inverse-square law describes the attenuation caused by the pattern in which sound travels from the source to the receptor. Sound travels uniformly outward from a point source in a spherical pattern with an attenuation rate of 6 dBA per doubling of distance (dBA/DD). However, from a line source (e.g., a road), sound travels uniformly outward in a cylindrical pattern with an attenuation rate of 3 dBA/DD. The characteristics of the surface between the source and the receptor may result in additional sound absorption and/or reflection.

Atmospheric conditions such as wind speed, temperature, and humidity may affect noise levels. The presence of a barrier between the source and the receptor may also attenuate noise levels. The actual amount of attenuation depends on the size of the barrier and the frequency of the noise. A noise barrier may be any natural or human-made feature such as a hill, tree, building, wall, or berm (Caltrans 2011).

All buildings provide some exterior-to-interior noise reduction. A building constructed with a wood frame and a stucco or wood sheathing exterior typically provides a minimum exterior-to-interior noise reduction of 25 dBA with its windows closed; by contrast, a building constructed of a steel or concrete frame, a curtain wall or masonry exterior wall, and fixed plate glass windows of one-quarter-inch thickness typically provides an exterior-to-interior noise reduction of 30–40 dBA when its windows are closed (Paul S. Veneklasen & Associates 1973, cited in Caltrans 2002).

2.6.4 NOISE DESCRIPTORS

The selection of a proper noise descriptor for a specific source depends on the spatial and temporal distribution, duration, and fluctuation of the noise. The noise descriptors most often encountered when dealing with traffic, community, and environmental noise are defined below (Caltrans 2011).

- **L_{max} (Maximum Noise Level):** The maximum instantaneous noise level during a specific period of time. The L_{max} may also be referred to as the "peak (noise) level."
- **L_{min} (Minimum Noise Level):** The minimum instantaneous noise level during a specific period of time.
- **L_{eq} (Equivalent Noise Level):** The energy mean (average) noise level. The instantaneous noise levels during a specific period of time in dBA are converted to relative energy values. From the sum of the relative energy values, an average energy value is calculated, which is then converted back to dBA to determine the L_{eq}. In noise environments that are determined by major noise events, such as aircraft overflights, the L_{eq} value is heavily influenced by the magnitude and number of single events that produce the high noise levels.
- **L_{dn} (Day-Night Noise Level):** The 24-hour L_{eq} with a 10-dBA "penalty" for noise events that occur during the noise-sensitive hours between 10:00 p.m. and 7:00 a.m. In other words, 10 dBA is "added" to noise events that occur in the nighttime hours, and this generates a higher reported noise level when determining compliance with noise standards. The L_{dn} attempts to account for the fact that noise during this specific period of time is a potential source of disturbance with respect to normal sleeping hours.

- **CNEL (Community Noise Equivalent Level):** Similar to the L_{dn} described above, but with an additional 5-dBA "penalty" added to noise events that occur during the noise-sensitive hours between 7:00 p.m. and 10:00 p.m., which are typically reserved for relaxation, conversation, reading, and television. When the same 24 hour noise data are used, the reported CNEL is typically approximately 0.5 dBA higher than the L_{dn}.

- **SENL (Single-Event [Impulsive] Noise Level):** A receiver's cumulative noise exposure from a single impulsive noise event, which is defined as an acoustical event of short duration and involves a change in sound pressure above some reference value. SENLs typically represent the noise events used to calculate the L_{eq}, L_{dn}, and CNEL.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level associated with a given noise environment. A common statistical tool to measure the ambient noise level is the average, or equivalent, sound level L_{eq}, which corresponds to a steady-state A-weighted sound level containing the same total energy as a time-varying signal over a given time period (usually 1 hour). The L_{eq} is the foundation of the composite noise descriptors such as L_{dn} and CNEL, as defined above, and correlates well with community response to noise.

2.6.5 Negative Effects of Noise on Humans

Negative effects of noise exposure include physical damage to the human auditory system, interference, and disease. Exposure to noise may result in physical damage to the auditory system, which may lead to gradual or traumatic hearing loss. Gradual hearing loss is caused by sustained exposure to moderately high noise levels over a period of time; traumatic hearing loss is caused by sudden exposure to extremely high noise levels over a short period. Gradual and traumatic hearing loss both may result in permanent hearing damage. In addition, noise may interfere with or interrupt sleep, relaxation, recreation, and communication. Although most interference may be classified as annoying, the inability to hear a warning signal may be considered dangerous. Noise may also be a contributor to diseases associated with stress, such as hypertension, anxiety, and heart disease. The degree to which noise contributes to such diseases depends on the frequency, bandwidth, and level of the noise, and the exposure time (Caltrans 2011).

Fundamental Noise Control Options

Any noise problem is generally composed of three basic elements: the noise source, a transmission path, and a receiver. The appropriate acoustical treatment for a given project should consider the nature of the noise source and the sensitivity of the receiver. The problem should be defined in terms of appropriate criteria (L_{dn}, L_{eq}, or L_{max}); the location of the sensitive receiver (inside or outside); and the time that the problem occurs (daytime or nighttime). Noise control techniques should then be selected to provide an acceptable noise environment for the receiving property while remaining consistent with local aesthetic standards and practical structural and economic limits. Fundamental noise control options are described below.

Setbacks

Noise exposure may be reduced by increasing the distance between the noise source and the receiving use. Setback areas can, for example, take the form of open space, frontage roads, recreational areas, and storage yards. The available noise attenuation from this technique is limited by the characteristics of the noise source, but is generally about 4–6 dBA.

Barriers

Shielding by barriers can be obtained by placing walls, berms, or other structures (such as buildings) between the noise source and the receiver. The effectiveness of a barrier depends on blocking the line of sight between the source and receiver; effectiveness is improved when the sound must travel a longer distance to pass over the barrier than if it were traveling in a straight line from source to receiver. The difference between the distance over a barrier and a straight line between source and receiver is called the "path length difference," and is the basis for calculating barrier noise reduction.

Barrier effectiveness depends upon the relative heights of the source, barrier, and receiver. In general, barriers are most effective when placed close to either the receiver or the source. An intermediate barrier location yields a smaller path length difference for a given increase in barrier height than does a location closer to either source or receiver.

For maximum effectiveness, barriers must be continuous and relatively airtight along their length and height. To ensure that sound transmission through the barrier is insignificant, barrier mass should be about 4 pounds per square foot, although a lesser mass may be acceptable if the barrier material provides sufficient transmission loss. Satisfaction of the above criteria requires substantial and well-fitted barrier materials, placed to intercept the line of sight to all significant noise sources. Earth, in the form of berms or the face of a depressed area, is also an effective barrier material.

There are practical limits to the noise reduction provided by barriers. For vehicle traffic or railroad noise, a noise reduction of 5–10 dBA may often be reasonably attained. A 15-dBA noise reduction is sometimes possible, but a 20-dBA noise reduction is extremely difficult to achieve. Barriers usually are provided in the form of walls, berms, or berm/wall combinations. The use of an earth berm in lieu of a solid wall may provide up to 3 dBA additional attenuation over that attained by a solid wall alone, because of the absorption provided by the earth. Berm/wall combinations offer slightly better acoustical performance than solid walls alone, and they are often preferred for aesthetic reasons.

Site Design

Buildings can be placed on a project site to shield other structures or areas from areas affected by noise, and to prevent an increase in noise level caused by reflections. The use of one building to shield another can significantly reduce a project's overall noise control costs, particularly if the shielding structure is insensitive to noise.

Site design should guard against creating reflecting surfaces that may increase on-site noise levels. For example, two buildings placed at an angle facing a noise source may cause noise levels within that angle to increase by up to 3 dBA. The open end of U-shaped buildings should point away from noise sources for the same reason. Landscaping walls or noise barriers located within a development may inadvertently reflect noise back to a noise-sensitive area unless located carefully. Avoidance of these problems while attaining an aesthetic site design requires close coordination between local agencies, the project engineer and architect, and the noise consultant.

Building Façades

When interior noise levels are of concern in a noisy environment, noise reduction may be obtained through acoustical design of building façades. Standard construction practices provide a noise reduction of 10–15 dBA for building façades with open windows and a noise reduction of approximately 25 dBA when windows are closed.

Thus, an exterior-to-interior noise reduction of 25 dBA can be obtained by requiring that building design include adequate ventilation systems, which allows windows on a noise-affected façade to remain closed under any weather condition.

Where greater noise reduction is required, acoustical treatment of the building façade is necessary. Reducing relative window area is the most effective control technique, followed by providing acoustical glazing (thicker glass or increased air space between panes) in frames with low air infiltration rates, using fixed (nonmovable) acoustical glazing, or eliminating windows. Noise transmitted through walls can be reduced by increasing wall mass (using stucco or brick in lieu of wood siding), isolating wall members by using double or staggered stud walls, or mounting interior walls on resilient channels. Noise control for exterior doorways is provided by reducing door area, using solid-core doors, and by acoustically sealing door perimeters with suitable gaskets. Roof treatments may include the use of plywood sheathing under roofing materials.

Vegetation

Trees and other vegetation are often thought to provide significant noise attenuation. However, approximately 100 feet of dense foliage (so that no visual path extends through the foliage) is required to achieve a 5-dBA attenuation of traffic noise. Thus, the use of vegetation as a noise barrier should not be considered a practical method of noise control unless large tracts of dense foliage are part of the existing landscape.

Vegetation can be used to acoustically "soften" intervening ground between a noise source and a receiver, increasing ground absorption of sound and thus increasing the attenuation of sound with distance. Planting trees and shrubs also offers aesthetic and psychological value, and it may reduce adverse public reaction to a noise source by removing the source from view, even though noise levels will be largely unaffected. However, trees planted on the top of a noise-control berm can slightly degrade the acoustical performance of the barrier. This effect can occur when high-frequency sounds are diffracted (bent) by foliage and directed downward over a barrier.

The effects of vegetation on noise transmission are minor, and are primarily limited to increased absorption of high-frequency sounds and to reducing adverse public reaction to the noise by providing aesthetic benefits.

2.6.6 VIBRATION

Vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structureborne noise. Sources of groundborne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as operating factory machinery, or transient, such as explosions. As is the case with airborne sound, groundborne vibrations may be described by amplitude and frequency.

Vibration amplitudes are usually expressed in peak particle velocity (PPV) or root mean square (RMS), as in RMS vibration velocity. PPV is defined as the maximum instantaneous positive or negative peak of a vibration signal. PPV is often used in monitoring of blasting vibration because it is related to the stresses that are experienced by buildings (Federal Transit Administration [FTA] 2006). PPV and RMS are normally described in inches per second (in/sec).

Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. Table 2-2, which was developed by Caltrans, shows the vibration levels which would normally be required to result in damage to structures. The vibration levels are presented in terms of peak particle velocity in inches per second.

Table 2-2. Effects of Various Vibration Levels on People and Buildings

Peak Particle Velocity		Human Reaction	Effect on Buildings
inches/second	mm/second		
0.006-0.019	0.15-0.30	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
0.08	2.0	Vibrations readily perceptible	Recommended upper level of which ruins and ancient monuments should be subjected
0.10	2.5	Level at which continuous vibrations begin to annoy people	Virtually no risk of architectural damage to normal buildings
0.20	5.0	Vibrations annoying to people in buildings	Threshold at which there is a risk of architectural damage to normal dwelling –houses with plastered walls and ceilings
0.4-0.6	10-15	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause architectural damage and possibly minor structural damage

Notes: PPV=peak particle velocity; In/sec=inches per second; mm/sec= millimeters per second
Source: Caltrans 2013

Although PPV is appropriate for evaluating the potential for building damage, it is not always suitable for evaluating human response. It takes some time for the human body to respond to vibration signals. In a sense, the human body responds to average vibration amplitude. The RMS of a signal is the average of the squared amplitude of the signal, typically calculated over a period of 1 second. Like airborne sound, the RMS velocity is often expressed in decibel notation, as vibration decibels (VdB), which serves to compress the range of numbers required to describe vibration (FTA 2006). This is based on a reference value of 1 microinch per second (μin/sec).

The background vibration-velocity level in residential areas is usually approximately 50 VdB. Groundborne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels (FTA 2006).

Typical outdoor sources of perceptible groundborne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the groundborne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Construction activities can generate groundborne vibrations, which can pose a risk to nearby structures. Constant or transient vibrations can weaken structures, crack facades, and disturb occupants (FTA 2006).

Construction vibrations can be transient, random, or continuous. Transient construction vibrations are generated by blasting, impact pile driving, and wrecking balls. Continuous vibrations result from vibratory pile drivers, large pumps, horizontal directional drilling, and compressors. Random vibration can result from jackhammers,

pavement breakers, and heavy construction equipment. Table 2-3 describes the general human response to different levels of groundborne vibration-velocity levels.

Table 2-3. Human Response to Groundborne Vibration Levels

Vibration Velocity (Vibration Decibels)	Human Response
65	Approximate threshold of perception for many humans.
75	Approximate dividing line between barely perceptible and distinctly perceptible.
85	Vibration acceptable only if there is a small number of events per day.

Source: FTA 2006

3 REGULATORY SETTING

3.1 FEDERAL PLANS, POLICIES, REGULATIONS, AND LAWS

The U.S. Environmental Protection Agency's (EPA's) Office of Noise Abatement and Control was originally established to coordinate Federal noise control activities. After its inception, EPA's Office of Noise Abatement and Control issued the Federal Noise Control Act of 1972, establishing programs and guidelines to identify and address the effects of noise on public health, welfare, and the environment. In 1981, EPA administrators determined that subjective issues such as noise would be better addressed at lower levels of government. Consequently, in 1982 responsibilities for regulating noise control policies were transferred to state and local governments. However, noise control guidelines and regulations contained in EPA rulings in prior years remain in place by designated Federal agencies, thereby allowing more individualized control for specific issues by designated Federal, state, and local government agencies.

To address the human response to groundborne vibration, the FTA of the U.S. Department of Transportation has set forth guidelines for maximum-acceptable-vibration criteria for different types of land uses. These include 65 VdB referenced to 1 μin/sec and based on RMS velocity amplitude for land uses where low ambient vibration is essential for interior operations (e.g., hospitals, high-tech manufacturing, laboratory facilities); 80 VdB for residential uses and buildings where people normally sleep; and 83 VdB for institutional land uses with primarily daytime operations (e.g., schools, churches, clinics, offices) (FTA 2006).

Standards have also been established to address the potential for groundborne vibration to cause structural damage to buildings. These standards were developed by the Committee of Hearing, Bio Acoustics, and Bio Mechanics (CHABA) at the request of the U.S. Environmental Protection Agency (FTA 2006). For fragile structures, CHABA recommends a maximum limit of 0.25 in/sec PPV (FTA 2006).

3.2 STATE PLANS, POLICIES, REGULATIONS, AND LAWS

3.2.1 GOVERNOR'S OFFICE OF PLANNING AND RESEARCH

The State of California, Governor's Office of Planning and Research (OPR), published the *State of California General Plan Guidelines* (OPR 2003), which provide guidance for the acceptability of projects within specific L_{dn} contours. Table 3-1 summarizes acceptable and unacceptable community noise-exposure limits for various land use categories. Generally, residential uses (e.g., mobile homes) are considered to be acceptable in areas where exterior noise levels do not exceed 60 dBA L_{dn}. Residential uses are normally unacceptable in areas exceeding 70 dBA L_{dn} and conditionally acceptable within 55–70 dBA L_{dn}. Schools are normally acceptable in areas up to 70 dBA L_{dn} and normally unacceptable in areas exceeding 70 dBA L_{dn}. Commercial uses are normally acceptable in areas up to 70 dBA CNEL. Between 67.5 and 77.5 dBA L_{dn}, commercial uses are conditionally acceptable, depending on the noise insulation features and the noise reduction requirements. The guidelines also present adjustment factors that may be used to arrive at noise acceptability standards reflecting the noise control goals of the community, the particular community's sensitivity to noise, and the community's assessment of the relative importance of noise pollution. In addition, Title 24 of the California Code of Regulations establishes standards governing interior noise levels that apply to all new single-family and multifamily residential units in California. These standards require that acoustical studies be performed before construction at building locations where the existing L_{dn} exceeds 60 dBA. Such acoustical studies must establish mitigation measures that will limit maximum

Table 3-1. Summary of Land Use Noise Compatibility Guidelines				
Land Use Category	Community Noise Exposure (dBA L_{dn})			
	Normally Acceptable[1]	Conditionally Acceptable[2]	Normally Unacceptable[3]	Clearly Unacceptable[4]
Residential—Low-Density Single-Family, Duplex, Mobile Home	<60	55–70	70–75	75+
Residential—Multifamily	<65	60–70	70–75	75+
Transient Lodging—Motel, Hotel	<65	60–70	70–80	80+
Schools, Libraries, Churches, Hospitals, Nursing Homes	<70	60–70	70–80	80+
Auditoriums, Concert Halls, Amphitheaters		<70	65+	
Sports Arena, Outdoor Spectator Sports		<75	70+	
Playgrounds, Neighborhood Parks	<70		67.5–75	72.5+
Golf Courses, Riding Stables, Water Recreation, Cemeteries	<75		70–80	80+
Office Building, Business Commercial, and Professional	<70	67.5–77.5	75+	
Industrial, Manufacturing, Utilities, Agriculture	<75	70–80	75+	

Notes: dBA = A-weighted decibels; L_{dn} = day-night average noise level

[1] Specified land use is satisfactory, based on the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

[2] New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning, will normally suffice.

[3] New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design. Outdoor areas must be shielded.

[4] New construction or development should generally not be undertaken.

Source: OPR 2003

L_{dn} levels to 45 dBA in any habitable room. Although there are no generally applicable interior noise standards pertinent to all uses, many communities in California have adopted an L_{dn} of 45 dBA as an upper limit on interior noise in all residential units.

3.2.2 California Department of Transportation

For the protection of fragile, historic, and residential structures, Caltrans recommends a more conservative threshold of 0.2 in/sec PPV for normal residential buildings and 0.08 in/sec PPV for old or historically significant structures (Caltrans 2013). These standards are more stringent than the federal standard established by CHABA, presented above.

3.3 Local Plans, Policies, Regulations, and Ordinances

3.3.1 Stanislaus County General Plan

Stanislaus County addresses noise impacts through its General Plan and Municipal Code. The Noise Element of the Stanislaus County General Plan utilizes noise exposure information to identify existing and potential noise

conflicts through the Land Use Planning and Project Review processes. The Noise Element establishes exterior noise level standards and maximum allowable noise exposure from stationary noise sources at noise-sensitive land uses. For transportation noise sources (e.g., traffic, railroads, airports), the Noise Element establishes 60 dBA L_{dn} or less in outdoor activity areas of single family residences, 65 dBA L_{dn} or less in community outdoor space for multi-family residences, and 45 dBA L_{dn} or less within noise sensitive interior spaces (Policy Two, Implementation Measure 1(a)). For stationary noise sources, new development of industrial, commercial, or other noise generating land uses are not permitted if resulting noise levels will exceed 60 dBA L_{dn} in noise-sensitive areas. Additionally, development of new noise-generating land uses which are not preempted from local noise regulation will not be permitted if resulting noise levels will exceed the performance standards shown in Table 3-2 in residential areas or other noise sensitive land uses.

Table 3-2. Maximum Allowable Noise Exposure from Stationary Noise Sources[1]

	Daytime 7a.m. to 10 p.m.	Nighttime 10 p.m. to 7 a.m.
Hourly L_{eq}, dBA	55	45
Maximum level, dBA	75	65

Note:
[1] As determined at the property line of the receiving land use. When determining the effectiveness of noise mitigation measures, the standards may be applied on the receptor side of noise barriers or other property line noise mitigation measures.
Source: Stanislaus County General Plan, Noise Element, Table 3-1

Lastly, the Stanislaus County Noise Element requires evaluation of mitigation measures for projects that would cause the L_{dn} at noise-sensitive uses to increase by 3 dBA or more and exceed the "normally acceptable" level, cause the L_{dn} at noise-sensitive uses to increase 5 dBA or more and remain "normally acceptable," or cause new noise levels to exceed the noise ordinance limits (Policy Three, Implementation Measure 1).

3.3.2 Stanislaus County Municipal Code

Noise generating sources in Stanislaus County are also regulated under the Municipal Code, Chapter 10.46 (Noise Control). Property line and construction noise limits are established in this ordinance. Property line noise limits apply to noise generation from one property to an adjacent property with the existence of a sensitive receptor (if no receptor, an exception or variance to the standards may be appropriate). These standards do not apply to construction noise that occurs between 7 a.m. and 7 p.m. The following is the applicable portions of the Stanislaus County Noise Control Ordinance and Tables 3-3 and 3-4 highlight the applicable noise limits related to the ordinance.

Table 3-3. Exterior Noise Level Standards		
	Maximum A-Weights Sound Level as Measured on a Sound Level Meter (L_{max})	
Land Use Zone	7 a.m. to 9:59 p.m.	10 p.m. to 6:59 a.m.
Noise Sensitive	45	45
Residential	50	45
Commercial	60	55
Industrial	75	75
Source: Stanislaus County Code, Chapter 10, Table A.		

Table 3-4. Cumulative Duration Allowance Standards	
Cumulative Duration	Allowance Decibels
Equal to or greater than 30 minutes per hour	Table 6 plus 0 dBA
Equal to or greater than 15 minutes per hour	Table 6 plus 5 dBA
Equal to or greater than 5 minutes per hour	Table 6 plus 10 dBA
Equal to or greater than 1 minute per hour	Table 6 plus 15 dBA
Less than 1 minute per hour	Table 6 plus 20 dBA
Source: Stanislaus County Code, Chapter 10, Table B.	

Section 10.46.050 Exterior Noise Level Standards. It is unlawful for any person at any location within the unincorporated area of the county to create any noise or to allow the creation of any noise which causes the exterior noise level when measured at any property situated in either the incorporated or unincorporated area of the county to exceed the noise level standards as set forth below:

1. Unless otherwise provided herein, the following exterior noise level standards shall apply to all properties within the designated noise zone: of Imperial on or beyond the boundaries of the property on which the noise is produced."

2. Exterior noise levels shall not exceed the following cumulative duration allowance standards: Pure Tone Noise, Speech and Music. The exterior noise level standards set forth in Table 6 shall be reduced by five dBA for pure tone noises, noises consisting primarily of speech or music, or reoccurring impulsive noise.

3. In the event the measured ambient noise level exceeds the applicable noise level standard above, the ambient noise level shall become the applicable exterior noise level standard.

Section 10.46.060 Specific Noise Source Standards, Subsection E. Construction Equipment. No person shall operate any construction equipment so as to cause at or beyond the property line of any property upon which a dwelling unit is located an average sound level greater than seventy-five decibels (75 dBA) between the hours of seven p.m. and seven a.m. (7:00 p.m. to 7:00 a.m.)

Section 10.46.070 Vibration. Operating or permitting the operation of any device that creates vibration that is above the vibration perception threshold of any individual at or beyond the property boundary of the source if on private property, or at one hundred fifty feet from the source if on a public space or public right-of-way is prohibited. For the purpose of this section, "vibration perception threshold" means the minimum ground-borne or structure-borne vibration motion necessary to cause a reasonable person to be aware of the vibration by such direct means as, but not limited to, sensation by touch or visual observation of moving objects, or a measured motion velocity of 0.01 in/sec over the range of one to one hundred Hertz.

Section 10.46.080 Exemptions. The following sources are exempt from the provisions of this chapter:

J. Public Entity or Public Utility Activity. This chapter shall not apply to construction or maintenance activities performed by or at the direction of any public entity or public utility.

3.3.3 CITY OF MODESTO URBAN AREA GENERAL PLAN

All development projects located within the Baseline Developed Area (and Redevelopment Area) shall be required to incorporate the following measures into the project.

a. The City of Modesto shall require construction activities to comply with the City's noise ordinance (Title 4, Chapter 9), and noise-reducing construction practices to be implemented as conditions of approval for development projects where substantial construction-related noise impacts would be likely to occur (e.g., where construction would include extended periods of pile driving, where construction would occur over an unusually long period, or where noise-sensitive uses like homes and schools would be in the immediate vicinity, etc.). The City should consider potential mitigation measures, including, but not limited to, the following:

    1. Construction equipment and vehicles should be equipped with properly operating mufflers according to the manufacturers' recommendations. Air compressors and pneumatic equipment should be equipped with mufflers, and impact tools should be equipped with shrouds or shields.

    2. Equipment that is quieter than standard equipment should be utilized.

    3. Haul routes that affect the fewest number of people should be selected.

b. During City review of a proposed project consistent with the updated General Plan, the City of Modesto shall use the following guidelines to decide whether to require additional study and/or mitigation for outdoor activity areas typically defined as common outdoor recreational areas, as discussed below:

    1. Single-family Residential uses: the noise would exceed 65 dBA, Ldn at outdoor activity areas. Outdoor activity areas for single-family residential uses are defined as backyards.

    2. Other proposed uses: the noise/land compatibility guidelines (i.e., those noise levels that are "conditionally acceptable," "normally unacceptable," or "clearly unacceptable") shown on Table VII-2. For multi-family residential uses, the exterior noise level standard shall be

applied at the common outdoor recreation area, such as pools, play areas, or tennis courts. Where such areas are not provided in multi-family residential uses, the standards shall be applied at individual patios and balconies of the development. Outdoor activity areas of transient lodging facilities include swimming pool and picnic areas.

c. For new single-family residential development within the 65 dBA, Ldn contour, new multifamily residential development within the 65 dBA Ldn contour (Figure VII-2), and other land uses located within the "Normally Acceptable" contour distances indicated in Table VII-2 and Figure VII-2, the City of Modesto shall require developers to demonstrate that the proposed development will incorporate measures to reduce noise impacts to a less-than significant level, as follows:

   1. Incorporate construction techniques to achieve an interior noise limit of 45 Ldn (these potential techniques are presented in CCR Title 24 standards).

   2. Where feasible and consistent with General Plan policy, incorporate setbacks and/or locate less-sensitive uses between a noise source and noise-sensitive uses.

   3. Provide (to the extent feasible and consistent with General Plan policy) berms, barriers, or other techniques to shield noise-sensitive uses. This policy is appropriate for more suburban, less densely populated areas of the City. More urban areas of the City would more likely require policies VII-G.3 [c.1] and [c.2], above.

d. The City of Modesto shall use the most recent noise contour map to implement the requirements of Noise Insulation Standards contained in Title 24 of the California Code of Regulations. (Title 24 applies to multi-family housing, not single-family.) Title 24 also specifies minimum values for the sound insulation afforded by interior partitions separating different dwelling units from each other and from interior common space.

e. For proposed non-residential uses, where noise mitigation is deemed necessary for new developments to meet the exterior noise land use compatibility guidelines (Table VII-2), the City of Modesto shall require developers to demonstrate that the proposed development will incorporate measures to reduce noise impacts to a less-than-significant level, as follows:

   1. Where feasible and consistent with General Plan policy, incorporate setbacks and/or locate less-sensitive uses between a noise source and noise-sensitive uses.

   2. Provide (to the extent feasible and consistent with General Plan policy) berms, barriers, or other techniques to shield noise-sensitive uses from noise sources.

   3. Incorporate construction techniques to achieve specified interior noise limits. One source that can be used for such specifications is the Noise Control Manual for Residential Buildings (Builder's Guide) by David A. Harris (1997).

f. With road extension, widening, and upgrade projects, the City of Modesto shall implement, as feasible, techniques to minimize noise impacts on adjacent uses. Potentially available techniques may include:

1. Widened right-of-way
2. Depressed roadway alignments
3. Earthen berms or earthen/wall combination
4. Walls
5. Acoustical retrofitting to affected parties

g. In recognition of the conservative methodology used to develop the noise contours shown on Figure VII-2, builders, developers (for private development projects), and the City (for Capital projects) shall be allowed to demonstrate that detailed noise studies and/or mitigation are not necessary because future noise levels would be substantially less than depicted on Figure VII-2 due to, for example, natural shielding (e.g. from intervening topographical features or man-made structures) of a site or inapplicability of assumptions (shown on Table 3-3 of the Master Environmental Impact Report) used to develop the contours.

h. The City of Modesto shall limit trucking to specific routes, times, and speeds that minimize adverse effects to sensitive land uses such as schools and residential areas.

i. Airport and aircraft noise analysis will be conducted in accordance with the Modesto City–County Airport's Master Plan mitigation measure in the approved plan and Federal Aviation Regulation (FAR) Part 150. Mitigation will be required for new construction as necessary to meet the noise compatibility standards of the UAGP. As airport operations increase, mitigation will be provided to existing residential and other sensitive uses, either through operations or direct property improvements, in order to meet Title 14 Code of Federal Regulations Part 150 land use compatibility guidelines.

j. Proponents of new heliports where projected noise impacts from helicopter operations would exceed 65 Ldn at the nearest residential uses should utilize the latest FAA helicopter modeling tools and noise assessment criteria.

3.3.4 CITY OF MODESTO CODE OF ORDINANCES

ARTICLE 1. - GENERAL NOISE REGULATIONS

4-9.101 - Declaration of Policy.

It is hereby declared to be the policy of the City of Modesto that the peace, health, safety, and welfare of its citizens require protection from loud and raucous noises from any and all sources in the community.

(Added by Ord. 2752-C.S., § 1, effective 3-27-91)

4-9.102 - Prohibited Generally.

It shall be unlawful for any person to willfully or knowingly make, continue, or cause to be made or continued any loud and raucous noise.

The term "loud and raucous noise" shall mean any sound which, because of its volume level, duration, or character, annoys, disturbs, injures, or endangers the comfort, health, peace, or safety of a reasonable person of ordinary sensibility within the limits of the City of Modesto.

The term "loud and raucous noise" specifically includes, but is not limited to, the kinds of noise generated by the activities enumerated in Section 4-9.103. The term "loud and raucous noise" specifically excludes the kinds of noise generated by the activities described in Section 4-9.104.

For any kind of noise not enumerated in Section 4-9.103, the factors which may be considered in determining whether a violation of the provisions of this section exists may include, but shall not be limited to, the following:

(a) The volume of the noise;

(b) Whether the nature of the noise is usual or unusual;

(c) Whether the origin of the noise is natural or unnatural;

(d) The volume and intensity of the background noise, if any;

(e) The proximity of the noise to residential sleeping facilities;

(f) The nature and zoning of the area within which the noise emanates;

(g) The density of the inhabitation of the area within which the noise emanates;

(h) The time of the day or night the noise occurs;

(i) The day of the week the noise occurs;

(j) The duration of the noise;

(k) Whether the noise is recurrent, intermittent, or constant; and

(l) Whether the noise is produced by a commercial or noncommercial activity.

(Added by Ord. 2752-C.S., § 1, effective 3-27-91)

4-9.103 - Enumeration.

The following specific acts, subject to the exemptions provided in Section 4-9.104, are declared to be public nuisances in violation of Section 4-9.102, namely:

(a) The loud and raucous discharge into the open air of the steam of any steam equipment or exhaust from any stationary internal-combustion engine.

(b) The loud and raucous operation or use of any of the following before 7:00 a.m. or after 9:00 p.m. daily (except Saturday and Sunday and State or federal holidays, when the prohibited time shall be before 9:00 a.m. and after 9:00 p.m.):

(1) A hammer, or any other device or implement used to pound or strike an object.

(2) An impact wrench, or other tool or equipment powered by compressed air.

(3) A hand-powered saw.

(4) Any tool or piece of equipment powered by an internal-combustion engine such as, but not limited to, chain saw, backpack blower, and lawn mower. Except as included in subsection (a)(6) below, motor vehicles, powered by an internal-combustion engine and subject to the California Vehicle Code, are excluded from this prohibition.

(5) Any electrically powered (whether by alternating current electricity or by direct current electricity) tool or piece of equipment used for cutting, drilling, or shaping wood, plastic, metal, or other materials or objects, such as, but not limited to, a saw, drill, lathe, or router.

(6) Any of the following: heavy equipment (such as but not limited to bulldozer, steam shovel, road grader, back hoe), ground drilling and boring equipment (such as but not limited to derrick or dredge), hydraulic crane and boom equipment, portable power generator or pump, pavement equipment (such as but not limited to pneumatic hammer, pavement breaker, tamper, compacting equipment), pile-driving equipment, vibrating roller, sand blaster, gunite machine, trencher, concrete truck, and hot kettle pump.

(7) Any construction, demolition, excavation, erection, alteration, or repair activity.

In the case of urgent necessity and in the interest of public health and safety, the Chief Building Official may issue a permit for exemption from the requirements within subsection (b) of this section. Such period shall not exceed three (3) working days in length while the emergency continues but may be renewed for successive periods of three (3) days or less while the emergency continues. The Chief Building Official may limit such permit as to time of use and/or permitted action, depending upon the nature of the emergency and the type of action requested.

(c) The loud and raucous use or operation of any radio, amplifier, phonograph, stereo, compact disc or tape player, loudspeaker, bullhorn, megaphone, or other device for the producing or reproducing of sound.

(d) Loud and raucous yelling, shouting, talking, whistling, or singing between the hours of 10:00 p.m. and 7:00 a.m. on any day.

(e) The owning, possessing, controlling, harboring, or keeping of any dog, cat, or other animal or fowl which by howling, yelping, whining, barking, or otherwise causes a loud and raucous noise.

(f) The loud and raucous use of any drum, guitar, horn, or other musical instrument or device.

(Added by Ord. 2752-C.S., § 1, effective 3-27-91)

4-9.104 - Exemptions.

The term "loud and raucous noise" as used in this chapter does not include noise or sound generated by the following:

(a) Cries for emergency assistance and warning calls.

(b) Radios, sirens, horns, and bells on police, fire, and other emergency response vehicles.

(c) Parades, fireworks displays, and other special events for which a permit has been obtained from the City are exempted provided there is compliance with all conditions which have been noted in writing on the permit. That loud and raucous noise produced as a result of noncompliance with any condition specified on the permit is not exempted from the requirements of this chapter.

(d) Activities on or in publicly owned property and facilities, or by public employees while in the authorized discharge of their responsibilities, are exempt provided that such activities have been authorized by the owner of such property or facilities or its agent or by the employing authority.

(e) Religious worship activities, including but not limited to, bells, organs, singing, and preaching.

(f) Locomotives and other railroad equipment, and aircraft.

(g) The collection of solid waste is exempted to the extent that the noise of such collection is regulated by Section 5-5.15 (Collection Equipment). That noise not covered by Section 5-5.15 is not exempted from the requirements of this chapter.

(Added by Ord. 2752-C.S., § 1, effective 3-27-91)

4-9.105 - Persons Responsible.

Any person, owner, agent, manager, or supervisor in charge of operating, ordering, directing, or allowing the operation or maintenance of any device, object, machine, or animal creating a noise as prohibited in this chapter, shall be deemed guilty of violating this chapter.

(Added by Ord. 2752-C.S., § 1, effective 3-27-91)

4 EXISTING CONDITIONS

4.1 EXISTING NOISE- AND VIBRATION-SENSITIVE RECEPTORS

Sensitive land uses generally include those uses where exposure to noise and vibration would result in adverse effects, as well as uses where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both noise levels (interior and exterior) and vibration levels. Other sensitive land uses include schools, hospitals, convalescent facilities, parks, hotels, places of worship, libraries, and other uses where low noise and vibration levels are essential.

The land uses in the immediate vicinity of the project sites include residential and agricultural. Existing nearby sensitive receptors include rural residential dwellings south of Ladd Road adjacent to project Site A and single subdivision residential dwellings located west of McHenry Avenue, adjacent to project Site B. Refer to Exhibit 4-1 for the general locations of existing sensitive receptors with respect to the project sites.

4.2 EXISTING NOISE AND VIBRATION SOURCES

The existing dominant noise source in the vicinity of the project sites are influenced by surface transportation noise emanating from roadway vehicle traffic on Ladd Road and McHenry Avenue. Noise from agricultural uses adjacent to both project sites, in addition to noise from outdoor activities (e.g., people talking, dogs barking, operation of landscaping and agricultural equipment) also contributes to the existing noise environment. Refer to Exhibit 4-1 for general locations of existing land uses and their respective location to noise sources (i.e., Ladd Road and McHenry Avenue).

4.2.1 ROADWAY VEHICLE TRAFFIC

As mentioned above, one of the noise sources in the study area is roadway vehicle traffic along McHenry Avenue and Ladd Road. Existing vehicle traffic noise levels were modeled using the Federal Highway Administration (FHWA) Traffic Noise Model and traffic data obtained from the traffic counts in Google Earth. Additional input data included day/night percentages of autos, medium and heavy trucks, vehicle speeds, ground attenuation factors, and roadway widths. Table 4-1 summarizes the modeled hourly L_{eq} noise levels at 100 feet from the roadway centerline and distance from the roadway centerline to the 60-, 65-, and 70-dBA L_{eq} contours for existing average daily traffic volume.

4.3 AMBIENT-NOISE SURVEY

An ambient-noise survey was conducted September 23-29, 2015, to document the existing noise conditions at various locations in the vicinity of the project sites. The 24-hour continuous long-term noise-level measurements were taken in accordance with the American National Standards Institute's acoustic standards at two locations, one at Site A in the front yard of 816 Ladd Road and one at Site B near the pool in the backyard of 117 Stewart Road. Short term 15 minute ambient noise measurements were also conducted at various locations near both sites. Instrumentation consisted of a Larson Davis Laboratories (LDL) Model 820 and Model 824 precision integrating sound-level meter. The systems were calibrated before and after use with a LDL CAL200 acoustical calibrator to ensure that measurements would be accurate, (refer to Exhibits 4-1 and 4-2 for ambient-noise monitoring locations).

	Saint John Road	McHenry Avenue	66	41	129	409
McHenry Avenue	Ladd Road	Stewart Road	67	45	143	453
	Stewart Road	Hogue Road	67	46	146	461
Stewart Road	McHenry Avenue	Del Cielo Way	56	4	12	37

Notes: dB = A-weighted decibels; Ldn = day-night average noise level.
Source: Modeled by AECOM in 2015

Atmospheric conditions were observed during long-term noise-level measurement sessions. Wind speeds typically ranged from 3 to 12 miles per hour. Temperatures averaged from 62°F to 89°F, with average humidity of 46 percent. These atmospheric conditions were verified using historical data from the Weather Underground website (www.wunderground.com).

The L_{dn}, L_{90}, and values for each ambient-noise measurement location are summarized in Table 4-2. Refer to Appendix A for a complete listing of hourly noise levels and modeled L_{dn} for each noise measurement location. Table 4-3 summarizes the short term ambient noise measurements.

The noise levels shown in Table 9 indicate medium ambient noise levels at the Site A and medium to high ambient noise levels at the Site B. The majority of the noise levels result from roadway vehicle traffic along Ladd Road and McHenry Avenue, respectively. The noise levels shown in Table 10 where utilized for calibrating the FHWA Traffic Noise Model.

4.3.1 Methods and Assumptions

Project details and observations during on-site noise monitoring were used to determine potential locations of sensitive receptors and potential noise generating land uses on the project sites. Noise-sensitive land uses and major noise sources near the project sites were identified based on existing documentation (e.g., equipment noise levels and attenuation rates) and site reconnaissance data.

To assess the impacts of potential short-term construction noise on sensitive receptors, the sensitive receptors and their relative exposure to the impacts (considering intervening building façades and distance) were identified to assess the impacts of potential short-term construction noise on sensitive receptors. The construction noise that would be generated by the proposed project was predicted by using the Federal Transit Noise and Vibration Impact Assessment methodology (FTA 2006). The emission noise levels referenced and the usage factors were based on the FHWA Roadway Construction Noise Model. The noise levels of the specific construction equipment that would be used and the resulting noise levels where sensitive receptors are located were calculated.

Table 4-2. Summary of Measured Long Term 24-hour Ambient Noise Survey Levels

Date	Average Measured Hourly Noise Levels, dB				
	L_{dn}	Daytime (7 a.m.–10 p.m.)		Nighttime (10 p.m.–7 a.m.)	
		L_{eq}	L_{max}	L_{eq}	L_{max}
Site A - Front yard of 816 Ladd Road					
September 23-24, 2015	56	51	69	49	64
September 24-25, 2015	57	51	72	50	65
September 25-26 2015	54	50	72	48	69
September 26-27, 2015	55	52	77	47	66
September 27-28, 2015	55	50	69	49	71
September 28-29, 2015	54	50	73	46	67
September 29-30, 2015	54	50	67	47	71
Site B – Backyard of 117 Stewart Road					
September 23-24, 2015	62	58	75	55	70
September 24-25, 2015	63	58	77	56	79
September 25-26 2015	63	58	87	56	79
September 26-27, 2015	62	57	79	55	76
September 27-28, 2015	62	58	78	56	73
September 28-29, 2015	62	58	80	55	73
September 29-30, 2015	62	58	77	55	73

Monitoring locations correspond to those depicted in Exhibits 4-1, and 4-2.
Notes: dB = A-weighted decibels; L_{dn} = day-night average noise level; L_{eq} = the equivalent hourly average noise level; L_{max} = maximum noise level.

Table 4-3. Short-Term Ambient Noise Levels Monitored during the Daytime

Site	Location	Date/Time	Noise Sources	A-Weighted Sound Level (dBA)	
				L_{eq}	L_{max}
Site A Ladd Road					
1	Backyard of 706 Ladd Road	September 30, 2015 3:58–4:13 pm	Traffic on Ladd Road	61	72
2	Behind 625 Ladd Road	September 30, 2015 4:17–4:32 pm	Traffic on Ladd Road	68	83
Site B McHenry Avenue					
3	7008 Hartley Court (vacant land)	September 30, 2015 4:38–4:52 pm	Traffic on McHenry Avenue	60	70
4	Front yard of 201 Stewart Road	September 30, 2015 4:56–5:11 pm	Traffic on McHenry Avenue	62	79

Monitoring locations correspond to those depicted in Exhibits 5, and 6 .
Notes: dB = A-weighted decibels; L_{eq} = the equivalent hourly average noise level; L_{max} = maximum noise level.
Source: Data collected by AECOM in 2015

Traffic noise modeling was conducted based on average daily traffic volumes obtained from the traffic counts in Google Earth.[1] The FHWA Highway Traffic Noise Prediction Model (FHWA RD 77-108) was used to calculate traffic noise levels along affected roadways based on the trip distribution estimates from the field counted traffic volumes. The project's contribution to the existing traffic noise levels along area roadways was determined by comparing the predicted noise levels at a reference distance of 100 feet from the roadway centerline for the cumulative conditions with and without project-generated traffic.

Potential noise impacts from long-term (operation-related) stationary sources were assessed based on existing documentation (e.g., AEC noise impact assessment of Well #315) and site reconnaissance data. This analysis also includes an evaluation of the proposed noise-generating uses that could affect noise-sensitive receptors near the project site.

To assess the land use compatibility of the proposed project with on-site noise levels, predicted operational noise contours were used to determine whether development of the proposed project would exceed the applicable noise criteria.

Groundborne vibration impacts were qualitatively assessed based on existing documentation (e.g., vibration levels produced by specific construction equipment operations) and the distance of sensitive receptors from the given source.

The standards of significance applied in this analysis address the exterior noise standards established by Stanislaus County and/or the City of Modesto. Unless otherwise stated, standards for interior noise levels would not be exceeded if exterior noise-level standards are achieved.

4.3.2 Criteria for Determining Significance of Effects

The significance criteria for this analysis are based on the environmental checklist in Appendix G of the State CEQA Guidelines and applicable jurisdictional noise standards. The proposed project under consideration was determined to result in a significant impact related to noise if it would:

- Expose persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies
- Result in a substantial temporary, periodic or permanent increase in ambient noise levels in the project vicinity above levels existing without the project;
- Exposure of persons to, or generation of, excessive groundborne vibration or groundborne noise levels;
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels; or

[1] Google Earth. 2015. Traffic count data for Ladd Road, McHenry Road, and Stewart Road, 31°47'08.52" N and 35°12'02.52" E. Traffic count year 2007. Accessed September 15, 2015.

- For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels.

The proposed project sites (Sites A and B) would not be located within an airport compatibility land use plan with an adopted 60 dBA L_{dn} noise contour. The project would not result in locating new receptors or workers on the project site to excessive airport noise levels. Therefore, these issues are not evaluated further.

The following considerations apply to the first four significance thresholds:

- **Noise impacts from operation of project facilities:** For all affected noise sensitive uses, noise that would be generated by operation of project facilities would be significant if it would cause the overall exterior noise level to exceed the "normally acceptable" noise standard compatible with exterior land uses (i.e., 50 dBA L_{eq} daytime or 45 dBA L_{eq} nighttime at the noise sensitive receptor property line), or would result in an increase of ambient noise levels by 5 dBA.

- **Noise impacts from increased daily traffic:** For all affected noise sensitive uses, noise that would be generated by an increase in daily traffic volumes caused by the project would be significant if it would cause the overall exterior noise level to exceed the "normally acceptable" noise standard compatible with exterior land uses (i.e., 60 dBA L_{dn}/CNEL at outdoor activity areas), exceed the interior noise standard (i.e., 45 dBA L_{dn}/CNEL in any inhabitable room), or would result in an increase of ambient noise levels by 5 dBA.

- **Exposure of sensitive receptors to, or generation of, excessive vibration levels:** Short- and long-term vibration impacts would be significant if project construction or operation would result in the exposure of sensitive receptors to, or would generate, vibration levels that exceed Caltrans' recommended standard of 0.2 in/sec PPV regarding the prevention of structural damage for normal buildings or the FTA's maximum acceptable vibration standard of 80 VdB regarding human response for residential uses (i.e., annoyance) at any nearby existing sensitive land uses.

- **Temporary, short-term noise impacts from construction:** Temporary, short-term noise impacts caused by construction would be significant if construction-generated noise levels exceed the Stanislaus County Municipal Code Specific Noise Source Standards Subsection E (Section 10.46.060, "Construction Equipment") and the City of Modesto Code Ordinances (Section 4-9.103, "Enumeration"). Project-related construction noise at exterior uses of residential properties (buildings) in the project vicinity would be considered significant if it would exceed 75 dBA during weekday daytime hours of 7 p.m. to 7 a.m..

Generally, a project may have a significant effect on the environment if it would substantially increase the ambient noise levels for adjoining areas or expose people to severe noise levels. In practice, more specific professional standards have been implemented. These standards state that a noise impact would be significant if it would generate noise that would conflict with local planning criteria or ordinances or substantially increase noise levels at noise-sensitive land uses.

For the proposed project, the significance of anticipated noise effects is based on a comparison between predicted noise levels and noise criteria defined by Stanislaus County (Site A) or the City of Modesto (Site B). For this project, noise impacts would be significant if existing or proposed noise-sensitive land uses would be exposed to noise levels in excess of the *County of Stanislaus General Plan* Noise Element, Stanislaus County Municipal Code standards, *City of Modesto General Plan* Noise Element, or City of Modesto Noise Ordinance standards as

described above (see "Regulatory Setting"), or if implementing the proposed project would result in increasing ambient noise levels at noise sensitive land uses in excess of those described above.

4.4 IMPACTS AND MITIGATION DISCUSSION

4.4.1 OPERATIONAL NOISE

Would the project result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Long-term operation of the proposed project would result in the operation of new noise-generating stationary equipment. The proposed project would include the long-term operation of water well and pump, a stand-by generator, and a booster pump station. Pumping will vary throughout the year depending upon need, based upon system pressure or tank level, ranging from as much as 20 hours per day during the summer months to as few as two hours per day in the winter. Pumping is expected to occur for an annual average of eight hours per day.

4.4.2 SITE A: LADD ROAD

Site A, located on Ladd Road, would encompass approximately four acres. The project facilities at Site A would consist of an above ground water storage tank, water well and pump, a stand-by generator, and a booster pump station. The pump station building will house the production well, booster pumps, disinfection equipment, ancillary valves and flow meters, and electrical equipment. The masonry block building will include three separate rooms: a pump station room, an electrical room, and calcium hypochlorite room.

The building would have various sound attenuation features including wall panels, fans, and louvers to reduce noise related to removing heat generated within the pump and electrical rooms. Metal wall panels would achieve a noise reduction coefficient of approximately 0.90. The pump station building would be ventilated by one side-wall mounted exhaust fan with a capacity of 4,500 cubic feet per minute. Exhaust fans would have the lowest possible exhaust fan noise measurement unit. Ducting in the building would be designed to minimize noise. The intake and exhaust pump station louvers would be sized to minimize air flow noise.

Production well pumping will vary throughout the year depending upon need, based upon system pressure or tank level, ranging from as much as 20 hours per day during the summer months to as few as two hours per day in the winter. Pumping is expected to occur for an annual average of eight hours per day. The proposed project includes up to four 60- hp) electric pumps. Two pumps would be on-duty, one is for standby, and the fourth pump is for future buildout. The well and booster pumps would be housed inside the pump station building.

A standby diesel generator and an above-ground diesel storage tank would be installed on a 10 foot by 20 foot concrete pad within the project site. The standby generator would be used as an alternate power source to the proposed project facilities. The generator would be equipped with critical grade mufflers for the exhaust system and level 2 sound housing in order to achieve an approximate sound level of 75 dB within 30 feet of the unit.

Based on the proposed site plan for Site A, operational noise would be reduced through site design, specifically building materials, surface treatments and acoustically designed louvers, to achieve and not exceed the City's noise thresholds. Project related operation noise at Site A would be considered exempt from Stanislaus County noise regulations because the project is a public utility. However, with the incorporated site design features

operational noise would comply with the County's Municipal Code and the City's Code of Ordinances noise standards[2]. Thus, the project would not result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project. As a result, project generated operational noise levels for Site A would be **less than significant**.

4.4.3 SITE B: MCHENRY AVENUE

Site B would encompass approximately 0.4 acres. The facilities at this site would consist of a production well and pump, stand-by generator, disinfection facilities, connecting lines to the City's existing distribution system down McHenry Avenue, and space for a future treatment unit and treatment filters. These facilities would be fully enclosed by a 12-foot tall concrete block wall with a 24-foot wide gate; there would be no roof over these facilities. Equipment at the site would consist of an above ground pump motor, engine generator, controls, chlorinator, and associated plumbing and equipment.

The production well and pump, stand-by generator are the two main sources of noise associated with the well. The analysis assumed an above-ground pump. Noise levels were measured at an existing well site where similar equipment to the proposed Del Rio well would be installed.[3] Well 62 at Freedom Park uses a Goulds (ITT Corporation) pump with a 200 HP Emerson motor and a 300kW standby diesel generator inside a Quiet Site Level II enclosure by Cummins. The Cummins generator measured 71 dBA at a distance of 23 feet diagonally from the air intake of the unit. The pump measured 72 dBA at a distance of 18 feet from the motor (70 dBA at 23 feet), with a sound spectrum in the higher frequencies. The generator dominated the existing background noise levels, while the pump-only operational noise was much less noticeable, raising noise levels 1 dBA. Subjectively, pump "whine" noise was barely audible over background noise levels.[4]

Based on the proposed site plan for Site B, the nearest adjacent residential property,117 Stewart Road, is approximately 30 feet west of the proposed location of the pump motor. The topography of the site is such that the pump, generator, and 12-foot-tall block wall would be at a ground level, 7 feet below the grade of the house pad for the residence to the west. It was assumed that the ground level on the residential property is 7 feet above the pump grade at a distance of approximately 20 feet from the property line. Noise levels are predicted to reach 48 dBA within the residential backyard of 117 Stewart Road based on the 200HP well pump data described above, and in consideration of the proposed 12-foot tall wall around the well facility. Noise levels are expected to drop down to 39 dBA at the nearest facade of the existing residence. Using an identical generator set and enclosure (300kW standby diesel generator inside a Quiet Site Level II enclosure by Cummins), unmitigated sound levels are expected to reach 58 dBA within the adjacent residential property at Site B.

These noise sources could be considered exempt from Stanislaus County noise regulations because the project is a public utility. However, local noise regulations were evaluated to determine the significance of potential noise impacts.

4 City of Modesto, Del Rio Well Replacement, Well #315, Noise Impact Assessment; prepared by Acoustical Engineering Consultants (AEC) July 13, 2012

The pump operating during nighttime hours is expected to exceed the County's noise standard of 45 dBA. Daytime operation of the pump is predicted to be less than the County's 50 to 55 dBA noise standard. Subjectively, the pump would be barely audible over background sources during daytime hours with the source becoming more audible as background levels drop during nighttime hours. Routine testing of the generator set would occur one to two times per month. During these tests, sound levels would technically exceed the local noise regulations. The generator is exempt from noise regulations when providing emergency power to the pump station and during short term testing periods.

Operational noise associated with the proposed project is predicted to dominate the existing noise environment when background levels are low (nighttime) at the adjacent receptor to the west of the project site. Operational activities could be considered exempt from noise standards when operating as a public utility or for emergency purposes. However, there is the potential for perceived noise impacts at 117 Stewart Road residence west of the proposed project site. Thus, the project would result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project. As a result, project generated operational noise levels for Site B would be **less than significant with mitigation incorporated**.

Mitigation Measures for Site B:

- Project specifications should include generator sound level limits similar to those used for the Freedom well site (i.e., 73 dBA at 23 feet).
- Noise control for the generator set will include a sound attenuated enclosure and the equipment yard sound wall. No additional sound reduction is recommended for the generator set.

  Equipment Yard Sound Wall Details

  - Construct a sound wall around the equipment within the yard.
  - The wall shall weigh a minimum of 4 lbs/sq.ft. Painted and sealed concrete block easily meets the weight requirement.
  - The sound wall must be continuous along its length and width with no gaps in the construction, including at the ground. Slope the equipment yard pad such that weeping holes are only needed on the north and east sides of the structure.
  - The wall height on the west and western half of the south sides shall be increased to a minimum of 13 feet above grade.

  Generator Set Sound Enclosure Details

  - Install a modular sound wall with an optional removable roof adjacent to the pump.
  - Install a sound absorptive modular barrier system along the west edge of the pump base to a height of at least 10 feet above grade. The barrier system would wrap around the north and south sides of the pump to create a three-walled system with integrated sound absorption. In general, acoustical barriers perform best when close to the noise source. Acceptable products include the following or an approved equal: Kinetics Noiseblock

Barrier Panel System, Noise Barriers LLC QuietLine Barrier Walls, Sound Fighter Systems LSE.

- Include an insulated sheet metal shroud
- Construct a sheet metal shroud to block the line of sight to the motor ventilation openings.
- Construction materials would likely include exterior grade sheet metal used for HVAC ducts and acoustical duct liner. Additional details and requirements would be developed if this option is used.
- Care must be taken to retain adequate ventilation for the pump motor.
- Optional: For additional noise reduction, install a removable solid roof system over the top of the pump motor. The removable roof must weigh a minimum of 3 lbs/sq.ft. and have no holes or gaps on the exterior surface. Neoprene gaskets should be used to provide a seal against the supporting walls.

- Routine testing should be performed during daytime hours, between 10 am and 5 pm, when background sound levels are highest to minimize potential noise impacts.

Additional noise reduction to meet the County's nighttime noise threshold of 45 dBA is possible for the pump through a variety of options:

- A submersible pump would place the motor under water and virtually eliminate the sound source.
- Reducing sound levels for the proposed above-ground pump motor can be accomplished by increasing the height of the equipment yard sound wall above 12 feet. Based on the analysis, increasing the equipment yard wall height to 13 feet would result in an additional 2 dBA of attenuation and a predicted sound level of 45 dBA. A 14-foot-tall wall could reduce sound levels by an additional 1 dBA.
- Sound levels could be reduced by constructing a barrier adjacent to the motor with an optional removable roof barrier directly over the motor. Placing a secondary barrier directly adjacent to the pump motor on the west side with an optional removable roof structure would be much more effective. The detachable roof would still provide access to the motor for servicing and removal.
- Another option for pump noise control would be to construct an insulated sheet metal shroud around the motor and shaft while still allowing the required air circulation through the motor. Sound radiates primarily from the motor openings and at the base of the motor where the shaft is visible. The shroud would divert sound energy from these openings through a path lined with sound absorbing material. Care must be taken using this method to ensure adequate ventilation is provided and motor warranties are not voided.

The proposed project, with the implementation of the above mitigation measures, would ensure that operational associated with the proposed project would comply with the County's Municipal Code and the City's Code of Ordinances noise standards.

4.4.4 CONSTRUCTION AND OPERATION GENERATED TRAFFIC

Would the project result in a substantial permanent increase in ambient traffic noise levels in the project vicinity above levels existing without the project?

Implementation of the proposed project would result in an increase of traffic volumes due to the addition of construction-generated traffic and long term operation. Construction-generated traffic on the local roadway network was analyzed based on the two material supply scenarios presented in the traffic section. As such, all materials would be transported over designated haul routes on the local roadway network, thus increasing traffic volumes along affected roadway segments. Long term operation related traffic volume increases would be considerably less than construction related traffic volume increases.

To examine the effect of project-generated traffic increases, traffic noise levels associated with the proposed project were calculated for roadway segments in the project study area using the FHWA Highway Noise Prediction Model (FHWA-RD-77-108). Traffic noise levels were modeled under existing conditions, with and without implementation of the proposed project's construction traffic and operational traffic. Average Daily Traffic (ADT) volumes and the distribution thereof were obtained from the traffic counts in Google Earth. Vehicle speeds and truck volumes on local area roadways were determined based on field observations and vehicle counts conducted. Table 4-4 summarizes the modeled traffic noise levels at 100 feet from the centerline of affected roadway segments. Additional input data included day/night percentages of autos, medium and heavy trucks, vehicle speeds, ground attenuation factors, and roadway widths. Refer to Appendix B for complete modeling inputs and results.

Table 4-4. Predicted Traffic Noise Levels Conditions

Roadway	Segment		Ldn at 100 Feet, dBA					
	From	To	No Project	Plus Construction	Net Change	Plus Project	Net Change	Significant Impact?
Ladd Road	Tully Road	Saint John Road	67	68	1	68	1	No
	Saint John Road	McHenry Avenue	66	67	1	67	1	No
McHenry Road	Ladd Road	Stewart Road	67	67	1	67	1	No
	Stewart Road	Hogue Road	67	67	1	67	1	No
Stewart Road	McHenry Avenue	Del Cielo Way	56	58	2	58	2	No

Notes: dB = A-weighted decibels; L_{dn} = day-night average noise level; U.S. 50 = U.S. Highway 50.
Traffic noise levels are predicted at a standard distance of 100 feet from the roadway centerline and do not account for shielding from existing noise barriers or intervening structures. Traffic noise levels may vary depending on actual setback distances and localized shielding.
Source: Data modeled by AECOM in 2015, using Average Daily Traffic (ADT) Volumes in Google Earth.

The modeling conducted shows that implementing the proposed project would not result in substantial traffic noise level increases compared to noise levels without the project. Based on volume, trip generation and distribution data, future traffic noise levels with and without the project, project generated traffic noise increases

would range from less than +0 dBA to +2 dBA L_{dn}, as shown in Table 4-4. A project-related noise level increase of +5 dBA or greater would be significant where ambient noise levels are less than 60 dBA L_{dn}/CNEL; +3 dBA where ambient noise levels exceed 60 dBA L_{dn}/CNEL. Thus, short- and long-term noise levels from project-generated traffic source increases would not result in a substantial permanent increase in ambient noise levels (+3 dBA or greater) or exceed applicable transportation noise standards at sensitive receptors. As a result, project generated construction traffic noise levels would be **less-than-significant**. No mitigation is required.

4.4.5 CONSTRUCTION VIBRATION

Would the project exposure of persons to, or generation of, excessive groundborne vibration or groundborne noise levels

Construction vibration would occur during construction of the proposed project during equipment operation on the project site and during the transport of construction equipment and materials to and from the site. New development should minimize vibration impacts to adjacent uses during demolition and construction based on Caltrans vibration standards. For sensitive historic structures, a vibration limit of 0.08 in/sec PPV (peak particle velocity) will be used to minimize the potential for cosmetic damage to a building. A vibration limit of 0.20 in/sec PPV will be used to minimize the potential for cosmetic damage at buildings of normal conventional construction. A vibration level of 85 VdB will be used to evaluate human response to groundborne vibration levels, as shown in Table 4-3 above. Table 4-5 shows the results of the construction vibration related to the proposed project.

Table 4-5. Project Construction Vibration Levels at Closest Sensitive Receptors

Receiver	Location	Shortest Distance (ft) Between Noise-Sensitive Uses and Proposed Construction Areas	Project, Vibration Levels	
			PPV[1]	VdB[2]
LT-01	Front Yard of 816 Ladd Road	130	0.008	66
LT-02	By the Pool in Backyard of 117 Stewart Road	50	0.031	78
ST-01	Backyard of 706 Ladd Road	100	0.011	69
ST-02	Behind 625 Ladd Road	500	0.001	48
ST-03	7008 Hartley Court (Vacant Land)	100	0.011	69
ST-04	Front Yard of 201 Stewart Road	300	0.002	55

Notes:
[1] Where PPV is the peak particle velocity.
[2] Where Lv is the velocity level in decibels and based on the root mean square velocity amplitude.
Source: FTA 2006

Operation of heavy duty construction equipment would produce ground borne vibrations measuring approximately 87 VdB (0.089 in/sec PPV) at a distance of 25 feet (FTA 2006; Caltrans 2004). The distance between proposed construction activities and the closest acoustically sensitive uses would be approximately 50 feet (Table 4-5). Assuming a standard reduction of 9 VdB per doubling of distance (FTA 2006), the project-related construction vibration level at the nearest receivers would be approximately 78 VdB (0.03 in/sec PPV). This level of vibration is well below the Caltran's vibration standards of 0.08 in/sec PPV residential buildings. Thus, the project would not expose persons to, or generation of, excessive groundborne vibration or groundborne noise levels. As a result, project generated vibration levels would be **less than significant**.

4.4.6 CONSTRUCTION NOISE

Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project;

Construction and maintenance activities for the proposed project would generate short-term, temporary, and intermittent noise at adjacent noise-sensitive receptors. Noise levels generated during construction and maintenance would fluctuate depending on the particular type, number, and duration of use of various pieces of equipment. Noise from construction and maintenance activities is typically considered point-source noise. Noise levels drop off at a rate of 6 dBA per doubling of distance over hard site surfaces such as streets and parking lots, and approximately 7.5 dBA per doubling of distance over soft site surfaces such as grass fields and open terrain with vegetation (FTA 2006).

Equipment required for construction and maintenance activities for the proposed project would likely consist of a paver, backhoe, bulldozer, tractor, well drilling equipment, and various trucks. The maximum noise levels produced by one of these types of equipment, at a distance of 50 feet and without noise controls, could range from 80 to 85 dBA L_{max} (Table 4-6). Noise levels vary for individual pieces of equipment because equipment comes in different sizes and with different engines. Noise levels also vary as a function of the activity level or duty cycle. Typical construction projects, with equipment moving from one point to another, including work breaks and idle time, have long-term noise averages that are lower than many short-term noise events. In addition, because of the dynamic nature of a construction site, noise levels are calculated from the center of the activity. Using these parameters, project-related construction noise was estimated using the Federal Highway Administration (FHWA) Roadway Construction Noise Model (FHWA 2006), including simultaneous operation of multiple pieces of equipment, were modeled with the results shown in Table 4-6 (Appendix B).

Construction equipment noise levels at 50 feet would as high as 87 dBA L_{eq} during the varying construction phase activities (Table 4-6). Assuming the standard spherical spreading loss (-6 dB per doubling of distance) and the highest unmitigated construction noise level of 87 dBA L_{eq} at 50 feet, the project construction noise levels are estimated to range between 67 and 87 dBA L_{eq} at the nearest noise-sensitive uses to the proposed project, as shown in Table 4-7. These results represent the worst-case, conservative noise exposure because they do not consider noise attenuation associated with intervening structures and atmospheric absorption. Therefore, actual construction equipment noise levels at the nearest residences could be lower. Construction activities are not expected to occur on weekends or legal holidays, nor would nighttime work be conducted.

Table 14 shows the resulting predicted interior noise levels at the closest noise sensitive receptor could be as high as 62 dBA at residential uses to the west of the proposed project site, specifically the residence at 117 Stewart Road. The Stanislaus County Municipal Code Specific Noise Source Standards Subsection E (Section 10.46.060, "Construction Equipment") and the City of Modesto Code Ordinances (Section 4-9.103, "Enumeration") were used for this analysis. Project-related construction noise at exterior uses of residential properties (buildings) in the project vicinity would be considered significant if it would exceed 75 dBA during weekday daytime hours of 7 p.m. to 7 a.m. These are the most restrictive criteria established by the County and City and provide the most conservative assessment of construction noise impacts at existing noise-sensitive uses in the project vicinity.

Table 4-6.	Construction Phases, Equipment, Anticipated Duration of Use, and Calculated Noise Levels		
Phase	Anticipated Number and Type of Equipment that May Be Utilized by the Contractor	Noise Level at 50 Feet	
		L_{max}, dBA	L_{eq}, dBA
Site Preparation Phase	Excavator	85	81
	Dump Truck	84	80
	Dozer	85	81
Maximum and Combined Noise Level		**85**	**87**
Well Drilling	Drill Rig Truck	84	77
	Jack Hammer	85	78
	Generator	82	79
Maximum and Combined Noise Level		85	86
Pipeline	Excavator	85	81
	Crane	85	77
	Dozer	85	81
Maximum and Combined Noise Level		85	87
Site Restoration	Paver	85	82
	Concrete Mix Truck	85	81
	Man Lift	85	78
Maximum and Combined Noise Level		85	87

Notes: dB = decibels; L_{eq} = equivalent sound level (the sound energy averaged over a continuous 15-minute to 1-hour period); Lmax = maximum instantaneous sound level

Source: Data compiled by AECOM in 2015

Construction noise associated with the proposed project is predicted to dominate to the existing noise environment at adjacent receptors during all construction phases. Construction activities would be exempt from noise standards when operating during allowable daytime hours outlined above. However, there is the potential for perceived noise impacts at the residential uses adjacent to the proposed project due to projected related construction noise. As a result, temporary, short term project generated construction noise would be considered **less than significant with mitigation incorporated.**

The City shall ensure the following mitigation measures are implemented prior to and throughout the duration of project construction:

- At least two weeks prior to the start of construction, provide written notification to the potentially affected property owners and residents within 500 feet of the project site, identifying the type, duration, and frequency of construction activities to residences directly exposed to the project noise. Notification of heavy construction activities shall include anticipated dates and hours during which construction activities are anticipated to occur. Notification materials shall also identify a mechanism for residents to register complaints with the City through contact information, including a daytime telephone number, for the project representative to be contacted in the event that construction noise levels are deemed excessive, overly intrusive or construction occurs outside the permitted hours. Recommendations to assist noise-sensitive land uses in reducing interior noise levels (e.g., closing windows and doors) shall be included in the notification.
- Prohibit the start-up of machines or equipment before 7 a.m. and after 7 p.m. Monday through Saturday and before 9 a.m. and after 5 p.m.
- Prohibit use of materials and equipment deliveries before 7 a.m. and after 7 p.m., Monday through Saturday and before 9 a.m. and after 5 p.m. on Sunday.
- Restrict the use of bells, whistles, alarms, and horns to safety-warning purposes.
- Equip all construction equipment with noise-reduction devices such as mufflers to minimize construction noise and operate all internal combustion engines with exhaust and intake silencers.
- To the extent feasible, the simultaneous operation of multiple construction equipment shall be limited.

- Locate fixed construction equipment (e.g., compressors and generators), construction staging and stockpiling areas, and construction vehicle routes as far as feasible from noise-sensitive receptors.
- Use noise-reducing enclosures around stationary noise generating equipment.
- Install temporary barrier between noise sources and noise sensitive receptors, or the use of intervening structures (i.e.; on-site construction trailer, stockpiles).
- Designate a disturbance coordinator and conspicuously post this person's number around the project sites, in adjacent public spaces, and in construction notifications. The disturbance coordinator shall be responsible for responding to any complaints about construction activities. The disturbance coordinator shall receive all public complaints about construction disturbances and be responsible for determining the cause of the complaint and implementation of feasible measures to be taken to alleviate the problem.

The proposed project, with the implementation of the above mitigation measures, would ensure that construction activities associated with the proposed project would comply with the County's Municipal Code and the City's Code of Ordinances noise standards.

4.4.7 CUMULATIVE NOISE IMPACTS

Project implementation would result in significant noise impacts associated with construction activities and noise generated by on-site stationary equipment. Noise impacts from construction activities and on-site stationary sources would be reduced to less-than-significant levels with implementation of Mitigation Measures for Site B relative to stationary-source noise and mitigation for construction activities, thus complying with the City's and County's maximum allowable noise standards.

Noise is a localized occurrence and attenuates rapidly with distance. Therefore, only future cumulative development projects in the direct vicinity of the project site would have the potential to add to anticipated project-generated stationary-source noise, thus resulting in cumulative noise impacts.

Stationary-source noise associated with the Del Rio Well project and the related projects could potentially result in exceedance of the City's noise regulations at sensitive receptors. The noise from any stationary noise sources associated with the related projects would be controlled at the source (by means of noise walls, enclosures, louvers and site planning), but there is no guarantee that all the relatable projects would include such noise controls as part of their proposals. Therefore, significant cumulative noise impacts associated with stationary noise sources could occur. As mentioned above, implementation of Mitigation Measures for Site B would reduce project-generated stationary-source noise impacts to a less-than-significant level; thus, project implementation would not result in a cumulatively considerable incremental contribution to significant cumulative stationary-source noise impacts.

The City's noise regulations limit construction activities to daytime hours. There are no other planned construction projects anticipated in the area of the Del Rio Well project. Therefore, significant cumulative noise impacts associated with construction activities would not occur. Implementation of Mitigation Measures for construction activities would reduce project-related construction-noise impacts to a less-than-significant level. Coupled with the fact that noise diminishes with distance, project construction would not result in a cumulatively considerable incremental contribution to any significant cumulative noise impacts.

Construction noise and stationary-source noise can be controlled on-site at the point of origin; however, traffic noise may extend beyond a project site along existing and proposed off-site and on-site roadways, resulting in significant traffic noise impacts on sensitive uses along these roadways. Because full buildout of the Del Rio Well project would not result in a perceptible increase in traffic noise on project area roadways, the project would not incrementally contribute to a cumulative impact. Thus, the traffic noise impacts from Del Rio Well project are considered cumulatively less than significant.

APPENDIX A

Fundamentals of Acoustics and Environmental Noise

Appendix A

1. Fundamentals of Acoustics and Environmental Noise

1.1 Sound, Noise, and Acoustics

Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a liquid or gaseous medium (e.g., air). Noise is generally defined as unwanted sound (i.e., loud, unexpected, or annoying sound). Acoustics is defined as the physics of sound. In acoustics, the fundamental scientific model consists of a sound (or noise) source, a receiver, and the propagation path between the two. The loudness of the noise source and obstructions or atmospheric factors affecting the propagation path to the receiver determines the sound level and characteristics of the noise perceived by the receiver. Acoustics addresses primarily the propagation and control of sound.

1.2 Frequency

The number of sound pressure peaks travelling past a given point in a single second is referred to as the frequency, expressed in cycles per second or Hertz (Hz). A given sound may consist of energy at a single frequency (pure tone) or in many frequencies over a broad frequency range (or band). Human hearing is generally affected by sound frequencies between 20 Hz and 20,000 Hz. (20 kHz).

Sound having a high concentration of energy in a relatively narrow frequency band may be considered "tonal" in character. Sources of noise that may tonal noise include fans, motors, transformers, and compressors. These sources generally have moving parts that rotate, oscillate, or vibrate at a given speed, producing a distinct tonal noise output directly related to that speed.

1.3 Amplitude

The amplitude of pressure waves generated by a sound source determines the perceived loudness of that source. Sound pressure amplitude is measured in micro-Pascals (μPa). One μPa is approximately one hundred billionths (0.00000000001) of normal atmospheric pressure. Sound pressure amplitudes for different kinds of noise environments can range from less than 100 μPa to 100,000,000 μPa. Because of this huge range of values, sound is rarely expressed in terms of pressure. Instead, a logarithmic scale is used to describe sound pressure level (SPL) in terms of decibels (dB). The threshold of human hearing (near total silence) is approximately 0 dB which corresponds to 20 μPa.

1.4 Addition of Decibels

Because decibels are logarithmic units, SPL cannot be added or subtracted through ordinary arithmetic means. Under the decibel scale, a doubling of sound energy corresponds to a 3 dB increase. In other words, when two sources are each producing sound of the same loudness, the resulting sound level at a given distance would be approximately 3 dB higher than one of the sources under the same conditions. For example, if one automobile produces an SPL of 70 dB when it passes an observer, two cars passing simultaneously would not produce 140 dB –

rather they would combine to produce 73 dB. Under the decibel scale, three sources of equal loudness together produce a sound level of approximately 5 dB louder than one source, and ten sources of equal loudness together produce a sound level of approximately 10 dB louder than the single source.

1.5 A-Weighted Decibels

Figure A illustrates sound levels associated with common sound sources. The perceived loudness of sounds is dependent on many factors, including sound pressure level and frequency content. However, within the usual range of environmental sound levels, perception of loudness is relatively predictable, and can be approximated by frequency filtering using the standardized A-weighting network. There is a strong correlation between A-weighted sound levels (expressed as dBA) and community response to noise. For this reason, the A-weighted sound level has become the standard descriptor for environmental noise assessment. All noise levels reported in this report are A-weighted.
